On the 18th inst., M. Von Manteuffel laid before the Second Chamber Royal message demanding a credit of four millions and a half sterling, which the Government hopes not to need, but which he says it must have at its disposal in order to be prepared for eventualities which at the present critical juncture nobody can foresee. The Minister read a declaration which claims to be accepted as a clear and open indication of the course which Prussia will pursue in the face of the war commencing between its western and eastern neighbours. The document is, however, but a string of sentences, worded with the studied care of pledging the Government to nothing at all.

UNITED STATES.

By the *Europa* we have advices from New York to the 8th inst. The news is not very important.

There had been considerable excitement in Congress on the Nebraska Bill, which has at length been disposed of so far as the Senate is concerned. In that Chamber the debate was brought to a close at a late hour on the 3rd, or rather at an early hour on the 4th instant, and upon the vote being taken, there appeared for the bill 37, and against it 14.

AUSTRALIA.

By the *Sydney* steamer we have received intelligence from Australia to the 7th of December—some days later than the dates by the *Great Britain*. A falling-off in the produce of some of the gold-fields is reported, owing to the want of water, and the rush of the diggers to new quarters. The Ballarat and Forest Creek sides seem to be the principal attraction. The week's produce from Bendigo had fallen off about 7000 ounces; but many of the diggers were hoarding their gold to spend at Christmas. The price was steady at 76s. 9d. Mr. Khull, in his circular, reports, upon good authority, that there was still abundance of gold to be obtained when the proper season came round. The quantity shipped for the year, up to the 10th December, was 2,141,876 ounces, which may be valued at £9,567,504. Drafts against gold on London were at one per cent discount. The Ovens diggings were yielding largely.

MUSIC.

The Second Concert of the Philharmonic Society took place on Monday evening. It was, on the whole, a good concert, but, containing no novelty whatever, it affords little room for remark. The instrumental music was of the very highest order. It included Beethoven's first Symphony in C, one of his early compositions, and in a simpler and lighter style than his later works of the same class, but not excelled by any of them in beauty; Mendelssohn's famous Symphony in A minor, known by the name of the "Scottish Symphony," because it is founded on the impressions received by the composer from the national music of Scotland when he visited that country; Weber's overture to "Euryanthe," Mozart's overture to the "Zauberflöte," and a charming concertante of Spohr's for two violins, admirably executed by Mr. Sainton and Mr. H. Blagrove. All these pieces were performed under the unerring guidance of Mr. Costa, with the perfection which characterises the orchestra of the Philharmonic Society.

The New Philharmonic Society began its third season on Wednesday evening, at St. Martin's hall, to which it has transferred its concerts from Exeter-hall, where they had hitherto taken place. The change is evidently for the better. Exeter hall is the best place in London for oratorios and other choral performances on a vast scale, but St. Martin's hall is much better fitted for orchestral symphonies and overtures, and for a specimen of the lighter music of the modern school. The orchestra of the New Philharmonic Society is diminished in numbers, this season, probably on account of the smaller size of the hall. This has produced the inconvenience of rendering the balance of sound very defective. The stringed instruments—the essential part of an orchestra—are weakened, while the brass and other wind instruments are necessarily kept up to their full complement. Though the orchestra did its duty admirably, under the able direction of Herr Lindpaintner (who has this season resumed his post of conductor), yet the effect was often seriously felt. The programme contained much that was excellent, though some things were indifferent; and others, good in themselves, were out of place. The chief feature of the concert was Beethoven's "Sinfonia Pastorale"—one of the most sublime of the mighty master's orchestral works: it was performed in a manner worthy of its grandeur, and made a profound impression. Equally admirable, but in a different style, was Mozart's Concerto in D minor, played by a very clever young pianist, Miss Arabella Goddard, with a degree of finish, refinement, and expression which we have never heard surpassed. She was vehemently applauded, and recalled after she had left the orchestra, to receive additional marks of enthusiasm. A selection from the "Freischütz" of John Sebastian Bach, from which manner in which it was announced in the programme, was evidently designed to be one of the most prominent points of the concert. But it failed to produce the expected effect; it was found dry and heavy, and very coldly received. Bach is a great and profound master; but his vocal music is very little known in England, and what is known hardly seems to justify the extravagant and exaggerated admiration. The introduction of a violin solo (Mr. Blagrove) was injudicious. Though extremely well played by Mr. Cooper, it was a mere piece of fiddling—a collection of tricks *a la Paganini*, which nothing less than Paganini's own magic of bow and finger could render acceptable. Weber's song in "Oberon," the original of which he composed to make room for the snow pieces written for Braham, was well sung by Reichardt, and is certainly much the better of the two. Mozart's Canzonet sung the scena from the "Freischutz" "Und ich reise mit ihm," so well that, backneyed as it is, it was received with warm applause. Such were the principal features of a very good but by no means faultless concert. The hall was very full.

The Directors of the Royal Italian Opera have put forth their prospectus of the season. Every thing material which it contains may be comprised in a few words. The principal soprani are to be Grisi, Viardot, Trevelli, and Bosio. In regard to Grisi, it is announced that this is positively her last season. The contralto is Mdle Didiée, the same we had last season: she is much too weak for the position. The tenors are Mario, Naudin, and Gardoni; and the basses Tamburini, Lablache (who, having stuck by the old house to the last, has now come to the new), Ronconi, Badiali, and Zelger. The name of Formes, we regret to see, is not included. These great performers (not to speak of those of the second class) will form a powerful company. The theatre is to open on Thursday next, the 30th instant.

The Countess of Wicklow gave a concert, under the direction of Sir Henry R. Bishop, on Tuesday evening last, which was numerously and fashionably attended. The principal artistes were Miss Dolby, Miss Birch, Mdlle. Vestvali (lately arrived in this country from Milan), Mr. Sims Reeves, Mr. Lawler, and Signor Belletti.

THE THEATRES, &c.

PRINCESS'

"Trifles light as air" are, to the experienced farce-writer, only "strong confirmations" of his skill, and "proofs" of his having thoroughly acquired the art of so treating his subject, however slight, that he can create an interest out of almost nothing. Mr Bayle Bernard achieved a triumph in this way on Monday, when a new farce of his was produced, under the title of "A Storm in a Tea up." The title intimates the author's design to make much out of a little; and in this he was most undoubtedly assisted by Mr. and Mrs Walter Lacy, who gave to the writer's idea a substance and body that invested it with distinct personality and living interest. A piece which depends on the development and action of a single incident is necessarily difficult to describe, since the statement of the incident can convey no notion of the elaborate process by which it is made to move or please the audience. We may state that *Mr. and Mrs Felix Summerley*, about to make a holiday, and packing their portmanteaus and carpet-bags for a Continental excursion, are interrupted in their proceedings by the arrival of a post-order, the direction on which is almost obliterated by the servant having accidentally split some ink on it, so that it cannot be clearly deciphered whether it is meant for the husband or the wife. The latter has every claims it, and, blinking it comes from a friend in Boulogne secures it in her pocket without reading it; whereupon the husband's suspicions are awakened that it comes from a former lover, and his jealousy gradually gathers strength, until the "storm" in the tea-cup" commences. This theme exhausted, the tables are turned upon the husband, by the discovery that the post mark is not Boulogne, but Bordeaux, and the "storm" continues, though flowing in a different direction. Ultimately it transpires that the letter was intended for neith r, but for their respected papa, and related to an order for wine. We have already indicated that this farce was successful, and that the two principal performers were deserving of high recommendation. It is due to our gratification in recording the success of this little drama, to be able to say that it is original, and not a version from the French. It has, however, all the neatness of the Parisian vaudeville; and the dialogue is not only polished, but witty.

LYCEUM.

A new piece, entitled "Wanted a She-Wolf," was produced on Thursday. The characters are German, and the action is exceedingly slow and sluggish; but there is sure, and occasionally wit, in the delineations and dialogue, which secure it success. The plot, in fact, turns upon a child in a basket being sent to *Herr Doctor Dreiserus* (Mr. Frank Matthews), and its "surreptitious paternity" being charged on *Herr Professor Fiechte* (Mr. C. Matthews), the mother being supposed to be the Doctor's niece, *Clara* (Miss M. Oliver). The *Burgomeister Babenhausen* (Mr. B Baker) makes himself busy, and in particular charges the two persons just named with the responsibility of the infant; but, finding the master too far advanced a declaration from his own daughter that it is her off-spring, she having married in private a proscribed exile, named *Conrad* (Mr. Templeton). The *Burgomeister's* repentance is manifested by a profound silence, and divers expressive embracings of the parties whom he has implicated. The title of the play is derived from the fact that the Doctor and Professor have called the babe *Romulus*, and propose to advertise for a nurse under the name of a She-wolf. There is a pretty and playful concerning *Thaddeus* and *Clara*, who are scarcely in love, and a declaration of whose mutual affection is elicited by the circumstances detailed. The piece was well received, but the author's name was not given.

ADELPHI

We have recently had instances of failure from the want of skill in dramatic structure. This week we have to record a triumph almost altogether due to the presence of that skill. The author of "Mask and Faces" have already entitled themselves to public confidence; and their fresh venture on Monday, entitled "Two Loves and a Life," a "new and original drama" in four acts, is well calculated to increase their claims. Messrs. Taylor and Reade are fond of quaint appellations, and the present piece excites attention by a similar peculiarity. The "Two Loves" are ladies with a strong affection for a Jacobite gentleman, whose "Life" is forfeited to the law. Both heroines strive to save him. One, to whom he is married while in prison, *Anne Musgrave* (Miss Woolgar), effects his escape, while *Ruth Bonnygar* (Mdme. Celeste) procures his pardon from the *Duke of Cumberland* (Mr. Selby), whose life she had formerly saved on the Leven Sands, and whose signet she accordingly bears, in proof of her claim to recompense. One of the best scenes in the play is that in which *Ruth* pleads for the life of *Sir Gervaise Rokewode* (Mr Leigh Murray). There was an intense eloquence in the style, a fervour and reality in the passion, and so distinct a characterisation in the *Duke's* manner—rough but kindly—that the authors may take credit here for an example of dramatic dialogue of rare merit. In the catastrophe of their pathetic story they have been equally happy. The scene on Tower hill, with the apparatus of a public execution, and the anxious crowds assembled, was not only excellent as a mere stage arrangement, but also for the disposition of the drama to interest. Poor *Ruth*, on finding that she had saved the hero for another, is at first inspired with a sentiment of revenge; but her better feelings prevail; and, having lately discovered her father, *Rudel fix* (Mr Webster), she resolves to devote herself to filial duties. The character we have just mentioned is one of the most marked in the piece, and acted with that distinct individuality which Mr. Webster is so capable of assuming. A result, in the costumes of a Quaker and a smuggler, he proceeds in his career of *Jacobite* man, with a quietness of manner, produced both by the depth of his religious convictions and the force of his sorrowful experiences. The tale of his sufferings, as told to his daughter, was most pathetically rendered. Notwithstanding its great merits, however, this play is not without its faults. These chiefly regard one part of its machinery. The events are principally brought through the cupidity of *Nunwire*, the postmaster of Ulverstone (Mr. O. Smith), who, not being able to read himself, causes his daughter *Anne* to open all letters previous to the delivery, and interpret to him their contents, of which he takes advantage to drive good bargains in the market. The more consequent on acts like these gives Miss Woolgar some fine opportunities for the expression of compunctious feelings, and of the struggle which it produces against the domestic tyranny under which she suffers. But it is evident that, in communicating to her father this correspondence, she might have omitted what she wished; nor is it credible that a man so intent on the kind of information would not have so far applied himself to the delivery, and interpret to him their contents, of which he takes advantage to drive good bargains in the market. The more consequent on acts like these gives Miss Woolgar some fine opportunities for the expression of compunctious feelings, and of the struggle which it produces against the domestic tyranny under which she suffers. But it is evident that, in communicating to her father this correspondence, she might have omitted what she wished; nor is it credible that a man so intent on that kind of information would not have so far applied himself to the delivery, and interpret to him their contents, of which he takes advantage to drive good bargains in the market. The scene between *Ruth* and *Anne* on the subject of her approaching marriage with *Sir Gervaise* is admirably managed: the dramatic tyranny under which she suffers. But it is evident that, in communicating to her father this correspondence, she might have omitted what she wished; nor is it credible that a man so intent on that kind of information would not have so far applied himself to the delivery, and interpret to him their contents, of which he takes advantage to drive good bargains in the market. But it is evident that, in communicating to her father this correspondence, she might have omitted what she wished; nor is it credible that a man so intent on that kind of information would not have so far applied himself to the delivery, and interpret to him their contents, of which he takes advantage to drive good bargains in the market. The scene between *Ruth* and *Anne* on the subject of her approaching marriage with *Sir Gervaise* is admirably managed: the dramatic

OLYMPIC.

A new musical comedietta, entitled "The Wrong Box," was produced on Monday—a slight affair founded on the French piece of "La Nuit aux Soufflets," and relating to an accidental box on the ear given to the *Duke of Brewery, Hereules III.* (Miss F. Horton.) Slender as is the interest of this drama, it is wrought up with great skill, and the characters are exceedingly well-drawn and contrasted. The *Duke*—a young ruler, who adopts for his model the great monarch Louis Quatorze—is a sort of playful leopard, who seduces his victims into familiarity, and then springs upon them fatally at some unexpected moment. The *Count de Carabelle*, a Frenchman of the court, through the mistake alluded to in the title of the play, has brought himself within the danger of this deceptive love of, by whom he had previously been petted and trusted. Mr. Wigan, in both passes of the character, acted admirably. Overdoing in the first, and, indeed, reckless; but, in the second, terrified almost to imbecility. A lady, his ward, *Hélène d'Orgilaise* (Miss Wyndham), serves for "the medium," to effect his delivery from the snare into which he has fallen. A story is quoted to the Duke of the magnanimity of the great King whom he had accepted as his exemplar, and how he had pardoned a similar insult on finding it to proceed from a lady's hand. The fair *Hélène* pretends that she is the true culprit, and is, on the ground of the historical association, of course, forgiven. The piece served for the introduction to these boards of Mr. Robinson, as *René de Montdidier* the lady's lover. He was well received. The little drama was perfectly successful.

CHESS.

TO CORRESPONDENTS.

An Ex-Member, &c.—No. 825 cannot be solved as you suggest. What is to hinder Black on his first move, from taking the Kt with his Queen's Pawn? We shall be glad to see the games when played.

E. B. of Bristol.—The celebrated Staunton Chess-boards are to be had of the original manufacturer, Jewell, 26, Lisle-street, London.

Ignoramus.—You have copied our diagram incorrectly. In that, there is a Black Pawn at the 3rd K's sq.

Provincial.—The annual subscript on to the St. George's Chess-club, for country members, is one guinea only. Apply for a copy of the new rules, to the Secretary, we have not room to give them at this busy moment.

Barnes, Hyde park corner.—We do not know upon what terms Mr. Löwenthal gives lessons at present in the game. You had better apply to him personally, at the Wellington Chess Rooms, 169, Strand.

E. B. C.—Each article.

E. B. C.—We do not at all approve of what are miscalled "Blindfold" or "Bewilderment" games. In the diagram sent to us, these pieces are continually coming off, until are thus the cause of frequent errors.

St. George's Chess-club.—At a meeting of the Committee on Wednesday last, Mr. Von Heydebrand der Lasa, the distinguished author of the "Handbuch des Schachspiels," was unanimously elected an honorary member of the Club.

R. D. M.—We quite approve of the first and third rules. With the second, however, we are not so well satisfied.

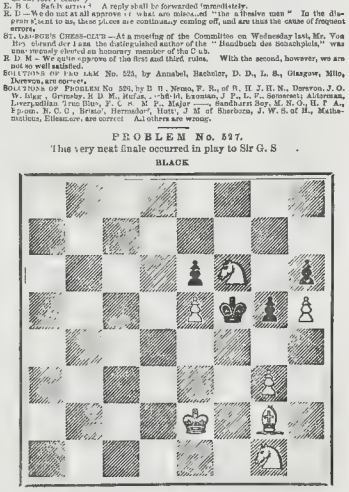
Solutions of Problem No. 825, by Annabel, Bachelor, D. D., L. S., Glasgow, Milo, Inverness, are correct.

Solutions of Problem No. 826, by B. B., Nemo, F. R., of H. J. H. N., Dawson, J. O. W., Isaac, Grimsby, R. D. M., Rufus, —ch-ld, Ignotus, J. P. L. F., Somerset, Aldermoor, Liverpudlian, True Blue, F. C. S., M. P., Major ——, Sandhurst Boy, M. N. O., H. F. A., Ignoramus, N. G. O., Bristol, Hernando, Harry, J. M. of Sunbury, J. W. S. of H., Mathematicus, Eldersloe, are correct. All others are wrong.

PROBLEM No. 827.

The very neat finale occurred in play to Sir G. S

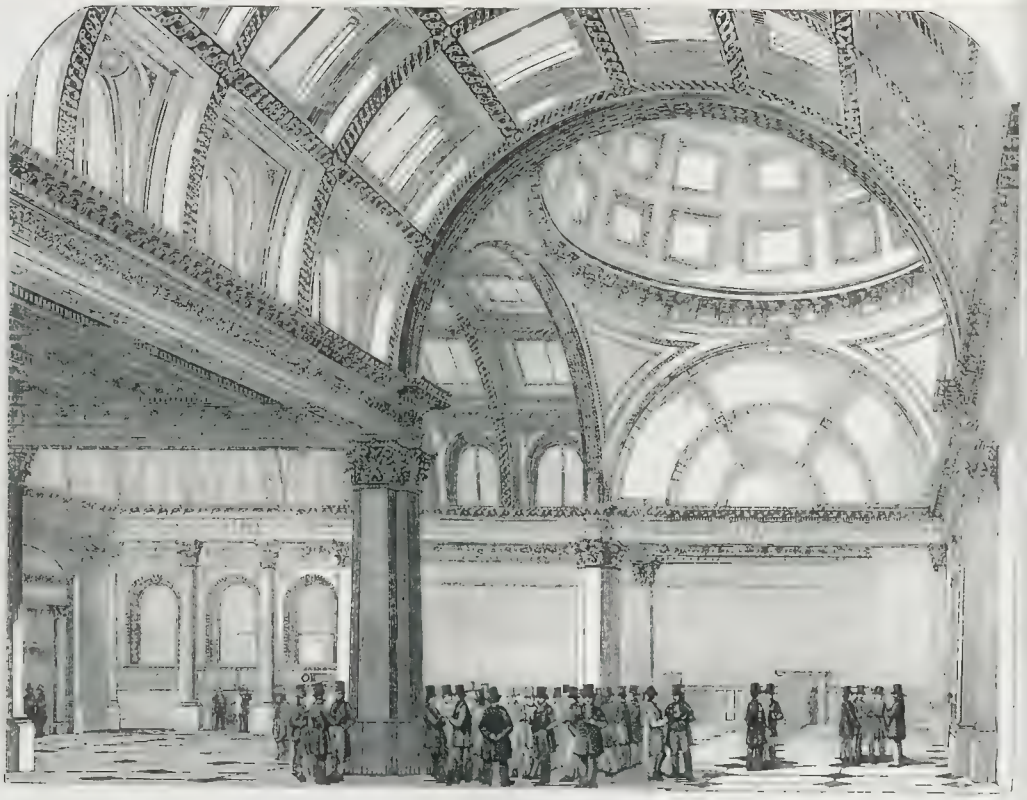
BLACK



WHITE.

White (Sir G. S.), having to play, announced mate in four moves.

Reduction of Colonial Postage.—The reduction of postage between this country and the colonies to a uniform rate of 6d. on letters not weighing more than half an ounce, commenced on the 23rd inst. with regard to the following colonies, viz.:—Canada, Prince Edward's Island, Bermuda, British West Indies (Barbadoes and Turk's Island excepted), British Guiana, Bahamas, Belize, Malta, and Gibraltar; and on the 1st May the same reduction will be made in the postage on letters between this country and Ceylon, Hong-Kong, St. Helena, and the Gold Coast.



THE NEW LONDON SIGHT—EXCHANGE.

THE STOCK EXCHANGE.—LONDON WAREHOUSES.

In Illustration of the largest Money-market in the world, and the st extensive buildings in the metropolis, for purposes of trade, y be appropriately associated upon the same page, since they possess kindred interest in being great centres of our commercial prosperity. commence with

THE STOCK EXCHANGE.

n origin of the Stock Exchange, although not commencing with the stence of a National Debt, yet arose out of it. There were formerly y two recognised modes of obtaining funds for great national emer- cies—subsidies levied by the arbitrary will of the Sovereign, and ns from wealthy merchants or corporations. The financial history of country, up to the time of the second James, presents but one un- ied system of rapacity and bad faith, on the part of each succeeding vernment. In every reign money was wrung from the pockets of any s or from any individual who was supposed to possess it. Richard I. estened to sell "London itself if a larger subsidy were not raised to lish his army for the Holy War." King John forced money from the ots and higher clergy. At one time outrageous monopolies were ly another, arbitrary fines were imposed, or as arbitrary taxes e levied; at another, "benevolences" were claimed; while many a n the Crown jewels were sold or pawned, to meet the exigencies of Sovereign.

he first gleam, and it was but a gleam, that shone through all this ty atmosphere of wrongfulness, comes to us in the time of Sir Thos. shum. Those arbitrary subsidies, so odious and so objectionable, be- e, under his financial administration, the exception rather than the . Gresham's advice to Elizabeth was, "Keep your credit, and dially with your own merchants; for it is they who must stand by , at all events, in your necessities." The principle thus enunciated— very pivot on which works the system of mutual reliance between a on and its rulers—though acknowledged, was not fully acted on l the Revolution, which placed William of Orange on the throne.

With the accession of William III. commenced that enormous accu- mulation known as the National Debt, supported and upheld in its ga- thering by its strict observance of Gresham's great principle, "Keep your credit." Mr. Macaulay has said that the Revolution did not import the practice of creating a debt—it merely introduced the system of ho- nestly paying it. Before the Revolution the National Debt amounted to £664,263, producing an annual charge of £39,855, chiefly in the form of terminable annuities. At the present moment the Debt amounts to up- wards of seven hundred and sixty-one millions, producing an annual charge of more than twenty-seven millions.

The growing importance of the English Funds soon produced exten- sive jobbing in the various securities, and the scene of these transac ons was the Royal Exchange. In 1698, however, the jobbers found a more convenient locality, in 'Change-alley. Here, looking south, stood Jon- than's Coffee-house—as much the resort of the stock-jobbers, brokers, and their clients, as "the Alley" itself; and here assembled men of all ranks and characters, infected with a spirit of gambling that reached a culminating point with the bursting of the South Sea Bubble in 1720. The rumour effects of this latter scheme created so strong a prejudice against speculation in the public securities, that the House of Commons in that year, passed a vote to the effect "that nothing can tend more to the establishment of public credit than preventing the infamous practice of stock-jobbing."

Another objection to the "doings in the Alley" was made in the pro- visions of the bill brought in at the instigation of Sir John Barnard, in 1733, against "time bargains," which, from that time, became illegal. The crusade against "the Alley," in fact, seems about this period, to have been at its acme; the proceedings of the jobbers in the public Funds were decried as "a complete system of knavery, founded on fraud," and the whole town was said to be "converted into a corporation of brokers and usurers, which could lie the Government into credit one week, and out of it the next."

Yet the virtuous indignation against the stock jobbers which swelled the immaculate bosom of the State, was slightly at variance with the practice of the Government in encouraging lotteries for its own profit. And, with a singular want of consistency, too, no indignation was vented against the traffic in seamen's tickets: a considerable portion of the fortune accumulated by Guy, the founder of the hospital bearing his name, was made by this traffic.

From some unexplained cause, but possibly from "Jonathan's" not being sufficiently extensive, in consequence of the increase of stock-job- bing business, those engaged in it removed to a room in Threadneedle- street; and in a newspaper dated July 15, 1773, we find that "the brokers and others at 'New Jonathan's,' yesterday, came to a resolution that, instead of its being called New Jonathan's, it should be called 'The Stock Exchange,' which is to be wrote over the door. The brokers then collected sixpence each, and christened the house with punch."

The still increasing scale of transactions in the public Funds, however, rendered another removal necessary; and at the close of the last cen- tury subscriptions were raised for the erection of a new Stock-market; the site fixed on being Capel-court, on the east side of Bartholomew- lane—the spot where formerly stood the residence of William Capel, Lord Mayor of London in 1504. The first stone of the new building was laid on the 18th of May, 1801. It records that "at this era, the first year of the union between Great Britain and Ireland, the public funded debt had accumulated in five successive reigns to £552,730,924." And the inscription adds—"The inviolate faith of the British nation and the principles of the Constitution sanction, and secure the property embarked in this undertaking. May the blessing of that Constitution be sacred to the latest posterity."

Hitherto—at all events, while it was held in 'Change Alley, and at Jonathan's Coffee-house—the market had been an open one, into which any person could go as freely as he could pass along a public thorough- fare; but, on the creation of the new Stock Exchange, none but members were admitted, who were elected by ballot, and who paid an annual subscription.

All business in the Foreign Funds was still transacted in the Royal Exchange, and so continued up to 1822, when the jobbers in those securities removed to the market in Capel-court. It is worthy of re- mark, as regards Foreign Stocks, that bargains in them "for time," do not come under the category of Sir John Barnard's Act; and differences

MESSRS. COOK, SONS, AND CO.'S WAREHOUSE, ST. PAUL'S CHURCHYARD.

rding to the decisions of several Judges, may be recovered by the er against a repudiating client.

e Stock Exchange, for all purposes of its internal government, is ruled committee of thirty of its members, who have a power of expulsion, nsion, and reprimand. A person desirous of admission must be in- ced by three members, each of not less than two years' standing. each of whom becomes security for the new member in £300 for ears. In the event of the latter being unable to meet his liabilities. ll or discount broker, nor any person engaged in business not con- ed with the Stock Exchange; no clerk in the Bank of England, India House, South Sea House, or in any public or private es- shment, is eligible to become a member. Neither can any person initted whose wife is engaged in business.

e members are divided into two classes, brokers and jobbers: the r are the agents of the public for the purchase or sale of and shares, and are remunerated by the charge of a commission; alter a e two dealers, and buy of, or sell to, the broker, remuna- g themselves by the "turn" of so much per share or per cent. "turn" varying according to the value of the stock or share, and onsequent extent of the risk.

e fluctuations in price are regulated by the simple economy of ly and demand; and the market rises or falls in proportion. The ction of any event—such as a war, or a good or bad harvest— upon prices by anticipation.

mething of the "old leaven" of prejudice against jobbers, which sted in bygone times, is still to be met with at the present day. y cannot "see the necessity" for the jobber's interference, and over look upon the "turn" of the Market as so much lost to the er or seller. The corn jobber was at one time regarded with a more evil eye than the stock-jobber; and the laws, for many

ly the 5th and 6th Edward VI., cap. 14, whoever bought any corn or with intent to sell it again, should be reputed an unlawful sser, and should, for the first fault, suffer two months' imprison- , and forfeit the value of the corn; for the second, six months' im- sonment, and forfeit double the value; and for the third, be set in the y, suffer imprisonment during the King's pleasure, and forfeit all his

centuries aimed at annihilating the dealer in corn; endeavouring to hinder any middle-man from coming between the grower and consumer. The positions of the stock and corn-jobber bear a relative affinity to each other, and the agency of such a middle-man is necessary to main- tain a just balance between the supply and demand, and to regulate an equitable price for the commodity.

The Stock Exchange having been found too small for the accommo- dation of its members, who now number 1350, besides 500 clerks, its en- largement was commenced about a year ago, the Committee hiring the Hall of Commerce until the completion of the alterations of their own house. This has just been accomplished, and the new structure was opened last week.

It has been erected by Messrs. W. Cubitt and Co. from the designs of Mr. Thomas Allason. About £6000 was expended in securing additional space prior to the commencement of the works, and the cost of the new edifice will exceed £10,000. It stands in the centre of the block of buildings fronting Bartholomew-lane, Threadneedle- street, Old Broad-street, and Throgmorton street. The principal en- trance is from Bartholomew-lane through Capel-court. There are also three entrances from Throgmorton-street, and one from Thread- needle-street. The area of the new house is about 75 squares, and it would contain 1100 or 1200 members; there are, however, seldom more than half that number present.

The site is very irregular and enforced some peculiar construction in covering it, into which iron enters largely. For the cupola laminated ribs are used. The vault which covers the centre of the building, 39 ft. span, is of timber and iron. The whole of this, together with the dome, &c., is covered with lead to the extent of about 80 tons, and is an ex- cellent piece of plumber's work.

Besides the "house," or large room, there are strong rooms, com- mittee rooms, reading and refreshment rooms, &c.

To ventilate the building, fresh air is admitted at the basement into two large chambers, filled with coils of warm-water pipe (by Jeakes), heated at a very low degree, for the purpose of tempering, but not warming, the air. A communication is formed between these chambers and the house behind the wall-framing; and the tempered air is ad- mitted into the house at a height of about six feet from the floor. The vitiated air is got rid of by an extracting chamber on the apex of the dome, heated by a gas sun-burner with 300 jets. During the day the sun-burner is concealed from view by a sliding perforated metal screen; but, when required, sufficient illuminating power is to be obtained, we are told, by withdrawing the screen, to light up the house without addi- tional burners.

The building is warmed by large open fires. The floor, ceiling, and sides of the new strong-room are formed of hollow-metal iron girders, ten inches from centre to centre, with flanges five inches wide, having trans- verse wrought iron bars five by three eight even nine inches; the whole filled in with blue Staffordshire bricks in pure cement. The walls are lined with one hardened steel, and fitted up with wrought-iron boxes. There is an external wall, two feet thick, round the strong room, to prevent fire from coming in contact with the metal girders. The floor between the refreshment-room in the basement and the house over is formed by rolled T iron joists, two feet six inches apart, having the lower flange placed downwards, and three courses of plain tiles in cement resting on it: the whole is covered with twelve inches of concrete, and a wood floor over. We have abridged these structural details from the *Builder*. The interior, as our Illustration shows, displays very beautiful ornamentation; and the new house is altogether one of the most elegant edifices of its class in the metropolis.

LONDON WAREHOUSES.

Whoever of late years has paid much attention to the extraordinary changes which have taken place in the conduct of business, whether in relation to the production or the dissemination of saleable goods, can hardly have failed to mark that the economy of commerce, of whatever kind, has been undergoing very important modifications. Old systems are breaking down, and, like old machines past work, are pushed aside to make room for new improvements. In the departments of manufacture, on the one hand, science is taxed to discover the means of effecting the maximum of produce from a given amount of raw material; and, as one of the results of her investigations, such words as "waste," and "rubbish," and "refuse," are beginning to be expunged from the manufacturer's vocabulary. Everything is found to have its use, and to be available for purposes of profit; and a multitude of articles of mer-

chandise are now bought and sold which are manufactured from materials that a generation back were regarded as utterly worthless. In the departments of distribution and sale, on the other hand, a system of ingenious adaptation and order, almost amounting to a science, has grown up contemporaneously, and is fast spreading into general use. Its grand object is the economization of time and labour, which are as much the capital of the merchant, who pays his business agents for the time they spend in his service, as are his raw material and machinery that of the manufacturer, who remunerates his agents for the work they execute. Thus, it is one principle which is at work in both instances—the principle to which commerce owes its progress, and will owe day over its ultimate perfection the principle, to wit, of a prudent, provident, and politic economy.

We are led to these reflections by a morning's visit, which by the courtesy of the proprietors, we have been allowed to make, to some of the monster warehouses standing within the shadow of St Paul's Cathedral. It may be worth the reader's while to follow us at least through a portion of the route, and to witness the spectacle it presents of industrial energy and order. We will land him first, with his permission, in the Receiving-room, an underground chamber on the basement floor, of the Messrs. Pawson and Co.'s establishment. It is a simple affair enough, being an ordinary room filled with bales and boxes, and differing only from other underground rooms by abundance of light, and a more than usual degree of cleanliness. An inclined plane communicates with a back street, and down this almost every article of merchandise sold in the establishment finds its way into the premises, and from them as the sale is effected, finds its way out again from a chamber of exit but a few paces distant from it. But it is the history of the goods, between their entrance and their exit, with which we have to do. Being received and unpacked, and checked off per invoice, they are consigned to the custody of one or other, according to their description, of twenty-seven different managers—that being the number of departments into which the establishment is divided. By them they are arranged and displayed in different apartments and galleries, for inspection by the retail traders and foreign agents; and, when purchased, are despatched to all parts of Britain and of the civilised world.

But we are as yet on the basement floor. Near the Receiving room is the Private Order-room, where goods are presented for the registering of such orders as are given personally by tradesmen. Near that is the Travellers' Order room, where the same number of clerks enter the orders received from a dozen or more travellers engaged in the provinces. Then comes the Town Order-room, for the registering of town travellers' orders; the Shipping-room, for the entry of goods sent to all parts of the globe; the Country-room, for buyers from the country; and the Ready-money room, which is, of course, a second Town room. Then there is the Scotch weigh-room, two rooms below ground always on the *qui vive* in Norway, and sending home plenty of orders. Next we have a roomy area monopolised by the packing department, where we see a prodigious quantity of goods on the point of bidding farewell to St Paul's churchyard. A people into a somber-looking vault, called the Fireproof-room, where sundry strong boxes repose, like coffins, behind an iron door, and we pass into the Calico-room, where we are up to the eyes in stacks of Manchester goods; and thence into the Linen-room, at once ever head and ears in Irish, Scotch, and foreign linens; and finish the basement floor in the Flannel-room, amid flannels enough to tuck up the whole Corporation of London, and leave plenty to spare.

This establishment being composed of two separate buildings, connected together by the underground floor, we must of necessity visit them one at a time, after ascending from the basement. Both divisions occupy the area of several entire houses. We ascend first into the older building, which occupies the ground floor of its first. On the ground floor, level with the street, we find the Haberdashers' department, built up with every species of haberdashery; and an extensive fancy depository, teeming with ornamental manufactures of every kind; which have given employment to workers in wood, in ivory, and in marocco, in brass, in leather, and in bronze; to cutlers, japanners, modellers, and carvers; and to the possessors of numberless ingenious arts and devices coming within no specific designation. Engravings from the works of the first modern masters adorn the walls, while everything fans fai fo. the drawing-room, the boudoir, or the toilet, is ranged on all sides in orderly abundance. Ascending to the first floor, we find that appropriated entirely to the silk trade, and filled with the produce of Yorkshire and the West of England, together with fabrics of a coarser texture from Germany. The second floor is allotted to the ready-made shirts and clothing, which latter department also extends into the third floor; a portion of which, as well as the whole of the fourth or topmost floor, is used for the depository and sale of furs.

Descending again to the basement, and passing under the banking-house of Messrs Puget, Baisbridge, and Co., which separates the two divisions of the establishment, we come to the ground floor of the new house, catching, as we pass, a momentary vision of a row of clerks quietly at work, in a long gallery at the side. We are struck, as we ascend, with the amplitude of the new building, which covers a large area, and with the efficiency of the contrivance for securing an abundance of light in every part. This is effected by a series of parallelogrammic wells, each some twelve by twenty feet in area, cut sheer through the successive floors, and admitting a flood of light from the sky. Taking into account the ventilation had to be built downwards from the top—that it was, in a manner, designed as it proceeded, to meet certain sudden and awkward exigencies—it presents an extraordinary example of skill and success. The ground floor is occupied by the printed cambrics and muslins of Scotland and Manchester, and the stuffs from Bradford and elsewhere. Here, also, are the receiving-rooms for the deposit of goods manufactured in London for the house—to say nothing of a whole series of counting-houses. The first floor is set apart for Delaines and fancy dresses, Spitalfields silks, Manchester silks, French silks, French merinoes, and various fancy fabrics. On the second floor we meet with hosiery, gloves, bandannas, trimmings, a forest of umbrellas, and a prostrate plantation of parasols, besides accommodation for 10,000 of the fair sex, in the shape of stays. Rising to the third floor, we are in a paradise of exquisite colour, amid pyramids of "flowers of all hues, and, without thorn, the rose," which, had we met with them in a Royal conservatory, we should never have taken for "wet cloth," by the artificial and imitative products of female industry. Here, too, are the marvellous productions of French taste, in ribbons of endless variety and exquisite design, together with the Coventry ribbons, which lag far in the rear of those of France. Here is the shawl department, in all its exuberance of design and colour, and both of home and foreign manufacture. Here are the lace rooms, the straw-plait rooms, and the mantle rooms, where ladies in full dress, but minus heads and feet, standing in graceful attitudes, accord the visitor a silent welcome.

If, from the upper part of either division of this huge mart, we go out upon the roof, we see it covered with broad tanks, supplied with water by the New River Company, which communicate by pipes with every floor in each floor code of the new division of the house, and by means of these, which are accessible at any moment, a plentiful supply of water can be furnished instantly to any part of the building, so that, in fact, were it not for the panic that invariably ensues upon an alarm of fire, there would be little or no risk of inflammable articles, are most of its contents, but little real danger in case of a fire occurring.

While wandering through such large accumulations of material wealth—perhaps, perhaps, he sees a hundred thousand pounds' worth of goods in a single department—a stranger is apt to infer that such a monster speculation must necessarily involve the elements of confusion in the management. Nothing can be farther from the truth. So perfect is the system of accounts, so effectual its double check it ensures, that a mistake rarely occurs, and when it does occur, may be said to rectify itself: and, we have it from the best authority, that, so complete is the working of the entire machine, the head of the concern can, if he choose, on arriving any morning, have the whole multitudinous stock, even to the smallest minutiæ, taken in a single day, and carry the account home with him at night!

Having thus looked at the commercial aspect of this establishment, we will glance at its effects on its domestic accommodations. Our merchants have long been aware that "property has its duties as well as its rights," and it has been found out, too, that attention to such duties brings its own reward. Time was when employes can do nothing for the employed beyond the rigid exaction of service; that time has passed away, and now the employer finds it his interest to nourish and to cultivate the integrity and the intelligence, which are the components of good service. As a consequence, when we cross the street at the back of these business premises, and enter the domestic home of the employed, we find home comforts abounding, and the presence of everything inducing to self respect and assisting to self-culture. We chance to come upon a hundred or so of young men in the act of dining, in a lofty, well-ventilated apartment, and pass a group of porters engaged in the same interesting ceremony in a separate room. We find an admirable library, well stocked with valuable works of the highest class of literature. In the upper floors we pass through a suite of airy dormitories, where light and ventilation have been cared for, and cleanliness is the order of the day.

In the kitchen we are introduced to a novel species of cooking apparatus, of most formidable capabilities, by means of which frying and grilling, and boiling and steaming, and roasting are carried on upon a power fully wholesale scale, without raising the temperature of the department beyond a few extra degrees. No fire is, in fact, visible; and though a dozen substantial joints are at this moment roasting, and our modern waters instinctively at the odour, there is neither spit nor jack, nor unctuous cook-maid, with a fiery face; but, instead, a series of ornamental iron cabinets, which a remarkably cool *maitresse de cuisine* superintends with literal *sang froid*. She opens one of them, and within are half a dozen goodly joints, just roasted to a turn, without having turned once, being cooked in a state of quietude by the heat from hundreds of diminutive spurs of gas surrounding them on all sides. In other cabinets other viands are cooking by similar agency; and a large boiler, heated by the same means, generates steam for a series of steaming-kettles, available for various culinary purposes. Altogether, the apparatus is marvellously compact and efficient, and, we were given to understand, is decidedly economical.

Two things are especially remarkable in the aspects of this establishment, both commercial and domestic; these are the order which regulates operations in every department; and the cleanliness, amounting to the entire absence of anything like dust, soil, or dirt, which reigns in every square foot of the premises. Even in the stables this latter feature is predominant; and that the pains which ensure it are well bestowed, is evident from the admirable condition of the animals.

We must now turn our attention to a neighbouring establishment, that of Messrs. Cook, Sons, and Co., standing but a stone's throw distance from the one we have just quitted. In imposing façade of this really magnificent building, which looks up towards Cheapside, must be familiar to many of our readers. It is not, however, from without that a just idea can be formed of its architectural character. Unlike most of the buildings in the heart of London, it is not an assemblage of small buildings, incorporated from time to time to meet the exigencies of business, but a complete whole, admirably designed for the purpose to which it is applied, and finished throughout with a view to picturesqueness of effect, as well as to the convenience of commerce. The edifice may be said to consist of three parts—the front warehouse, which looks into St. Paul's Churchyard; the back warehouse, which opens into Carter-lane; and the grand central warehouse, which connects the two together. On entering we are met by the same presence of abundant light, produced by similar means to those adopted in Messrs. Pawson's new house, but carried out in a style of greater magnitude and more artistic proportions. In addition to the four-sided wells which pierce the several floors in various places, there is in the centre of the building a grand elliptic lantern, adorned with elegant friezes at the several stories, which admits a flood of light from the sky, illuminating every stage. The galleries are supported by slender Doric columns; and solid walls are superseded by lateral series of elegant arches, which, viewed from various points of elevation, present picturesque vistas suggestive of indefinite space and distance. The structure was erected by Mr. J. T. Knowles, and in point both of design and execution, it leaves nothing to be desired. To most people, in fact, it would appear more like a Walhalla than a warehouse: the interior decorations are so chaste and simple, the lines that meet the eye are everywhere so graceful, and the colours employed, being chiefly a subdued white, broken with a light neutral tint, are so soft and unobtrusive, that the building, great as are its intrinsic merits, is subordinated to its purpose as the repository of the valuable and beautiful productions of human ingenuity and toil. Call it a Walhalla if you will, but you will not call it by it as a simple, sacred, not to poesy and the arts, but to mechanical genius and industry.

In its internal economy, this establishment combines resembles very much the one we have already described; but of that we know nothing. We noticed, however, that the luggage and other wares are done by a steam engine; and we rode from bottom to top through the successive floors in a moving chamber traversing a perpendicular shaft. On the roof are cellular water-tanks, ready in case of fire, and appliances for the discharge of water tantamount to seventeen fire engines are ever at hand on the premises. The whole fabric is warmed by steam, laid down in pipes beneath the floorings; and everywhere the same scrupulous cleanliness prevails which marks the perfection of order and business management.

Were we to extend our researches to Messrs. Grucock and Co.'s establishment in Bow Churchyard, we should find the same system of order and subdivision controlling the operations of a somewhat different line of business, the same facilities for the economy of time and labour, and evidences of the same growing appreciation of the indissoluble connection which exists between the interests of the employer and his responsible agents.

CALENDAR FOR THE WEEK.

SUNDAY, March 26.—4th Sunday in Lent. Duke of Cambridge born, 1819
MONDAY, 27.—Peace of Amiens, 1802. Gunpowder invented, 1380.
TUESDAY, 28.—General Abercrombie killed, 1801.
WEDNESDAY, 29.—Siege of Acre, 1799.
THURSDAY, 30. Allied sovereigns entered Paris, 1814.
FRIDAY, 31. Beethoven died, 1827
SATURDAY, April 1.—Expedition to the North Pole sailed, 1818.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING APRIL 1.

Sunday.	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday.
M. h. m.	M. h. m.	M. h. m.	M. h. m.	M. h. m.	M. h. m.	M. h. m.

ZOOLOGICAL GARDENS, Regent's Park.—Fellows and Visitors are informed that a pair of GIANT ANT EATERS, and an adult pair of INDIAN LIONS have been added to the Collection. Admission, 1s. Monday, 6d.

NATIONAL FREEHOLD LAND SOCIETY, 14, Moorgate-street, Lothbury.—The Freehold Estate, sold by AUCTION, at GARRAWAY'S, on MONDAY the 27th inst. Members entitled to prior to of choice will have the option of choosing in their order from the estate on the 27th, 28th and 29th inst.

Those may not be left after that time, they may be taken by any person paying the price, or possessing or purchasing the right to borrow the money, and if the whole should not be sold during the MEETING, the remaining one may be taken by any person on payment of ten per cent, and the balance, with interest, within twelve months. Persons not having rights of their own, but wishing to obtain early shares, can do so by purchasing the rights of others, and a register of rights offered for sale with prices is kept at the office. Plans, with conditions of sale, may be had on application. March 16, 1854 W. E. WHITTINGHAM, secretary.

COUNTY FIRE OFFICE, 50, Regent-street, and 2, Royal Exchange-buildings, London. Established in 1807.

The Rates of Premium charged by the County Fire Office are upon the lowest scale consistent with Security to the Insured

When a Policy has existed for a period of Seven Years, a return of 25 per cent. or one fourth of the amount of premium paid during that period is declared upon such policy.

The Returns paid to the present time amount to nearly £200,000

All Losses are settled with promptitude and liberality.

It is respectfully invited to purchase Policies in this office, the renewals of which fall due at Lady-day, that the same should be paid on or before the 6th of April. The receipts are lying at the offices in London, and in the hands of the several agents.

CHARLES STEVENS, Secretary.

THE CHARTERED BANK of INDIA, AUSTRALIA, and CHINA. The Subscribers, Allottees, and Scripholders, who are opposed to this Bank letting for her proposed with, are requested to forward, without delay, to Messrs ATKINSON and PILGRIM, 88 Sotters, Church court, Lothbury, London, the number and par ics are of the shares and Scrip held by them respectively, it being desirable that the Committee appointed at the Meeting held at the London Tavern on the 16th instant, should be put in possession of the information as soon as possible.

The Committee take the opportunity of stating that, although the call of £2 per Share, declared by the Directors, is payable this day, no forfeiture of shares can take place until the expiration of one Calendar Month previous to which time an adjourned Meeting will be held, of which due Notice will be given.—25th March, 1854

STEAM to AUSTRALIA, carrying her Majesty's Mails.—The Royal General Screw Steam Shipping Company's splendid Iron Steam-ship, QUEEN OF THE SOUTH, 1800 tons (Captain NORMAN), WILL SAIL from Southampton for Adelaide, Port Phillip, and Sydney (carrying on the 4th APRIL. This splendid vessel having been one of the Company's fastest steamers on the Indian line, and noted for her very superior accommodations—offers an excellent opportunity to intending Passengers. Her speed of the South has enough and her passages between Southampton and India will be equally unsurpassed, thereby justifying the anticipation that she will make one of the fastest runs to Australia on record. Passage money from 50 to 100 guineas. For plans and full particulars, apply to Messrs. GRINLAY and CO., 124, Bishopsgate-street; or 9, St. Martin's-lane, Charing-cross.

*** Several articles of interest are unavoidably omitted from the present Number.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 25, 1854.

THE money and intrigues of Russia, though unsuccessful in procuring friends for the Czar in civilised Europe, have been to some extent successful among the semi-barbarians of modern Greece. The insurrection fomented by Russian agents continues to spread in Albania and Epirus, and seems to be openly encouraged by the Government of King Otho. It will become the immediate duty of the allies of Turkey to aid the efforts of the Sultan in extinguishing this revolt. The foolish sentimentalism that, thirty years ago, led France and England to act with Russia in the establishment of a Grecian kingdom, has long since died away. People are, by this time, pretty generally convinced that it was a gross anachronism to revive the name of Greece for a country whose inhabitants possess none of the virtues or characteristics, and but little of the blood, of the ancient people who formerly inhabited it. But the error as regards true policy has proved even greater than the anachronism. Under the Government of King Otho, Modern Greece has not only brought discredit upon its former patrons, but has proved itself unworthy to rank among the civilised Powers of Europe. That such a Government should be permitted to complicate the affairs of the world at a moment like the present is not to be tolerated. We can fully understand why, under Russian protection, King Otho and his piratical subjects should do their best to gain possession of Albania and Epirus; and we can imagine that a "private and confidential" correspondence, between the Czar and the Court of Athens, may have long ago settled when this insurrection was to break out; to what extent the King was either secretly or openly to encourage it; and that equivalent rewards were promised him, as the price of his complicity. But the Western Allies are fortunately in a position to defeat any such projects, if they exist, as well as to co-operate with the Sultan, in restoring peace in the disaffected portions of his dominions. When military officers, high in the service of King Otho, assume the command of large bodies of insurgents, and invade the Turkish territory without resigning their rank or their pay in the Greek army, and without any public disavowal of their conduct on the part of their Sovereign, King Otho and his Government become their accomplices, and will justly be held responsible for all the evils that may ensue. The insurrection in Albania will be easily quelled, if it be not aided by the predatory hordes of the neighbouring kingdom; and the allies will act a merciful part towards King Otho, by letting him understand at once that the slightest attempt on his part to aid the insurgents will be summarily and condignly punished by the fleets and armies of France and England. Greece is vulnerable on every side, and the possession of Athens would cost the allies but little trouble. King Otho, and the Russianized German Court by whom he is surrounded, have not governed Greece in such a manner as to make friends even among the Greeks themselves. Independence has done nothing for the Greeks; and the re-annexation of the country to Turkey, if it effected no change for the better in their condition, would not sensibly operate for the worse. King Otho has already had a specimen of the manner in which Great Britain can punish duplicity and breach of faith. The remembrance of his former humiliation should have taught him to beware how he braved a second time the just retribution of this country.

THAT war produces many evils is a fact which has been often stated, and as often deplored. But war also is the parent of some benefits and virtues. It produces fortitude courage, self-reliance

and patriotism. The time of war is one in which self sacrifice is a pleasure to some, and a duty to all. The individual who would cheat or rob his country in a time of peace, hesitates at committing such an atrocity during a war. It is only the vilest of the vile who betray their country in the hour of difficulty. The deserter meets with no sympathy, and the man who becomes a spy, and sells his country to the enemy, is abhorred by everybody, even by those who employ him. And what shall be said of the trader who contracts to supply his Government with wholesome food or necessaries for the army or navy at a reasonable price, and wilfully foists unwholesome or abominable trash upon them instead of the article which he undertook to furnish? Such a man deserves not only the epithets of "miscreant" and "criminal," which Lord Ellenborough, the Duke of Newcastle, and other Peers, have showered upon him, but the severest punishment that an offended nation can inflict. Such a case has unhappily occurred within the last few days, and has elicited the disgust and indignation of the whole country. The subject was brought under the notice of the House of Lords on Tuesday night by the Earl of Ellenborough. It appears that a person who gave the name of Sturgeon, of Grays, in Essex, undertook to supply the British Government with a quantity of pressed hay for the service of the Artillery horses destined to be employed in the war on the Danube. A portion of this hay had been shipped before it was discovered that the trusses were merely external coatings of hay, and that the insides were formed of straw, shavings, rubbish, and even offal. It was furthermore discovered that the trusses had been wetted so as to increase their weight, by which means a risk was incurred of spontaneous combustion on board ship. It is enough to make an Englishman blush for his country that such a fraud should have been perpetrated at such a time. If the knave had been a Russian, though the fraud might have been as great, the disgrace would not have been so intolerable. If he had owed allegiance to any Sovereign on the globe except to the Sovereign of these isles, the people might have found some degree of comfort in the reflection that he was an alien. If, as is feared, the criminal law cannot reach such an offender, it is more than enough to make an Englishman wonder at the short-sightedness of our law-makers. We trust, however, that this nefarious trader—if he be not the last of his kind—will be the last who shall escape the severest punishment which it is advisable to inflict. His offence, if it had not been discovered in time, might have endangered the safety of one valuable arm of the British service; and might even have led to the failure, more or less complete, of military manœuvres, on which the fortune of the campaign depended. Words can scarcely express the detestation with which such an offence must be regarded. We do not agree with the noble Lords who considered that the publication of the man's name to the abhorrence of his countrymen would be a sufficient punishment. To men of honour such a punishment seems too great for endurance; but persons who commit crime have thick hides, and can bear an immense amount of obloquy. It is likely enough that if a ragged urchin in the streets had robbed this delinquent of his pocket-handkerchief, he would have felt himself bound, as a "respectable man," to prosecute the offender as a warning to other reprobates of his class. We earnestly hope that the law will be found elastic enough to reach a case infinitely more dastardly and mischievous. If it be not, the greatest amends that Mr. Sturgeon can render his country, will be to betake himself to St. Petersburg, and to remain there. Certain we are, in the present temper of Parliament and the people, he will be luckier, if he escape, than any other person who shall hereafter imitate his example in his dealings with the British nation.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, MARCH 23.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 30.37 inches at the beginning of the week to 29.94 inches by the morning of the 19th; increased to 30.32 inches by the morning of the 21st; and decreased to 30.29 inches by the afternoon of the same day; increased to 30.49 inches by the 22nd, and decreased to 30.351 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.262 inches.

The mean temperature of the week was 40·8°, being 1·2° below the average of the corresponding week during 38 years.

The range of temperature during the week was 26·8°, being the difference between the highest reading on the 17th, and the lowest on the 18th.

The mean daily range of temperature during the week was 17·9°. The greatest was 25·5° on the 18th; and the least 6·3°, on the 19th.

Rain fell on three days during the week, to the depth of four-tenths of an inch.

The Weather, on the 17th, 21st, and 23rd was fine, and the sky tolerably free from cloud. The rest of the week was cold and dull. The wind throughout the week has been almost constantly north.

Lewisham, March 24, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—In the week ending Saturday, March 18, the births of 1764 children were registered: 883 were boys, and 881 were girls. The averages of the same week in the nine corresponding years were 764 and 747 respectively. The number of deaths registered within the same week was 1156: of these, 606 were males, and 582 females.

PRESIDENT OF CHRIST'S HOSPITAL.—On Thursday the Governors of this ancient institution met for the purpose of choosing a new President, in the place of the late Alderman Thompson. The Lord Mayor Sidney was proposed by Mr. Hoare, and his Royal Highness the Duke of Cambridge by Mr Hankey, M.P. At three o'clock the glasses for the ballot were closed, and the numbers declared as follow:—For the Duke of Cambridge, 216; for the Lord Mayor, 87: majority, 129. The proceedings then closed.

LONDON PROVIDENT INSTITUTION, MOORFIELDS.—On Thursday the directors of this institution issued their annual report, which states that the money transactions in the course of the year 1853 numbered 78,358, and that the increase in the amount of balances due to depositors was £15,782 7s. 1½d.

THE HIGHLAND SOCIETY.—Tuesday evening, being the fifty-third anniversary of Sir Ralph Abercromby's victory and glorious death, the Highland Society held a high festival, at the Freemason's Tavern, in honour of the event: the Duke of Hamilton and Brandon in the chair.

LATEST INTELLIGENCE.

FRENCH PREPARATIONS FOR WAR.

The latest accounts from Brest state that the *Jemmapes*, the *Inflexible* (on board which Admiral Deschênes is to hoist his flag), and the steam-frigate *Darien*, were in the roadstead; the *Souffleur*, the *Vigie*, and the *Erèbe*, would be ready for sea directly; and the equipment of the frigates *Hyche*, *Aventure*, *Néréide*, and *Calypso*, was proceeding with the greatest activity. Letters from Toulon of the 20th mention that the embarkation of troops had not yet commenced, but was expected hourly. At Marseilles the most extraordinary exertions prevailed in despatching vessels daily. At Algiers everything had been arranged for the departure of troops for the East.

It is said that terms have been entered into between the English Government and the French railway companies, by which the latter engage to forward horses to any of the ports at the rate of 20s a day.

NEUTRALITY OF SWEDEN.

Russia has recognised the neutrality of Sweden, on the terms insisted upon by the latter Power. It remains to be seen what course will be now adopted by Denmark, as, notwithstanding Russian influence in that country, a treaty providing for joint action between Sweden and Denmark is known to exist.

THE RUSSO-GREEK INSURRECTION.

Private letters from the provinces represent the state of affairs most favourably, and tranquillity reigned everywhere, with the exception of the Greek frontier. The insurrection at Samos is far from being so serious as it was represented by the Greek journals.

The Porte has resolved to send a naval division to the Archipelago. It is to be composed of one frigate, 52 guns; one corvette, 22 guns; two brigs, and one steamer. This squadron was to sail immediately for Prevesa, and not under the orders of Fuad Effendi, the Frontier Commissioner. When affairs are terminated in that direction it will cruise among the Greek Islands.

The term of six months allowed to Russian subjects to remain in Turkey expires on the 26th inst. The Porte has officially notified to the American intermundo that, at the expiration of that delay, they must quit the Ottoman empire. In Constantinople there are 317 Russian subjects, but in Turkey they number upwards of 4000.

THE WAR ON THE DANUBE.

Letters from Kalafat to the 16th, speak of several skirmishes during the previous week, but nothing of importance had occurred. The general news from the seat of war is extremely scanty. The *Soldaten Freunde* learns that English and French officers are now employed by Omer Pacha in arranging the details of the various projected operations. It is generally known that the Turkish troops now in the Bulgarian pass and fortresses on the Black Sea will march to Schumla in the month of April, in order to make room for the Anglo-French auxiliaries, who, on their arrival, will assemble somewhere in the neighbourhood of Constantinople, and repose for a time from the fatigues of their voyage. None of the auxiliary troops will be sent to the Danube; but the reserve division of the French General Forey will, perhaps, be posted in Roumelia, to the south of the Balkan. A very strongly intrenched camp is being formed at Fokshany.

General Sir J. Burgoyne, accompanied by two Turkish staff officers, proceeded by the *Caradoc* to Varna, on the 8th inst.; from thence he will visit Schumla, and the fortifications along the Danube. On his return to Constantinople, he will be received in audience by the Sultan, and then quit for London, leaving Colonel Tylden in his place.

THE TRIPARTITE TREATY.

Advices from Constantinople of the 13th instant announce that the tripartite treaty between the Porte and England and France was signed on the 12th.

THE EAST INDIA AND CHINA MAILS.

The *Sultan* steamer arrived at Southampton yesterday with the heavy portion of the India mail. She left Malta on the 15th. Two French steamers were lying in Gibraltar Bay on the 18th, and a French screw steamer arrived half an hour previous to the *Sultan's* departure, but her name was unknown.

THE COURT.

The birthday of the Princess Louisa occurring on Saturday last the Duchess of Kent paid a visit of congratulation to her Majesty at early hour. In the afternoon her Majesty visited the Duchess of Gloucester, at Gloucester House. In the evening the Queen had a winner-party, which included the Duchess of Kent, the Bavarian Minister, the Earl of Aberdeen, Lord Seymour, Lady Fanny Howard, the Baroness de Speth, Lord and Lady Claud Hamilton, Lord and Lady Alfred Hervey, Major-General Sir Richard England, and Colonel Wylde.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of Buckingham Palace. The Hon. and Rev. Gerald Wellesley officiated.

On Monday the Prince Consort, accompanied by the Prince of Wales, rode out on horseback. The Princesses Helena and Louisa visited the Zoological Gardens in the Regent's park, during the forenoon. In the evening the Queen had a dinner party, the guests including the Duchess of Kent, his Royal Highness the Duke of Cambridge, the Duchess of Sutherland, Madame Tricoupi, the Neapolitan Minister and Princess de Cariati, the Earl and Countess of Derby, the Earl and Countess of Desart, the Earl and Countess of Lucan, Lord and Lady de Ros, and Major-General Sir de Lacy Evans.

On Tuesday the Queen, attended by the Hon. Matilda Paget, Viscount Torrington, and Captain the Hon. Charles Grey, visited her Royal Highness the Duchess of Gloucester. Her Majesty received visits from the Duchess of Cambridge and the Princess Mary. In the evening the Queen and the Prince honoured the Olympic Theatre with their presence.

On Wednesday the Queen held a Levee.

Lord de Tabley and Lieut.-General Sir Edward Bowater have succeeded Lord Waterpark and the Hon. Mortimer West, as the Lord and Groom in Waiting on her Majesty.

The Court, it is understood, will return to Windsor, for the Easter holidays, on Saturday, the 15th proximo.

THE LEVEE.

The Queen held a Levee (the third this season) on Wednesday, at St. James's Palace. Her Majesty and Prince Albert, attended by the Ladies and Gentlemen in Waiting, arrived from Buckingham Palace at two o'clock, escorted by a detachment of the Life Guards.

Her Majesty wore a train of white and gold moiré antique silk, bordered with white flowers, and trimmed with gold blonde and white satin ribbon. The petticoat was white satin, trimmed with gold blonde and white satin ribbon to correspond with the train.

The Queen's head dress was a diamond circlet.

Among the more notable presentations were the following:—

The Marquis of Lothian, by the Marquis of Salisbury.
The Earl of Dunmore (succeeding to the title), by the Marquis of Londonderry.
Lord Audley (on his lordship's succession), by Lord Seymour.
Lord Belhaven, by the Marquis of Londonderry.
By Admiral Sir Thomas Hastings, by the Earl of Aberdeen.
By Sir John Hay, Bart., by the Baroness de Speth here.
By Major-General Sir Richard England, on his departure for foreign service, by Viscount Hardinge.
Lieut. Hon. L. Carnegie, on appointment to the Staff, by General Lord Raglan.
Colonel Birkhall Earnest, on appointment to be Brigadier-General and Deputy-Adjutant-General to the Army of the East, by Viscount Hardinge.
Captain H. O'Brien, Secretary to the First Lord of the Admiralty, on return from abroad, by Sir J. Graham.
Mr. Alderman Moon, on his appointment as one of her Majesty's Justices of the Peace for the county of Middlesex, by the Marquis of Salisbury, K.G.

Her Royal Highness the Duchess of Gloucester continues to improve in health daily, and her medical attendants have great hope that she will shortly be convalescent.

His Excellency the French Ambassador and the Countess Walewski gave a grand dinner on Tuesday evening, at Albert-gate, the new residence of the French Embassy, to his Royal Highness the Duke of Cambridge and Lord Raglan, preparatory to their departure to join the expedition nary army in the East.

Viscount and Viscountess Palmerston gave a grand banquet on Saturday evening to his Excellency the French Ambassador and the Countess Walewski, his Excellency the Danish Minister, his Excellency the Portuguese Minister and the Countess Lavradio, and a distinguished circle. His Lordship has been suffering from an attack of gout this week.

Lord John Russell has been indisposed this week, with a cold, but is now better.

Lady Mary Wood had an assembly on Thursday evening, in Chesham-place.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Irish Exodus still continues on a large scale. The *Waterford News* says, "The Marquis of Waterford is exceedingly short of workmen on his farms."

A company is about to be started at Paris to run pleasure trains, and Marseilles, to Constantinople, at a charge of 300 francs.

A conference of medical and scientific men in Birmingham is spoken of, to consider the systematic and alarming adulterations of food, and articles of general consumption.

The Duke of Buccleuch is erecting a range of first-class dwellings at Kirkford, in Roxburghshire, to be occupied by the day labourers and others on his estate.

The aggregate receipts from all sources of traffic, by all the railways in the United Kingdom, during the first six months of 1853, amounted to £7,196,551 3s. 8½d.; and during the corresponding half-year of 1853, to £8,184,056 8s. 5d.

The total number of persons employed by the railways already opened, of the United Kingdom, in the first half of 1853, was 83,409; of whom 66,367 were employed in England and Wales, 8979 in Scotland, and 5163 in Ireland.

The French Council of State is now examining a project of law, by which prepaid letters are to be carried to any part of France for four sous. Unpaid letters are to pay six sous.

Mr. Latrobe, Lieutenant-Governor of Victoria, was expected to leave Melbourne for England in January.

Mrs. Chisholm sails by the *Ballarat* on the 4th April, for Australia, having been disappointed in the ship which was to have conveyed her, with a large party of female emigrants.

The tenders received for the construction of the new Westminster-bridge are as follows:—Myers, £305,000: Crawshay, £275,000; Mare, £301,000.

The balance of the debt against Prince Edward Island, which in 1851 was £24,375, is now only £2058; and the revenue, which in 1849 was £18,615, had risen in 1853 to £25,845, including £2800, the produce of an education rate.

Within about three months six fires in New York have destroyed buildings and their contents to the value of between five and six millions of dollars.

Lord Batteman has accepted the chairmanship of the Shrewsbury and Birmingham Railway Company, vacant by the decease of Robert Clive, Esq., M.P.

Paris is being supplied now in considerable quantities by rice grown in the south of France. It is considerably less in price, and the quality is good, in fact they report better than the rice of Piedmont and India.

The gross receipts, for 1853, of the Duchy of Cornwall amounted to £67,158. After deducting the amount of salaries, repairs, and other expenses, and leaving a balance of £6000 in hand, the sum of £57,925 was paid over to the Trustees and Treasurer of the Prince of Wales, who is Duke of Cornwall.

The Dublin committee have approved of the model furnished by Mr Christopher Moore for the bronze statue, to be erected in honour of Thomas Moore.

As Ivy Tor Consols, Cornwall, the miners have dug into a "chamber of crystals, as varied for beauty as the scenes in the late Crystal Palace."

At Panama a new steam company has been got up under the name of the "Central America and New Grenada Steam Navigation Company," for the purpose of opening up trade with the ports of Central America.

The preparations for the French Grand Exhibition are actively continued. As Prince Napoleon, the President of the Commission, is about to leave France on foreign service, it is expected that the Minister of State will succeed him.

An attempt had been made at St. Domingo to assassinate the President, and a conspiracy has also been discovered to burn and destroy the town of St. Jago.

English cotton shirts, on which the concise contents of the Koran are roughly printed in blue, are now selling in the Turkish camp. They are eagerly bought up at tenfold their value, as the Turkish soldiers attach to those talismanic extracts the gift of making the wearer invulnerable in battle.

The four liberated slaves from Cuba, on their way to Liberia, have left Southampton for London, where free passages on board the West Coast of Africa steamer *Faith* have been taken for them by order of the Government.

Of the 14,077 churches in England and Wales, there are only 732 churches that are open three times on a Sunday; and 4740 which are open only once on a Sunday.

The Panama railroad is now open to Obispo, which obviates the necessity of any more boating on the Chagres river. The whole of the Panama railway will be opened by the 1st of August next.

Cowell, Grimshaw, Gallaher, Lang, Gardner, Wood, and Brocklehurst, the Preston delegates, have been committed to take their trial at the Liverpool assizes, but have been liberated on bail.

Prince Carl Oscar, the son of the Prince Royal of Sweden and of her Royal Highness the Princess Louise of the Netherlands, died at Stockholm on the 15th inst., at the age of fifteen months.

The young King of Portugal is expected shortly at the hotel of the Portuguese Legation in Brussels.

The statue of Gustavus Adolphus, which was some time since cast on shore on Heligoland, from a wreck, has been purchased by the senate of Bremen for 6000 marks, and will be shortly erected in the market-place of that city.

Mr. Ewart has obtained leave to introduce a bill to amend the Libraries Act. The principal scope of the new measure is to place the power of founding town libraries on the same footing as that of founding baths and wash-houses.

The Mayor of Genoa has issued a circular to all the families of that city, requesting them to forward to him the names of all their relations that fell in 1848 and 1849, fighting for Italian independence. These names are to be engraved on a marble slab, to be placed in the Civic Palace.

Alsace has lately been overrun by an immense number of field mice, which have caused much damage. By the use of a mouse-trap of a particular kind, 15,315 of these animals were caught in thirty-six days, on a surface of fifty acres.

There is every appearance of the Madeira vine crop being blighted again this season.

The *Messagere di Modena* states that it is the intention of the Commander-in-Chief of the French forces at Rome to establish an entrenched camp near Civita Vecchia, with a view to fortify that place on the land side.

The weather, which for some weeks had been precociously warm and pleasant in Belgium, has suddenly resumed its winter severity, and snow has again fallen in various localities.

The Turkish loan for £2,000,000 has been taken by Messrs. Rothschild. The price is 85, the money to be remitted at six fifteen days from the date of issue, and it will pay nearly nine per cent on these terms.

In the Lenten Indult just issued from Rome by Cardinal Wiseman, he enjoins "that, as soon as war shall be publicly announced, there shall be inserted in the prayer recited after mass on Sundays for her Majesty the Queen, the clause (*for* forty years omitted) 'that she may conquer her enemies.'"

The streets of Paris are inundated with songs calculated to stir up the warlike spirit of France against Russia. The Czar and the Cossacks are held up as demons, and even Nicholas himself is painted in colours that might make him be taken for his namesake. The whole of these songs are sanctioned by the Minister of the Interior, and each copy bears the stamp of his office.

The French Government proposes to despatch a special fast steamer from Marseilles to Constantinople every five days, to convey couriers and official despatches for the joint Governments.

Official portraits of the Emperor and Empress of the French have been painted, at Winterhalter, to serve as models. They are now in the Louvre, and are said to be excellent likenesses.

The *Alta California* says, a specimen of the zoology of that country, in the shape of an animal allied to the porcupine, "twenty-two feet in length!" was lately sent to the San Francisco Academy of Natural Science.

In consequence of the Convention concluded between Austria and Piedmont, the telegraph lines of the two countries have just been connected at Bufalora. The telegraphs of the Pontifical States are now in direct communication with Piedmont, through Milan.

The *New York Herald* states, some very rich guano islands have lately been discovered in the Caribbean Sea.

General Giulay, the military Governor of Lombardy, has seized upon all the money belonging to the sequestrated properties of the emigrés.

Care has been taken for the wants of the Highlanders at Malta. An Inverness spirit merchant has received orders to ship a quantity of old high-and whisky to the Mediterranean.

The committee of the Maryland Senate have unanimously reported against the proposed prohibitory liquor bill.

H.M.S. "NEPTUNE."—REAR-ADMIRAL CORRY SALUTING THE QUEEN, AND GETTING UNDER WAY.

REAR-ADMIRAL CORRY'S DEPARTURE FOR THE BALTIC.

On Thursday week, as we stated in a portion of last Saturday's publication, her Majesty, accompanied by Prince Albert, the Prince of Wales, Prince Alfred Princess Helena, and Princess Louisa, visited Admiral Corry's squadron, lying at Spithead; immediately after which it was expected that the whole of the ships at the anchorage would have got under way, and have proceeded to the Baltic. The ships, six in number, which formed the squadron at Spithead, were the *Neptune*, 120; *Cæsar*, 91; *Prince Regent*, 90; *Boscawen*, 70; *Prolic*, 16; and *Bull-Dog*, 6. With the exception, however, of the *Neptune* and the *Bull Dog*, none of the ships were ready for sea. The *Cæsar*, not having her guns on board, was engaged in refitting her rigging; while the *Boscawen* and the *Prince Regent* had not made up the complements of their crews. At half-past ten on Thursday morning the Royal yacht, *Fairy* and *Elfin*, left Cowes Harbour, and proceeded to the anchorage Immediately on their arriving within a couple of miles of the *Neptune*, the latter opened a Royal salute, which was taken up by the *Prince Regent*, 90, Captain Smith; *Boscawen*, 70, Captain Glanville; and *Prolic*, 16, Commander Nolloth. The *Neptune* and *Bull-dog*, paddle-frigate, Captain W. H. Hall, then weighed—the former under topsails and top gallant sails, and ultimately royals; the latter under steam. The *Neptune's* sails were set as if by a simultaneous movement effected by machinery. At one moment she lay at anchor with all sails furled, and not the slightest indication of a movement; the next, down fell every stitch at once, and she wore round like a cutter, and stood majestically away for the Downs, followed by her smaller steam consort, whom she outstripped while yet inside the Nab. The splendid manner in which this ship was handled exceeded anything which has been witnessed at Spithead for some time, and reflects great credit on Captain Hutton and his excellent crew. There is probably no large ship in commission at the present moment which has a finer crew than Admiral Corry's flag ship: the greater portion of the men are from the *Prince Regent*, and so highly is Captain Hutton respected that he would have had no difficulty in obtaining a much larger number of hands for his ship, had they been required

The *Neptune* got away at eleven o'clock, with topsails, topgallant sails, royals, and jib, in admirable style. This being her first trip, her conduct under canvas was watched with considerable interest, and her performance fully realised every expectation formed of her; and, notwithstanding the immense weight of stores which she takes out, the ship made excellent way. The *Fairy* followed the *Neptune* out for some distance; and signal being made that she was about to part company, the rigging was manned, and what was considered the parting cheer was given. The same daring and exuberant enthusiasm which manifested itself on Saturday on board the *Duke*, was displayed on this occasion, and on the giddy top of the main, fore, and mizen trucks, was perched a tar who, holding one hand aloft and with the other wildly waving his hat, expressed alike his daring and his loyalty.

Her Majesty and Prince Albert from the deck of the *Fairy*, acknowledged Jack's enthusiastic loyalty—the Queen by waving her handkerchief, and the Prince his hat. Her Majesty, however, appeared unwilling to part company with the gallant crew, and proceeded with the noble ship a short distance outside the Nab, notwithstanding a fresh gale which was blowing, and the roughness of the water. A large war steamer appearing in the distance, her Majesty ordered the "demand signal" to be run up; and receiving, in reply, that it was the *Penelope*, a fine paddle steamer from the coast of Africa. Her Majesty is fully conversant with the code of signals, and on board the Royal yachts not unfrequently takes that department under her own management, selecting and reading the signals with as much promptitude and accuracy as many of her own officers. Having ascertained the name of the *Penelope*, the *Fairy* wore round, at a quarter to twelve, and for the third time the *Neptune* manned her rigging, and gave a loud, a long, and an enthusiastic parting hurrah—her Majesty still lingering on the spot, as though reluctant to leave the good ship. Passing the *Bulldog*, which accompanied the *Neptune*, and the anchorage, on her way to Osborne, the ships once more manned the rigging, and cheered her Majesty, who arrived at Osborne shortly before one o'clock.

REAR ADMIRAL CORRY, COMMANDER OF THE SECOND DIVISION OF THE BALTIC FLEET. FROM A DAGUERREOTYPE BY MAYALL.

The *Neptune* and *Bulldog* were under orders to anchor in the Downs till next day, and wait orders and despatches, when they sailed, to join the other portions of the fleet at Kiel Bay.

REAR-ADMIRAL ARMAR LOWRY CORRY.

We abridge from O'Byrne's valuable "Naval Biographical Dictionary" the following brief Memoir of the Commander of the Second Division of the Baltic Fleet:—

This officer entered the navy, as a first-class volunteer, in August, 1805, on board the *Diadem*, Captain Sir Home Popham; and, after assisting in the operations against the Cape of Good Hope and Buenos Ayres, returned to England, as a midshipman in the *Sampson*, Captain W. Cuming, in May, 1807. In the ensuing bombardment of Copenhagen, he was on board the *Leda*; and was afterwards wrecked, on the January 31, 1808, near the entrance of Milford Haven. The *Warspite*, 74, was his next ship; and in her he served, on the home and Mediterranean stations, till he obtained his commission as Lieutenant, on the 28th April, 1812. Mr. Corry, during the years 1812, 1813, and 1814, served in the *Nereus* and *Montagu*; and, on the 28th May, in the *Impregnable*, 98, flag-ship of H.R.H. the Duke of Clarence (afterwards William IV.), he escorted to England the Emperor of Russia (Alexander) and the King of Prussia. Lieut. Corry afterwards served in the *Tay*, 24; and was promoted to the rank of Commander in 1815. He sailed for the East Indies, in October, 1820, in command of the *Satellite*, 18; and in the July of the next year he became Flag-Captain to Admiral the Honourable Sir Henry Blackwood, who was an old and esteemed friend, and with whom he continued until he was invalided home in the *Samarang*, in February, 1822. In April, 1825, Captain Corry took command of the *Barham*, 50, and in that ship conveyed the late Earl of Durham to Constantinople. He afterwards took charge of a squadron on the east coast of Spain; and obtained the thanks of the Queen of Spain, her Ministers, &c., for his exertions in landing with the various ships companies under his orders, and pr serving the cities of Barcelona and Valentia, for her Majesty. From 1830 to 1844, Captain Corry was on half pay; but in September 7th, he was appointed to the *Firebrand* steam-frigate; and in December of the same year, he was transferred to the *Superb*, 80, to take charge of various ships in experimental cruises. Captain Corry obtained his flag as Rear-Admiral, on the 8th of March, 1853; and was appointed to the command of the cruising squadron which went to the Tagus on the recent death of the Queen of Portugal. On his return he was appointed second in command of the Baltic fleet, and his flag as Rear-Admiral of the White is now flying on board the *Neptune*.

KRONBORG CASTLE, ELSINEUR.

This important fortress is situated on the north-east point of the island of Zealand, in Denmark. It was erected about 1580, in the reign of Frederick II.; the style is Gothic, and the material white stone. The Castle is surrounded by fortifications of a comparatively-modern construction, the powerful guns of which sweep the Sound of the Baltic in all directions.

On the opposite coast is the Swedish town of Helsenborg, distant about three miles; and the two places form most formidable objects of annoyance to an enemy entering or leaving by this highway the Baltic. In 1801 the British fleet, under Sir Hyde Parker, with Nelson second in command, forced this passage of the Sound previous to the bombardment of Copenhagen.

Under the Castle are capacious casemates, capable of accommodating upwards of 1000 men; and the lighthouse at the north-west corner commands a beautiful and extensive view of Elsineur and its neighbourhood, the distant town of Helsinborg, and a long range of Swedish coast, with the Baltic bounding the horizon on the south.

There are many interesting associations connected with Kronborg. It has been immortalised by Shakspeare making its ramparts the meeting-place of *Hamlet* with his father's ghost. According to the traditions, its vaults are sacred, as the dwelling-place of the Danish Roland, the hero of a thousand legends, who never appears on the surface of the earth but when the State is in danger; and the dungeons of Kronborg have a melancholy interest attached to them from the unfortunate Caroline Matilda, Queen of Christian VII., and sister of George III. of England, having been imprisoned here. In the lively "Letters from the Baltic," the approach is thus described:—

Our voyage now increased in interest; the coast of Jutland and Kronborg Castle—or, as tradition calls it, Hamlet's Castle—like a square mass on the waters, in sight, and vessels far and near studding the expanse around, and indicating the line of boundary 'twixt sea and sky, which the misty glow of a cloudless sun had almost fused into one.

At Elsineur, that key which unlocks the narrow sluice-gates of the Baltic, an hour's delay occurred to pay those dues which are no mean compensation to Denmark for the scantiness of her absolute territory, and to take in a pilot to conduct us through the narrow slip which alone is navigable of this narrow sound. Our present locality recalled many naval reminiscences; and the new pilot at the helm occasioning a temporary leisure, we came in for some interesting particulars of our captain's life. Deriving his birth from the same county which sent forth Nelson, he had come under the particular charge of this great man; had served in his ship from the almost infantine period of his entering the navy; had assisted at the bombardment of this very Castle of Kronborg, which had attempted an opposition to their advance on Copenhagen; and had seen a brother, post-captain at the age of nineteen killed at his side a few days after his promotion.

Kronborg has already become a point of interest in our naval expedition to the Baltic; and, in another part of the present Number, we have engraved the pioneer of the fleet saluting the Castle in passing.

KRONBORG CASTLE, ELSINEUR, ENTRANCE OF THE SOUND.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

POSTAL CHARGES TO THE BALTIC FLEET.

Viscount CANNING, in answer to Earl Grey, mentioned that application had been made to the Treasury for authority to reduce the postal charge of letters to officers serving in the Baltic fleet from 1s. 8d. to 8d. the half ounce. For seamen and marines the charge would continue to be a penny.

HOUSE OF COMMONS.—MONDAY.

THE EASTERN QUESTION.

Mr. LAYARD postponed his question relative to the affairs of the East until the House should have an opportunity of digesting the very important and extraordinary correspondence upon the subject which had been recently laid on the table.

INCOME-TAX.

The House having gone into Committee of Ways and Means, the resolution for doubling the income-tax for the coming half year was agreed to without any discussion.

MINISTERS' MONEY (IRELAND) BILL.

The second reading of this bill was carried, by a majority of 208 to 97.

COLONIAL CLERGY DISABILITIES BILL.

The second reading of this bill was carried, after a short discussion, by a majority of 126 to 63.

PREVENTION OF BRIBERY AT ELECTIONS

The ATTORNEY-GENERAL moved for leave to bring in bills for the prevention of bribery in the election of members to serve in Parliament for the city of Canterbury, and the boroughs of Cambridge, Barnstaple, Kingston-upon-Hull, and Maldon. To remedy this state of things, he proposed simply to disfranchise the guilty parties whose names were reported by the Commissioners; and about whom, therefore, there could be no difficulty.

Sir J. HARMER also opposed the motion, and condemned the practice of issuing such commissions as those upon whose reports these bills were founded.

Mr. NAPIER thought that no man was bound to give evidence which would subject him to any species of forfeiture, and such forfeiture would therefore be held to be incurred in the indemnity. In this view the bill would be a breach of the honour of the House, if it passed.

Mr. WHITESIDE contended, that according to the fair and liberal construction of the Act of Parliament which gave the indemnity, the parties giving evidence could not be subjected to forfeiture of any kind.

The SOLICITOR-GENERAL contended that the bills of the Attorney-General were quite in accordance with the Act of Parliament which gave the indemnity, and gave it for the express purpose of enabling the House to legislate on the evidence thus to be obtained.

Mr. WALPOLE held that the object of the bill was to make "inquiry," and not to "disfranchise." In his opinion, the proposed measure involved a violation of the fundamental law of England.

Sir A. COCKBURN replied, and in the course of his remarks referred to the silence of Sir Fitzroy Kelly as symptomatic of non-coincidence in the opinions of those who sat on the same side of the House.

Sir F. KELLY rose in consequence of this remark, and expressed his full concurrence in the opinions of Mr. Walpole. At the very least, the Act of Parliament was sufficiently ambiguous to entitle the witnesses to claim indemnity from all consequences whatever. The bill was one of pains and penalties. It was a delusion, a deception, and a fraud.

On a division, leave was given to introduce the bill by 189 to 118.

Leave followed for bills to accomplish the same object in the four other boroughs (Cambridge, Barnstaple, Kingston-upon-Hull, and Maldon), whose writs had been suspended.

HOUSE OF LORDS.—TUESDAY.

PAYMENT OF SEAMEN.

The Earl of ELLENBOROUGH complained of the inconvenience which arose from allowing the coast guard-men who enlisted into the navy a higher rate of pay than was given to able seamen.

The Earl of ABERDEEN remarked that the experiment was a new one, and time was required to determine upon its final arrangements.

THE EASTERN EXPEDITION—FRAUDULENT CONTRACT.

The Earl of ELLENBOROUGH referred to an alleged case of fraud perpetrated by a contractor who had engaged to furnish hay for the transport vessels which were conveying troops to the East.

The Duke of NEWCASTLE admitted that such a fraud had been attempted. Every means would be used to bring the offender to justice; but there was much difficulty in finding a law that could reach the case.

HOUSE OF COMMONS.—TUESDAY.

THE INCREASED INCOME-TAX.

On the question that the report of the Committee of Ways and Means (Increased Income Tax) be received,

Sir H. WILLOUGHBY moved an amendment that the collection of the additional moiety extend over the whole year, and not be levied during the first half of the year. The Chancellor of the Exchequer having obtained the sanction of the House to issue, if necessary, £1,750,000 in Exchequer bills, there was no necessity for exacting the additional Income tax within six months

Mr. FRENCH seconded the amendment, adverting specially to the hardship inflicted upon Ireland by the increase in the Income-tax.

Mr. T. HANKEY was one of those who heard with surprise the remark of the Chancellor of the Exchequer, when explaining his Budget that it was a matter of congratulation that the balances of the Exchequer were so low. Mr Hankey went into details to show that Mr Gladstone had committed some errors of judgment in financial operations, the results of which had been inconvenience and loss. In April next the Chancellor of the Exchequer, must, in all probability, be a borrower to a larger extent than he anticipates. It was not good policy in the Government to place itself under too great obligations to the Bank of England.

Mr. W. WILLIAMS maintained that the course taken by the Chancellor of the Exchequer in reducing the balances, and lowering the interest on Exchequer-bills was judicious, and profitable to the public.

Mr SPOONER prophesied that, should the war continue, the inconvenience of the restriction would be felt to an alarming extent.

Mr. BUNCE, in reference to Mr. Spooner, in his character of prophet, remarked, that his predictions during a period of thirty years had always been falsified. He thought that the Chancellor of the Exchequer was justified in reducing the rate of interest on Exchequer-bills at the time that he did so.

Mr CAYLEY prognosticated that ere long the Act of 1844 would have to be suspended.

Russia was, he would prove a less formidable enemy than the Act of 1844.

Mr MALINS was certain that, if the real character of the law of 1844 was known to the public, it would not remain in force for six months.

Sir F. BARING, in adverting to the strong opinions expressed against the Act of 1844 by several members, thought the better course for them to pursue would be to bring forward a specific motion expressive of their views. With respect to balances of the Exchequer, Sir Francis thought the Chancellor of the Exchequer would have been in a more comfortable condition had he passed the Budget less than he does at present; but that was no disparagement to him. No man can foresee with certainty all the circumstances which may affect his calculations. With regard to the proposition involved in the Budget, he regarded it as the best arrangement which could have been made.

Sir F. KELLY, anticipating a costly, and it may be a lasting war, thought it the duty of the House to look manfully at its difficulties. Had Mr. Gladstone not neglected the warnings of Sir F. Kelly, and those on the Opposite of the House, the Treasury would have had a large amount at its credit.

Mr DISRAELI contended that the Government were justified in demanding increased taxes to provide for a war only upon the condition of proving that the war was unavoidable. This they had not done; and, after making out a case by the production of a voluminous series of documents, had within the last few hours issued a supplemental volume, giving a totally new aspect to the question. As time had not allowed him to study these new documents, he was not obliged to take the proposition now before the House just as it stood, leaving for future discussion the question whether the Ministry had deserved the confidence of the House or the country by the conduct which had led to their requiring enhanced revenues. Mr. Disraeli then passed on to the subject of the Exchequer balances, computing that the ready money that would be at the disposal of the Government next month would amount to a comparatively insignificant sum so few, indeed, as to be dangerous and impolitic, even if the country were in a state of profound peace. Assigning as the cause of this impoverishment the various reductions of interest and conversions of stocks attempts with much minuteness, he characterised them as having been injudicious, ill-advised, and persisted in against the opinions of the most competent authorities, and in the face of symptoms which should have shown the Chancellor of the Exchequer the peril he was incurring. The final result would be to force the Minister to raise a loan, which would only be obtained upon worse terms the longer it was delayed. Meeting the objection that no criticism should be pronounced on the Ministerial policy if the critic were not prepared to propose a vote of no confidence, the right hon. member urged that it was apparent the Government had no confidence in the House or even in themselves, and contrasted the expression of different Ministers at different times to show how loose and conflicting had been their opinions on the great question of peace and war. The war itself had been occasioned by this divergence of opinion. A united Cabinet would have averted it altogether—it was a coalition war. He believed that the Finance Minister would want more money than he could get, and it was not right to incur embarrassments.

The CHANCELLOR OF THE EXCHEQUER, in adverting to the discursive nature of the topics which had been touched upon in the course of the prolonged debate, said, the amendment actually before them had occupied but a small place. Replying to Mr. Disraeli, he observed that the omission to propose a vote of want of confidence was defended upon the very grounds that should have prompted it; and characterised the conclusion, in which that right hon. member had landed his argument, as illogical and recreant. Mr. Gladstone then proceeded to vindicate his policy with regard to the reduction of interest on Exchequer-bills, the conversion of stock, and the partial employment of the Treasury balances in buying up the public debt. He denied, in reference to the remarks of Mr. Hankey, that Government had sought accommodation from the Bank of England, except upon the ordinary terms of the discount market; or were in any way bound under special obligations to that establishment. He concluded by enforcing the policy of defraying the expenses of the year by the supplies of the year.

The amendment having been negatived, the report of the resolution was agreed to; a bill was ordered to be brought in; and the House adjourned soon after two o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

SIMONY LAW AMENDMENT BILL.

Mr. R. PHILLIMORE moved the second reading of the Simony Law Amendment Bill. It was practically the same as the measure introduced last year, absolutely prohibiting the sale of any ecclesiastical preferment, or a next presentation thereto, after decease of the present holder. The honourable member described the abuses which existed under the law as it now stood and declared that his bill had received the approbation of nearly all the Judges.

Mr BERNAL moved that the bill be read a second time that day six months, which was carried, after a short discussion, by a majority of 86 The bill was consequently lost.

The second reading of the Payment of Wages (Hosiery) Bill was carried by a majority of 120 to 73.

HOUSE OF LORDS.—THURSDAY.

ROYAL ASSENT.

The Royal Assent was given by commission to the following bills, viz :— The Consolidated Fund (£8,000,000) Bill, the Exchequer Bills (£1,750,000) Bill, the Coasting Trade Bill, the Mutiny Bill, and the Marine Mutiny Bill.

HOUSE OF COMMONS.—THURSDAY.

THE NEW JUDGE.

On the motion of Mr. HAYTER, a new writ was ordered to issue for the Borough of Lincoln, in the room of Mr. Crowder, who has accepted the office of one of the Puisne Judges of the Court of Common Pleas.

FORAGE FOR THE ARMY.

In reply to a question from Colonel Blair, Mr. B. OSBORNE stated that the parties who were guilty of supplying an inferior description of hay, under a forage contract, for the horses proceeding to Turkey, were Sturgeon and Sons of Grays, Essex.

Sir J. GRAHAM said that the Solicitor to the Admiralty had been that day instructed to prosecute the party. Should the law prove insufficient to meet such a case, he would come to Parliament with a bill to prevent the recurrence of such frauds for the future.

GAMING HOUSES.

The ATTORNEY-GENERAL moved for leave to bring in a bill for the suppression of gaming houses. He said that strict as was the existing law against gaming-houses, it had been found inefficient to put down the evil. They were barricaded in such a way that before the police could effect an entrance, there was ample time to destroy the gaming implements; and there was an impossibility, therefore, of obtaining evidence on the parties arrested therein Under these circumstances, he proposed that it should be a substantive offence, punishable by penalties, to prevent the entrance of officers legally authorised to obtain admission. He also proposed, by the bill that the magistrate—where a *prima facie* case was made out—should have the power of assuming the guilt of the parties, so far as to throw upon them the *onus probandi* that the house was not a common gaming-house. He also proposed to give the magistrate the power of selecting the persons whom he deemed it right to prosecute, and to liberate the others. One other proposal, upon which he set considerable value, was that of making it a substantive offence to give a false name.

After a few words from Sir J. SHELLEY, in approval of the measure, leave was given to bring in the bill.

THE INCOME-TAX BILL.

This bill was read a second time.

On the motion of Mr BRADY, the Medical Practitioners Bill was read a second time. Adjourned.

HOUSE OF LORDS.—FRIDAY

The COMMON-LAW PROCEDURE (1854) Bill was read a second time, with the understanding that it was to be referred to a Select Committee.

The Bill Ways (South Wales) Bill, and the Registration of Bills of Sale Bill, were read a third time, and passed.

The Valuation (Ireland) Act Amendment Bill was reported, with amendments.—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Mr. F. DUNDAS asked what measures would be taken by the Government for the protection of the fisheries on the north-east coast of Scotland, and the islands of Orkney and Shetland, in the event of war being declared?

Sir J. GRAHAM said he should be very much disappointed if a single Russian ship of war would be able to get into the neighbourhood of the fisheries at all

Sir F. KELLY asked whether it was the intention of Government, in the event of a declaration of war against Russia, to adopt any measures having reference to private property on board neutral vessels, or to the searching of neutral vessels, or to the letting out of privateers?

Lord J. RUSSELL said he hoped very soon to be able to give the requisite information. It might be by an Order in Council, or it might be necessary to have a bill in Parliament on the subject

In reply to a question from Sir F. Thesiger, Lord J. RUSSELL said he would proceed with the Oaths Bill on Friday next, unless more pressing business should interfere. He would give a more definite answer on Monday.

SETTLEMENT AND REMOVAL BILL.

Mr. BAINES moved the second reading of the Settlement and Removal Bill.

Mr STAFFORD moved, as an amendment, that the bill be read a second time that day six months, and complained that the Irish members, like the House generally, were kept in the dark as to the intentions of the Government. It had been yesterday announced in the lobby that Government had ascertained that Scotland and Ireland should be included in the bill, whereas it now appeared that they were not to be included, but that there would be a separate bill on the subject for them. The hon. gentleman then proceeded to take objections to the proposed measure, which he contended would, instead of improving the condition of the poor, increase their misfortunes, by removing the stimulus which at present existed to landlords to employ them. It would give the Commissioners at Somerset-house too great a control over the property of the country; it would break up altogether the present parochial system, and greatly increase the taxation of the country.

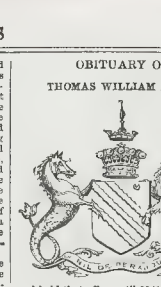
Lord D STUART seconded the amendment.

After a lengthened discussion the debate was adjourned until Monday.

The Income-tax Bill passed through Committee.—Adjourned.

OBITUARY OF EMINENT PERSONS.

THOMAS WILLIAM ANSON, EARL OF LICHFIELD.



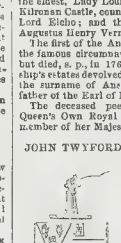
THE death of this nobleman occurred on the 18th inst., at Hill street, Berkeley-square. His Lordship was born 20th October, 1795, the eldest son of Thomas, Viscount Anson, by Anne Margaret, his wife, second daughter of Thomas W Coke, Esq., of Holkham, county Norfolk, afterwards Earl of Leicester He succeeded to the Viscounty of Anson at the death of his father, 31st July, 1818; and was advanced to the Earldom of Lichfield 8th September, 1841. In 1835 he became Postmaster-General,

and held that office until 1841. He was also at one time Master of the Buckhounds. The Earl married, 11th February, 1819, Louisa Catherine, daughter of the late Nathaniel Philips, Esq., of Slebech Hall, county Pembroke; and leaves issue, Thomas George, Viscount Anson (now second Earl of Lichfield), three other sons, and four daughters: of whom the eldest, Lady Louisa, is married to Edward King Tenison, Esq., of Kilronan Castle, county Roscommon, the second, Lady Anne, is wife of Lord Elcho; and the third, Lady Harriet, is married to the Hon. Augustus Henry Vernon.

The first of the Ansons who attained the Peerage was George Anson, the famous circumnavigator He was created Baron Anson in 1747, but died, s. p., in 1762, when that title became extinct; but his Lordship's estates devolved on his nephew, George Adams, Esq., who assumed the surname of Anson, and was father of Thomas, Viscount Anson, father of the Earl of Lichfield.

The deceased peer was Lieutenant-Colonel Commandant of the Queen's Own Royal Regiment of Staffordshire Yeomanry Cavalry, a member of her Majesty's Privy Council, and a Doctor of Civil Law.

JOHN TWYFORD JOLIFFE, ESQ., OF AMMERDOWN-PARK, COUNTY SOMERSET.

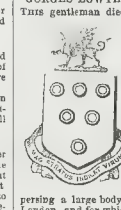


THIS much respected and lamented country gentleman died, after a lingering and painful illness, on the 16th inst., at his beautiful seat, near Bath.

Colonel Joliffe was eldest son of the late Thomas Samuel Joliffe, Esq., M.P. for Petersfield, by Mary Anne Twyford, his wife, heiress of Kilmeeston; and grandson of John Joliffe, Esq., M.P., whose father, Benjamin Joliffe, Esq., of Copton Hall, county Worcester, represented a family of considerable antiquity in the counties of Stafford and Worcester. Colonel Joliffe was Lieutenant-Colonel in the First Somerset Regiment of Militia, and a Magistrate and Deputy-Lieutenant for Somersetshire So great was the public good effected by this excellent gentleman's benevolence, and by his influence as an extensive landholder, that his loss will be long and deeply felt by a numerous tenantry. His hereditary estates devolve by entail on his only surviving brother, the Rev. Thomas Robert Joliffe, now of Ammerdown. There was one other brother, Charles Joliffe, an officer in the army, who fell at Waterloo.

GORGES LOWTHER, ESQ., LATE OF KILRUE, CO. MEATH.

THIS gentleman died on the 23rd ult., at his residence, Hampton Hall, Somerset, in the eighty-fifth year of his age. He formerly possessed large estates in the county of Meath. His father and grandfather represented the county of Meath for many years in Parliament; and the latter, Gorges Lowther, Esq., was father of the Irish House of Commons, having sat for a period of fifty years. On his death, the House, by unanimous consent, went into mourning for three days. Mr. Lowther, whose decease we record, was for many years member for the borough of Ratoath. He commenced his career in the 5th Dragoon Guards, and afterwards commanded for sixteen years, a troop of Light Dragoons, in the county of Hants, where he had estates; and on one occasion was instrumental in dispersing a large body of malcontents, on their way from Portsmouth to London, and for which he received the thanks of the county. Mr. Lowther was descended from William, fifth son of Sir Christopher Lowther, of Lowther; the present Earl of Lonsdale being descended from Sir John, the eldest son. Mr. Lowther was educated at Winchester College, and at the Military College of Angers, in France. He was an author of no inconsiderable eminence, having published several works of a controversial character. He married Julia, daughter of the Rev. Thomas Huntingford, D.D., and niece of G. J. Huntingford, Lord Bishop of Hereford, by whom he leaves issue, five sons and four daughters.



THE REV. DR. JENKYNS

THE Rev. Dr Jenkyns, Master of Balliol College, Oxford, and Dean of Bath and Wells, died on the 6th inst., at the Master's Lodgings of his College. Dr. Jenkyns' career was one of much respectability and high classical repute. He matriculated at Balliol College, May 5th, 1800, and took his degree of M.A., the 3rd October, 1806. Although at that time the system of awarding classes at the examinations was not in operation, it was evident that Dr Jenkyns passed through his examinations with great credit, for he was made Master of the schools in 1809 and 1810, and subsequently a public Examiner in Literæ Humanioribus. In the year 1819, at the time that he was Tutor and Bursar, he was elected Master of Balliol College, on the death of the Rev Dr. Parsons, Bishop of Peterborough. In 1824 he served the office of Vice-Chancellor of the University of Oxford, and distinguished himself by his firmness, his courtesy, and his aptitude for his duties. In 1845 he was appointed Dean of Bath and Wells. At the time of his decease, Dr. Jenkyns was a delegate of the press and of accounts in the University. He was, when he died, in his 71st year.

EXECUTION OF MOSES HATTO.—Moses Hatto was hanged yesterday (Friday) at Aylesbury. Subsequently to his conviction he had made a full confession of his crime a long rambling story affording not the slightest palliation for the murder.

A FATAL JOKE.—At Monaghan, last week, a "wake" was being held, and, as usual in rural districts, was the scene of much merriment. Amongst other frolics, a mock trial was held on a young man for the abduction of a young girl. Judge, jury, counsel, prisoner, and prosecutor were all enacted, and a verdict of guilty returned. The prisoner was placed on a chair, with a rope noosed round his neck, the other end cast over a beam, and unfortunately secured by some accident the chair was kicked from under the man, he dropped—the spine was dislocated, and instant death ensued.

THE NORTH COUNTRY SEAMEN.—There is a very unhappy feeling existing between the shipowners and seamen in the north-east ports. A union man will sail with none but such as have medals, and the associations dictate the amount of wages that have to be earned by them per month or per voyage. The shipowners of Shields, Sunderland, and Hartlepool have met this combination by a counter-combination, and in each port offices are established, called "Shipowners'-offices," for the employment of non-union men. Seamen offer £5 for a London voyage, but the unions refuse to allow their hands to go to sea under £6 10s.

DISCOVERY OF GOLD.—Last week, three labourers who were at work at Ballykilty, county Clare, upon the property of Mr. Blood, through which the Limerick and Ennis Railway is to run, accidentally turned up with a spade a large quantity of valuable antique Irish gold ornaments, of which they equally possessed themselves, and one of the parties, who filled his hat with the precious metal, was simple enough to sell 10¼ ounces of it for £30. The gold is of the purest description, consisting of armlets, ringlets, bracelets, collars, &c., and worth £4 per ounce.

ROYAL SEA-BATHING INFIRMARY.—On Thursday the half-yearly court of this charity was held at the London Tavern. The report stated that, though the year's expenditure, owing to the state of the markets, had been greater than that of the previous year by £164 5s. 8d., yet it was most satisfactory to state that the income also showed an increase of £211 1s. 6d., leaving a balance at the end of the year of £731 0s. 11d. The patients during the past season numbered 613.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE Government scheme for the reformation of the Civil Service of the country, which Mr. Gladstone is about to bring before the House, has formed the subject of conversation in literary circles during the present week. It is praised and dispraised, complained of and defended, at tables that are not literary; while among authors and candidates for distinction, either on the press or at the bar, it is thought to open a channel to distinction, all but closed to authors, since the memorable Ministry of Queen Anne. There are writers of repute, who dream, and r the new scheme, to rise, like Prior, to ambassadorial distinction, or to hold, as Addison held, the seals of one of the principal Secretaries of State. Government purposes to throw open to public competition, as vacancies arise, the 16,000 situations held by the 16,000 civil servants of the Crown. The son of a Whitechapel butcher may enter into competition with the son of a Peer of the realm. A Howard or a Cavendish is to have no better chance than a Snooks or a Jim Baggs. Absolute fitness is to be the only test for every situation. The prizes to be contended for vary from £6000 a year to £90 a year; and the number of prizes in this lottery of distinction are said to average from £150 to £250 a year. The scheme has much that is excellent in it, but surely it is a little romantic. Who are to be the examiners—and what is the nature of the examination to which candidates are to be subjected? Very different talents are required for very different situations, and it is clear that the very best examin rs will give a widely different importance to particular branches of information. Sir Isaac Newton spoke of poetry as ingenious nonsense; and Gray, the poet, looked on mathematics as an idle pestering of the brain. Lord Derby, as an examiner, would consider Lord Aberdeen as very unfit for the office of Prime Minister, and Mr. Disraeli would by no means consider Mr. Gladstone as the person the best fitted in the three kingdoms for the situation of Chancellor of the Exchequer. We know what boys and men know for—we know, moreover, that precocity is seldom lasting, and that a readiness in an examination answer is anything but a safe test of the higher and more valuable qualifications so essentially necessary in a public servant. Still, the scheme may be made to work well; and, in common with authors ambitious of ambassadorial distinction, we shall watch its progress with the interest it deserves.

There is a talk, and something more, of raising a public subscription for a monument to the memory of the late Mr. Justice Talfourd; but what shape the monument is to take is as yet wholly undetermined. Some of his admirers contemplate a handsome cenotaph over his grave in the cemetery at Norwood; others recommend a statue in Westminster Abbey; and many have suggested a Talfourd dramatic scholarship or medal. Any memorial over his grave placed by public subscription, might be thought to interfere with what his children may naturally prefer doing for themselves. Westminster Abbey is already overcrowded with statues and tablets; while Wordsworth and Byron are without monuments in Poet's Corner, a statue of Talfourd would be somewhat out of place there. The scheme of a dramatic scholarship—not to perpetuate his name, but to show our sense of his talents, and his services to the drama—merits every consideration; indeed, it deserves to be carried out. Whatever is to be done should be done quickly. It is difficult to revive the first gush of sympathy. Friends are soon forgotten; and people are apt to exclaim, when asked for subscriptions for men already cold in the grave, "O, this should have been done before: it is too late now." If we want any instances of the evil of delays in such matters, we have only to call to mind the starved memorial to Mrs. Siddons, and the still lagging subscription to the memory of Sir James Mackintosh.

On the very day on which this number of our paper is published the famous marble eagle, one of the leading treasures of the strawberry-hill collection, will pass to some new proprietor, under the hammer of Messrs. Christie and Manson. It is, in every respect, a very fine work, and has justly been the attraction in art in London during the past week. Our readers will, doubtless, remember its history. It was dug up in Italy, and is the eagle about which Walpole raves so admiringly in so many of his letters. The plumage is a masterpiece of carving. The British Museum should be its resting-place; but its destiny, and the price it sold for, we shall duly record in our next week's column. How little did Walpole foresee its fate!

Good autographs are rising in value. The fall in the Funds seems to have no effect on property not often in the market. A letter, in the handwriting of Oliver Cromwell, addressed to Mr. Cotton, "Pastor to the church at Boston, in New England," has just been sold by Messrs. Puttick and Simpson for £36. This is the highest price ever given for a Cromwell letter. It has gone to America—an excellent market for whatever is illustrative of English history and manners.

The Stowe copy of Houbraken's "Illustrious Heads," bought by Mr. Pickering, at the Stowe sale, for £91, was knocked down, on Thursday last, by Messrs. Sotheby and Wilkinson, for £97. This is unquestionably the finest copy known of one of the finest books of engraved portraits. It was formed by Alderman Boydell, and contains ninety-five first proofs, before any letters; eighty-five proof impressions, besides many additional proofs; and nine etchings of the utmost rarity.

We recorded, a few weeks ago, the fate of one of the two famous cedars in the Botanic-gardens, at Chelsea. We have now to record, as a piece of landscape gardening news, the planting of a tree in Hyde-park, which is in every likelihood, destined to be familiarly known to two centuries and more of English fashion and beauty. At the west end of Rotten-row, where the road to the right runs to the bridge over the Serpentine, and the road to the left descends to Kensington, the new Chief Commissioner of Woods has just planted, in the very centre of the road, a young vigorous sapling—an elm, we take it to be—with a plain substantial fence around it, where it serves at present for a sort of half-way shelter, like a lamp-post in London, for timorous adventurers to cross. When this tree shall have thrown its branches into the air, it will form a trysting-tree for lounging admirers—we had nearly said lovers—upon horseback. Reynolds boasted, and not unjustly, that he had painted two generations of English beauty—in other words, an entire century of English loveliness. Under this tree may meet—not greater loveliness, perhaps, but certainly a much greater amount of it. Our chronicling the period of its setting may be of interest hereafter.

Mr. Martin, the painter, has not left behind him—what painters generally leave—a number of finished and unfinished pictures upon canvas, and at least some ten or twenty portfolios of sketches for works completed or never commenced. We believe that his unsold pictures are not above three, and his sketches literally none. He has left, however, some sixty exquisite water-colour drawings—chiefly transcripts from nature—made with a poet's eye and a painter's skill in rendering all that is beautiful before him. We have seen these drawings: there are three of the Windcliff, in South Wales, that are perfect marvels in water-colour art.

Jacob Albert, of Baltimore, who died three weeks ago, has left two millions of dollars.

M. de Villèle, French Minister of Finance, under the Restoration, died at Toulouse on the 13th instant.

REPRESENTATION OF WESTMORELAND.—Nothing is yet known as to who will succeed the late Alderman Thompson, M.P. for Westmoreland. The county has not been contested since 1826, when Lord, then Henry Brougham, near y succeeded in beating the Lowther interest, which has long been nearly paramount in Mr. Thompson succeeded to his seat on the elevation of Lord Lonsdale to the peerage, in 1841, previously to which both seats were monopolised by the house of Lowther.

NATIONAL SPORTS.

WARWICK AND LEAMINGTON SPRING MEETING.—TUESDAY.

Sweepstakes of 5 sovs each.—Cerise, 1. Fingerlet, 2.
Woodcote Stakes.—The Deepbell, 1. Oddity, 2.
Free Handicap.—Alonzo, 1. Forist, 2.
Trial Stakes.—Orestes, 1. Redsplash, 2.
Willoughby Handicap.—Fourton, 1. Ethelwolf, 2.
Farmers' Plate (Hacks).—British Sailor, 1. Jenny Jones, 2.

WEDNESDAY.

Sweepstakes of 5 sovs. each.—Cerise, 1. Mraheau, 2.
Welter Handicap.—Tutterstone, 1. Warwick, 2.
Debdale Stakes.—Tipperary Boy, 1. The Farmer's Friend, 2.
Great Warwickshire Handicap.—Ethelwolf, 1. Ethelwolf, 2.
Two-year-old Stakes.—Border Chief, 1. Bessie, 2.
Handicap Plate.—Kohinoor, 1. Gaylad, 2.
Maiden, 100 p. p.—Mr. Boyle's Great Bear Lucy Glitters.
Farmers' Handicap Hurdle Race.—British Sailor, 1. Sworford, 2.

THURSDAY.

Gold Cup.—Torrent, 1. Cervus, 2.
Sweepstakes. Billy, 1. Beckford Lass, 2.
Welter Stakes.—Peepnpr Tom, 1. Liberty, 2.
Veteran Stakes.—Capt. France's Donative, 1. Capt. Lucas's The Lad, 2.

FRIDAY

Scurry Handicap.—Battery, 1. Jack Leeming, 2
Annual Steeplechase.—Trout, 1. Oscar, 2.
Hunters' Stakes.—Emperor, 1
Hurdle Race.—Mr. Boyle's Gerard, 2.
Sweepstakes.—Census, 1.
Free Handicap Steeplechase.—Stretford Lass, 1. Widow Machree, 2.
Hunt Cup.—Tipperary Boy, 1. Lobster, 2.

CITY BETTING.—THURSDAY

NORTHAMPTONSHIRE STAKES.—3 to 1 agst Defiance, 5 to 1 agst Mr. Sykes; 8 to 1 s. Langrecles, 10 to 1 agst Little Jem.

VISITATION OF NUNEATON.—A large and respectable meeting of Roman Catholics was held on Tuesday, in St. Marnock's hall, for the purpose of taking into consideration the propriety of the bishop's visiting her next parish. Resolutions to that effect were taken by the Hon. Charles Langdale. Resolutions concerning such interference were carried without opposition.

THE VACANT JUDGESHIP.—Mr. Crowder has been appointed to the seat upon the bench vacant by the death of Mr. Justice Talfourd. This appointment creates a vacancy in the representation of Lisk aard.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During the whole of the present week the Market for Consols has been in a very unsatisfactory state. The warlike preparations on the part of England and France, the continuous drain of bullion from the Bank of England for shipment to the Continent, and the numerous sales of stock, have tended to depress prices, and increase future difficulties. However, the fall has not been extensive; but the operations entered into for further decline have been large. The Unfunded Debt has felt the effects of a fresh issue of Bills. The previous bill fallen ours greatly, and an additional number of Exchequer Bills on the Market is calculated further to depress the quota ions.

No further cuts in rates have been announced, and some of the larger rather heavy amounts. The demand for money has increased. Although we have no change to notice in the rates of discount, the Lombard Street has become somewhat lighter. Money on "call" is now worth 4½ per c nt.

A new Turkish Loan for £2,200,000 has been announced. The amount is for Six per Cent Stock, at 85. Ten per cents are to be made in five instalments, and the loan will be repaid, at par, within fifteen years, in equal annual amounts. It is thought that the subscription lists here will not be heavy, as the loan is not guaranteed either by England or France; but it must be borne in mind that the Ottoman Porte repaid the whole of the last loan contracted here, with a bonus of three per cent.

The imports of bullion are £102,000 from the West Indies, and 127,854 dollars from New York. The shipments have comprised £275,000 to India, and 90,000 to France, Holland, &c. Our latest advices from China state that silver was selling extremely high to admit of large shipments from this country at a good profit.

Great fairness was experienced in the Consol Market on Monday. The Three per Cents were done from 84¾ to 85, for the Account, and for Money 85¼. Exchequer Bills were 8 to 10s. premium. On Tuesday, very few money purchases were effected. Consols for Account sold at 90 to 84½; and the Three per Cent Reduced, 85¼ to 85½. Bank Stock, 212. Opening Jan. 5, Exchequer Bills, 5s to 7s. prem um. On Thursday, the Market for Consols was flat, and prices were further depressed. The Three per Cents were quoted at 84¾ to 85. Bank Stock, 212. Exchequer Bills were very dull, at 7s. discount to 8s premium.

All Miscellaneous Securities have met a very dull market, and prices almost generally have given way, excepting Bank Stock, which has realised 213. Exchequer Bills, 8s to 10s. premium. On Tuesday, very few money purchases were effected. Consols for Account sold at 90 to 84½; and the Three per Cent Reduced, 85¼ to 85½. Bank Stock, 212. Opening Jan. 5, Exchequer Bills, 5s to 7s. premium. On Thursday, the Market for Consols was flat, and prices were further depressed. The Three per Cents were quoted at 84¾ to 85. Bank Stock, 212. Exchequer Bills were very dull, at 7s. discount to 8s premium.

All Miscellaneous Securities have met a very dull market, and prices almost generally have given way, excepting Bank Shares have realised 75; British North American, 63; London Chartered of Australia, 16; London Joint Stock, 23; Oriental 45; Union of Australia, 65; Ditto, New, 46; Australian Agricultural, 22; Ditto, New, 3; Colonial, 44; Eastern Mail, 2; Berlin Waterworks 2; British American Land, 75. Friday Evening.

Great depression has prevailed in the Consol Market, to-day, and prices have fallen one-half per cent. The Three per Cents have marked 84¾ ¾ ¾. The Unfunded Debt has declined 2s. to 2s prem. Foreign Bonds and Railway Shares have ruled dull and lower.

THE MARKETS.

CORN EXCHANGE (Monday).—The arrivals of English wheat fresh up to this morning's market, coastwise and by land carriage, were very moderate, but there were several of Mear ay s unsold samples on offer. Owing to the immense imports of foreign, the demand for all kinds of wheat of home produce was heavy in the extreme To have effected sales, to be 2s per quarter less money must have been accepted. For new wheat, the how of which was large, it sel excessively dull, and most kinds were offering at a farther decline of 2s. per quarter. For fine ng samples were quite no leased We had a fair inquiry for barley, at 1s. per quar er less money Malt was offering at 1s. per qr. rise decline. The sat trade was heavy, at 6d. to 1s. per quarter below Monday's rates. In beans, peas, and flour neat 1s. nothing was doing.

ARRIVALS.—English wheat 1120, barley, 3290, malt 7060; oats 1740, flour 5, Irish: oats 2620. For ign wheat 9290, barley, 13 470; oats, 780; flour, 353 sacks, peas, 1

ENGLISH MARK LANE AND KENT, (Monday).—Wheat, 45s. to 57s.; ditto, white, 52s. to 59s.; Norfolk and Suffolk, red, 44s. to 54s.; ditto, white, —s. to —s.; rye, 34s. to 36s.; grinding barley, 26s. to 28s.; malting barley, 30s. to 40s.; malting ditto, 42s. to 44s.; distilling ditto, 34s. to 36s.; malt, 60s. to 68s.; brown ditto, —s. to —s.; Kingston and Ware, 68s. to 70s.; Chevalier, 71s. to 72s.; white and Lincolnshire, 71s. to 74s.; Scotch, 72s. to 76s.; potato ditto, 52s. to 55s.; Youghal and Cork, 44s. to 45s.; ditto, white, 52s. to 53s.; Sligo, 44s. to 45s.; ditto, white, 52s. to 53s.; Limerick, 44s. to 45s.; ditto, white, 52s. to 53s.; Londonderry, 44s. to 45s.; ditto, white, 52s. to 53s.; Dublin, 44s. to 45s.; ditto, white, 52s. to 53s.; Belfast, 44s. to 45s.; ditto, white, 52s. to 53s.; oats, new, 22s. to 24s.; ditto, old, 25s. to 26s.; Dublin and Belfast, 25s. to 26s.; Scotch, 25s. to 26s.; beans, new, 44s. to 46s.; ditto, old, 45s. to 48s.; peas, 42s. to 45s.; maple, 42s. to 45s.; white, 38s. to 39s.; harlers, 28s. to 30s. per quarter. Town-made flour, 40s. to 42s.; Suffolk, 34s. to 36s.; Yorkshire and Derbyshire, 36s. to 40s. per 280 lbs. *Foreign:* French, —s. to —s. per 280 lbs.; American flour, 31s. to 41s. per barrel.

Seeds.—For all kinds of seeds the demand is steady, and in 1 week's currency is well supported. Duty remained very full price.

Linseed, English sowing, 60s to 68s.; Baltic crushing, 52s to 53s.; Mediterranean, 51s; Odessa, 50s to 50s.; Bengal, 60s. to 64s. per quarter. Carraway —s. to —s. per cwt. Brown mustard-seed, 10s. to 14s.; white ditto, 12s. to 13s.; red tares, 7s. to 8s. 6d per bushel. English rapeseed, £21 to £22 per last of ten quarters. Linseed cakes, English, £10 5s to £11 5s.; ditto, foreign, £9 10s to £11 10s per ton. Rapeseed cakes, £7 5s to £7 10s per ton. Canary, 50s. to 54s. per quarter. English clover-seed, white, 58s to 64s.; red, 50s to 58s per cwt. Trefoil, 20s to 24s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11d. of household bread, 8½d to 10d. per 4 lb. loaf.

Imports.—Of cattle, —; sheep, —; Wheat, 70s. 8d.; barley, —s. 0d.; oats, 27s. 7d.; rye, 50s. 9d.; beans, —s. 0d.; peas, —s. 0d.

The Smithfield Markets.—Wheat, 70s. 8d.; barley, —s. 0d.; oats, 27s. 8d.; rye, 50s. 9d.; beans, 45s. 0d.; peas, 42s. 0d.

The Baltic.—Of sailings from the Sound, since our last report, with a heavy demand.

Provisions.—Pine Irish butter, 118s. to 120s. per cwt.; of which a small parcel, in bad condition, sold at very low prices. In other kinds only a limited business is doing, on former terms. Bacon in very slow request, at late rates. English is quoted at 64s. to 66s. The home market is rather dull, at late quotations. Other kind of provisions are dull.

Coals (Friday).—In the Pit Market, to-day, there was a fair amount of business doing, at late rates. Hasswell 16s 6d; Lambton 19s; Hetton 20s 6d.—Steamp.

Hops. (Friday).—The market is tolerably well supplied with all descriptions of last year's growth, which is but moderately sought after, and prices are well supported. This week's imports are 4b bales from Hamburg, Mecklenburg, and East Kent pockets, 7s 10s to 12 12s 6d; Weald of Kent, 6s 6d to 7 7s 6d; Sussex, 5s 15s to 6 6s 10s per cwt.

Wool.—The public sales of colonial wool, which commenced on the 14th inst., have gone on in the most animated manner. We estimate the quantity of wool offered for sale during the week at 12,000 bales, and the whole of which has been disposed of at an advance of 1d per lb on the rates obtained at the previous sales. Fine wools are in good request, as from 1s 4d to 1s 6d per lb; and the middle and inferior sorts are fully supported. In pulp very little was doing.

Per ibs. to smk the offals.—Coarse and middling Scots, 3s 10d to 4s 0d; prime ditto, 4s 2d to 4s 4d; prime large oxen, 4s 6d to 4s 8d; prime Scots, 4s 4d; and small ditto, 4s 6d; coarse and inferior sheep, 3s 6d. to 3s. 8d.; second quality ditto, 3s 10d. to 4s 4d.; prime Southdown ditto, 4s 6d. to 4s 8d.; prime Scots, 4s 4d. to 4s 6d.; large Lambs, 5s 0d. to 5s 4d.; coarse calves, 4s. 6d. to 5s 2d.; prime small ditto, 5s. 4d. to 5s 8d.; large pigs, 3s 8d to 3s 10d.; middling ditto, 4s. 0d. to 4s 2d.; small ditto, 4s 4d. to 4s 6d. Total supplies: Beasts, 1100, cows, 160, sheep, 3 600; calves, 180; pigs, 300.

Newgate and Leadenhall (Friday).—The general demand ruled steady, at very full prices. For the time of the year—Inferior beef, 3s 6d to 3s 8d; middling ditto, 3s 10d to 4s 0d; prime large ditto 4s 2d. to 4s 4d; prime small ditto, 4s 6d. to 4s 8d.; large pork, 3s. 8d. to 4s 0d.; prime ditto, 4s 2d. to 4s 4d.; small ditto, 4s 4d. to 4s 6d. ROBERT HERBERT.

ARRIVAL OF THE REMAINS OF THE MARQUIS OF LONDONDERRY AT THE GREAT NORTHERN RAILWAY STATION.

FUNERAL OF THE MARQUIS OF LONDONDERRY.

HE funeral of this distinguished soldier has been attended with some ervances of melancholy interest, and high tributes of respect to the ceased. in the metropolis, at the family mansion, and at the last ting-place of the remains, Wynyard.

On Monday night (last week) the remains were removed from Holnesse house to the terminus of the Great Northern Railway at ng's-cross, *en route* to Wynyard, where they were to lie in state on adnesday, preparatory to their interment on the following day at Long rton, the ancient burial-place of the Vane family.

The body was conveyed in a hearse drawn by six horses, after ich followed two mourning coaches and four. In the first rode the ree sons of the deceased nobleman—Viscount Castlereagh (now Mar- is of Londonderry); Viscount Seaham (now Earl Vane); and Lord dolphus Vane. The second carriage conveyed the Earl of Portington, son-in-law of the deceased, and his two nephews, Captain ood and Mr. Stewart of Ards. The private carriage of the deceased bleman, and about a dozen other carriages belonging to the nearest atives of the late Marquis, followed.

The officers and men of the deceased nobleman's regiment (2nd Life ards) having expressed a desire to pay the last tribute of respect to ir Colonel, by attending at the station as a guard of honour to re- ve his remains, the assent of the family was obtained, and at eight lock on Monday night, the whole regiment, with the Colonels and cers at its head, marched from the Regent's-park barracks to King's- ss, where the men were drawn up in double column at the south end the railway platform.

On the arrival of the hearse containing the body within the station closure, the fine band of the regiment, led by Mr. Grattan Cooke, commenced playing "The Dead March in Saul," which was continued during the time occupied in placing the hearse upon a railway travelling truck; which, being done, it was moved slowly towards the train to which it had to be attached; the sons of the deceased, with Lord Portarlington and the two nephews, following uncovered. The present Marquis was deeply affected, and the other relatives appeared greatly moved. The solemn music continued until just previously to the train being set in motion, and the sons of the deceased remained in attendance until the latest moment.

Captain Wood and Mr. Stewart, as executors to their deceased relative, accompanied the remains

In conformity with the expressed wish of the deceased Peer, his funeral was essentially private. The body arrived at Wynyard on Tuesday morning, and was immediately deposited in the private chapel of the mansion, which was hung with black cloth, and appropriately decorated. In the centre a bier had been erected, upon which was placed the coffin, covered with crimson velvet, and bearing a massive gilt inscription-plate. A black velvet pall, ornamented with escutcheons of the family arms, was thrown partially over the coffin, upon the head of which rested the coronet and cushion, and at the foot the helmet, sword, and sash, worn by the deceased Marquis.

At noon, on Wednesday, the public were admitted. Captain Wood and Mr. Stewart sat at the head of the corpse from noon until three o'clock, during which limited period upwards of a thousand persons passed through the chapel.

The Corporations of the city of Durham, as well as of Sunderland, Stockton, Seaham, and other towns, met and unanimously determined that business should be altogether suspended on Thursday. At Sunderland, as well as at Seaham, the flags of all the vessels in harbour were hoisted half-mast high, and the bells at the different churches tolled from an early hour. The works throughout the extensive collieries and quarries belonging to the deceased Peer were also suspended by the voluntary act of the workmen.

At nine o'clock, the principal tenantry on the Wynyard estate (all of whom had made application to be permitted to attend the funeral) began to assemble. They were mounted on horseback, attired in deep mourning, and provided with scarfs and hatbands.

At ten o'clock the mournful cortège left the mansion in the following order:—

Two Mutes bearing wands. The tenantry on the Wynyard Estate, on horseback, two and two. A coach and four, conveying the master of the deceased's household, bearing the coronet; and his Lordship's valet bearing the sword, &c. A lid of plumes. The Hearse, drawn by six black horses, conveying the coffin, and ornamented with escutcheons of the family arms. The favourite charger of the deceased, led by his groom, with boots and spurs suspended from the saddle. A mourning coach and four, conveying Viscount Castlereagh, Viscount Seaham, the Earl of Portarlington, and the Earl of Roden. Followed by six other mourning coaches, and the family carriage, containing the relatives, agents, and professional advisers of the deceased.

The procession advanced through the family domain by the road, towards its destination at Long Newton, some twelve miles distant from Wynyard. At Stockton on-Tees, the shops were all closed, and the Mayor and corporate authorities on the Londonderry-bridge received the cortège, and preceded it through the town. A considerable number of the townspeople joined the procession at this place, many of them accompanying it to its destination.

Long Newton is principally the property of the Marchioness of Londonderry. The picturesque little church is indebted to her Ladyship's munificence for an organ and three painted windows which decorate the chancel. The edifice itself is plain and unpretending. There are no other monuments than those of the Vane family, whose vault is in the chancel, immediately beneath the altar.

At the village of Long Newton, assembled the Mayors, and Corporations of Durham, Sunderland, Seaham, and other important towns in the county. The gentry and magistracy, for many miles around, also met at this place, to join in the last tribute of respect to the memory of their lamented Lord Lieutenant. At a quarter before one, the procession entered the hamlet; a few minutes previously, the widowed Marchioness of Londonderry, and the female branches of the family, having arrived in the churchyard. The mounted tenantry filed off on either side the road, and allowed the procession to pass between them. The coronet and cushion, and the helmet and sword were followed by a lid of funeral plumes. The coffin succeeded. The pall was borne by the Duke of Cleveland, Lord Hatherton, the Earl of Roden, Col. Sir H. Browne, Col. M'Dowell, and Col. Williams. Immediately behind the coffin walked Viscount Castlereagh as chief mourner, followed by Viscount Seaham and the Earl of Portarlington. Mr J. Stewart and Captain Wood came next, the other mourners following; and in the rear were several officers of the 2nd Life Guards. The coffin having been placed upon a bier in front of the altar, the church doors were closed, and the service for the burial of the dead proceeded. At its conclusion the mourners returned to Wynyard.

LONG NEWTON CHURCH, THE BURIAL-PLACE OF THE MARQUIS OF LONDONDERRY

ORNAMENTAL LIBRARY BELLOWS.

ONE of the noticeable events of last week, as possessing a peculiar and significant interest at the present time, and as showing the latent taste which exists in various departments of British industry, is the completion of a pair of very costly and elegant Library Bellows, by Mr. John C. Onions, the extensive bellows manufacturer of Birmingham, for presentation to his Imperial Majesty the Emperor of the French. We engrave this curious specimen of industrial art, which exhibits much beauty and appropriateness of design. The materials employed in its production are curiosities. They consist of portions of the celebrated willow which hung over the grave of Napoleon I., at St. Helena; and the no less celebrated Stratford elm, memorable as the tree under whose branches Shakespeare was wont to spend the "sunny hours of childhood." The former relic was obtained from Mrs Tarbutt, the proprietress of the estate on which the tree grew, and its genuineness is proved by documents in the handwriting of General Monthelon and Count De las Casse, both of whom were with Napoleon during the last hours of his exile. The other relic was cut down only a few years ago, when it came by purchase into the hands of Mr. Onions. For these reasons, this pair of bellows is a rarity; but it has also other qualities to recommend it. As a specimen of manufacturing art, it is singularly beautiful. The carving, which is characteristic of the period of Louis XIV., is executed with great skill and delicacy. The fittings are blue and white kid, secured by silver nails, adorned with national emblems. The pipe, likewise, is of silver, chased and engraved. As a whole, we have seldom seen a more perfect specimen of Birmingham manufacture, or one better calculated to advance the reputation of the large and ancient establishment whence it has emanated. Ancient we may say, truly enough; as it appears that the ancestors of Mr. Onions were almost the first to introduce the trade of bellows-making into Birmingham; and as far back as the year 1650, the family was somewhat celebrated for its manufacture of this article. The present representative of the family, however, has far outstripped his ancestors. He has effected many important improvements in the trade, employs nearly 200 pairs of hands, and may be said to make more bellows than are made by all the other manufacturers in England put together.

LIBRARY BELLOWS PRESENTED TO THE EMPEROR OF THE FRENCH.

This unique gift was last week forwarded to Paris for presentation to the Emperor at the Tuileries.

EXHIBITION OF THE NATIONAL INSTITUTION OF FINE ARTS

"THE TEN VIRGINS."—PAINTED BY J. E. LAUDER, R.S.A.

THE Seventh Exhibition of the young and industrious Association of Artists has opened for the season at the Portland Gallery, 316, Regent-street. The number of works exhibited is 180, by far the greater proportion of which are landscapes. In this favourable line the Williamses, Sidney Percy, J. W. Bunny, Peel, A. Gilbert, Harland, Willis, Bell, Bates, &c., are largely contributors.

E. Williams sen. has seven pictures: the "Old Coach-road—Market-morning" (114), with a group of rustics at the door of an inn, is full of material and carefully painted, but a little tame in effect, not so in either respect "Sunset, Having the Common Early Morning" (107), in which the red dawn is strongly marked in color and effect, and is variously broken by figures just on the horizon on the right hand.

G. A. Williams exhibits fifteen productions, among which are several winter scenes, and all fully treated, the occasional sunbeams, and appropriate warm shadows, coming in to soften the asperities of the snow drift and ice-bound foreground. In "The Fisherman's Haunt" (104) the glowing rays of the setting sun, piercing through the foliage, produce an attractive and striking effect.

S. Percy, in his "Stream from the Mountains" (11), betrays an increasing propensity for the severer aspects of nature. The mountain scene, broken in places with blocks of rock, slate, &c., deriving increased asperity from the cold, bleak atmosphere which covers it. The slightest tinge of mellow tone would be a real boon to the eye, besides materially increasing the artistic merit of the picture. Mr.

"A PEEP BY THE COAST."—PAINTED BY F. CALDWELL.

Percy should study Salvator Rosa, and see how he condescended to admit some atmosphere of warmth in his most desolate, and savage creations.

A. Gilbert's "A Calm Evening" (48) is at once a clever and agreeable work. In the left of the picture is a mass of rich foliage overhanging a calm river's surface; the right is occupied by an expanse of low ground, above which the sky is gilded with the abundant rays of the setting sun.

Willis's "Scene on the Conway, near Bettws-y-coed—Evening" (39), is well painted, and is especially commendable for its breadth and airiness of effect. His "Pleasant Nook in North Wales" is also pleasantly rendered—the cattle nicely painted. A similar remark will apply to "The Lazy Herd—a Scene on the Conway (138)," by F. W. Hulme and H. B. Willis.

With this we close, for the present, our review of the landscape department of the collection; and proceed to take a glance at the few efforts in the higher walks of art which it comprises. And here for a moment we pause, to consider whether we ought to include portraiture in the aforesaid "higher walks" or not. Certainly the managers of the Institution seem almost to invite one to do so by the prominence with which they have honoured their works in this line—Mr. Barraud's portrait of the Marquis of Conyngham (1) occupying the place of honour over the chimney-piece in the first room; and Mr Bell Smith's group, of "Mrs W. Maxmore Williams and Children" (90), the second place of honour, opposite; and Mr. Middleton's "portrait" (227), understood to be of himself, being hung over the chimney-piece in the second room. But we will not be provoked to criticism of them, and so pass on to other matters.

C. Rossiter has a goodly pen of colouring, in "La Fleur's Courtship" (20) from the "Sentimental Journey;" the figures, too, are hard, and the giddy gallant sentiment is not realised.

Anna Mary Howitt (daughter, we believe, of the author) comes across us with a very creditable essay—"Margaret Returning from the Fountain" (128), after the passage in Goethe's "Faust:"

Margaret, having heard the harsh judgment of her companions at the city fountain, returns home tortured by self-accusation.

The attitude of the figure, and the expression of the half concealed face, correctly illustrate the emotion intended; and the drawing and handling are in all respects satisfactory, though the arrangement of the picture is evidently studied under pre-Raphaelite influence.

J. E. Collins has two agreeable female studies, in ovals—(35), "Giannetta," a dark-eyed brunette, with a basket of grapes; and (44) "Made line," removing "wreathed pearls" from her hair; as described in a line in the "Eve of St. Agnes."

Charles Dukes is more successful in the composition, drawing, and expression of his pretty little every day group of "The Mother" (80), than in the colour, which is far too much toned; that the expanse of grey would call for pink or red trimmings, instead of cold blue, and this alteration would further help to support the rose, which, held out in the hand, is now isolated, and produces a spotty effect. His companion piece, "A Rustic Group" (133), is tame compared with the other, and confusedly coloured.

F. Underhill has two capital rustic groups, treated with an honest genuine purpose. "Babes in the Wood" (82) are not the sentimental babes of the nursery-tale version, but real ruddy flesh and blood; and the boy has an arch intelligent expression which prepossesses us in his favour. In "A Rest by the Way" (153), which we engrave, we have a scene of harvest in North Wales—a village matron gravitating on his back, fast asleep—snoring, of course; while two others lean against a stile, enjoying his happy condition. A third picture by this artist is a clever study of "Little Nell" (305).

"Do Too Virgins" (83), by J. R. Lauder, is a small picture, somewhat original in design, and, as to grouping, carefully studied in every part. In the centre, and towards the right, are the five wise virgins, preparing to depart to meet the bridegroom; on the left are the foolish ones—three of whom are asleep, two others having fallen awake, and one of whom earnestly implores their more fortunate companions for some of their oil. The group on the left is in deep shadow, while the middle and right of the picture display a good breadth of light. The colouring, perhaps, is not little wanting in keeping, and somewhat deficient in harmony; but, with this exception, the picture is a good one, and we have much pleasure in producing an engraving of it.

R. S. Lauder has a picture on a larger scale than the last described, of "The Marys at the Sepulchre" (24), in which there is good drawing, and much general ability in parts; but the figures are so widely separated, as to form two groups on either side of the canvas, the centre being a dark void. This is obviously an error of composition, which no artistic appliances in the execution can atone for. The same artist has also an ingeniously contrived work, "The Lady of Shalott" (332), the face seen in profile, and full face in the glass, as

In her web she still delights
To weave the mirror's magic sights.

G. F. Herring's "Inter or of a Stable" (228), with his favourite white horse, in fine coat condition, displays all that nicety of surface treatment for which he is celebrated.

"Hamlet, Horatio, and Osric" (300), by Marks—

Hamlet Your bonnet to its right use—'tis for the head.
Osric. I thank your worship—'tis very hot.

A violent conceit of prater-pre-Raphaelitism. Osric is equipped after the extreme fashion of a Court fool; and his expression and pose are in keeping.

Glass has another equestrian performance—one of those astonishing night adventures in which he is unrivalled. The present subject is "the Flight of Mary Stuart from Lochleven." The time is described as that of early dawn; but the full moon is too high in the sky for that period of the day; and the blue grey gloom is the same as the splashing water is the same; and the head and neck rush appears the same as in the "Night March," and other nocturnal scenes by this artist.

MARLBOROUGH HOUSE—ANCIENT ITALIAN ART.

A very interesting exhibition has just been opened at the Museum of Ornamental Art, consisting of models in wax and terra cotta, supposed to be by various Italian masters, including Michael Angelo, Donatello, Ghiberti di Bologna, and (one specimen only) by Raphael. These objects, whether authentic or not (and after a first hasty glance we are inclined to give an affirmative opinion in respect to many), have long been laid away in obscurity, and have only recently come to light at Florence. They belong to Madame Gherardini; by whom they have been offered for sale successively to the Austrian, the French, and now to the English Government. Their exhibition, under the care of the Department of Practical Art (which will continue for a month), is "with a view of eliciting from the public and the artists of this country such an expression of opinion as to their value and genuineness as will justify the purchase or the rejection of the collection by her Majesty's Government." The ordinary mode of proceeding, which it had been well at the Government and its advisers had always pursued in these art ventures. Considering the subject to be one of public interest, we shall recur at some length to it in our next, when we shall also give Engravings of some of the models.

LARGE ARRIVAL OF VESSELS FROM THE NORTH OF EUROPE.—Since Sunday the river has received an unusual appearance, owing to the arrival of 200 or 300 vessels from the ports in the north of Europe (the first trip with many of them since the breaking up of the ice) which have been detained, labouring about in the North Sea, by the south-west easterly winds. Late on Saturday, however, there was a change to the north-ward and eastward, and the next tide or so the windbound fleet made its appearance at the mouth of the Thames. Amongst the number, there Russians laden with grain. So rapid was their arrival at Gravesend that the Custom-house authorities had to use extraordinary expedition in putting officers on board of them. On Monday the number of ships entered inward at the Custom-house amounted to upwards of 150.

IMPROVED EMIGRANT SHIP.—The emigrant ship *City of Manchester* is provided with commodious baths for the use of the emigrants; and a bakehouse for supplying soft bread twice a week; she is fitted on an entirely new principle, by which the berths are divided off into sections of twelve persons, with tables in the open spaces towards the portholes, which hoist up and in, and render each section as private as if in a separate cabin, curtains being made to fall down over the sleeping places, and providing a clear passage all round the interior of the ship.

REFORMATORY INSTITUTION.—A reformatory institution is to be erected on that part of the Curragh of Kildare cut off by the Great Southern and Western Railway, and containing between 300 and 400 acres. The aim of the institution will be self-supporting. Suitable buildings will be erected, capable of affording accommodation for 400 boys.

THE VALUE OF DUST.—The privilege of removing the dust and ashes of the parish of St. Andrew, Holborn, above Bars, has been sold for £160 a year, for which last year only £80 was given, and a few years ago the parish had to pay, instead of being paid, for its removal.

"LIKE A GENTLEMAN."

Say's Nick to John, "I have something to say,
Just in a confidential way,
Of an unfortunate friend of ours,
On whom dark destiny dimly lowers,
He's breaking up as fast as he can—
In short, he's a very unfortunate man.
Ruin surrounds him above and below;
With no one to help him, and Fortune his foe,
So, with you, I should like his case to scan,
Quite *en ami*, and *en gentleman*.
Poor fellow! He's *very sick*, they say;
And lies at the Crescent, over the way,
In that shaky hotel at the sign of the Crown,
Which, I've reason to fear, is tumbling down;
And his case to consider, as well as we can,
Is the part of a friend and a *gentleman*."

"'Tis very proper," says John to Nick,
"And we'd try to help this poor fellow that's sick."

"Just so," says Nick, "for, indeed, 'tweuld be cruel,
When a man is *so* sick, not to give him his gruel;
And we'll play the good Samaritan:
In short—behave *like a gentleman*.
You see, if he's left to himself, my friend,
I fear he'll come to a very bad end,
The waiters about him will soon be trying
To prig what they can from the man that's dying;
And his watch, and his rings, and such little things,
They'll filch, and they'll rob; unless we've a plan
To fly to his aid, on pity's wings,
And watch over him—*like a gentleman*:
For you and I can better dispose
Of his watch and his chains than fellows like those.
I'll take the *chains*, for I've use for *them*;
The *watch* you'll keep." Cried John, "Ahem!
The watch I'll keep—you say quite true;
(*Aside*) I'll keep a watch on you."

"Now," says Nick, "when he dies"——Says John, "Don't hurry him,
One would think you were going to bury him."
"By no means," says Nick, "I would save that expense,
For his case is such, we may raise the pretence
That the cause of science 'twould very much aid
If a private *post mortem* dissection were made—
For *I'm sure he'll die*," says Nick, with a wink,
"And 'twould be an excellent plan, I think,
To dissect him between us, in friendly alliance,
Just for the good of practical science—
Of course we'd do it as clean as we can;
I mean by that *like a gentleman*."

"But, sir," says John, "the man's not dead yet
Perhaps you'll find his *spirits not fled yet*;
And that phrase, *post mortem*, is unhappily said,
In my apprehension, till bodies *are* dead."

"Pooh, pooh!" says Nick, "what a squeamish elf—
Then I must cut up the fellow myself;
And I'll declare to each *Royal* college
That 'twas only done in pursuit of knowledge;
For 'knowledge is power,' philosophers say,
And the *power* I'll have"—if the d——'s to pay!"

"Beware," says John, "it may cost you your life,
You may be indicted as 'Nick of the knife;'
And your judges the potent distinction may urge on,
'Twixt 'surgeon barber' and barbarous surgeon;
However, if you *will* insist to go through with it,
Observe, my good sir, I'll have nothing to do with it."

Then Nick, with a scowl (but the D——l could match it), he
Drew his knife—like grim *Shylock*—to finish the tragedy,
But the man "that was sick" had a kick in him yet,
As Nicky found out; for, before he could get
Within reach of the *heart* of his victim—his *heel*
Made a serious impression where ruffians *can* feel.
If all other parts boast of insensibility,
There, at least, may be planted a wound on gentility,
And Nick, with his kick, from the sick Oriental man,
Cried "Zounds! what a way to behave to a *gentleman!*"

SAMUEL LOVER.

DEPARTURE OF THE BALTIC FLEET.

We have been favoured by Mr. Brierley with the very interesting scene engraved at page 280. The moment represented is that when the fleet, under sail and steam, had passed Beachy-head, and were nearing the Straits of Dover.

During the afternoon of Saturday they had weighed, from Spithead, in obedience to a signal from the flag-ship and stood out to sea, headed by her Majesty, in the *Fairy*, which, off the Nab Light, lay to, and allowed the whole fleet to pass her. Each ship manned her rigging, and kept up such cheering as spoke well for English lungs and loyalty. Ordinary etiquette prescribes that the lower rigging only should be manned, and three cheers given; but, on this occasion, the tars crowded aloft, even to the trucks, and shouted with enthusiasm, as affecting as it was uncontrollable.

During the night the wind fell nearly to a calm, and though, at the time represented in our Sketch, there was a good breeze, it needed the assistance of steam to bring them into that beautifully regular position the fleet was formed into three lines. To windward, the paddle steamers were headed by Admiral Plumridge, in the *Leopard*; abreast, or a little ahead of him, Admiral Sir Charles Napier, in the *Duke of Wellington*, led the starboard, or weather line; and, at the head of the lee division, is seen the *Edinburgh*, flag ship of Admiral Chads. In our illustration the Admiral has made a general signal to the fleet, which, having been acknowledged by the "answering pendant" at the mast-head of each ship, he is hauling down.

Next to the Admiral is the *St. Jean d'Acre*, a little out of the line, as it will be seen; her great speed rendering it necessary occasionally to veer from her course, to avoid running into the flag-ship ahead.

The run from Spithead was one continued ovation: from every little port they passed, steamers, full of enthusiastic excursionists, dashed into the fleet, greeting each ship with cheers, which each gracefully acknowledged by dipping her ensign.

Towards sunset, as the fleet steamed into the Downs, one of those sights occurred which, seen once in a life, remain graven on the memory for ever. Many hundred merchantmen, of every nation—among them some Russians—were lying, with all sails set, and floating idly in the dying wind. Threading their way among them, and looming like mountains by the contrast, came the giant line-of-battle ships, looking, as they glided along with bare yards, as if their motions were the result of mere volition. Bands were playing on their decks; and, as the sun touched the horizon, there was a rattle of musketry from the sentries of the fleet; down came the ensigns from the peak, a heavy plunge from the bows of the Admiral told that his anchor was down, and his position taken up: each ship followed his example and anchored in line, in reversed order of sailing.

THE RUSSIAN OVERTURES TO THE BRITISH GOVERNMENT.

THE "secret and confidential" despatches of which the existence was betrayed by the *Journal de St Petersburg*, as stated in our last, were placed before Parliament on Friday evening, the 17th, and published in the daily journals of Monday last. We have made some observations in another portion of the ILLUSTRATED LONDON NEWS on these important and very remarkable papers, which we present to our readers with but very slight abridgment, leaving intact the conversations of the Emperor, as detailed by Sir G. H. Seymour; the reply of Lord John Russell to the Czar's overtures; and the confidential memorandum of Count Nesselrode.

No. 1.

SIR G. H. SEYMOUR TO LORD J. RUSSELL.—(Received Jan. 23.)
(Secret and confidential.)

St. Petersburg, Jan. 11, 1853

My Lord,—On the evening of the 9th inst. I had the honour of seeing the Emperor, at the palace of the Grand Duchess Helen, who, it appeared, had kindly requested permission to invite Lady Seymour and myself to meet the Imperial family.

The Emperor came up to me, in the most gracious manner, to say that he had heard with great pleasure of her Majesty's Government having been definitively formed, adding that he trusted the Ministry would be of long duration.

His Imperial Majesty desired me particularly to convey this assurance to the Earl of Aberdeen, with whom, he said, he had been acquainted for nearly forty years, and for whom he entertained equal regard and esteem. His Majesty desired to be brought to the kind recollection of his Lordship.

* * * * *

The Emperor went on to say—"I repeat that it is very essential that the two Governments—that is, that the English Government and I, and I and the English Government—should be upon the best terms; and the necessity was never greater than at present. I beg you to convey these words to Lord John Russell. When we are agreed (*d'accord*) I am quite without anxiety as to the west of Europe; it is immaterial what the others may think or do. As to Turkey, that is another question; that country is in a critical state, and may give us all a great deal of trouble. And now I will take my leave of you," which his Majesty proceeded to do by shaking hands with me very graciously.

It instantly occurred to me that the conversation was incomplete, and might never be renewed, and, as the Emperor still held my hand, I said, "Sire, with your gracious permission, I would desire to take a great liberty." "Certainly," his Majesty replied; "what is it? let me hear."

"Sire," I observed, "your Majesty has been good enough to charge me with general assurances as to the identity of views between the two Cabinets, which assuredly have given me a great pleasure, and will be received with equal satisfaction in England; but I should be particularly glad that your Majesty should add a few words which may tend to calm the anxiety with regard to the affairs of Turkey, which passing events are so calculated to excite on the part of her Majesty's Government. Perhaps you will be pleased to charge me with some additional assurances of this kind."

The Emperor's words and manner, although still very kind, showed that his Majesty had no intention of speaking to me of the demonstration which he was about to make in the South. He said, however, at first with a little hesitation, but, as he proceeded, in an open and unhesitating manner—"The affairs of Turkey are in a very disorganised condition, the country itself seems to be falling to pieces (*tombe en ruine*); the fall will be a great misfortune, and it is very important that England and Russia should come to a perfectly good understanding upon these affairs and that neither should take any decisive step of which the other is not apprised."

I observed in a few words, that I rejoiced to hear that his Imperial Majesty held this language; that this was certainly the view I took of the manner in which Turkish questions were to be treated.

"Tenez," the Emperor said, as if proceeding with his remark, "tenez, nous avons sur les bras un homme malade—un homme gravement malade; ce sera, je vous le dis franchement, un grand malheur si, un de ces jours, il devait nous échapper, surtout avant que toutes les dispositions nécessaires fussent prises. Mais enfin ce n'est point le moment de vous parler de cela."

It was clear that the Emperor did not intend to prolong the conversation. I, therefore, said, "Votre Majesté est si gracieuse qu'elle me permettra de lui faire encore une observation. Votre Majesté dit que l'homme est malade; c'est bien vrai, mais votre Majesté aurait mauvaise grâce si j'en fais observer, que c'est à une mauvaise et fort dérangée l'homme malade et faible."

The Emperor then took leave of me in a manner which conveyed the impression of my having, at least, not given offence, and again expressed his intention of sending for me on some future day.

* * * * *

I have, &c.,
G. H. SEYMOUR.

No. 2.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL. (Received Feb. 6.)
(Secret and confidential.)

[Extract.]

St. Petersburg, Jan. 22, 1853

My Lord,—On the 14th inst., in consequence of a summons which I received from the Chancellor, I waited upon the Emperor, and had the honour of holding with his Imperial Majesty the very interesting conversation of which it will be my duty to offer your Lordship an account, which, if imperfect, will, at all events, not be long read.

I found his Majesty alone; he received me with great kindness, saying, that I had appeared desirous to speak to him upon Eastern affairs; that, on his side, there was no indisposition to do so, but that he must begin at a more remote period.

"You know," his Majesty said, "the dreams and plans in which the Empress Catherine was in the habit of indulging; these were handed down to our time, but while I inherited immense territorial possessions, I did not inherit those visions—those intentions. If you like to call them so. On the contrary, my country is so vast, so happily circumstanced in every way, that it would be unreasonable in me to desire more territory or more power than I possess; on the contrary, I am the first to tell you that great, perhaps our only danger is that which would arise from an extension given to an empire already too large.

"Close to us lies Turkey, and, in our present condition, nothing better for our interests can be desired. The times have gone by when what had been the fanatical spirit or the military resources of the Turks; and yet the country is a strong enough, or has hitherto been strong enough, to preserve its independence, and to ensure respectful treatment from other countries.

"Well, in that despised Power there are several millions of Christians whose interests I am called upon to watch over (*surveiller*), while the right of doing so is secured to me by treaty. I may truly say that I make a moderate and sparing use of my right, and I will freely confess that it is one which is attended with considerable responsibility and moving, but I cannot recede from the discharge of a distinct duty. Our religion, as established in this country, came to us from the East; and there are feelings, as well as obligations, which never must be lost sight of.

"Now, Turkey, in the condition which I have described, has by degrees fallen into such a state of decrepitude, that, as I told you at other sight, eager as we all are for the prolonged existence of the man (and that I am as desirous as you can be for the continuance of his life, I beg you to believe) he may sudden y die upon our hands (*nous rester sur les bras*). We cannot resuscitate what is dead. If the sick man expire falls, it falls to rise no more; and I put it to you, therefore, who Are it is not better to be provided beforehand for a coming day, than to incur the chaos, confusion, and the certainty of a European war—all of which must attend the catastrophe if it should occur unprepared, and before some interior system has been established? This is the point to which I am desirous that you should call the attention of your Government."

"Sir," I replied, "your Majesty is so frank with me, that I am sure you will receive the goodness to permit me to speak with the same openness.

I would, then, observe that, deplorable as is the condition of Turkey, it is a country which has long been plunged in difficulties supposed by many to be insurmountable. With regard to contingent arrangements her Majesty's Government, as your Majesty is well aware, objects, as a general rule, to taking any arguments upon possible eventualities; and would, perhaps, be particularly disinclined to doing so in this instance. If I may be allowed to say so, a great disinclination (*répugnance*) might be expected in England to dispose, by anticipation (*d'escompter*) of the successor of an old friend and ally."

"The rule is a good one," the Emperor replied; "good at all times; especially in times of uncertainty and change, like the present; still, it is of the greatest importance that we should understand one another,

and not allow events to take us by surprise: maintenant je dédre vous parler en ami et en *gentleman*; si nous arrivons à nous entendre sur cette affaire, l'Angleterre et moi, pour le reste peu m'importe; il m'est indifférent ce que font ou pensent les autres. Usant donc de franchi e, je vous dis nettement, que si l'Angleterre songe à s'établir un de ces jours à Constantinople, je le permettrai pas; je ne vous prête point ces intentions, mais il vaut mieux dans ces occasions parler clairement; de mon côté, je suis également disposé de prendre l'engagement de ne pas m'y établir, en propriétaire, il s'entend, car en dépositaire je ne dis pas; il pourrait se faire que les circonstances me missent dans le cas d'occuper Constantinople, et rien ne se trouve prévu, si l'on doit tout laisser aller au hasard."

I thanked his Majesty for the frankness of his declarations, and for the desire which he had expressed of acting cordially and openly with her Majesty's Government, observing at the same time that such an understanding appeared the best security against the sudden danger to which his Majesty had alluded. I added that, although unprepared to give a decided opinion upon questions of such magnitude and delicacy, it appeared to me possible that some such arrangement might be made between her Majesty's Government and his Majesty as might guard, if not for, at least against certain contingencies.

To render my meaning more clear, I said, further, "I can only repeat, Sir, that in my opinion, her Majesty's Government will be indisposed to make certain arrangements connected with the downfall of Turkey; but it is possible that they may be ready to pledge themselves against certain arrangements which might, in that event, be attempted."

His Imperial Majesty then alluded to a conversation which he had held, the last time he was in England, with the Duke of Wellington, and to the motives which had compelled him to open him-elf to his Grace; then, as now, his Majesty was, he said, eager to provide against events which, in the absence of any concert, might compel him to act in a manner opposed to the views of her Majesty's Government

The conversation passed to the events of the day, when the Emperor briefly recapitulated his claims upon the Holy Places—claims recognised by the Sultan on last February, and confirmed by a sanction to which his Majesty said he attached much more importance—the word of a Sovereign.

* * * * * * *

With regard to a French expedition to the Sultan's dominions, his Majesty insinuated that such a step would bring affairs to an immediate crisis; that a sense of honour would compel him to send his forces into Turkey without delay or hesitation; that if the result of an advance should prove to be the overthrow of the Great Turk (*le Grand Turc*), he should regret the event, but should feel that he had acted as he was compelled to do.

To the above report I have only, I think, to add, that the Emperor desired to leave it to my discretion to communicate or not to his Minister the particulars of our conversation; and that before I left the room his Imperial Majesty said, "You will report what has passed between us to the Queen's Government, and you will say that I shall be ready to receive any communication which it may be their wish to make to me upon the subject."

No 3.

Dated Jan. 22. 1853, simply notifies to Lord John Russell that Sir G. H. Seymour communicated to Count Nesselrode a correct summary of the above conversation

No. 4.

LORD J. RUSSELL TO SIR G. H. SEYMOUR.
(Secret and confidential.)
Foreign-office, Feb. 9, 1853.

Sir,—I have received and laid before the Queen your secret and confidential despatch of the 22nd of January.

Her Majesty, upon this, as upon former occasions, is happy to acknowledge the moderation, the frankness, and the friendly disposition of his Imperial Majesty

Her Majesty has directed me to reply in the same spirit of temperate, candid, and amicable discussion.

The question raised by his Imperial Majesty is a very serious one. It is, supposing the contingency of the dissolution of the Turkish empire to be probable, or even imminent, "whether it is not better to be provided beforehand for a contingency, than to incur the chaos, confusion, and the certainty of a European war, all of which must attend the catastrophe if it should come unexpectedly, and before some ulterior project has been sketched; this is the point," said his Imperial Majesty, "to which I am desirous that you should call the attention of your Government."

In considering this grave question, the first reflection which occurs to her Majesty's Government is, that no actual crisis has occurred which renders necessary a solution of this vast European problem. Disputes have arisen respecting the Holy Places, but these are without the sphere of the internal government of Turkey, and concern Russia and France rather than the Sublime Porte. Some disturbance of the relations between Austria and the Porte has been caused by the Turkish attack on Montenegro; but this again, relates rather to dangers affecting the frontier of Austria than the authority and safety of the Sultan; so that there is no sufficient cause for intimating to the Sultan that he cannot keep peace at home, or preserve friendly relations with his neighbours.

It seems further to her Majesty's Government to remark that the event which is contemplated is not definitely fixed in point of time. When William III. and Louis XIV. disposed, by treaty, of the succession of Charles II. of Spain, they were providing for an event which could not be far off. The infirmities of the Sovereign of Spain and the certain end of any human life made the contingency in prospect both sure and near. The death of the Spanish King was in no way hastened by the treaty of partition. The same thing may be said of the provision made in the last century, for the dismemberment of Tuscany upon the decease of the last Prince of the house of Medici. But the contingency of the dissolution of the Ottoman empire is of another kind. It may happen, twenty, fifty, or a hundred years hence.

In these circumstances it would hardly be consistent with the friendly feelings towards the Sultan which animate the Emperor of Russia, no less than the Queen of Great Britain, to di pose beforehand of the provinces under his dominion. Besides this consideration, however, it must be observed, that an agreement made in such a case tends very surely to hasten the contingency for which it is intended to provide. An agreement France could not, in fairness, be kept in ignorance of the transaction, nor would such concealment be consistent with the end of preventing an European war. Indeed, such concealment cannot be intended by his Imperial Majesty. It is to be inferred that, as soon as Great Britain and Russia should have agreed on the course to be pursued, and have determined to enforce it, they should communicate their intentions to the great Powers of Europe. An agreement thus made, and thus communicated, would not be very long a secret; and while it would alarm and alienate the Sultan, the knowledge of its exi-tence would stimulate all his enemies to increased violence and more obstinate conflict. They would fight with the conviction that they must ultimately triumph, while the Sultan's generals and troops would feel that no immediate success could save their cause from final overthrow. Thus would be produced and strengthened that very anarchy which is now feared, and the foresight of the friends of the patient would prove the cause of his death.

Her Majesty's Government need scarcely enlarge on the dangers attendant on the execution of any similar convention. The example of the Succession War is enough to show how little such agreements are respected when a pressing temptation urges their violation. The position of the Emperor of Russia as depositary, but not proprietor, of Constantinople, would be exposed to numberless hazards, both from the long-cherished ambition of his own nation, and the jealousies of Europe. The ultimate proprietor, whoever he might be, would hardly be satisfied with the inert, supine attitude of the heirs of Mahomet II. A great influence on the affairs of Europe seems naturally to belong to the Sovereign of Constantinople, holding the gates of the Mediterranean and the Black Sea.

This influence might be used in favour of Rus-ia; it might be used to control and curb her power.

His Imperial Majesty has justly and wisely said: "My country is so vast, so happily circumstanced in every way, that it would be unreasonable in me to desire more territory or more power than I possess. On the contrary," he observed, "our great, perhaps our only, danger, is the evil which would arise from an extension given to an empire already too large." A vigorous and ambitious State, replacing the Sublime Porte, might, however, render war, on the part of Russia a necessity for the Emperor or his successors.

Thus, European conflict would arise from the very means taken to prevent it; for neither England nor France, nor probably Austria, would be content to see Constantinople permanently in the hands of Russia

On the part of Great Britain, her Majesty's Government at once declare that they renounce all intention or wish to hold Constantinople. His Imperial Majesty may be quite secure upon this head. They are likewise ready to give an assurance that they will enter into no agreement to provide for the contingency of the fall of Turkey without previous communication with the Emperor of Russia.

Upon the whole, then, her Majesty's Government are persuaded that no course of policy can be adopted more wise, more disinterested, more beneficial to Europe than that which his Imperial Majesty has so long followed, and which will render his name more illustrious than that of the most famous Sovereign who have sought immortality by unprovoked conquest and ephemeral glory.

With a view to the success of this policy, it is desirable that the utmost forbearance should be manifested towards Turkey; that any demands which the great Powers of Europe may have to make should be made matter of friendly negotiation rather than of peremptory demand; that military and naval demonstrations to coerce the Sultan should as much as possible be avoided; that differences with respect to matters affecting Turkey, within the competence of the Sublime Porte, should be decided after mutual concert between the great Powers, and not be forced upon the weakness of the Turkish Government

To these considerations her Majesty's Government wish to add, that in their view it is essential that the Sultan should be advised to treat his Christian subjects in conformity with the principles of equity and religious freedom which prevail generally among the enlightened nations of Europe. The more the Turkish Government adopts the rules of impartial law and equal administration, the less will the Emperor of Russia find it necessary to apply that exceptional protection which his Imperial Majesty has found so burdensome and inconvenient, though no doubt prescribed by duty and sanctioned by treaty

You may read this despatch to Count Nesselrode, and, if it is desired, you may yourself place a copy of it in the hands of the Emperor. In that case you will seemingly ask its presentation with those assurances of friendship and confidence on the part of her Majesty the Queen, which the conduct of his Imperial Majesty was so sure to inspire.

I, am, &c.,

J. RUSSELL.

No. 5.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.—(Received March 6.)
(Secret and confidential.)

[Extract.] St. Petersburg, Feb. 21, 1853.

The Emperor came up to me last night, at a party of the Grand Duchess Hereditary, and in the most gracious manner took me apart, saying that he desired to speak to me. After expressing, in flattering terms, the confidence which he has in me, and his readiness to speak to me without reserve upon matters of the greatest moment, as, his Majesty observed, he had proved in a late conversation, he said: "And it is well it is so; for what I most desire is, that there should be the greatest intimacy between the two Governments. It never was so necessary as at present. Well," the Emperor continued, "are you have got your answer, and you are to bring it to me to-morrow?"

"I am to have that honour, Sir," I answered, "but your Majesty is aware that the nature of the reply is very exactly what I had led you to expect."

"So I was sorry to hear; but I think your Government does not well understand my object. I am not so eager about what shall be done when the sick man dies, as I am to determine with England what shall not be done upon that event taking place."

"But, Sir," I replied, "allow me to ob erve that we have no reason to think that the sick man (to use your Majesty's expression) is dying. We are as much interested as we believe your Majesty to be in his continuing to live; while, for myself, I will venture to re mark that experience shows me that countries do not die in such a hurry. Turkey will remain for many a year, unless some unforeseen crisis should occur. It is precisely, Sir, for the avoidance of all circumstances likely to produce such a crisis that her Majesty's Government reckons upon your generous assistance."

"Then," rejoined the Emperor, "I will tell you that, if your Government has been ad to believe that Turkey retains any elements of existence, your Government must have received incorrect information. I repeat to you, that the sick man is dying; and we can ne r allow such an event to take us by surprise. We must come to some understanding; and this we should do, I am convinced, if I could hold but ten minutes' conversation with your Minister—with Lord Aberdeen, for instance, who knows me so well, who has full confidence in me, as I have in him. And, remember, I do not ask for a treaty or a protocol; a general understanding is all I require that between gentlemen is sufficient: an', in this case, I am certain that the confidence would be as great on the side of the Queen's Ministers as on mine. So no more for the present; you will come to me to-morrow; and you will remember that, as often as you think your conversing with me will promote a good understanding upon any point, you will send word that you wish to see me."

I thanked his Majesty very cordially, adding that I could assure him that her Majesty's Government, I was convinced, considered his word, once given, as good a bond. * * * * *

No 6

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL. —(Received March 8.)
(Secret and confidential.)

[Extract.] St. Petersburg, Feb. 22, 1853.

I had the honour of waiting yesterday upon the Emperor, and of having with his Majesty one of the most interesting conversations in which I ever found myself engaged. My only regret is my inability to report in full detail a dialogue which lasted an hour and twelve minutes.

The Emperor began by desiring me to read to him aloud your Lordship's secret and confidential despatch of the 9th inst., saying that he should stop me occasionally, either to make an observation, or to call upon me for the translation of a passage

Upon arriving at the fourth paragraph, the Emperor desired me to pause, and observed, that he was certainly most desirous that some understanding should be entered into with her Majesty's Government for providing against a contingency so probable as that of the downfall of Turkey; that he was, perhaps, even more interested than England could be in preventing a Turkish catastrophe, but that it was constantly impending; that it might be brought about at any moment, either by an external war, or by a feud between the old Turkish party and that of the "new superficial French reforms;" or again, by a rising of the Christians already known to be very impatient of shaking off the Mussulman yoke (*long*)

As regards the first cause, the Emperor said that he had a good right to advert to it, inasmuch as, if he had not stopped the victorious progress of General Diebitsch in 1829, the Sultan's authority would have been at an end.

The Emperor likewise desired me to remember that he, and he only, had hastened to the assistance of the Sultan, when his dominions were threatened by the Pacha of Egypt.

I proceeded to read, and was again stopped at the sentence beginning "In there circumstances it would hardly be consistent with the friendly feelings," when the Emperor observed that her Majesty's Government did not appear to be aware that his chief object was to obtain from her Majesty's Government some declaration, or even opinion, of what ought not to be permitted in the event of the sudden downfall of Turkey. I said, "Perhaps your Majesty would be good enough to explain your own ideas upon this negative policy." This his Majesty for some time declined doing; he ended however, by saying: "Well, there are several things which I never will tolerate; I will begin by one of-less. I will not tolerate the permanent occupation of Constantinople by the Russians; having said this, I will say that it never shall be held by the English, or French, or any other great nation. Again, I never will permit an attempt at the reconstruction of a Byzantine empire, or such an extension of Greece as would render her a powerful state; still less will I permit the breaking up of Turkey into little republics, asylums for the K suths and Mazzi-is, and other revolutionists of Europe. Rather than submit to any of these arrangements I would go to war, and as long as I have a man and a musket left would carry it on. These, the Emperor said, "are at once some ideas. Now give me some in return."

I remarked upon the assurance which would be found respecting the English resolution of never attempting to possess Constantinople, and, upon the cancellation of her Majesty's Government to enter into eventual arrangements But, upon being still pressed by his Imperial Majesty, I said—"Well, Sir, the idea may not suit your Majesty, may not suit her Majesty's Government; but what is good between man and man often proves bad between one State and another. How would it be if, in the event of any catastrophe occurring in Turkey, Russia and England were to declare that no power should be allowed to take possession of its provinces; that the property should remain, as it were, under seals, until amicable arrangements could be made as to its adjudication?"

"I will not say," the Emperor observed, "that such a course would be impossible, but, at least, it would be very difficult; there are no elements of provincial or communal government in Turkey; you would have Turks attacking Christians, Christians falling upon Turks, Christians of different sects quarrelling with each other—in short, chaos and anarchy"

"Sir," I then observed, "if your Majesty will allow me to speak plainly, I would say that the great difference between us is this—that you continue to dwell upon the fall of Turkey, and the arrangements requisite before and after the fall, and that we, on the contrary, look to Turkey remaining where he is, and to the precautions which are necessary for preventing her condition from becoming worse."

"Alas!" said the Emperor, "that is what the Chancellor is perpetually telling me; but the catastrophe will occur some day, and take us all unaware."

His Imperial Majesty spoke of France. "God forbid," he said, "that I should accuse any one wrongfully; but there are circumstances, both at Constantinople and Montenegro, which are extremely suspicious; it looks very much as if the French Government were endeavouring to embroil us all in the East, hoping in this way the better to arrive at their own object—one of which, no doubt, is the possession of Tunis."

The Emperor then proceeded to say that, for his own part, he cared very little what line the French might think proper to take in Eastern affairs, and that little more than a month ago he had apprised the Sultan that if his assistance was required for resisting the menaces of the French, it was entirely at the service of the Sultan.

In a word, the Emperor went on to observe, "As I before told you, all I want is a good understanding with England, and this not as to what shall, but as to what shall not be done; this point arrived at—the English Government and I, and the English Government, having entire confidence in one another's views—I care nothing about the rest."

I remarked that I felt confident that her Majesty's Government could see as little disposed as his Imperial Majesty to tolerate the presence of the French at Constantinople; and being desirous, if possible, of ascertaining whether there was any understanding between the Cabinets of St. Petersburg and Vienna, I added, "But your Majesty has forgotten Austria: now all these Eastern questions affect her very nearly; she, of course, would expect to be consulted."

"Oh!" replied the Emperor, greatly to my surprise, "but you must understand that when I speak of Rus ia I speak of Austria as well; what suits the one suits the other; our interests as regards Turkey are perfectly identical." I should have been glad to make another inquiry or two upon this subject, but I did not venture to do so.

I ought to have stated that in a preceding part of the conversation his Majesty, although without any appearance of anger, evinced some surprise at an expression in your Lordship's despatch, "the long-cherished ambition of his (the Emperor's) own nation;" he would ask what that phrase meant?

It happened that I was prepared for the surprise expressed, and ready to answer any reflection which it might call forth.

"Sir," I said, "Lord John Russell is not speaking of your ambition; he speaks of that entertained by your people."

The Emperor could not at first admit that the phrase was applicable to the Russian nation any more than to himself; when I said, "Your Majesty will permit me to remark that Lord John Russell only repeats what was said thirty years ago by your brother, of glorious memory, in writing confidentially to Lord Castlereagh, in the year 1822 the Emperor Alexander spoke of being the only Russian who resisted the views of his subjects upon Turkey, and of the loss of popularity which he had sustained by his antagonism."

This quotation, which, by accident, I could make almost in the words of the letter, seemed to change the current of the Emperor's ideas.

"You are quite right," he said; "I remember the events to which my late brother alluded. Now it is perfectly true that the Empress Catherine indulged in all sorts of visions of ambition, but it is not less so that these ideas are not at all shared by her descendants. You see how I am behaving towards the Sultan. This gentleman (*ce monsieur*) breaks his written word to me, and sets in a manner extremely displeasing to me, and I have contented myself with despatching an Ambassador to Constantinople, to demand reparation. Certainly, I could send an army there if I chose—there is nothing to stop them; but I may late brother alluded. Now it is perfectly true that the Empress Catherine indulged in all sorts of visions of ambition, but it is not less so that these ideas are not at all shared by her descendants. You see how I am behaving towards the Sultan. This gentleman (*ce monsieur*) breaks his written word to me, and sets in a manner extremely displeasing to me, and I have contented myself with despatching an Ambassador to Constantinople, to demand reparation. Certainly, I could send an army there if I chose—there is nothing to stop them; but I have no intention of being trifled with."

His Imperial Majesty spoke of Montenegro, observing that he approved the attitude taken by the Austrian Cabinet, and that in these affairs he could not be permitted that the Turks should ill treat and even murder a Christian population.

I ventured to remark that upon this point the wrongs were at least divided between the Turks and the Montenegrins, and that I had full reason for believing that the provocation came from the latter. The Emperor, with more impartiality than I had expected, admitted that there had been wrongs on both sides; that certainly the mountaineers were rather addicted to brigandage; and that the taking of Djablak had excited his great indignation As the same time his Majesty said, "It is impossible not to feel great interest in a population warmly attached to their religion, who have so long kept their ground against the Turks;" and the Emperor continued—"It may be fair to tell you that if any attempt at exterminating these people should be made by Omer Pacha, and should a general rising of the Christians take place in consequence, the Sultan will, in all probability, lose his throne; but in this case he has to rise no more. I wish to support his authority, but, if he loses it, it is gone for ever. The Turkish empire is a thing to be tolerated, not to be reconstructed. In such a cause, I protest to you I will not allow a pistol to be fired."

The Emperor went on to say that, in the event of the dissolution of the Ottoman empire, he thought it might be less difficult to arrive at a satisfactory territorial arrangement than was commonly believed. "The Principalities are," he said, "in fact, an independent State under my protection; this might so continue. Servia might receive the same form of government. So again with Bulgaria. There seems to be no reason why this province should not form an independent state. As to Egypt. I quite understand the importance to England of that territory. I can listen only say, that if, in the event of a distribution of the Ottoman succession upon the fall of the empire, you should take possession Egypt, I shall have no objections to offer. I would say the same thing of Candia: that island might suit you, and I do not know why it should not become an English possession."

As I did not wish that the Emperor should imagine that an English public servant was caught by this sort of overture, I simply answered that I had always understood that the English views upon Egypt did not go beyond the point of securing a safe and ready communication between British India and the mother country.

The conversation now drawing towards an end, the Emperor express ed his warm attachment to the Queen our gracious Sovereign, and his respect for her Majesty's present advisers. The declarations contained in your Lordship's despatch had been, he said, very satisfactory; he could only desire that they should be a little amplified. The terms in which your Lordship had spoken of his conduct were, the Emperor said, very flattering to him.

In dismissing me, his Imperial Majesty said—"Well, induce your Government to write again upon those subjects—to write more fully, and to do so without hesitation. I have confidence in the English Government. On the next point in arrangement, any convention de la jarbande; c'est un libre échange d'idées, et, au besoin, une parole de *gentleman*, entre nous cela suffit." * * * * *

No. 7.

From Sir G. H. Seymour to the Earl of Clarendon, dated March 9th, incloses a confidential memorandum, which his Imperial Majesty had caused to be drawn up, and which was intended as an answer to, or a comment upon, the despatch of which Sir G. H. Seymour had made to his Imperial Majesty on the 21st ult., and which Sir George describes as one that cannot fail of being considered as one of the most remarkable papers that had ever been issued from the Emperor's secret Cabinet.

(Translation.) Feb. 21, 1853.

The Emperor has, with the liveliest interest and real satisfaction, made himself acquainted with the secret and confidential despatch which Sir Hamilton Seymour communicated to him. He duly appreciates the frankness which has dictated it He has found therein a fresh proof of the friendly sentiments which her Majesty the Queen entertains for him. In connexion with the friendly relations with the British Envoy on the cases which, from one day to another, may bring on the fall of the Ottoman Empire, it had by no means entered into the Emperor's thoughts to propose for this contingency a plan by which Russ'a and England should dispose beforehand of the provinces ruled by the Sultan—a system altogether arranged; still less a formal agreement to be concluded between the two Cabinets. It was purely and simply the Emperor's notion that each party should confidentially state to the other less what it wishes than what it does not wish; what would be contrary to English interests, what would be contrary to Russian interests; in order that, the case occurring, they might avoid acting in opposition to each other.

There is in this neither plans of partition, nor convention to be binding on the other Courts. It is merely an interchange of opinions, and the Emperor sees no necessity of talking about it before the time. It is

(*Continued on page 281.*)

THE BALTIC FLEET RUNNING FOR DOVER STRAITS.—SKETCHED BY O. W. BRIERLEY.—(SEE PAGE 273.)

(Continued from page 270.)

precisely for that reason that he took especial care not to make it the object of an official communication from one Cabinet to the other. By confining himself to speaking of it himself, in the shape of familiar conversation, to the Queen's representative, he selected the most friendly and confidential form of opening himself with frankness to her Britannic Majesty, being desirous that the result, whatsoever it might be, of these communications, should remain, as it ought to be, a secret between the two Sovereigns.

"Consequently, the objections which Lord John Russell raises to any concealment as regards the other Powers, in the event of a formal agreement being entered into—of which there is at present no question—fall to the ground; and consequently, also, the inconveniences disappear, which he points out as calculated to contribute to hasten the occurrence of the very event which Russia and England are desirous of averting, if the existence of such an agreement should become prematurely known to the Sultan and to the subjects of the Sultan.

As regards the object of this wholly confidential interchange of opinions, that is to say, the downfall of the Ottoman empire, doubtless, that is but an uncertain and remote contingency. Unquestionably, the period of it cannot be fixed; and the actual crisis has arisen to render the realization of it imminent. But, after all, it may happen; happen even unexpectedly. Without mentioning the ever-increasing causes of dissolution which are spread by the moral, financial, and administrative condition of the Porte it may proceed gradually from one, at least, of the two questions mentioned by the English Ministry in its secret despatch In truth, it perceives in those questions only mere disputes, which would not differ in their bearing from difficulties which form the ordinary business of diplomacy. But that kind of dispute may, nevertheless, bring on war; and, with war, the consequences which the Emperor apprehends from it. If, for instance, in the affair of the Holy Places, the *amour propre* and the menaces of France, continuing to press upon the Porte, should compel it to refuse us all satisfaction; and if, on the other hand the religious sentiments of the orthodox Greeks, offended by the concessions made to the Latins, should raise the lowness majority of his subjects against the Sultan. As regards the affair of Montenegro, that, according to the late accounts, may happily be looked upon as settled. But, at the time that the Emperor had his interview with Sir Hamilton Seymour, it might be apprehended that the question would take a most serious turn. Neither ourselves nor Austria could have allowed a protracted devastation or forced submission of Montenegro—a country which, up to the present time, has continued actually independent of the Porte—a country over which our protection has been extended for more than a century. The horrors which are committed there—those which, by Ottoman fanaticism, have, a short time since, been extended over Bulgaria, Bosnia, and the Herzegovine gave the other Christian provinces of the Porte only too much reason to anticipate that the same fate awaited them. They were calculated to provoke the general rising of the Christians who live under the empire of the Turkish empire, and to hasten its ruin. It is not, then, by any means an idle and imaginary question—a contingency too remote—to which the anxiety of the Emperor has called the attention of the Queen his ally.

In the face of the uncertainty and decay of the existing state of things in Turkey her English Cabinet expresses the desire that the greatest forbearance should be shown towards the Porte. The Emperor is conscious of never having acted otherwise. The English Cabinet itself admits it. It addresses to the Emperor, with reference to the numerous proofs of moderation which he has given up to the present time, praises which its Majesty will not accept, because in that he has only listened to his own overbearing conviction. But, in order that the Emperor may continue to concur in that system of forbearance, to abstain from any demonstration—from any peremptory language—it would be necessary that this system should be equally observed by all the Powers at once France has adopted another. By menaces she obtained, in opposition to the letter of the treaties, the admission of a ship of the line into the Dardanelles. At the cannon's mouth she twice presented her claims, and her demands for indemnity, at Tripoli, and afterwards at Constantinople. Again, in the contest respecting the Holy Places, by menaces she effected the abrogation of the firman that is to say, the very promises which the Sultan had given the Emperor. With regard to all those acts of violence England observed a complete silence. She neither offered support to the Porte nor addressed remonstrances to the French Government. The consequence is very evident. The Porte necessarily concluded from this that from France alone it has everything to hope as well as everything to fear, and that it can evade with impunity the demands of Austria and of Russia. It is thus that Austria and Russia, in order to obtain justice, have even themselves compelled, in their own despite, to have recourse against their will, to act by intimidation, since they have to do with a Government which only yields to a peremptory attitude; and it is thus that by its own fault, or rather by that of those who have weakened it in the Divan, the Porte is urged on in a course which even it detests, and it still more. Let England, then, employ herself in making it listen to reason. Instead of uniting herself with France against the just demands of Russia, let her avoid supporting, or even appearing to support, the resistance of the Ottoman Government. Let her be the first to blame the latter, as she herself considers it essential, to treat its Christian subjects with more equity and humanity. That will be the surest means of relieving the Emperor from the obligation of availing himself in Turkey of those rights of traditional protection to which he never has recourse but against his will, and of postponing indefinitely the crisis which the Emperor and her Majesty the Queen are equally anxious to avert.

In short, the Emperor cannot but congratulate himself at having given occasion for this intimate interchange of confidential communications between her Majesty and himself. He has found therein valuable assurances, of which he takes note with a lively satisfaction. The two Sovereigns have frankly explained to each other what, in the extreme case of which they have been treating, their respective interests cannot endure. England understands that Russia cannot suffer the establishment at Constantinople of a Christian Power sufficiently strong to control and disquiet her. She declares that for herself she renounces any intention or desire to possess Constantinople. The Emperor equally disclaims any wish or design of establishing himself there. England promises that she will enter into no arrangement for the purpose of concerting measures to be taken in the event of the fall of the Turkish empire, without a previous understanding with the Emperor. The Emperor, on his side, willingly contracts the same engagement. As he is aware that in such a case he can amply reckon upon Austria, who is bound by her promises to concert with him, he regards with less apprehension the catastrophe which he still desires to prevent and avert as much as it shall depend on him to do so.

No less precious to him are the proofs of friendship and personal confidence on the part of her Majesty the Queen, which Sir Hamilton Seymour has been directed on this occasion to impart to him. He sees in them the surest guarantee against the contingency which his foresight had deemed it right to point out to that of the English Government.

No. 8.

Dated on the same day as the preceding, informs the Earl of Clarendon that, as the important document enclosed in No. 7 appeared to have been drawn up under a complete misapprehension, real or assumed, of the part taken by the British Government in the affairs of Turkey, Sir G. H. Seymour had thought it his duty to address an explanatory letter to Count Nesselrode. Sir G. H. Seymour encloses the letter, which, like all the rest, is marked "private and confidential."

No. 9,

Dated March 10th, informs Lord Clarendon that, in consequence of the communication referred to, Sir G. H Seymour had a very amicable and satisfactory conversation with the Chancellor; and that the two had read over the memorandum together

No. 10.

THE EARL OF CLARENDON TO SIR G. H. SEYMOUR.

(Secret and confidential.)

[Extract]. Foreign-Office, March 28, 1853.

Sir,—Your despatches of the 21st and 22nd ult. have been laid before the Queen, and I am commanded to express her Majesty's entire approval of the discretion and tact displayed by you in the conversations which you had the honour to hold with the Emperor.

* * * * * * *

Her Majesty's Government persevere in the belief that Turkey still possesses the elements of existence, and they consider that recent events have proved the correctness of the opinion expressed in the despatch of my predecessor, that there was no sufficient cause for intimating to the Sultan that he cannot keep peace at home, or preserve friendly relations with his neighbours.

Her Majesty's Government have accordingly learnt with sincere satisfaction that the Emperor considers himself even more interested than England in preventing a Turkish catastrophe; because they are convinced that upon the policy pursued by his Imperial Majesty towards Turkey will mainly depend the hastening or the indefinite postponement of an event which every Power in Europe is concerned in averting. Her Majesty's Government are convinced that nothing is more calculated to precipitate that event than the constant prediction of its being near at hand; that nothing can be more fatal to the vitality of Turkey than the assumption of its rapid and inevitable decay; and that if the opinion of the Emperor that the days of the Turkish empire were numbered became notorious, its downfall must occur even sooner than his Imperial Majesty now appears to expect.

But on the supposition, that, from unavoidable causes, the catastrophe did take place, her Majesty's Government entirely share the opinion of the Emperor that the occupation of Constantinople by either of the great Powers would be incompatible with the present balance of power and the maintenance of peace; that, therefore, and must at once be regarded as impossible; that there are no elements for the reconstruction of a Byzantine empire; that the systematic misgovernment of Greece offers no encouragement to extend its territorial dominion; and that, as there are no materials for the erection of communal government, anarchy would be the result of leaving the provinces of Turkey to themselves or permitting them to form separate republics.

The Emperor has announced that, sooner than permit a settlement of the question by any one of these methods, he will be prepared for war at every hazard; and, however much her Majesty's Government may be disposed to agree in the soundness of the views taken by his Imperial Majesty, yet they consider that the simple predetermination of what shall not be tolerated does little towards solving the real difficulties, or settling in what manner it would be practicable, or even desirable, to deal with the heterogeneous materials of which the Turkish empire is composed.

England desires no territorial aggrandizement, and could be no party to a previous arrangement from which she was to derive any such benefit. England could be no party to any understanding, however general, that was to be kept secret from other Powers; but her Majesty's Government believe that no arrangements could control events, and that no understanding could be kept secret. They would, in the opinion of her Majesty's Government, be the signal for preparation for intrigues of every description, and for revolts among the Christian subjects of the Porte. Each Power, and each party would endeavour to secure its future interests, and the dissolution of the Turkish empire would be preceded by a state of anarchy which must aggravate every difficulty, if it did not render a peaceful solution of the question impossible.

The only mode by which such a solution could be attempted would be that of a European Congress, but that only affords an additional reason for desiring that the present order of things in Turkey should be maintained, as her Majesty's Government cannot, without alarm, reflect on the jealousies that would then be evoked, the impossibility of reconciling the different ambitions and the divergent interests that would be called into play, and the certainty that the treaties of 1815 must then be open to revision, when France might be prepared to risk the chances of a European war, to get rid of the obligations which she considers injurious to her national honour, and which, having been imposed by victorious enemies, are a constant source of irritation to her.

* * * * *

Her Majesty's Government believe that Turkey only requires forbearance on the part of its allies, and a determination not to press their claims in a manner humiliating to the dignity and independence of the Sultan that friendly support, in short, that, with States as with individuals, the weak are entitled to expect from the strong in order not only to prolong its existence, but to remove all cause of alarm respecting its dissolution.

Nos. 11 and 12.

From Sir G. H. Seymour to the Earl of Clarendon, refer to a memorandum written in pencil by the Emperor, on the confidential memorandum of February 21st. The Emperor imagined that Sir G. H. Seymour had considered a passage in that paper as reflecting upon the conduct of the British Government, and had authorized Count Nesselrode to modify it if necessary.

No. 13,

From the Earl of Clarendon to Sir G. H. Seymour, dated 5th April, 1853, expresses the opinion of her Majesty's Government that no useful purpose would be served by prolonging the correspondence. His Lordship states that her Majesty's Government observe with pleasure that, in the opinion of the Emperor, the fall of the Turkish empire is looked upon as an uncertain and distant contingency, and that no real crisis has occurred to render its realization imminent." His Lordship concludes by adding that, "as her Majesty and the Emperor have now mutually renewed the assurances of their intention to uphold the independence and integrity of the Turkish empire, it is the earnest desire of her Majesty's Government that the representatives of the two Powers may henceforward co-operate together in carrying out this intention by giving similar advice in the same friendly spirit to the Porte.

No. 14.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received May 2.)

(Secret and confidential.)

[Extract.] St. Petersburg, April 20, 1853.

The Emperor, on rising from the table when I had the honour of dining at the palace on the 18th inst., desired me to follow him into the next room.

His Majesty then said that he had wished to state to me the real and sincere satisfaction which he received from your Lordship's despatch, marked "Secret and confidential," of the 23rd ultimo.

It had been, his Majesty said, most agreeable to him to find that the overtures which he had addressed to her Majesty's Government had been responded to in the same friendly spirit in which they were made; that, to use a former expression, there was nothing in which he placed so much reliance as *la parole d'un gentilhomme*—that he felt that the relations of the two Courts stood upon a better basis now that a clear understanding had been obtained as to points, which, if left in doubt, might have been productive of misintelligence; and, as his Majesty was pleased to add, he felt obliged to me for having contributed towards bringing about this friendly *entente*.

And his Majesty said, "I beg you to understand, that what I have pledged myself to will be equally binding on my successor; there now exist memorandums of my intentions, and whatever I have promised, my son, if the changes alluded to should occur in his time, would be as ready to perform as his father would have been.

* * * * *

No. 15.

From Sir G. H. Seymour to the Earl of Clarendon, dated 21st April, encloses the following document:—

(Translation.)

The Emperor has, with lively satisfaction, made himself acquainted with Lord Clarendon's despatch of the 23rd of March. His Majesty congratulates himself on perceiving that his views and those of the English Cabinet entirely coincide on the subject of the political combinations which it would be chiefly necessary to avoid in the extreme case of the contingency occurring in the East which Russia and England have equally at heart to prevent, or, at all events, to delay as long as possible. Sharing generally the opinions expressed by Lord Clarendon on the necessity of the prolonged maintenance of the existing state of things in Turkey, the Emperor, nevertheless, cannot abstain from adverting to a special point which leads him to suppose that the information received by the British Government is not altogether in accordance with ours. It refers to the humanity and the toleration to be shown by Turkey in her manner of treating her Christian subjects.

Putting aside many other examples to the contrary of an old date, it is, for all that, notorious that recently the cruelties committed by the Turks in Bosnia forced hundreds of Christian families to seek refuge in Austria. In other respects, without wishing on this occasion to enter upon a discussion as to the symptoms of decay, more or less evident, presented by the Ottoman Power, or the greater or less degree of vitality which its internal constitution may retain, the Emperor will readily agree that the best means of modifying the duration of the Turkish Government is not to harass it by overbearing demands, supported in a manner humiliating to its independence and its dignity. His Majesty is disposed, as he has ever been, to act upon this system, with the clear understanding, however, that the same rule of conduct shall be observed, without distinction, and unanimously, by each of the great Powers, and that none of them shall take advantage of the weakness of the Porte to obtain from it concessions which might turn to the prejudice of the others. This principle being laid down, the Emperor declares that he is ready to labour, in concert with England at the common work of prolonging the existence of the Turkish empire, setting aside all cause of alarm on the subject of the late war. In a candid spirit, the full value offered by the British Cabinet of entire confidence in the upright[illegible] of his sentiments, and the hope that, on this basis, his alliance would long land cannot fail to become strong[illegible]. St. Petersburg, April 15, 1853.

NEGOTIATION IN 1844.

The following is the memorandum by Count Nesselrode delivered to her Majesty's Government, and founded on communications received from the Emperor of Russia subsequently to his Imperial Majesty's visit to England in June, 1844.—

(Translation.)

Russia and England are mutually penetrated with the conviction that it is for their common interest that the Ottoman Porte should maintain itself in the state of independence and of territorial possession which at present constitutes that empire, as that political combination is the one which is most compatible with the general interest of the maintenance of peace.

Being agreed on this principle, Russia and England have an equal interest in using their efforts in order to keep up the existence of the Ottoman empire, and to avert all the dangers which can place in jeopardy its safety.

With this object, the essential point is to suffer the Porte to live in repose, without needlessly disturbing it by diplomatic bickerings, and without interfering, unless with absolute necessity, in its internal affairs.

In order to carry out skilfully this system of forbearance, with a view to the well-understood interest of the Porte, two things must not be lost sight of. They are these:

In the first place, the Porte has a constant tendency to extricate itself from the engagements imposed upon it by the treaties which it has concluded with other Powers. It hopes to do so with impunity, because it reckons on the mutual jealousy of the cabinets. It thinks that, if it fails in its engagements towards one of them, the rest will espouse its quarrel, and will screen it from all responsibility.

It is essential not to confirm the Porte in this delusion. Every time that it fails in its obligations towards one of the great Powers, it is the interest of all the rest to make it sensible of its error, and seriously to exhort it to act rightly towards the Cabinet which demands just reparation.

As soon as the Porte shall perceive that it is not supported by the other Cabinets, it will give way; and the differences will have arisen will be arranged in a conciliatory manner, without any conflict resulting from them.

There is a second cause of complication which is inherent in the situation of the Porte: it is the difficulty which exists in reconciling the respect due to the sovereign authority of the Sultan, founded on the Mussulman law, with the forbearance required by the interests of the Christian population of that empire.

This difficulty is real. In the present state of feeling in Europe, the Cabinets cannot see with indifference the Christian populations in Turkey exposed to flagrant acts of oppression and religious intolerance.

It is necessary constantly to make the Ottoman Ministers sensible of this truth, and to persuade them that they can only reckon on the friendship and on the support of the great Powers on the condition that they treat the Christian subjects of the Porte with toleration and with mildness.

While insisting on this truth, it will be the duty of the foreign representatives, on the other hand, to exert all their influence to maintain the Christian subjects of the Porte in submission to the sovereign authority.

It will be the duty of the foreign representatives, guided by these principles, to act among themselves in a perfect spirit of agreement. If they address remonstrances to the Porte, those remonstrances must bear a real character of unanimity, though divested of one of exclusive dictation. By persevering in this system with calmness and moderation, the representatives of the great Cabinets of Europe will have the best chance of succeeding in the steps which they may take, without giving rise to any complication which might affect the tranquillity of the Ottoman empire. If all the great Powers frankly adopt this line of conduct, they will have a well-founded expectation of preserving the existence of Turkey.

However, they must not conceal from themselves how many elements of dissolution that empire contains within itself. Unforeseen circumstances may hasten its fall, without its being in the power of the friendly Cabinets to prevent it.

As it is not given to human foresight to settle beforehand a plan of action for such or such unlooked-for case, it would be premature to discuss eventualities which may never be realised.

In the uncertainty which hovers over the future, a single fundamental idea exists, the admission of a really practical application: it is that the danger which may result from a catastrophe in Turkey will be much diminished if, in the event of its occurring, Russia and England have come to an understanding as to the course to be taken by them in common.

The moment this understanding will be the more beneficial, inasmuch as it will have the full assent of Austria. Between her and Russia there exists already an entire conformity of principles in regard to the affairs of Turkey, in a common interest of conservation and of peace.

In order to render their action more efficacious, there would remain nothing to be desired but that England should be seen to associate herself thereto with the same view.

The question which recommends the establishment of this agreement is very simple.

On land Russia exercises, in regard to Turkey, a preponderant action.

On sea England occupies the same position.

Isolated, the action of these two Powers might do much mischief. United, it can produce a real benefit: thence the advantage of coming to a previous understanding before having recourse to action

This notion was in principle agreed upon during the Emperor's last residence in London. The result was the eventual engagement, that if anything unforeseen occurred in Turkey, Russia and England should previously concert together as to the course which they should pursue in common.

The object for which Russia and England will have to come to an understanding may be expressed in the following manner:—

1. To seek to maintain the existence of the Ottoman empire in its present state, so long as that political combination shall be possible.

2. If we foresee that it must crumble to pieces, to enter into previous concert as to everything relating to the establishment of a new order of things, intended to replace that which now exists, and, in conjunction with each other, to see that the change which may have occurred in the internal situation of that empire shall not injuriously affect either the security of their own States and the rights which the treaties assure to them respectively, or the maintenance of the balance of power in Europe.

For the purpose thus stated, the policy of Russia and of Austria, as we have already said, is closely united by the principle of perfect identity. If England, as the principal maritime Power, acts in concert with them, it is to be supposed that France will find herself obliged to act in conformity with the course agreed upon between St. Petersburg, London, and Vienna.

Conflict between the great Powers being thus obviated, it is to be hoped that the peace of Europe will be maintained even in the midst of such serious circumstances. It is to secure this object of common interest, if the case occurs, that, as the Emperor agreed with her Britannic Majesty's Ministers during his residence in England, the previous understanding which Russia and England shall establish between themselves must be directed.

BARBADOES.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

In the article in your Number of last Saturday, headed "Withdrawal of troops from the West India Islands," your Military Correspondent states that Barbadoes was conquered in 1625. Allow me to correct him in this particular. Barbadoes, although it was known as early as the commencement of the sixteenth century to the Spaniards, and apparently supplied Indians as slaves for their mines in Espanola (of whose wretched condition, as well as that of the South American natives, the generous Las Casas, by his constant exertions in their favour, procured some amelioration from Charles V., who issued his instructions for that purpose to the licentiate Rodrigo de Figueroa, in 1518), was never colonised by any other nation than the English, who landed there in 1605, and in whose possession it has ever since remained. Barbadoes has always been one of the most loyal of our colonies. It was here that many of those attached to the Royal cause during the civil wars of the middle of the seventeenth century, sought and found an asylum until these rivalric opposition of that small spot roused the ire and vengeance of Cromwell. Its large trade with the Dutch (which the Protector sought to cripple and harass), was the cause which led to the Navigation Laws. It may not be uninteresting to antiquaries to mention, that in the small churchyard of St. John, in this island, is the burial-place of Ferdinand Paleologus, the sixth in descent from the brother of Cons antine, the last of the Greek Emperors, who perished the 29th of May, 1453, in the general assault, when Constantinople was taken by the Turks.

Warwick, March, 1854. H. S. M.

DARIEN SHIP CANAL.—CONFERENCE ON BOARD H.M.S. "ESPIEGLE," IN CALEDONIA BAY.

THE DARIEN SHIP CANAL EXPEDITION.

By favour of a Correspondent, we are enabled to Illustrate another stage of this enterprise—a Conference held on board H.M.S. *Espiegle*, in Caledonia Bay, New Granada, on the 22nd of January last, sketched by Mr. W. F. B. Edwards, of the above ship. The persons present were, commencing from the left-hand of the Sketch, Capt. Hancock, R.N., Mr. Lionel Gisborne, C.E., Dr. Cullen, and Lieut. St. John, R.E.; and seated above is a party of the Darien Indian Chiefs. Of these, the first from the left is "Dennis of Sasardi;" and the fourth, "Robinson," Secretary of State to "Calega," the old Chief of San Blas. The object of this conference, or "pow-wow," was to obtain permission to make a thorough survey of the route. The Chiefs were at first very averse to the party landing on the Isthmus; but they at length, however, consented that the English party should land, but only for the purpose of reconnoitring the proposed route of the Ship Canal. On the 24th an English and French party were, accordingly, despatched, in addition to a party of Americans, who left the United States sloop-of-war *Cyane*, on the 19th. The result, however, in each case, seems to have been as unfavourable as that which had been previously experienced by Commander Prevost, engaged on the same service on the Pacific side. "Every party that returned," says the *Aspinwall Courier*, "expressed the same opinion, that the route was utterly impracticable."

Another account states:—

The report of the American party is not at all favourable to the prospect for a ship-canal, for they estimated, on a fair calculation, that the elevation of the lowest points over which they passed is about 1000 feet in height. They followed the Caledonia river; and you can judge the size of the stream when the party walked up the bed of the river all the way. The English and French party, combined, started on the 24th. On that day a party of five, detached from Strain's party, returned to the ship, and reported the obstacles and hardships which they had encountered. They stated they had left Strain and his party in the mountains, eighteen miles distant. They left the ship again with a reinforcement of ten men and ten days' extra provisions, under the charge of Lieutenant Fauntleroy. While I write I see detachments of the French and English party returning to their vessels, and am informed they have come after provisions. A glance at the letter of Lieutenant Fauntleroy, who overtook the English party the day after he left, fully indicates that their own conclusion upon the premises acquired thus far is that the route is impracticable.

"THE ORINOCO" LANDING TROOPS AT MALTA

TROOPS FOR THE WAR.

(From a Correspondent.)

MALTA, March 13th, 1854.

You will be glad to hear of the safe arrival here of the several steamships, &c., with troops, composing part of the expedition against Russia.

Early in the morning of the 4th inst. the *Orinoco* came in sight from Southampton, nine days out, with 23 officers, part comprising the staff, and 924 men of the Coldstream Guards, all of whom were safely landed at Fort Manoel and Fort Tigne, the same afternoon. (*See Sketch*). About two p.m., the *Niagara* came in sight from Liverpool, with 31 officers and 878 men, of the 28th Regiment; they safely landed the same afternoon, on the quay of the Victualling-yard, and took up their quarters at Bighi, San Salvador, Zabbar, and Verdala. The *Ripon* arrived about ten p.m., of the 4th; but, owing to a swell setting into the harbour, did not land the troops till Sunday afternoon, the 5th. She brought 26 officers and 602 men, of the 3rd Battalion Grenadier Guards. They landed, and took up their quarters at Fort Manoel and Lazaretto. 7th, *Cambria*, from Cork, arrived, 21 officers and 663 men, 50th Regiment; quartered at the Dockyard. 8th, *Himalaya* arrived, in seven days two hours, from Plymouth, with 7 officers and 210 men, Rifles; 6 officers and 100 men, Sappers and Miners; and 33 officers and 911 men, 93rd Highlanders: these last are encamped on the Hornwork outside Fort Bombe, and present a very picturesque appearance. 11th, the *Emu*, from Queenstown, arrived, with 29 officers and 803 men, 33rd Regiment: these are encamped on the Crown work above Fort Bombe (both camps about three quarters of a mile from the Valetta Gate). 11th, *Vulcan* arrived, with 25 officers and 793 men of the Rifles; and, lastly, yesterday, the *Manilla* arrived, with 280 Grenadiers, complement of 3rd Battalion; landed, and quartered in Fort Manoel. This steamer having damaged her machinery, was delayed at Gibraltar for repairs, or she would have been here sooner.

I send a calotype of the Highlanders' Camp.

The usually quiet town of Valetta is quite alive with soldiers, and the variety of uniform gives one a slight idea of what the Chobham Camp must have been. Perfect good feeling exists between the Maltese and the soldiers. The Highlanders and Guards excite particular interest, from their uniform, which is new in these parts. J. L. W.

A fine View of Valetta appeared in our Journal of last week.

THE HIGHLANDERS' CAMP, AT MALTA.

THE WILLOUGHBY TESTIMONIAL.

THIS handsome Testimonial has lately been presented to Mr. Willoughby; its purpose being related in the following inscription:—

Presented to J. P. Willoughby, Esq., on the occasion of his leaving Bombay on the 3rd of May, 1851, by his friends, as a testimony of the regard and esteem which they entertained for him in his personal character—the high opinion they had formed of him as a most able and devoted servant of the Government—their gratitude for his philanthropic labours in the abolition of Infanticide in the province of Khattiawar, and the public spirit which he had uniformly evinced in support of the Philanthropic Educational and Literary Institutions of Bombay. The remainder of the Subscriptions has been invested as a Fund, under the title of the "Willoughby Fund," for the encouragement of the Vernacular Literature in Western India.

THE WILLOUGHBY TESTIMONIAL.

The design consists of an Indian column, surmounted by a very elaborate basket. Upon the plinths are two groups, characteristic of Mr. Willoughby's exertions in the suppression of Infanticide

The first Group represents Wisdom appealing to "Natural Affection;" and the second is emblematic of the blessings resulting from the suppression of Infanticide.

The Plate has been beautifully executed by Messrs. Hunt and Roskell, New Bond-street.

RUSSIAN NEWS ABOUT OUR NAVY.—A St. Petersburg paper of the 10th gives details from London of the attempts now making in England to raise forces capable of meeting those of Russia. According to this authority, old men of sixty are ordered on board, to make up the full complement of a ship's crew; the recruiters, too, have had the greatest difficulty in beating up volunteers; then, again, children of nine, ten, and twelve years have been coaxed into the naval service; "huge" bounties have been offered to native and foreign mariners, as an inducement for them to enter the Royal Navy; never has it been so difficult to collect sailors in England, and never was there so few seamen as at present.

THE WAR ON THE DANUBE

WALLACH FAMILY WAITING TO EMBARK FOR WIDDIN.

(From our Special Correspondent.)

WIDDIN, March 3, 1854.

Austria, we are told, has declared her intention to consider the passage of the Danube by the Russians, as a declaration of war. She is said also to have declared that the permanent occupation of the Danubian Principalities would be considered in the same light. It is somewhat difficult, whilst in the latitude of Widdin, to conclude, upon such premises as these, what may be the real wish or the intention of Austria. Two points are to be considered, viz, whether Austria does not know that Russia has no intention of crossing the Danube, and whether she is not aware, in urging the second, how difficult it is to define a permanent occupation of the Principalities. As regards the first point, there seems to be but little doubt. The Russians, no doubt, expect, ere long, to see an imposing force arrayed against them on the very ground which they now occupy. Their long line of troops extending from the villages in front of Kalafat to those in front of Matchin, is in imminent danger of being attacked by Turkish, French and English forces. The Russians, so far from being able to cross the Danube, will find it necessary to concentrate themselves in a position which may enable them firmly to resist the efforts of combined Europeans and Turks; and, even when they have done so, their permanent occupation of such a position must depend partly on their own bravery and success, and partly on the attitude of Austria. It is evident that, with Austria threatening on the side of Transylvania, the Turks advancing in front, and French and English troops coming up to assist, the chances of the Russians are very slight indeed. But leaving aside what seems at present to be most doubtful—the hostility of the Court of Vienna—the movements of the Russians are likely to be defensive rather than offensive ones. It is said, indeed, that, having abandoned the intention of attacking Kalafat, General Gortchakoff, under the advice of General Schilders, has determined for the present to make Slatina his head-quarters on this wing, taking the Aluta as the line to be defended, and holding Karakal as a point of defence in Lesser Wallachia—the communications to be kept open between it and Wallachia Proper by the necessary bridges on the Aluta. I am informed—and a glance at the map confirms the information—that, from the side of the Danube, Karakal cannot be attacked by the enemy, on account of the marshy nature of the ground; whilst, in front, the place may be strengthened with ease by a few earthern works. There is no doubt that the Russian force before Kalafat is much decreased in numbers. The Austrian *Lloyd* of the 14th of February contains a letter in which the forces of the Russians in front of the Turkish lines, on the 7th ult., are described as follows:—"In Poyana, the infantry regiment Katharinenburg, the Jäger regiment Odessa, with two batteries of eight guns, and Cossacks. In Maglavitz, the infantry regiment Tobolsk, and the Jäger regiment Ukrain, and two regiments of cavalry." A deserter from the Paskiewitsch Hussars, who gave himself up on the 25th, furnished answers in exact accordance with the letter. He added, however, that the number of batteries in Poyana was three and not two. However this may be, it is now certain that there are scarcely 12,000 Russians around Kalafat. The Turks might overthrow such a force, if they chose to advance; but they have forborne from annoying the enemy, even by reconnoissances, of late; and it is not the part of a non-military man to guess at their reasons for remaining quiet. There is a general complaint of the *nonchalance* of the Commander. Five squadrons of Russians approached Kalafat on the 27th, with two guns; and four Turkish squadrons marched out to meet them. The Russians fired about twenty rounds—killed two men, and the horse of Major O'Reilly, of the 2nd Regiment of Guards—and then retired in good order, without being charged by the Turks, and having only lost two men by a distant fire of musketry. There may be policy in thus holding back, but boldness in appearance is all on the side of the Russians, and timidity on the side of the Turks; and such appearances speedily and disagreeably affect the spirit of an army. It is said that shortly the forces at Kalafat will be increased, and raised to an imposing number; and that Doxoun Pacha, who commands the reserves at Sofia, will be ordered to join. Doxoun Pacha is a General of note, who is said not to brook the command of any lesser officer than Omer Pacha. Some persons here pretend, therefore, that Omer Pacha, now Generalissimo, as you will doubtless have heard from Constantinople, will come to Kalafat to take the command. All these statements are involved in uncertainty at present. I do not believe that Omer Pacha intends coming here. In the meanwhile, the Russians who, as I ventured to predict, have made no attempt to pass over the Danube into Servia, are endeavouring to foment a revolution in that country. Prince Milosch, who owes his wealth to the hostility of Russia, is now using that wealth in league with the Czar to crush the land of his birth. The fate of Czar George, whom he murdered on the ground of intrigues with the Czar against the peace of Servia, has failed to deter him from this course. The son of Czar George is on the throne—the parts are changed—the latter is now the

JUVENILE AMUSEMENTS AT WIDDIN.

friend of independence; the former, the friend of Russia. With the aid of that enormous fortune which he plundered from the Servians, Prince Milosch has raised some regiments, with which he now intends to try his fortune in a civil war. The Russians, in abetting such a revolution, are acting far more wisely for their interests than in quartering their troops upon the people of the Principality. The inland towns of Servia are still peopled with the partisans of Obrenowitsch. Milosch was accustomed to govern with a body-guard of dare-devils, who feared none but him; men who committed many atrocities, and who had become as hateful, by their excesses, as the Turkish janissaries. These men are still *en surveillance* in various parts of the country. The hope of plunder, and the irksomeness of their confinement, render them fit to commence a civil war. Fortunately, the provincial administration of Prince Alexander is strong and energetic. The partisans of Milosch have long since been excluded from employ and pay. The attention of the Ministry has been now directed to the partisans of Russia. The Governors of Departments known to have such leanings have been dismissed the service, and men of tried political sentiments replace them. At Negotin Mr. Davidovitz, of the Independent and Turkish party, has superseded Mr. Yankovitch, who was suspected of intriguing with General Gortschakoff. It is to be hoped that the ex-Minister Guerachas, lately deposed at the request of Russia, will be replaced at the head of the Servian Ministry, and contributes, by his great influence, to preserve that peace which is essentially necessary to the maintenance of neutrality. It is not difficult, indeed, to divine that Austria would see with pleasure a movement of parties in Servia which should give a pretext for her interference. There is at this moment a corps of 25,000 men encamped at Semlin, opposite Belgrade, under the command of Count Coronini. The Count himself arrived at head-quarters some ten or fifteen days ago, and paid a formal visit to Izzet Pacha at Belgrade. The firman brought by Ethem Pacha, confirming the privileges previously possessed by Servia, had recently been promulgated before an attentive and decorous crowd. It had acted as a counterpoise to the late ukase of the Czar, in which that potentate pretended to confirm what he is pleased to call his protectorate. Count Coronini congratulated the Turkish authorities on the quiet and order which continued to mark the progress of affairs in the Principalities, and laboured to persuade the Pacha that the presence of an Austrian corps at the Gates of Belgrade, was but a matter of precaution, destined to protect Servia, if necessary, from the attacks of Russia. Count Coronini afterwards paid a visit in form to Mr. de Fonblanque, our Consul-General at Belgrade, and then returned to Semlin. Whilst such is the attitude of Austria on the frontier of the Saava, the corps of observation of Temeswar, under the orders of General Schlick, has advanced to the frontiers of Wallachia, and no doubt before long an imposing force will be quartered in Orsova and the neighbourhood, which may become as useful for an attack on Servia as for an advance into the disputed Principalities. In addition to these forces, the Austrians have a corps of observation at, or near Fiume, under the orders of the Ban Jellachich, and another at Mahmula. I have already said what would be the result of a Russian invasion of Servia. I still maintain that it would create a civil war, of which the end is doubtful. Of this, however, there is a certainty—party hostility would cease before the entrance of an Austrian force. Servia once, during a period of twenty years, felt the yoke of Austria. That state has done her best to impede Servian commerce, and stop Servian products in their passage. She has been vexatious and petty. Servia is more averse to her than to any other nation; and the Servians, if let alone, would prove to her most dangerous enemies.

Prince Gortschakoff, in the meanwhile, has not contented himself with efforts to provoke a civil war in Servia. He has lately forced the with efforts to provoke a civil war in Servia. He has lately forced the boyards to raise regiments for the purpose of fighting against the Turks. The Bachi boyard, George Philippesco, received the first-class order of St. Anne from the Emperor, in consequence of his successful efforts in that direction. Perhaps that nobleman will shortly wish he had never received such a mark of favour. He may, however, be saved from the future wrath of the Turks by the intercession of his own son, who is now in Widdin, with other Wallach gentlemen, victims of their desire to give their country a better constitution. It is not now the time perhaps, to give the history of the revolution of Bucharest in 1848. Some of its episodes have been related in previous letters; but when one considers the question of the Danubian Principalities in its political, apart from its religious, point of view, one cannot be persuaded but that the rule of Turkey—now thoroughly roused against Russia—will, if Russia is defeated, be favourable to the development of liberal ideas in Wallachia and Moldavia. The speech which Mr. Cobden made in Manchester, if read by the lights which strike one here, will be found to have been based on ignorance of the political feeling of the mass of the people in Wallachia and Moldavia. The question of these Principalities is no more in reality a question of religious protectorate than the rights and privileges of the Greek and Latin Churches in Turkey are the cause of a declaration of war on the part of the Western Powers. Amongst the grand grievances of the people of Wallachia that of the priesthood is one. Not in England at the time of Henry VIII., not in Naples at the present day, where the benefices of the clergy absorb an enormous mass of the wealth of the country—in no single instance on record can a priesthood be found more swollen, more exclusive, and more anti-national, than the clergy of the Principalities. Strange it is to say, the clergy of those countries are Russian, although they know that, were they incorporated with the poor priests over whom the Czar exercises spiritual rule, they would be instantly deprived of the wealth and independence which, by his help, they hope to maintain. This clergy, acting upon the lowest and most dependent of the class beneath them, spread the notion that the Russians are with the Wallachs and Moldavians, because they are Christian, and desire to protect their brother Christians against the Turks; but, in the name of common sense, when so much is said about "protection," let us hear what it is that threatens, and what is there to protect. If Wallachia and Moldavia had ever been under the dominion of Turkey, as Bulgaria is and Servia was, there might be some reason in a cry for protection. No doubt, in Bulgaria, the ryah requires that their lot should be improved. They are little better than brutes at present—they have at best the cunning which appertains to the fool. They are a degraded population, and it must take some scores of years to educate, and to restore them to consciousness and dignity. But in Wallachia and Moldavia the case is widely different. When the Turks first conquered the Principalities, they respected the political and religious rights of the people. They sought not to impose the religion of Mahomet, nor to debase the religion of Christ—they asked for tribute, and no more. There are no minarets in the towns of Wallachia. There are no Turkish mosques, whose revenues are derived from Christian contributions. The Turks have not even done for themselves there what we do for our establishment in Ireland—make the people of one religion pay for the support of that of the other. The Christian religion is free, and the Wallach and Moldavians not rayahs. For Russia to say, therefore, that she is protector of these people on the plea of religion, is absurd. What Russia came to do in 1848, was to protect the boyards from the effects of a peaceful and liberal revolution, to preserve for the clergy their overgrown privileges and swollen benefices, and to deprive the people of those newly conceded rights which they enjoyed but for a day, namely, freedom from feudal tenures, and from the service of serfs. What Russia came to do at the present juncture, was to keep the Principalities for her own use—she may have the pleasure, and the profit, of spoiling what the Turks certainly never thought of touching—the savings banks of the towns and villages throughout the whole of the country under their occupation. What they might further do, were they successful, it is needless here to describe, though by no means difficult to conceive, or to conjecture. It is sufficient to quote a portion of one of General Gortschakoff's general orders, to prove in what spirit the Russian protection is looked upon by the inhabitants of the Principalities—that which he published lately in Lesser Wallachia, enjoining the troops cantoned there, not to stray more than 1000 yards from their camp, and not to hold any intercourse with, what he calls, perfidious inhabitants.

But, if this were an insufficient proof, others are at hand to show which side the peasants of Wallachia are most likely to espouse. The village of Chupertshin, situate on the Danube, about two miles below Kalafat, has been alternately occupied of late by the Russians and the Turks. It is a place in which the former might find a convenient resting-place from whence to start against the Turks and their intrenchments. The Turks have determined, therefore, to destroy the place. They offered to the inhabitants the alternative of going with their goods and cattle to the Russians, or to Widdin; and the inhabitants determined at once which course to pursue. They were to be seen yesterday moving with a long line of bullock-carts across the bridge that joins the island to the mainland, and bringing with them their furniture, their goods and chattels, to Widdin. The weather was extremely cold; and the dress of the poor Wallachs seemed ill-suited to resist the blast; but they set up their temporary tents, and strengthened them with reeds, whilst they waited for the ships to take them over.

You may have heard of the disgrace of General Anrep, who commanded the division which was routed at Citate. He was taken into custody at Motzatze, and marched to St. Petersburg. It is said he will be sent to the Caucasus.

The news of an army embarking from England for the assistance of the Turks has been received with the utmost rejoicing; the more so as almost all those to whom the probability of such a thing had been hinted, received the intelligence with incredulity. The presence in Turkey of such excellent and highly-disciplined troops as those of England and France, will doubtless have a salutary effect upon the Ottoman forces, and may induce the officers generally, whether commissioned or non-commissioned, to improve their military knowledge, and insist with greater rigour upon the necessity of order and discipline amongst the men whom they command.

Some heavy cannonading has taken place for two or three days past on the Danube. The Russians have erected a small battery of two guns opposite the village of Florentin, where Selim Pacha's troops are quartered. With these they fire at the ships which carry corn and wood for the use of the Turkish soldiers.

General Guyon has received a new appointment. Achmet Pacha, a brave soldier unacquainted with tactics, having been appointed to supersede Abdi Pacha, has himself been replaced by Mustapha Xarif Pacha, in command of the army of Anatolia. General Guyon, who reorganised that army after the departure of Abdi Pachs, is appointed chief of a permanent council of war, which is to direct all offensive and defensive operations.

(Our Correspondent's letter is accompanied by two characteristic Sketches of Wallachian Peasantry.)

RUBINI.

In our Journal of last week we briefly announced the death of Rubini, at Bergamo, the principal town of his native province, where he had lived in retirement ever since he quitted the stage. Rubini was born at Romano, a small town of that province; the date of his nativity is not quite certain, but he is generally said to have been born in the year 1795. Being the son of a professor of music, he acquired at an early age some knowledge of the art. The beauty of his voice induced his father to endeavour to bring him forward on the stage; and, after "roughing" it for some time among the small theatres in the north of Italy, where, if he gained little money, he gained practice and experience, he made his way to the theatre of Pavia. His success there led to engagements at Brescia, Venice, and afterwards at the first-class houses known to fame—several Naples. At this last city he remained three years. Many of his operas were written expressly for him; and, before he was five and-twenty, he was regarded throughout Italy as the first tenor of the day.

Rubini made his first appearance at Paris in 1825. He was then under engagement to Barbaja, the manager of the San Carlo, at Naples. This celebrated *impresario* was in the practice of making engagements for his singers at other theatres, on terms advantageous to himself; and it was on one of these engagements that Rubini appeared at the Paris Italian Opera. His popularity was immense; but Barbaja recalled him at the end of six months. He remained thus bound to Barbaja till the year 1831, during which period he was "farmed out" by the manager, who sent him to Milan, Vienna, and other places, in the same manner as he had been sent to Paris. Of his engagements at that time the lion's share went to Barbaja, who, by these and other means, is said to have amassed an enormous fortune. During that period, however, Rubini reached the summit of his powers and his celebrity. The greatest composers of the day—Bellini and Donizetti—wrote some of their finest operas for him; and the renown of his name spread throughout Europe.

In 1831, when Rubini found himself freed from the fetters of Barbaja, he returned to Paris; and in the same year he appeared for the first time in London. At that time the Théâtre Italien and the King's Theatre (as our Opera-house was then called) were in the same hands—those of Laporte: during whose *regime* the company, after the Paris season, migrated to London, where the season began later. At Paris and London he was received with equal enthusiasm; and, for ten years afterwards, he divided the year between Paris and London, excepting only the year 1838, when he passed the summer at his native place. For several years he was engaged to direct the Imperial Opera of St. Petersburg, where he was in the highest favour with the Court and the aristocracy. In 1842 he visited London for the last time; and, in the same year, he took his leave of the Parisian public; but he retained his situation at St. Petersburg for some years longer. Rubini's professional gains were commensurate with his reputation; and his fortune, at the time of his retirement, has been estimated at £100,000. Since that time he has constantly resided in his native place, enjoying the *otium cum dignitate* in a manner worthy the character of a great artist, maintaining a handsome establishment, and receiving the friends of his former days, who visited him in his retreat, with kind and liberal hospitality.

Rubini was assuredly the most consummate artist of the present century. Those who have heard him only in England cannot estimate from their own observation the full extent of his powers. Though he was under forty when he arrived in this country, his voice had suffered from the wear and tear of his previous brilliant career. Its quality of tone was unequalled, and it retained its marvellous flexibility. But it had no longer the bloom and freshness of youth; and he had lost, in some measure, the power of sustaining a long-drawn note with ease and firmness. To cover this defect he resorted to the device—which the highest degree of art only could render available—of converting his long notes into florid passages, executed with such inimitable clearness, articulation, and finish, that he found means to transform what was really a blemish into a source of the most exquisite beauties. He was little of an actor, in so far as mere acting was concerned; but yet, without acting, he carried dramatic singing to its highest pitch; being able, by his expressive tones and impassioned declamation, to exert a greater power over the feelings of his audience than has been possessed even by the most accomplished of his successors.

EGYPTIANS AT ST. PETERSBURG.—Letters from Alexandria state that the Egyptian officers of the *Sesi-Persons* steamer, who had fallen into the hands of the Russians at Sinope, have been allowed to return home. They have been taken to St. Petersburg by order of the Czar, and were very kindly received by him. He conversed with them for some time through an interpreter; and expressed his regret that he was not at war with Egypt, to see them fighting against Russia. He also replied that the war which his Majesty was waging on Turkey was undertaken not only for Egypt, but for every other country; and that he ought not to be astonished to see their nation in arms against him for so legitimate a cause. The Czar, nevertheless, presented them to the Empress, and then informed them that they were free to return home, on condition of not bearing arms against Russia for the space of one year.

TO CORRESPONDENTS.

THE BALTIC SEA.—Our readers are requested to substitute *Ulesborg* for Archangel, in the sentence which ends with the words, "terminating the Gulf of Bothnia." The writer intended to say that Sir C. Napier "would have done something with notice at all the naval depôts, except Archangel, which, though it has a fleet, is entirely out of the question." Correspondent is thanked for pointing out the inadvertence.

THE SISTERS OF A BRITISH OFFICER should address their letters to Malta.

R. F. S. B., Plymouth.—We have not room for your letter.

A YOUNG ARTIST should apply to an American bookseller.

ZURICH.—We cannot advise you.

W. T. M., Edinburgh.—The Parliamentary Blue-books may be had, by order, of any bookseller; or at the office for the sale of Parliamentary Papers, in Great Turnstile, Holborn.

PHILO-DRAMATICUS.—See the List of Hackney Carriage Fares authorised by the Commissioners of the Metropolitan Police, and published by C. Knight, 90, Fleet-street.

A SUBSCRIBER, Weymouth, should apply to a picture-dealer, who, probably, will expect a fee for such information as our correspondent desires.

X. Y. Z.—The East India Company may grant commissions, but cannot grant honours. Esquire is an honour. The Crown cannot grant its honours indirectly, or through a third party (See Talbot *v.* Eagle, in "Taunton Reports," p. 810). The Lord Lieutenant of Ireland confers honours because he is *loco tipsis Regina*. A Governor of a colony cannot, because he is only agent of, not in place of, the Monarch. Prince Albert holds a Lares as the Queen's agent: but as such he could not make a Peer or a Knight.

AULD LANG SYNE.—The only representative now living of the Grays, Lords of Edmundyn, is Mr. William Gray Cooper, of the city of Dublin, whose grandfather, Captain William Gray, was the last of the name who inherited the estate of Lyndoch, which subsequently gave title to the peerage of the gallant Scottish General Graham.

YOUNG ENGLAND.—The Crest of Palmer of Wingham, Dorney, Parham, and Fernfield, is a demi panther rampt, guardant arg., spotted gu. vert, and ppr. differently, flames issuing from the mouth and ears, holding a palm branch ppr. Other families of Palmer bear different crests.

W. G., Westminster.—The error in the folios of our last Volume (324 being followed by 525) occurred through the Double No. of Dec 24 being printed in Paris.

MIRIM, Peterborough.—We cannot undertake to recommend "the best" makers of musical instruments.

V. C.—Your letters will work principally on the affairs of Siberia may be heard of at an American publisher's. In 1852, the Rev. J. Despard, of Redland, Bristol, was Hon. Sec. to the Patagonian Missionary Society in Terra del Fuego.

A CONSTANT SUBSCRIBER.—A new "Book of Forfeits," and similar games may be had at 80, Fleet-street.

H. J. W.—See Sidney's "Three Colonies of Australia," last edition.

A SUBSCRIBER in Brussels may exchange his name without any legal proceedings: but the Royal authority has to be sought, and can only be obtained upon the showing of sufficient ground for the application.

J. M., Gosport.—Our Abstract of the Census of 1851 will be ready shortly.

J. W., Paddington.—We have not room for the Views.

FRANCES.—Miss Linwood's Needlework Pictures were sold in 1846, the year after her death. The whole number did not realise £1000.

R. Bromley; and S. B., Southport.—We have only noon.

E. K.—Probably the Report of the Meeting of the British Archæologica Association at Rochester, last year, may furnish the information.

S. R. (in a letter, too long for us to print) suggests a plan of employing workhouse girls and boys, dressed in suitable warm clothing; and with capes impervious to rain, to sweep the crossings; each child to have a locked money-box, with a slit in the top, so that the money could be put in, but not by any chance extracted. The magistrates at Brighton have, our Correspondent believes, managed this with regard to boys, and she states that many of the little cripples have thus been enabled to find homes and employment in Australia, or have been apprenticed to trades in England. Our Correspondent appears to be aware of "the vested interests" in street crossers.

VIATOR.—See Black's "Picturesque Tour through England and Wales." We possess no recent Typographical Dictionary of England and Wales that we can recommend. The articles on the English counties, in the "Penny Cyclopædia" are valuable.

MAYO, Castlebar.—The Ordnance Estimates may be had at the Parliamentary paper-office, Great Turnstile, Holborn.

A SUBSCRIBER, Oxford.—To obtain the copy of a will in the Prerogative Will-office, Doctors' Commons, apply to the clerks in the room, and they will state the expense per folio.

T. YOUNG, JUN., Wigtown.—See the shilling "Treatise on the Dog," published by Orr and Co., London.

HARRIET HAMILTON.—We do not remember the quotation.

A CORRESPONDENT.—In Sinope, the accent is upon the second syllable.

S. L., Liverpool.—In Afghanistan, the accent is upon the penultimate syllable. Mr. Cannung, at the time of his death (August 8, 1827), was M.P. for Liverpool.

ST. PAUL'S LORRIMORE, Newington.—We are sorry to hear that this new edition is not to hear completion as we stated a few weeks since, although the building was commenced three years ago. The parish is poor and populous, and the emergency pressing: a Correspondent states that the population of 70,000, with church accommodation for 6000.

J. O., Barnsbury.—Broughton and Broughton Tower are engraved in a series of Views on the Whitehaven and Furness Junction Railway, in the ILLUSTRATED LONDON NEWS, No. 454.

E. P.—See also Dr. Bassett's Collection of Saxon Antiquities has just been purchased by Mr. Mayer, of Liverpool. We are informed that they will be described in a quarto work by a London antiquary; and then they will probably be added to the Liverpool public Museum.

J. J. E. R.—Application at the Foreign Office will direct you to the proper source of information. The appointments in the corps of Gentlemen-at-Arms are, in most cases, obtained by purchase.

CAPTAIN W.—Arms borne by Bowyer: Gu. a chev. or, between three peacocks arg. Crest: Two hands conjoined in fesse, winged at the wrist.

D. C. L., Newcastle.—Strength'tharn (now Longman), Waterloo place, Pall-mall, London.

J. L. E.—He died Sir Thomas Roughley died and was buried at or near St. Helens, Lancashire, in the year 18—. His sister, Miss Margaret Roughley, survived until the 18—. Her executor, Mr. George Copestake, of Lulland, near Ashbourne, Derbyshire, has in his possession the Roughley arms, crest, and motto, and numerous other family papers.

AN INQUIRER.—Mr. C. Fleming Williams, Cranley, late Lieutenant of the Limburg Dragoons, and relative of the celebrated Madame Malibran, is still living. Madame Malibran's age is unknown in this country previous to her appearance at Drury Lane, last summer, when she made a highly favourable impression by her performance in the Italian and German operas, then given at that theatre. She is a German, but, as a singer, belongs more to the Italian than the German school, her style is uniformly that of an accomplished musician, and her powers, as an actress, are very considerable. A lady's age is a delicate question, and we have to be excused from answering it.—Signor Bettini has appeared at the Royal Italian Opera.

A SUBSCRIBER.—A common law student should be well read in Blackstone, but not a thorough knowledge of the Law of Evidence, and be conversant with Special Pleading.

YERSUN.—Arms of Fairfax: Arg. three bars gemelles gu., over all a lion rampt. sa. Crest: A lion passant guardant sa. (sometimes borne on a pair of maintenance).

J. A.—Write to the East India House, Leadenhall-street.

ANON.—The younger sons of Earls take precedence of Baronets, but Privy Counsellors rank above the younger sons of Viscounts. The younger sons of Dukes, Marquises, and Earls, have higher precedence than the Higher Privy Councillors or Baronets.

STUPPS.—The Queen of Spain had a daughter (the present Princess of the Asturias) living, when the last was born. Her Majesty never had a son.

R. S., Wakefield.—We have not room for the column on "Colliery Accidents."

A CORRESPONDENT (whose name we cannot decipher), Exeter, is thanked for his suggestion, which, however, if carried out, would form a bulky volume.

A CONSTANT SUBSCRIBER.—The line—

> "Men are but children of a larger growth,"

is from Dryden's play of "All for Love," Act IV., Scene 1.

A. R., Haddington.—The oft-quoted lines, commencing,

> "The man that hath no music in himself,"

is from Shakspeare's "Merchant of Venice," Act V., Scene 1.

QUARANTY.—"Quandora" is borne upon the colours of the 90th Light Infantry, in honour of the gallant conduct of the regiment in an action fought in Egypt, near Alexandria, in the vicinity of a village of that name, which occurred during the campaign in which Sir Ralph Abercrombie was killed. For further details we refer "Quandary" to Sir R. Wilson's account of those operations.

R. H. Sussex.—Decimal.

IRIO.—We have received 3s. worth of stamps for Defoe's great-grandson; says our Corre-pondent, "to express your gratitude for the great amusement his ancestor's work gave us in the days of our childhood." The stamps have been forwarded to Mr. C. Knight, 90, Fleet-street.

S. G.—The Earldom of Roscommon is, we believe, extinct.

L. P., Dublin.—The three decker, in p. 2 of the *Windsor Castle*, is now the *Duke of Wellington*, flagship of Admiral Napier in the Baltic.

LANDLEUBER.—No; a frigate is a vessel carrying one row of guns between decks.

GREYBEARD.—We have not room for your long letter.

DECLINED.—J. R.; UNA, Blackheath; S. E. M., Penzance; F. J., Hull.

CAMPBELL.—We cannot advise you.

ARQUIS, Northampton.—Received.

PARDUS, West Country.—Received.

ACETO-NITRATE is thanked.

THE ILLUSTRATED LONDON NEWS

No. 676.—VOL. XXIV.] SATURDAY, APRIL 1, 1854. [WITH A SUPPLEMENT, SIXPENCE.

DECLARATION OF WAR AGAINST RUSSIA.

THE Emperor of Russia, with a contemptuous insolence, unbecoming his position, though on all hands expected of him, has refused to return any answer to the demand made upon him by Great Britain and France to evacuate the Danubian Principalities. No alternative was therefore left to the Allies but an immediate Declaration of War. On Monday evening a formal Message from her Majesty, announcing the fact, was communicated to both Houses of Parliament. On the same day a similar communication was made by the Emperor Napoleon to the Senate and Legislative Assembly of France. On Tuesday evening a Declaration of War by the British Government against Russia was published in a *Gazette Extraordinary*, which we elsewhere reproduce. With a unanimity which has characterised all the steps taken by Great Britain and France during the momentous negotiations, of which these acts are the close, the French Government simultaneously proclaimed war against the wicked disturber of the peace of the world. The struggle will immediately commence and the most ardent wish, the most sincere prayer of every honest man in the civilised world will be formed for the speedy downfall of the Imperial Barbarian, whose pretensions are an outrage to Europe, and an insult to the right feeling and common sense of mankind.

The document in which her Britannic Majesty announces to her subjects the commencement of the war, and the reasons which have rendered it imperative, is a concise, lucid, and dignified exposition. Every assertion which it makes is an incontestable truth, stated in the plainest terms. There is scarcely a paragraph in it which does not convict the Emperor Nicholas of wilful falsehood and deception. If any sense of shame were left in his conscience, his cheeks would glow, and his ears would tingle, at so merciless and yet so temperate an exposure of his hypocrisy. But reason and morality have no influence over minds that have been hardened by selfishness and cupidity. It is material and not moral force that can restrain such evil doers as the Czar. To material force he was the first to resort; and, until his pride shall be humbled, and his ambition not only restrained, but punished, the material arguments of fleets and armies, and all the artillery of destruction, will be the only arguments which he can understand, or which the Allies will employ.

It would be undignified, and it might be unwise, to enter upon the war in a spirit of boastfulness. Yet, while no such sentiment fills the minds of the British people in this solemn crisis of their history, they display a just reliance in the holiness of their cause. Justice and Duty invariably give strength to the arms of those who do battle at their bidding. The confident cheerfulness with which the British people of all ranks and classes enter upon the conflict, and with which they are prepared to support all the burdens and sacrifices which it may impose, is an augury of victory. On looking back to the history of every previous war in which this country has been engaged, we find none of which the causes have been so clear, and the justification so triumphant. Neither do we find any in which the national energies have been so great and our alliances so splendid. In such a war, it is impossible not to feel more than usually hopeful of success. That France and England—without *arrière pensée* of any kind, with the utmost simplicity and singleness of purpose, without any intentions of self-aggrandisement, and solely with the object of defending the right against the wrong, the weak against the powerful, the public law of Europe against an Imperial robber, and the great cause of independence and civilisation against slavery and barbarism—should join their hands, forgetful of all their past animosities, is a spectacle which does honour to our age. It makes the heart of every true Englishman throb with enthusiasm. The same generous ardour, we may be certain, inspires the gallant French people, from the Emperor down to the humblest soldier of his armies. It is almost worth the cost and misery of a British war against Russia, to know that it will render impossible, for ages to come, a British war against France. The benefits to humanity which may flow from the lasting friendship of two such nations it is scarcely possible for the most sanguine to over-calculate. There was once an alliance of the nations that was designated as the "Holy." Opinions differ as to the correctness of the epithet in that case. None but Russians will deny its correctness when applied to the alliance which France and Great Britain have contracted. They will cement it by generous emulation, and by mutual sacrifices, in days of difficulty and peril. The glory acquired in such a cause will be more splendid than any, however dazzling, which they might have gained in selfish struggles for territory or dominion.

The advisers of her Majesty have done wisely to record that, throughout the whole of the negotiations now brought to a close, the Governments of Austria and Prussia supported the proposals for peace, which were tendered by France and Great Britain. The two great German Powers may be excused for having taken a longer time for reflection than the Western Allies. Their proximity to Russia, and the personal relations of their Sovereigns with the Czar, were natural causes for some degree of anxiety and hesitation. But the day for hesitation has passed. Situated as they are, they cannot remain neutral, however greatly they may desire to do so. Their neutrality is not only a dereliction of duty, but an abdication of their position in Europe. Inevitable necessity will compel them to take their side To ally themselves with Russia would be no gain to either. Such a fatal resolution might protract the war, but it would not prevent that certain catastrophe—the defeat and humiliation of their friend and confederate. It is for them to consider whether his defeat and punishment would not include theirs. But we cannot believe that those Sovereigns will allow any personal feelings to influence them. The great

STREET SCENE IN CONSTANTINOPLE.—(SEE NEXT PAGE.)

nations which they govern are not ignorant and degraded serfs. They are Germans, not Russians. They have no Russian sympathies; and they abhor the knout, as much in the persons of those who administer, as in those who patiently submit to it. Although not so free as they deserve and aspire to become, public opinion is sufficiently strong and enlightened among them to compel their Sovereigns to follow in the rightful course, unless, by despising it, they choose to risk the chances of Revolution. Every circumstance tends to show that the heart of the German people beats in unison with France and England. In spite of all present indications to the contrary, we therefore cling to the belief that the alliance of the Austrian and Prussian Sovereigns with the civilised Powers of Europe did not terminate with the negotiations. They have done nothing as yet to forfeit the good opinion of right-minded men, and we will not do them the injustice of considering them so pusillanimous as only to give a rightful cause the support of their words, and to withdraw it as soon as action becomes a point of honour. It is possible, though not probable, that, as individuals, they may feel inclined to play this part. But we will not accuse them of it. Its danger would be sufficient to deter them, if higher incentives were wanting. We have faith in the influence which the sentiment of their people must exercise over their councils. The savage Russians may believe that the Czar is right, and that his policy is just—but the Germans know better.

Little importance need be attached to the opposition which the Ulemas and Muftis of Constantinople have raised against the firman which the Sultan, by the advice of his Allies, has consented to issue. The firman does not, as was at one time supposed, concede to the Christian powers of Europe the same right to interfere in the domestic concerns of the Ottoman Empire, as was demanded by Prince Menschikoff. But it extends civil liberty to all the Christian subjects of the Sultan, gives them the right to offer evidence in the Moslem Courts of Law and to hold land; while it abolishes the Capitation-tax—an imposition that was felt to be degrading—and assimilates the personal contributions of Christians towards the necessities of the State to those demanded from their Mahometan fellow-citizens. In Turkey, as everywhere else, there is a party of Stagnation as well of Movement. This party, fanatically opposed to all reform, finds its representatives among the Ulemas and Muftis, and bases its opposition upon the Koran. But it is not all-powerful in the State; and, having entered its protest to relieve its conscience, will leave the control of affairs to that overpowering Necessity to which it is part of the creed of devout Mussulmans to yield. Fate is Law with the orthodox of Islam; and, like our own House of Lords in 1832, when they saw that Reform was inevitable, or in 1846, when they found it impossible to carry on a struggle to uphold the Corn-laws, the Ulemas and Muftis will yield at the fitting moment, and allow the State to be governed by the more competent and practical men who have assumed its guidance, and whose councils alone can save it.

The die is cast. May the war be short, but decisive! May permanent good to Europe flow from the transitory evil! May peace be rendered more secure by its temporary interruption! May retribution speedily fall upon the head of the guilty man who is the sole cause of this great calamity!—such are the fervent aspirations which naturally arise in all hearts at a moment like this. With pious reliance upon the justice of their cause, the British people enter cheerfully into the contest. They do not, like the Czar, invoke the God of Battles to aid them in pillage and in murder. They invoke His Holy Name in support of His holy precepts, and abide the issue with confident reliance upon His over-ruling wisdom. Inspired by such feelings, they may have some anxieties, but they can have no fears for the result.

STREET SCENE IN CONSTANTINOPLE.

THE scene upon the preceding page is street life in Constantinople. Close to where the kerb stone would be, if kerb-stone there were, stands our cobbler's stall. But no margin for the convenience or safety of foot-passengers runs between the houses, shops, stalls, and other fixtures, and the rolling tide of the street. Great cities have their physiognomy as well as individuals; and engravings, pictures, and sketches, into which human action enters as a main element, furnish to the distant reader a peculiar source of information, very different from that derived from statistics, but without which statistical knowledge is, after all, but an unpractical guide. Men of business never think that they understand a man because they may have heard his story up to that moment, and may even have verified by documentary evidence—they want next to see the individual. Yet they would be puzzled to specify what precise additional facts the person's general appearance can reveal. In fact, more than one half of the impressions which govern the proceedings of life defy analysis, and almost elude description. And so with countries, races, and centres of authority or resort. Those who read that a people called the Turks had settled in a very fertile land—one of the spontaneous gardens of nature, amid a thick cluster of commercial nations, with a vast and profitable sea-board, and that this people—these Turks—had made nothing out of so many advantages,—that the land was languishing and the sea idle around them: those who read such facts have a sort of negative knowledge about these Asiatic conquerors. But if they then see the Turks, or even but study lively representations of them as they act, move, and look, in the habits and usual current of their daily existence, that which was but the *eidolon* and skeleton of an idea puts on flesh and blood, and a species of abstract knowledge becomes vivid, realised, and practical information.

There they are, without the tricks and changes of an extraordinary occasion; there they are, as they appear diurnally; no exaggeration in any point, favourable or adverse; it is after nature, a common, a characteristic scene, and a fair study (to recur to our metapor) of national physiognomy. In the distance a couple of lounging men gossipping at the street corner, one wearing the tarboush, the other the turban, both fine-looking, lazy creatures; a crowd of white specires, all sheet except the black staring eyes, and a bit of the sallow nose—women who may see, but must not be seen—counting for very little—having no souls, at least none that are immortal, in the opinion of their lords—moveable property, worth what it may fetch at market, no more; a common man with a basket on his head; a rather Calmuck-faced young Turk, shouldering his way, he also wearing the more convenient tarboush, instead of the once universal turban; and, finally, the cobbler and the group around him, with a specimen of not the least remarkable class in Constantinople, the street-porters, passing at a swing-trot under a heavy load.

Wherever these stalls are pitched—whether they be the workshops of a cobbler, or the little repertories of the scent-seller and druggist, or anything else—they are centres round which all idlers assemble to stare, rather than to talk. Staring and smoking are the most approved style of conversation among these lounging street-groups of Stamboul. To stare and smoke in company—that is life, that is society. Our shoemaker and slipper-mender by no means kills himself with hard work. He does not look like a man who would do so. He is glad to have gazers about him, even though there be not a purchaser among them all. His nargilly is beside him; and, without breaking silence, he will put down his work, and pay his sociable attendants a compliment of good-fellowship, by taking a smoke himself.

Even the unkempt-looking porter, who is hurrying with the luggage of evidently a western traveller to some hotel, carries a cherry-stick pipe stuck dagger-wise in his girdle. These carriers are the Gallegos of Constantinople. They belong to one race, who live in the interior of the country. They leave their wives spinning and working at home, and migrate for some five or six years to the capital, where they accumulate a little money, by doing all the hard work of the streets, of which they virtually secure an associated monopoly. It is a curious and honourable thing in the East, when these poor fellows return to their homes, they invariably find their Penelopes true and industrious, and with a like purse saved. They then often set up a small farm; some of them finally emerging into the condition of petty flock-masters.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The departure of the Prince Napoleon is now, it seems, definitively fixed for the 8th April, on board the *Roland*. The Prince gave last week a grand *déjeûne* to his staff and a large number of his private friends, in the tent which he is to take for his private use in the expedition, and which was for this occasion pitched in the Champs Elysées. A splendid fête is preparing at Marseilles for his reception and that of the Duke of Cambridge.

Notwithstanding the prospects of war, the Mi-Carême has been prodigal of fêtes. On Thursday last no less than 634 public balls took place, to say nothing of the private receptions given throughout the capital. At the Court fête in honour of the marriage of the young Prince Murat (who is only nineteen, and two years the junior of his bride) and Mdlle. Berthier, Princesse de Wagram. The youthful couple were not present at the ball, having started for their honeymoon trip, *à l'Anglaise*—a fashion gradually becoming adopted here—in the afternoon. The ball, though not a ceremonious one, was very numerously attended. There was no official quadrille. The Empress opened the ball with M Oscar Lédsine, ex-attaché of the Embassy of France at Madrid; she afterwards waltzed with M. de Castelbajac, son of the late Minister of France in Russia. The Emperor retired as early as half-past eleven; but the Empress remained till one o'clock.

The Horticultural Society of Toulouse has composed a bouquet for the Empress, containing 10,000 violets and 300 camellias, and of which the diameter is upwards of three-quarters of a yard, and the height somewhat more than a yard. The centre is a dome of violets, surrounded by a circle of camellias; the whole surmounted by a crown. On the dome appear the initials of her Imperial Majesty in orange blossom and white *pequerettes*.

On Thursday last took place, at the *Salle Herz*, probably the finest and best-attended concert of the season, in favour of the charity of *Les Amis de l'Enfance*. The lady-patronesses ranked among the first families of the French nobility and aristocracy; and the names of Battaille, Roger, Levasseur, Samson, Cruvelli, &c., among the artists, answer for the merit of the performance, which, independent of the concert, included the representation of a charming little *proverbe* by Madame Berton, daughter of Samson, of the Théâtre Français, and wife of the successor of Bressant at the Gymnase, who has obtained so brilliant a success in "Diana de Lys."

It is the intention of the Emperor to pass a portion of the summer months at the Elysée, which he has not inhabited since the days of his Presidency; though that palace, from its position, and the advantage of its large private garden, has always been a favourite residence of his. The works of improvement and enlargement for some time going on at the Elysée are ordered to be executed with all possible despatch, so that it may be ready for his Majesty's reception in the spring.

The Emperor and Empress dined with the Prince Jerome on the occasion of the 20th of March, and other banquets took place in honour of the same anniversary.

The chiefs of the old Napoleon party are endeavouring to organise a grand democratic ball at the Jardin d'Hiver, for the 20th of April, the birthday of the Emperor Napoleon I.

A rumour states that measures are to be adopted to examine into the validity of all heraldic titles borne in society, and also to adopt yet more stringent measures than those at present in force, with regard to the wearing of foreign decorations. We suspect the result of such proceedings, if carried out, will reduce the number of *soi-disant* nobility and *hommes décorés* to a very considerable extent.

The Spanish General, Prim, has attached himself as a volunteer to the staff of the Prince Napoleon. An incident attending the departure of the vanguard of the French army from Marseilles is worthy of remark, as being significative of the real sentiments of some of the powers which remain neuter in the question of the war. Not only did the English trading-vessels, as was natural, hoist all their flags, but those of the Dutch, Swedish, and Danish nations displayed a similar demonstration.

The Marquis de Turgot, so unjustly compromised in the absurd quarrels of MM. Soulé, *père et fils*, at Madrid, has, we regret to say, suffered most severely from the result, being compelled to resign his diplomatic functions, and attend solely to the cure of the painful and severe wound received on the occasion of his duel with the Minister of the United States.

Last week the Emperor, visiting the works of the Louvre, took a hammer from one of the workmen, and amused himself for some time in cutting the stone on which he had been engaged. In returning the instrument, he accompanied it with some gold pieces.

A new work is about to appear from the clever pen of M. Jule Lecomte, entitled "Memoires du Temps." No doubt can exist as to the talent and wit of the writer, and the amusement the work in question will furnish, but it is to be hoped that on this occasion M. Lecomte will pay more attention to veracity, and exercise more delicacy and discretion in the details of events and characters than he has displayed on some former occasions—witness his "Voyage de désagrémens à Londres," and certain other productions, where he chronicles, as from his own proper knowledge and experience, events, circumstances, and conversations which never occurred, coupling them with the names of well-known characters in society, in a most offensive manner. A new journal, entitled *La Table Parlante*, treating solely of occult sciences, is advertised to appear the beginning of next month.

The Porte St. Martin has a considerable success with a piece by MM. Anicet, Bourgeois, and Théodore Barrière, entitled "La Vie d'une Comédienne," in which Madame Guyon plays an admirable *rôle*. The Odéon has a little piece called "La Laquais d'Arthur," which, notwithstanding the improbability, not to say impossibility, of the plot, is so brilliantly written, as to obtain a considerable degree of well-merited applause. "La Promise," with Madame Marie Cabel, continues to be one of the favourite spectacles of the season.

THE FRENCH PREPARATIONS.

The remainder of the 6th regiment of Infantry marched into Toulon on Saturday last, at twelve o'clock, the Colonel and two Majors at their head, and their splendid band playing the well-known air, "Partant pour la Syrie." The men looked as fresh as if they had only marched out of their late barracks in Paris, and were evidently much elated on arriving at their place of embarkation for foreign service. There are now 6000 infantry at Toulon, under orders for the Dardanelles; and as there are ships of war more than sufficient to receive them ready in the harbour, a movement is shortly probable. This number would be increased by the arrival of the 5th battalion of Chasseurs of Vincennes, which was daily expected.

A contract is said to have been entered into with the French Government for the transport of 2400 English horses by the Lyons railroad.

THE FRENCH DECLARATION OF WAR.

On Monday the French Minister of State read to the Corps Legislatif, in the name of the Emperor, a Message announcing that the final resolve of the Cabinet of St. Petersburg had placed Russia in a state of war as regards France. The following is a report of the proceedings, given by the *Moniteur*:—

The Minister of State, introduced with the usual ceremony, and, in the name of the Emperor, read to the Chamber the following Message:—

"Messieurs les Députés,—The Government of the Emperor and that of her British Majesty had declared to the Cabinet of St. Petersburg that, if the difference with the Sublime Porte was not replaced in a purely diplomatic position, in the same way as if the evacuation of the Principalities of Moldavia and Wallachia was not commenced immediately, and terminated by a given day, they would see themselves forced to consider a negative reply or silence as a declaration of war. The Cabinet of St. Petersburg having decided not to reply to the communication thus made, the Emperor charges me to inform you of that determination, which places Russia with respect to us in a state of war, the whole responsibility of which appertains to that Power."

The moment the hon. Minister concluded, the loudest acclamations arose from every part of the Chamber. The President then rose, and, after having formally acknowledged the reception of the Message just delivered, said—

"The Emperor may reckon on the unanimous co-operation of the Legislative Body, as on that of the whole of France."

Fresh acclamations greeted the assurance thus given by the hon. President. The proceedings then terminated, amidst reiterated cries of "Vive l'Empereur!"

At three o'clock the Minister proceeded to the Senate to make the same declaration. It was greeted there, as in the Legislative Chamber, by a unanimous assent, and with the loudest acclamations. The President then said:—

"The Senate gives a formal acknowledgment to the minister of State of the communication which he has just made in the name of the Government, and which it has listened to with a profound sentiment of the most entire and most devoted co-operation. I think I express the unanimous feeling of the Senate in adding, that it confides fully in the Emperor, who will know how to conduct the war with the ability and energy which have so eminently distinguished the negotiations. The unanimous decision of his Excellency the Minister of State shall be inserted in the minutes of our proceedings, and the original shall be deposited in the archives."

The Senate hailed these words of the President with unanimous cries of "Vive l'Empereur!"

The *Moniteur* of Tuesday publishes a declaration granting the space of six weeks, dating from that day, to Russian trading vessels to leave French ports. Russian trading vessels now in those ports, or which, having left Russian ports before the declaration of war, shall enter French ports, may enter and complete their cargoes up to the 9th of May inclusively.

Such of those ships as may be captured by French cruisers, after having left the ports of the Empire, will be allowed to go free, if they can prove by their papers on board that they were making direct for their port of destination, and had not been, at the time, able to reach it.

The Minister of Commerce has informed the various Chambers of Commerce throughout France that letters of marque will not be granted to American vessels, and that the Federal Government has declared to the French Minister that acts so contrary to the rights of nations will not be tolerated in the territory of the Union.

Russian subjects who may choose to reside on French soil, under the protection which the law extends to every foreigner, have been informed that they are at liberty to do so, so long as they, on their part, respect the law.

It is believed that, notwithstanding the order issued by the Emperor Nicholas, recalling to their own country the Russians residing in France, there are still a considerable number in Paris, who, not having property to be confiscated in Russia will not leave France, in which they in some sort consider themselves natives. The last Russian Consul, M. d'Ebeling, left Paris a few days ago.

THE ALLIED FORCES AT MALTA.

On the evening of the 23rd ult. (last Thursday week) a little before dusk, the *Christophe Colomb*, French Government steamer, having on board Lieutenant-General Canrobert, Lieutenant-General Bosquet, Lieutenant-General Martinprey, forty-five officers, 800 soldiers, and forty horses, and with the French transport *Mistral*, with twenty seven soldiers and forty horses, in tow, hove in sight, and ran into the grand harbour of Valetta, about six o'clock. As she passed St. Elmo, the artillerymen and men of the 3rd Rifle Regiment manned the walls, and gave a thundering round of cheers, which were returned by their gallant allies. The French soldiers, indeed, continued cheering all the time the vessels proceeded up the harbour whenever a boat with a red coat in it came in sight, and seemed in excellent spirits. These vessels left Marseilles on the 19th, and conveyed the first portion of the French contingent. It was said that at least one steamer would arrive in Valetta on each alternate day till the whole force had passed. General Canrobert, so well known as one of the most dashing and energetic leaders of the *armée d'Afrique*, landed in the course of the evening, and was received by the authorities with all the respect due to his rank and mission. His Excellency, the Governor, invited the general officers to his box at the Opera, where they appeared in full uniform, and were the object of much observation.

The English troops, who number altogether about 11,000, are in excellent health and spirits, and the conduct of every one, and especially that of the Guards, is most exemplary. Notwithstanding the increased force, and the many temptations which the low prices of wines and ardent spirits offer for falling into excesses, not a single charge against the military has appeared on the police-sheet, and the natives continue to fraternise with the new-comers in the most friendly spirit possible.

The commissariat department have been somewhat puzzled to find provisions and accommodation for so great an influx of troops; but, according to all accounts, the officers charged with that branch of the service have done the best that, under the circumstances, could be done.

Since the return of the courier from St. Petersburg, orders have been sent for the immediate despatch of a portion of the troops now at Malta to a point on the Turkish coast, and all the British force will have reached its destination as soon as the time arrives for commencing operations on a large scale with advantage. At present the swampy condition of the low grounds near the Danube would not only tell greatly against the troops in a sanitary point of view, but would render military operations almost impossible.

TRANSIT OF ENGLISH TROOPS THROUGH FRANCE.

It is now decided that both brigades of cavalry destined for service in Turkey will proceed to the East via France. They will be conveyed by steam-boat and railway to Paris, and thence by railway so far as Chalons, then down the Rhone by steam-boat to Lyons and Avignon, from Avignon to Marseilles by railway. The distances are as follow:—

From London to Dover	.. .. ..	88 miles
Dover to Calais	.. .. ..	25 "
To Paris	.. .. ..	222 "
To Chalons	.. .. ..	238 "
To Avignon	.. .. ..	217 "
To Marseilles	.. .. ..	75 "
Total	.. ..	875 "

The British troops will have a grand reception at Paris, *en route*.

THE IONIAN ISLANDS.

The Ionian Parliament was prorogued on the 16th ult. to that day month. A message from the Lord High Commissioner, addressed to the President of the Legislative Assembly, explains the motive which has led to this step, stating that an address was now lying upon the table of that body for further consideration, containing allusions to foreign politics, with which the Assembly has constitutionally no right to interfere. "This address," says the Lord High Commissioner, "is to be read to me as a representative of the Queen, in a public sitting. If I receive it in silence, I shall be considered as concurring in its spirit. If I oppose it—and I can only do so by reiterating the advice already given in the name of her Majesty, against any participation in the movements of Epirus (with the assurance, however, that her Majesty, together with her allies, will exercise her influence to secure a stable and satisfactory position to the Christian subjects of the Porte, and to place their rights under the guarantee of Europe)—I shall find myself in collision with the Assembly, in a matter relating to questions of much delicacy, which will be constantly arising under different forms."

PASSAGE OF THE DANUBE BY THE RUSSIAN ARMY.

The news of the crossing of the Danube by 30,000 Russians at Gedshid is confirmed, and later despatches speak of the main body of the Russian army under General Lüders having also crossed at Galatz. The reports are very confused, but they all unite in stating that the Russians are in great force in Bulgaria, where they have been actively engaged, lately, in efforts to get up an insurrection. According to one account, 18,000 Russians crossed the Danube from Braila to Gedshid, on the 23rd ult. without meeting with any resistance from the Turks. Another despatch makes the number 35,000. The fact of the Turks not having opposed them is easily explained. Omer Pacha is said to be anxious to tempt the Russians forward, now that he can rely upon the assistance of France and England. In a despatch from him, which appeared in the *Journal de Constantinople* of the 14th ult., he says:—

We have now a force of 30,000 men, with 96 heavy guns and field-pieces, at Kniafat and Widdin. Although the Russians from sure information, have 50,000 men in Little Wallachia, they have, it is that, lost all desire of attacking Kalafat, and purpose crossing the Danube at other points. If they should really do so, they would render me a great service, by enabling me to give a sound chastisement to these barbarians, who have broken into our house like robbers. But if the Russians do not resume the offensive, I shall undertake nothing important until the arrival of our reserves now on their march; and the season being not very favourable, I shall await the reinforcements of cavalry. Besides that, I shall have the advantage of being able to employ the time that will remain to us until operations on a greater scale be possible, to teach my troops, by combats in detail, how to beat the Russians, thus raising and maintaining their confidence; while, on the other hand, the demoralisation is now at work, that in the Russian army will not fail to increase.

The whole Turkish army of Bulgaria, or very nearly, is now *en echelon* along the line of the Danube: 80,000 men are at their extreme left at Kalafat, 50,000 at the extreme right, between Schumla and Pravlitza. The intermediate space is occupied by the fortresses of Rustchuck and Silistria; each of these has a garrison of about 8000 men. The Russians having passed the Danube much lower down, towards Silistria or Matschin, they will most probably reinforce themselves from the corps now round Kalafat; and in that case the Turks will doubtless take the field in Little Wallachia, and not upon their flank and rear. The last computation of the total Russian forces which have entered the Principalities is as follows:—Infantry, 110,000; cavalry, 12,000: Cossacks, 10,000; and the proportionate amount of artillery; or, at the utmost, 150,000 men in all: and deducting 35,000 for killed, wounded, sick, and dead, they have not above 110,000 to 115,000 ready to take the field. 20,000 more may, as it is reported, be in Bessarabia. The *effective* strength of the Turkish army is calculated at 117,000 men. The proportion of cavalry is doubtless in favour of the Russians.

THE RUSSIAN FLEET IN THE BLACK SEA.

The last accounts from Constantinople speak of a Russian naval division, composed of six sail of the line and five steamers, having been seen along the coast of Circassia. The Porte was in great anxiety, apprehending that an attack on Batoum and Chefkeeli is intended. The above news had been communicated to the Admirals, and one English and one French steamer were sent to cruise along the coast, which is hardly enough, in the event of their encountering the Russian fleet. Another despatch states that the *Sampson* had returned from her cruise, with information that the Russians were abandoning their forts on the east coast of the Black Sea. Souchum-Kaleh was in flames, and the Circassians were plundering it. The *Furious* was left to gather further information. The vessels sent to ascertain the state of the Sulina channel of the Danube report that it is impassable.

THE GREEK INSURRECTION.

The *Trieste Gazette* publishes reports from Athens, which if true would imply that the Greek Government, army, and people, had joined the insurrection. Besides the General Inspector Zavellas, who has assumed the command of the insurgents, General Hadji Petros, and Lord Marshal Colocotroni, the ex-Minister Zaco Milio, Coumousi, the Vice-President of the Chamber of Deputies, and several hundred notables, are said to have joined their ranks. The Queen, too, takes the most lively interest in the anti-Turkish movement, and it is considered *bon ton* to eulogise Russia, and rail at Turkey.

A letter from the Piræus, of the 17th ult., mentions the expected arrival of two Envoys Extraordinary from France and England with the last propositions of those Powers to the Greek Government. It is stated that King Otho will leave Athens and proceed to the Morea, in order not to receive these diplomatists. The Greek Government only exists by name in the provinces. No one pays any taxes; and when the collector arrives, the taxpayer is found wanting in arms, and he replies to the demand of this functionary by saying, "What do you come for? We have given everything to the insurrection, and we are preparing to join it."

ASSASSINATION OF THE DUKE OF PARMA.

On Sunday last, at six o'clock in the evening, the Duke of Parma was stabbed by a man whom he had marcelled with in a wine shop, and died on the following day. The Duchess of Parma has assumed the Regency during the minority of the young Duke Robert, born July 9th, 1848. The Duchess is the only sister of the Bourbon pretender to the crown of France. The Ministry of Parma is dissolved, and the Englishman, Baron Thomas Ward, has received orders to quit the country and never to return to it.

UNITED STATES.

By the steam-ship *Nashville*, which left New York on the 14th March, and the *Arctic*, which left on the 18th ult., we have letters and papers to the latter date. The seizure of the steam-ship *Black Warrior* by the Cuban authorities had been the cause of a protracted session of Congress. It was understood that the President would transmit to Congress a strong message relative to the affair, accompanied with numerous documents connected with this and other recent infractions of Spanish perfidy, as soon as the papers could be properly arranged. The Secretary of the Navy had transmitted a message to the House of Representatives, in reply to the resolution of inquiry relative to the adaptability of the various mail steamers to war purposes in case of emergency.

THE OVERLAND MAIL.

The *Bombay* steamer arrived at Trieste on the 25th ult., with the Indian Mail. The usual despatches, in anticipation of it, were received here on Wednesday. The political intelligence is of no moment.

Burmah continues to be invested with doubts, and the district of Bassein is particularly disturbed by them. There seems no doubt that this system of deceity, which is almost identical with guerilla warfare, has been substituted for active operations by the Court at Ava, who have been induced to adopt it by the recommendation of Captain (now General) D'Orgeuil, the French officer who has recently been drilling the Burmese troops. That is now at an end, however, as the General is on his way to Paris, where his presence is demanded by the French Government, to answer certain charges preferred against him by the British Minister.

In Persia, as far as is known, matters continue tranquil; but Government vigilantly guards against any information being promulgated. On the 16th of February the Hon. Company's steamer *Ackbar* sailed for the Gulf with sealed orders. Prior to her departure she took in all her stores and ammunition, and mounted all her heavy guns. A small detachment of European artillery also proceeded on board of her.

The news from China is not of much importance. The rebels are still in possession of Shanghae, and the rebel army is wintering at Foch Lin, 100 miles from Pekin.

AUSTRALIA.

News was received from Melbourne on Tuesday by means of the Overland Mail and the telegraph from Trieste, in fifty-five days. This is the quickest despatch from Australia on record, and since that powerful steamers, placed on the line between Ceylon and Australia, will make the Overland route the best. The news thus received is forty-nine days later from Sydney than that on Monday last, by the *Sydney* steamer, forty-four days later from Melbourne, and forty-three from Adelaide.

The Melbourne papers state that no striking event had taken since the departure of the previous mail. Mercantile affairs were rather dull, but the general condition of the country was said to be quite as favourable and encouraging as it had been at any former period.

The Constitution Act for New South Wales has passed through committee, and had been read a third time on the 21st of December. The plan of a nominee Upper House for life had been modified to one appointed by the Crown for five years. The Council was prorogued on the 22nd of December till the 7th of February.

RUSSIAN CARGOES.

The following important dispatch has just been received from Lord Clarendon, in further reply to the representations of the parties interested in cargoes of Russian produce:—

Foreign Office, March 25, 1854.

Sir,—I am directed by the Earl of Clarendon to state to you that since his Lordship had the pleasure of seeing, on the 20th instant, the deputation of merchants connected with the trade with Russia, his Lordship has further considered the question put to him by the deputation, whether Russian produce brought over the frontier by land to Prussian ports and shipped from thence by British or neutral vessels, will be subject to seizure by her Majesty's cruisers, and to subsequent confiscation in the High Court of Admiralty.

Lord Clarendon conceives that the question will turn upon the true ownership of, or the interest or destination, and the destination of, the property which may be seized or captured, and that neither the place of its origin nor the manner of its coming into the port from whence it was shipped will be decisive, or even in most cases of any real importance.

Such property, if shipped as neutral, or after it has become *bond fide* neutral property, will not be liable to condemnation, whatever may be its destination. If it should still remain enemy's property, notwithstanding it is shipped from a neutral port, and in a neutral ship, it will be condemned, whatever may be its destination. If it be British property, or shipped at British risk, or on British account, it will be condemned if it is proved to be really engaged in a trade with the enemy, but not otherwise. The place of its origin will be immaterial; and if there has been a *bond fide* and complete transfer of ownership to a neutral (as by purchase in the neutral market), the goods will not be liable to condemnation, notwithstanding they may have come to that neutral market from the enemy's country, either overland or by sea.

Lord Clarendon has, however, to observe that circumstances of reasonable suspicion will justify capture, although release and not condemnation may follow; and that the ships with cargoes of Russian produce may not improbably be considered, under certain circumstances, as liable to capture, even though not liable to condemnation.

I am, Sir, your most obedient, humble servant,
(Signed) H. U. ADDINGTON.

THE BRITISH FLEET IN THE BALTIC.

The fleet of Sir Charles Napier is again under way. If the latest reports may be relied on, the first point of attack will be the island of Aland. The *on dit* is the fleet shall first batter an officer high in command ventured, in a conference with Sir Charles Napier, to argue against attacking Aland, saying that great carnage must occur in such an attack by ships without troops, there being about 7000 Russian soldiers in garrison on the island. The answer of Admiral Napier is stated to have been characteristic—"If you think so you had better go home again." The impression in the fleet is that Aland will be the scene of their first operations.

It is stated that the Russian squadron has left Revel, but it is not known where they have gone. The current opinion in Stockholm is that the Russians will not meet Sir C. Napier's fleet. It is added that the Russian force of shipping is much over-rated.

All the crews of the ships go to general quarters daily, and are practised at the great gun exercise in firing at targets and in ricochetting at any small rocks or islands they may be near.

THE FLEET IN BEICOS BAY.

The telegraphic despatch from Vienna, received yesterday, confirms the former report regarding the peaceful attitude of the fleet in Beicos Bay.

Five Russian steamers, with large vessels in tow, containing 4000 troops, have left Sebastopol. The united fleets are still at Beicos, where they are detained by want of coal.

THE AUSTRIAN ARMED NEUTRALITY.

The news from Vienna yesterday was that an Imperial manifesto may be expected, in which it will be stated that Austria, though she disapproves of the steps which Russia is taking, is resolved to remain neutral, with the rest of Germany. "A German army of 400,000 men will make that neutrality respected on all sides." Baron Meyerndorf has been informed that Russia has nothing to expect from Austria except strict neutrality.

THE GREEK INSURRECTION.

The news from Greece is of a very confused story description, so far as it relates to the state and prospects of the insurrection, some accounts speaking of it as most formidable, and others as nearly burnt out. A letter from a correspondent of the *Press*, dated Athens, March 17, uses very strong language, and hints at strong measures. He affirms that Athens and the whole of Greece are at this moment nothing but a Russian prefecture. Nothing, he says, is to be expected from the good will of the Greek Government; and unless the Western Powers immediately take in hand, conjointly with Turkey, the repression of the insurrection, the most serious consequences may be apprehended. They must not be content with the momentary restoration of tranquillity, but must resolutely assume the protection of Greece.

THE COURT.

On Sunday last, her Majesty and the Prince Consort, with the Duchess of Kent and the youthful members of the Royal family, attended divine service in the private chapel at Buckingham Palace. The Hon. and Rev. Gerald Wellesley read the prayers, and the Rev. N. Nowarth preached the sermon.

On Monday Mr. Crowley had the honour of submitting to her Majesty his portrait of his Royal Highness the Duke of Cambridge. In the evening the Queen and her Royal Highness honoured the Olympic Theatre with their presence.

On Tuesday the Queen and the Prince Consort visited the Duchess of Gloucester at Gloucester House. In the evening her Majesty had a dinner party, the company at which included the Duchess of Kent, the Archbishop of York, and the Hon. Mrs. Musgrave the Duke of Newcastle the Marquis of Cholmondeley, the Earl of Cardigan, Lord and Lady John Russell, the Right Hon. T. B. Macaulay, Brigadier-General Pennefather, Brigadier-General Hon. C. Grey, and Count Henkel.

THE PRIVY COUNCIL, &c.

The Queen held a Court and Privy Council on Wednesday afternoon at Buckingham Palace. At the Court, her Royal Highness the Donna Anna of Portugal, great aunt of her Majesty the King of Portugal, was presented to her Majesty, at an audience, by the Earl of Clarendon, K.G., her Majesty's Principal Secretary of State for Foreign Affairs. At the Council, proclamations were ordered to be issued respecting prizes of war, and Orders in Council were passed giving directions and instructions to her Majesty's Courts of Admiralty.

THE QUEEN'S DRAWINGROOM.

The Queen held a Drawingroom (the first this season) on Thursday afternoon, in St. James's Palace. Her Majesty and his Royal Highness Prince Albert, attended by the Ladies and Gentlemen in Waiting, arrived soon after two o'clock, escorted by a detachment of Life Guards, and were received by the principal officers of the household of her Majesty and the Prince.

The Duke of Cambridge attended the Drawingroom, and was received by the Vice-Chamberlain.

The Queen and Prince Albert entered the Throne-room, attended by the Duchess of Sutherland, the Countess of Desart, the Countess of Mount Edgcumbe, the Viscountess Jocelyn, the Hon. Matilda Paget, and the Ladies and Gentlemen of the Royal household.

Her Majesty wore a train of white poplin, ornamented in gold, a running pattern of flowers and leaves, trimmed with white tulle and gold bands and bunches of sweet peas. The petticoat was white satin, trimmed with white tulle, gold blonde, and sweet peas. Her Majesty's head-dress was an opal and diamond diadem, and feathers.

The general circle was not numerously attended, but the number of young ladies presented was more than usually great.

Her Majesty and Prince Albert, attended by the Royal suite, returned to Buckingham Palace, escorted by a detachment of Life Guards.

The Countess of Desart has succeeded the Countess of Mount Edgcumbe as the Lady in Waiting to her Majesty. Lord Byron has succeeded Lord de Tabley as Lord in Waiting, and R. Ormsby Gore, Lieut.-General Sir Edward Bowater, as Groom-in-Waiting.

SEIZURE OF COMBUSTIBLES.—On Saturday the officers of Customs seized a vessel in the Thames, laden with saltpetre and sulphur, consigned to a Russian port. It is understood that the Government intend to enforce the penalties against the shippers.

PHOTOGRAPHY.—Captain Scott, of H.M. steamer *Hecla*, took with him to the Baltic a young photographer, of the name of the Elliott, for the purpose of trying experiments on the application of photography to surveying purposes. Captain Scott has returned, bringing home with him perfect views of the coasts, and of the fortresses along the coast, taken when the steamer was propelled at the speed of fifteen knots an hour—all of them most beautifully perfect in all their details. Captain Scott, thus armed, is now urging on the Admiralty the appointment of a photographer to the Baltic fleet.

OBITUARY OF EMINENT PERSONS.

COLONEL MOUNTAIN, C.B.

COLONEL ARMINE SIMCON HENRY MOUNTAIN, C.B., Adjutant-General to her Majesty's Forces in India, Aide-de-Camp to the Queen, &c., fourth son of the first Lord Bishop of Quebec, was born at Quebec, Feb. 4, 1787; received a military education in Germany; spoke and wrote all the Continental, and several Oriental, languages with the facility of a native. Went out to India, as Military Secretary to Sir Colin Halkett; became Aide-de-Camp to Lord William Bentinck; served as Adjutant General in the Chinese War, where he received three balls through his body. Returned to England with the wreck of his Regiment, the 26th, which he soon made one of the finest in the army; and continued to command it, as Lieut.-Colonel, till he went out again to India, as Military Secretary to Lord Dalhousie. Was soon afterwards appointed Adjutant-General; commanded a brigade at Chillianwallah, and received the warm thanks of Lord Gough for a brilliant and gallant charge which secured the victory; wounded through the left hand, by the accidental discharge of a pistol in mounting his charger the next day. Died of fever, Feb. 8th, 1854. Was twice married: first, to Jean O'Beirne, daughter of a former Bishop of Meath; secondly, to Anne, elder daughter of Colonel Dundas, of Carron Hall, Falkirk. No issue.

LADY JEPHSON.

CHARLOTTE ROCHFORD, Lady Jephson, died on the 20th ult., at her residence, 76, Wimpole street, Cavendish-square. She was eldest daughter of the late General Sir John Smith, K.A., and widow of Sir Edward Mountney Jephson, Bart, who was for many years Judge-Advocate and Judge of the Admiralty Court at Gibraltar. She is the present Baronet, Sir R. M. Jephson, is his eldest son by his first wife. William Jephson, Esq., of the Isle of Wight; Colonel Jephson, commanding his regiment at the Cape; Captain Jephson, now on military service in India; Charlotte, married to Edward Fitzgerald, Esq; Julia, Marchioness of Ailsa; and Eliza, are the children of the late Sir R. M. Jephson, Bart., by his second wife—the lady whose death we record.

CHARLES III., DUKE OF PARMA.

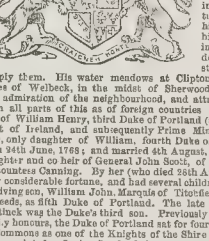
THE Duke of Parma died at Turin on Monday, on the 27th ult., from the effects of a wound inflicted by an unknown assassin.

His Highness (Ferdinand-Charles-Joseph Maria-Vittorio-Balthasar de Bourbon, Duke of Parma, Infant of Spain) succeeded to the Duchy on the abdication of his father, Charles II., in 1849. He was born 14th of January, 1823, and married 10th November, 1845, Louise-Marie-Thérèse, sister of the Comte de Chambord (the Duc de Bordeaux). By that Princess (who has been declared Regent), he leaves, with other issue, a son and successor, Robert, now Duke of Parma, born 9th July, 1848. The Duchy of Lucca was the original inheritance of the deceased Duke's father; but that possession he ceded, 5th October, 1847, to Tuscany, and became shortly after, on the 17th of the following December, at the decease of Maria Louise, ex-Empress of the French, Duke of Parma and Piacenza, which Government he abdicated, in 1849, in favour of his son.

This Prince—Charles II.—was son of Louis, King of Etruria, by his wife Maria-Luisa, Duchess of Lucca, daughter of Charles IV, King of Spain.

WILLIAM HENRY CAVENDISH SCOTT BENTINCK, FOURTH DUKE OF PORTLAND.

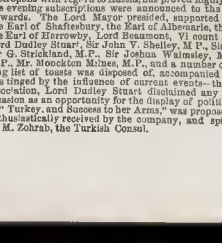
THIS venerable nobleman died at Welbeck Abbey, Notts, on the 27th ult., at the patriarchal age of eighty-six. His very long life had been chiefly devoted to the improvement of his great estates. In accomplishing this object, he made himself the most practically useful landowner in England, spending his time principally among his people, identifying himself with them, knowing their wants, and endeavouring, in most instances successfully, to



supply them. His water meadows at Clipton—a farm within a few miles of Welbeck, in the midst of Sherwood Forest—are the pride and admiration of the neighbourhood, and attract agricultural visitors from all parts of this as of foreign countries. His Grace was eldest son of William Henry, third Duke of Portland (at one time Lord Lieutenant of Ireland, and subsequently Prime Minister), by Dorothy his wife, only daughter of William, fourth Duke of Devonshire. He was born 24th June, 1768; and married 4th August, 1795, Henrietta, eldest daughter and co heir of General John Scott, of Balcomie, and sister of Viscountess Canning. By her (who died 26th April, 1844) he acquired a very considerable fortune, and had several children, of whom the eldest surviving son, William John, Marquis of Titchfield, born 18th Sept., 1800, succeeds, as fifth Duke of Portland. The late lamented Lord George Bentinck was the Duke's third son. Previously to his accession to the family honours, the Duke of Portland sat for fourteen years in the House of Commons as one of the Knights of the Shire for Bucks. In 1807 he was appointed a Junior Lord of the Treasury; in 1809, succeeded his father; and in 1827 became Lord Privy Seal, in the Administration of his brother-in-law, George Canning. His Grace's last connection with public affairs was his brief tenure of the Presidency of the Council, under Lord Goderich's Government.

ELIZA, COUNTESS DOWAGER OF CLANRICARDE.

THE Countess Dowager of Clanricarde died on the 26th ult., at her residence in Dublin, aged nearly 90. Her Ladyship was third daughter of Sir Thomas Burke, the first Baronet, of Marblehill, county Galway, and sister of the late Sir John Burke, Bart., M.P. for that county. Her marriage with John Thomas, thirteenth Earl of Clanricarde, took place on March 17, 1799; and its issue consisted of one son, Ulick John, present Marquis of Clanricarde; and two daughters, Hester Catherine, Dowager Marchioness of Sligo, and Emily, who married the present Earl of Howth, and died Dec. 5, 1842.



Lady Clanricarde was universally respected and esteemed.

THE FRIENDS OF POLAND.—On Thursday night the members and supporters of the Literary Association of the Friends of Poland, in departing from their custom of collecting funds by means of a public ball for the relief of the Polish exiles, dined together at the London Tavern. The experiment, backed by the present state of political feeling in the metropolis with regard to Russia, has proved highly successful, and during the evening subscriptions were announced to the amount of £1000 and upwards. The Lord Mayor presided, supported by Prince Czartoryski, the Earl of Shaftesbury, the Earl of Albemarle, the Earl of Yarborough, the Earl of Harrowby, Lord Beaumont, Vi count Sandon, Lord Kinsale, Lord Dudley Stuart, Sir John V. Shelley, M.P., Sir Benjamin Hall, M.P., Sir G. Strickland, M.P., Sir Joshua Walmsley, M.P., Sir James Duke, M.P., Mr. Monckton Milnes, M.P., and a number of other gentlemen. A long list of toasts was disposed of, accompanied by speeches more or less tinged by the influence of current events—though, on behalf of the association, Lord Dudley Stuart disclaimed any intention of using the occasion as an opportunity for the display of political feeling. The toast of "Turkey, and Success to her Arms," was proposed by Lord Beaumont, enthusiastically received by the company, and spiritedly acknowledged by M. Zohrab, the Turkish Consul.

MODE OF SLINGING ARTILLERY HORSES FOR EMBARKATION.

EMBARKATION OF ARTILLERY HORSES AT WOOLWICH.

The embarkation of horses is, with inexperienced persons, both a tedious and difficult operation; but the means employed by Captain Paynter's battery at Woolwich Dockyard on the 22nd ult. proved to be alike safe and expeditious—the average time occupied in placing each horse securely in the hold being only two minutes.

The operation is effected in the following manner. The ship being brought alongside the wharf, a strong piece of canvas is placed under the body of the horse, and fastened over his back by a rope; he is then hoisted into the air by a running tackle from the mainyard arm, and slung into the hold of the ship; when there, he is received by the drivers, who, by coaxing, are enabled in a few seconds to re-assure him, and he is then led to his stall. A strong padded stanchion is placed between each horse; a canvas sling is also passed under his body, and fastened overhead, which prevents his lying down during the voyage, but acts as a great support to him when weary.

On the ship arriving at its destination, if the coast admits of it, the horses are dropped overboard, and allowed to find the best of their way to the shore; on the other hand, should this be found impracticable, the operation of slinging as above described, is again resorted to.

The principal danger in the transportation of horses arises from sea sickness; the horse, unfortunately, from its physical formation, not being able to vomit, is often attacked by madness, in which case he is bled to death, and thrown overboard.

Three fine ships, the *Palmerston*, *Hannibal*, and *John Masterman*, received on board the whole of Captain Paynter's battery; each ship carrying two officers, sixty men, and about as many horses, besides the necessary guns, carriages, and ammunition.

The Royal Artillery band was present at the embarkation on the 22nd ult.; and it being high tide at about six o'clock p.m., the ships were hauled out of dock, and taken in tow by tugs.

The wharf was crowded with officers of artillery and their families also the wives and children of the men. Several cavalry officers were present in plain clothes, and evinced great interest in the operation.

ARTILLERY HORSES IN THE HOLD OF A VESSEL.

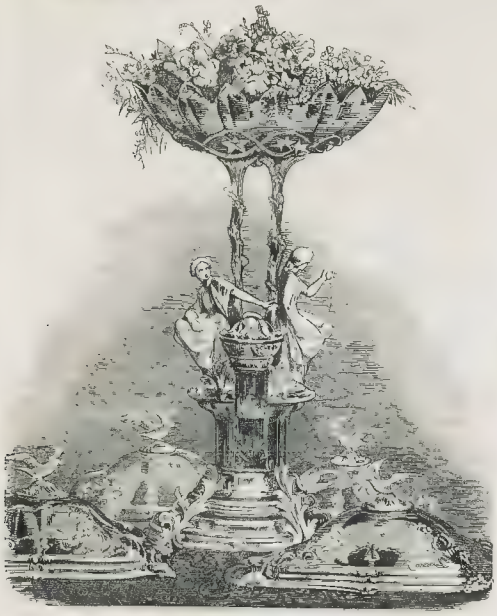


PLATE PRESENTED TO DR. HARRISON.

PLATE PRESENTED BY THE UNDERWRITERS OF LLOYD'S.

TESTIMONIAL TO DR. HARRISON.

At the last fortnightly meeting of the Directors of the North-Eastern division of the London and North-Western Railway, held in the Board-room, at the London-road Station, Manchester, a handsome Service of Plate—consisting of an Epergne, and four covered Side-dishes (value about 300 guineas)—was presented to Dr. John Gregson Harrison, of Piccadilly, for the valuable services rendered by him during his connection with the Company, as their honorary medical officer for the district. The Plate has been beautifully manufactured by Mr. George Attenborough, of Regent-street, London. The Epergne—which is formed of an emblematic group of figures—represents Atropos about to sever the thread of life, with Hygeia interposing to prevent it. The columns—copied from the pillars of the gate in Raphael's Cartoon of "St. Peter and St. John Healing the Lame Man"—bear the following inscription:—

Presented, with other plate, to John Gregson Harrison, M.D., by the Directors of the London and North-Western Railway Company, as a mark of their appreciation of his professional skill, as Honorary Surgeon of the North-Eastern and Northern Divisions of the Company for many years.

Mr. Matthew Lyon, Chairman of the Committee, in presenting the superb gift, addressed Dr. Harrison, and spoke in high terms of his long, extensive, and eminently successful course of practice; the zeal and energy with which he had invariably discharged his duties as honorary medical officer to the Company; and the courtesy and urbanity which he had always displayed in his intercourse with the Directors, and everyone connected with the Company; and especially the uniform and great kindness shown by Dr. Harrison to every individual, of whatever rank or station, whose lot it had been to be placed under his care.

Dr. Harrison thanked the Company for this unexpected mark of their approval of his services, which were far more than repaid by the very splendid testimonial then before him. This elegant and substantial compliment, emanating from the directory of the first Company in the universe, could not be otherwise than highly flattering to his feelings, because it gracefully conveyed their concurrence with his endeavours to promote the interests of this powerful corporation.

The Doctor was afterwards complimented by Mr. Edward Tootal, Mr. Caeppell, and Mr. Brook, Directors; and by Captain Huish, the manager; who, with Messrs. Harrison and Cooper, the superintendents, were present on the interesting occasion.

PLATE PRESENTED BY THE UNDERWRITERS AT LLOYD'S.

This handsome and costly group of Plate, consisting of two salvers, three cups, and five snuff-boxes, have just been presented by the Underwriters at Lloyd's, in testimony of the services rendered by the recipients of the several gifts, to the steamer *Glendower*, whilst on shore near Milford, in September, 1853.

First is a large salver, which has been presented to Sir Thomas Pasley, Bart., Pembroke Dockyard, for the kind and prompt manner in which he authorised assistance to be sent to the *Glendower*.

The smaller salver has been presented to Lieut. G. M. Alldridge, Commander of H.M.S. *Asp*, for the prompt and efficient services rendered by him to the *Glendower*.

The two cups, with covers, have been presented to Mr. G. A. Macfarlane, Second Master of the *Asp*, and to Mr D. Hall, for their able co-operation in the above services. And the five snuff-boxes have been given to Messrs. Morgan, Venning, Hill, Kindersley, and Clark, for their kind and prompt attention upon the above occasion.

The two salvers are characteristically engraved with sea-weeds

THE ORATORY, AT BROMPTON.—EXTERIOR OF THE RESIDENCE.—(SEE NEXT PAGE.)

sea-fish, &c.; the borders being formed of cables, with anchors introduced. The crest of the gentlemen are embodied in the chasings at the top, whilst at the foot is engraved the screw-steamer *Glendower*. The silver cups bear richly-chased nautical designs; and on the cover of two of them is a figure of a sailor. The muff-boxes are also elaborately chased, and bear on the lid an engraving of the *Glendower*.

The Plate has been designed and manufactured by Messrs. Sarl and Son, Cornhill.

THE ORATORY AT BROMPTON.

On Wednesday (last week) the temporary Church which has just been constructed for the Oratorians, at Brompton, was opened with the accustomed ceremony of consecration.

The Oratorians, it may be as well to explain, are a new branch of the order of St. Philip Neri, in the Roman Catholic Church, erected in 1850, by the Holy See, to preach to the poor, and educate them, gratis. They are under the usual voluntarily-assumed obligations of chastity, personal poverty, and obedience; and have the distinctions of lay brethers, whose offices are somewhat menial; and priests, who perform the higher functions. They were originally located in King William-street, Strand; but have lately removed to a new site at Brompton, which was a gift to the Fathers by two benefactors of their congregation. The ground is somewhat short of four acres, and is bounded on the east by the avenue of lime-trees leading up to the Church of the Holy Trinity: on the north, by its cemetery; on the west, by the ground recently purchased by the Commissioners of the Great Exhibition; and, on the south, by the narrow road, which the Commissioners are about to widen to eighty feet. The original cost of the whole site, which is freehold, was, we believe, £16,000. The Superior in London is the Rev. F. W. Faber; and at Birmingham, the Rev. J. H. Newman, D.D.

Such is the new location of the Oratorians; and it is, perhaps, one of the most rural sites in the suburbs. The new building by no means shows its great size to advantage from the road, as it is erected in the shape of the letter T. The limb from east to west is the dwelling-house of the community, with the Instruction and Reception-rooms; and the portion which runs from north to south comprises the Oratory, with the Library over it, and the Refectory. The house is plain, with no ornament but a few cement dressings; yet, from its size and excellent proportions, it presents a handsome and imposing appearance, without anything unbecoming the domestic residence of a congregation of secular priests. Some idea of the scale on which the building is executed may be gathered from the following dimensions:—The Oratory, 72 feet long, 30 wide, 29 high; the Library, 72 long, 30 wide, 28 high; the Refectory, 50 long, 30 wide, 28 high; the Corridors of the house, 164 long, 9 wide, 14 high.

Our View represents the principal front, facing the Old Brompton-road. This part is the dwelling of the Oratorians, and is the only completed portion of the extensive range. It is made to accommodate forty persons, and consists of private rooms, domestic chapel, refectory, library, recreation room, lavatory, bath-rooms, lecture and congregation rooms, &c. The whole is remarkably well arranged. The corridors are wide, and well adapted for exercise in wet weather. The grand staircase is of good proportion, and is placed in the centre of the house. The chapel or oratory is approached from the house by a sacristy, and a corridor, running parallel with the sacristy. There is an approach to the garden and bowling-green from the hall. A large space has been given up to the Commissioners for the improvement of the old Brompton-road, at the solicitation of Mr. William Jackson, and for the consideration of the sum of £2000, one-half of which he contributed himself.

To the east, and on the site of the future church, stands the temporary church, 181 feet long by 40 wide, and 27 feet to the ridge of the roof. It is built in the simplest manner possible, and of course presents externally no ecclesiastical features. The open wooden roof is left in the church, and is coloured chocolate and blue. This building will contain 1200 persons, and its fine sanctuary of thirty feet by forty will give the ceremonies of the church a very imposing effect. It will be furnished with seats, confessionals, organ-loft, altars, stalls, &c., together with the fittings of the sacristy, for about £3000.

The architect both of house and church is Mr. Scoles, who designed Farm-street, St. John's-wood, and Islington Roman Catholic Churches; and what he has done at Brompton will be no slight addition to his well-deserved reputation. The contract was given to Mr. William Jackson, of Pimlico, by whom the works have been most efficiently executed. The whole has been raised within twelve months.

The house, oratory, and library are stated in the *Tablet* to have been built by the Fathers themselves, who have sunk their money for that purpose. We understand their new church is to be entirely free, with a certain amount of reserved seats, but not let on pew rents. But the Fathers had no funds for the church, for which they have incurred a debt of about £2000; trusting that their friends will assist them in the liquidation of it.

CHURCH, UNIVERSITIES, &c.

Bishopric of Salisbury.—Tuesday's *Gazette* contained the order for the *congé d'élire* for the election of a Bishop for the See of Salisbury; and recommending the Rev. Walter Kerr Hamilton, M.A., to be elected to the vacant see.

Preferments and Appointments.—*Deanery:* The Rev. G. H. B. Coleridge, M.A., to Wells. *Canonries:* The Rev. J. S. Master, to an Honorary Canonry of Manchester; the Rev. J. Bailey, to a Canonry Residentiary of York. *Rectories.* The Rev. E. S. Pankes, to Corfe Castle, Dorset; the Rev. G. V. Le Clerk to Kent; the Rev. J. Day, to Bedingfield, Suffolk; the Rev. R. Gell, to Kirk Ireton, Derbyshire; the Rev. H. D. Hilton, to Orlingbury, Northamptonshire; the Rev. W. S. M'Dowall, to Dodford, Worcestershire; the Rev. J. Sikes, Chevening, Kent; the Rev. G. Smith, to Tetsworth, Oxfordshire; the Rev. F. E. Lowe, to Bitham Lodge, Leicester; the Rev. A. D. Wilton, to Orlingbury, Northampton. *Vicarages:* The Rev. W. H. Brevor, to St. Mary; the Rev. G. R. Mackarness, to Ham, Staffordshire, the Rev. B. Simpson, to Bosall, near York; the Rev. C. F. Smith, to Bishopthorpe; the Rev. W. H. White, to Kenton, Suffolk. *Incumbencies:* The Rev. S. Arnott, to St. Luke's, Berwick-street; the Rev. E. F. Boyle, to St. Peter's Church, Hammersmith; the Rev. J. Colborne, to Holy Trinity, Painswick, Stroud; the Rev. C. Eckersall, to Lower Beeding, Sussex; the Rev. R. Hill, to Wormsley; the Rev. H. P. Leakey, to Trinity Church, Swansea; the Rev. W. Poole, to Hentland and Little Dewchurch, Hereford; the Rev. G. S. Robertson, to Fightelthorne, Buckinghamshire; the Rev. J. Wilson, M.A., to St. James's Church, Preston; the Rev. H. Woodward, to St. John's Church, Deddington, Salop; the Rev. R. S. Wright, to the Holy Trinity, Bersted, Lancashire. *Perpetual Curacies:* The Rev. A. T. Armstrong, to Ashton-on-Ribble; the Rev. H. A. Barrett, to Langley, Norfolk; the Rev. J. Colborne, to Slad, Gloucester; the Rev. T. H. Jones, to St. Peter's, Croydon, Surrey; the Rev. J. Pilling, to Grimsargh.

Oxford.—Magdalen Hall.—The Lusby open scholarship was, last week, awarded to Mr. C. H. Hoole, from the Islington Proprietary School.

Testimonials.—By the parishioners and inhabitants of Bexley, Kent, on the recent silver breakfast suite, to the Rev. G. A. Langdale, on his leaving that parish. By the inhabitants of the district of the Episcopal chapel, Kennington, a handsome silver salver, to the Rev. C. Bussey, as a token of their sense of his unwearying kindness to them. Both testimonials were from the manufactory of Messrs. Benson, Cornhill.

Dinner to Her Majesty's Ministers.—Her Majesty's Ministers were entertained by the Lord Mayor of London, at the Mansion-house, on Saturday, when a numerous and distinguished body of guests were partakers of civic hospitality. Most of the members of the Cabinet and of the Government were present. Lord John Russell, Lord Palmerston, and Sir James Graham were, however, prevented from attending by illness or unavoidable engagements. In returning thanks for the toast of "Her Majesty's Ministers," the Earl of Aberdeen said:—"It is a great satisfaction to her Majesty's Government to be acting with an ally from whom we have from the first experienced the most cordiality, truth, and loyalty (cheers). I recollect that my distinguished friend (Count Walewski), whom I see near me, joined with me last year in the hope of peace. I have no doubt we shall pursue that object together, and if the same unjust and unprovoked war may be carried on with vigour and with energy, still I think we must entertain a firm resolution to terminate that war as speedily as it possibly can be terminated, consistently with the national honour." In returning thanks for the toast of "The Foreign Ministers," Count Walewski recalled the words of the Emperor Louis Napoleon, that the time for conquests had passed away for ever.

The Crystal Palace Railway.—The branch railway from the London and Croydon to the Crystal Palace was opened on Monday, when a special train, containing several directors and officers of the Brighton Railway and the Crystal Palace Company, Mr. James M.P., the Chairman of both companies, proceeded from the main line near the Sydenham station, and ascended the hill on the summit on which the Palace stands, terminating in a large and convenient station, which by means of a glass-covered way, communicates directly with the Palace.

CALENDAR FOR THE WEEK.

Sunday, April 2.—4th Sunday in Lent.
Monday, 3.—Richard Bishop of Chichester.
Tuesday, 4.—St. Ambrose.
Wednesday, 5.—Sun rises 5h. 29m., sets 6h. 38m.
Thursday, 6.—Old Lady Day.
Friday, 7.—Cambridge Term ends.
Saturday, 8.—Oxford Term ends. Fire Insurance due.

A COMPARATIVE VIEW

of the

POPULATION (DISTINGUISHING THE SEXES) OF EVERY PARISH AND TOWN IN THE EMPIRE IN 1841 AND 1851:

With a Detailed View of the Population of the Metropolis; a Comparison of the Population in Counties and Towns, and of the whole Empire, at Different Periods; and a Variety of Interesting Information concerning the Movement of the Population the groundwork of all Political Science;

WITH A LARGE ILLUSTRATIVE MAP.

TO CORRESPONDENTS.

Ethiop is thanked for his very interesting letter, which shall appear.

Maria (Enniskillen) is mistaken in her facts, and pseudo correctors ought not to expect attention to anonymous communications.

A. Z., Barnsley; and an Undergraduate. Davidson's "System of Shorthand;" or "Short Shorthand."

J. N., Cork.—We have not room.

Erratum.—The Bust engraved at page 219 is that of John Graham, Esq., as described in the text; and not of Professor Graham, as stated in the head-line, and that beneath the Engraving.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 1, 1854.

It has long been considered probable that Prince Gortschakoff would endeavour to strike a decisive blow on the Danube, in anticipation of the Declaration of War by the Allies. A brilliant victory achieved in this manner by the Russians, might afford the Emperor an opportunity for making peace with less damage to his own sensitiveness, and that of his nation, than after negatory attempts to defeat Omer Pacha. A movement of the kind has taken place, and the Russians crossed the Danube on the 23rd ult., at Ibraila and Galatz, in two divisions, the one under Prince Gortschakoff and the other under General Lüders. The two divisions are variously estimated at from 35,000 to 50,000 men. The Turks appear to have offered an obstinate resistance to these movements. Eight days previously, the Russians under Prince Gortschakoff were defeated by the Turks in an attempt to take the island in the Danube opposite Turtukai. The Russians had taken possession of the temporary bridge connecting the island with the bank of the Danube, when the fire of the Turks brought it down, and the Russians perished to the number, it is reported, of nearly 2000 men. It is not easy to divine the objects of the Russians in making this movement, or to decide whether it should be considered as offensive or defensive. If offensive, and intended as preparatory to a march through Bulgaria towards Schumla, the Balkans, and Constantinople, it is a bold, but not likely to be a successful movement. Prince Gortschakoff would, in such a case, not only have to encounter the main body of the Turkish army at Schumla, but would incur the serious risk of being assailed in the rear by the reinforcements which the British and French fleets in the Black Sea would pour into any landing-place on the coast. If they advanced as far as Schumla it would be necessary to reduce Varna, before they could hope for victory. How they could reduce Varna, in opposition to the fleets of the Allies stationed in its bay to defend it, we are at a loss to imagine. But, perhaps the movement is a defensive one, as Matchin is a hundred miles nearer to the Russian frontiers than Prince Gortschakoff's former head-quarters at Bucharest.

While hostilities are thus proceeding, the country will learn with satisfaction that the British and French Governments have made an attempt to humanise the practice of war, and to diminish, to some extent, the inevitable horrors that attend it. The same *Gazette Extraordinary* which contained the declaration of war against Russia, contained a notification from her Majesty, waiving, though not positively renouncing, several of the rights which have been hitherto invariably exercised by belligerents; and a *Supplemental Gazette* was published on Wednesday, containing several Orders in Council, prescribing the conduct of her Majesty's forces and her subjects during the continuance of hostilities. By the declaration of the 28th ult., her Majesty, in order to preserve the commerce of neutrals, waives the right of seizing enemy's property laden on board a neutral vessel, unless it be contraband of war; and also the confiscation of neutral property not contraband of war found on board enemy's ships. The French Government has issued a similar notification; and in this, and all other measures, great or small, rendered necessary by the war, it acts in most perfect union and agreement, both of principle and detail with the Government of this country. The first of the Orders in Council, bearing date the 29th ult., is technically called an "Order of General Reprisals;" and is a formality usual when maritime Powers declare war. It authorises her Majesty's fleets and ships to seize all ships, vessels, and goods belonging to the Emperor of Russia or his subjects, or of aliens inhabiting his territories and yielding him allegiance, and to bring the same for judgment before the duly-authorised Admiralty Courts in Great Britain or her Colonies. The second enjoins that no ships or vessels belonging to any of her Majesty's subjects be permitted to enter and clear out for any of the ports of Russia until further orders. It also lays an embargo on all Russian ships or vessels whatsoever now within, or which shall hereafter come into, any of the ports, harbours, or roads within her Majesty's dominions; together with their crews, and all property and effects whatsoever, that may be on board. The third Order in Council qualifies the second, to the extent of allowing all Russian merchant-vessels now in British ports or harbours a period of six weeks to load their cargoes and to take their departure. The fourth and last Order gives the usual directions for the distribution of prize money. The French Government has already announced that Russians now resident in France will not necessarily be expelled, but will be allowed to remain upon the sole condition of conforming to the laws. It is understood that a similar indulgence will be accorded by the British Government to such Russians as business or choice may induce to remain in this country. When it is remembered that in former wars the civilised States of Europe often expelled, at twenty-four hours' notice, the subjects of the Government with whom they happened to be at war, it will be seen how much more consistent with humanity is the practice of which the British and French Governments have just set the example. Neither Government will, for the present, issue letters of *marque*. It is to be hoped that no circumstance in the progress of the war will force them, against their present inclination, to have recourse to so questionable a mode of inflicting damage upon an opponent.

The interest attaching to the actual commencement of war deprives of much of its importance the supplemental Blue-book, which has just been issued under the old and somewhat irrelevant title of "Correspondence respecting the Rights and Privileges of the Latin and Greek Churches in Turkey." The correspondence dates from the 15th January to the 27th March, 1854, and includes nearly 140 letters and despatches. We have not space this week for any summary of their contents, but will probably recur to the subject. The most interesting of the letters refer to the insurrection in Greece, and are so far important that they prove the determination of the British and French Governments to hold the King of Greece responsible for the participation of his subjects in the revolt against the Sultan's authority in Albania and Epirus. The Greek insurrection, we thus learn, will be immediately put down, and it will be fortunate for King Otho if his kingdom be not a severe sufferer by the collision with Great Britain and France, which Russian intrigues have induced him to provoke.

The resignation of Mr. Baines, the respected President of the Poor-law Board, would have been regarded as an unfortunate circumstance; and we are glad that, on reconsideration, the right honourable gentleman has consented to remain in the office which he so ably fills. The question of the Poor-laws has always been a popular and exciting one. It is one in which Englishmen of all classes take a lively interest, and in which opinions very widely differ. The right to relief in destitution is, to the humbler classes of the people, the one great prop and pillar of our Constitution. Mr. Baines, in undertaking to introduce a further and much-needed reform into the existing law, entered on a task that was sufficient to test the statesmanship of any man in Parliament. Between those who would maintain the existing system, and those who desire to establish a national, instead of a local rating, he was placed in a position of difficulty. The defeat of the Government, though not incurred upon the principle of the measure, was significant enough to warn it of the impolicy of forcing on the measure without further consideration of the manner in which it would affect the Irish and Scotch poor. To extend the area of taxation in England, and to abolish the law of settlement, may be, and we think are, highly necessary reforms. But if the law of settlement be abolished for the English, how is it to be retained against the Irish? Irish labour, instead of being a drug in the market of England, is a highly valuable commodity, as Lord Palmerston very opportunely confessed. It is Irish labour that is mainly instrumental in building our houses, in paving our streets, in constructing our docks and railways, and in gathering in our harvests. It is the Irishman, in fine, who performs all our rough and ready work. It would, therefore, be manifestly unjust that the law establishing the Englishman's right to relief in the place where he shall have become destitute should not also apply to the Irishman. The bill of Mr. Baines made no provision either for the Irish or the Scotch in this respect, and hence the temporary defeat that it has experienced at the hands of the opponents of any further Poor-law reform, aided by a large reinforcement of the Irish members. Lord Palmerston proposed to introduce a separate bill for Ireland; but it seems to be the desire of the House of Commons that the subject should be considered as a whole; and the Government will, in all probability, think it expedient to yield the point. Possibly the result will be, either at the present or at some future time, the assimilation of the Irish and Scottish Poor-law system to that of England. The Scottish system does not recognise the right of the able-bodied poor to any relief whatsoever; and the Irish Poor-law—a recent introduction—has, even in its present state, gone far to effect a social revolution, and to regenerate and save a country whose previous miseries were alike the scandal and the perplexity of the British Government. We know of no sufficient reason why there should be three systems of Poor-laws in the United Empire.

Declaration of War.—On Wednesday the area in front of the Royal Exchange was crowded with persons, in expectation of hearing the Declaration of War with Russia read, or "proclaimed" with state ceremony, similar to that observed on the proclamation of peace or the accession of the Sovereign. Thus in Chamberlain's "History of London," we read, "on the 17th of December, 1718, war was declared against Spain in the usual places, with the accustomed solemnities, within the city of London and Westminster." Again, vol. 22, 1760, "the officers of arms, with the serjeants-at-arms and trumpeters, mounted their horses, and, with the serjeants-at-arms' plate-gates. Garter Principal King-of-Arms read his and, at Westminster-hall gate, Norroy King-of-Arms proclaimed Majesty's declaration of war, and Norroy King-of-Arms proclaimed it abroad. The like ceremony was performed at Charing-cross. At Temple-bar the Westminster officers retired, and the heralds were joined by the Lord Mayor, Aldermen, and Sheriffs, and the declaration was [illegible] proclaimed at the end of Chancery and, at the end of Wood-street, and Cheapside, at the Royal Exchange, amid the [illegible] of the people. There are similar records of 1744, 1756, and 1793, the last of which drew crowds to the assembling of the crowd at the Royal Exchange on Wednesday, when, however, no declaration or proclamation took place.

PREPARATIONS FOR WAR.

THE ORDERS IN COUNCIL.

A Supplemental *Gazette* was published on Wednesday night, containing the following Orders in Council:

At the Court at Buckingham Palace, the 29th of day of March, 1854—

Present, the Queen's Most Excellent Majesty in Council.

Her Majesty having determined to afford active assistance to her ally, his Highness the Sultan of the Ottoman Empire, for the protection of his dominions against the encroachments and unprovoked aggression of his Imperial Majesty the Emperor of all the Russias, her Majesty, therefore, is pleased, by and with the advice of her Privy Council, to order, and it is hereby ordered, that general reprisals be granted against the ships, vessels, and goods of the Emperor of all the Russias, and of his subjects or others inhabiting within any of his countries, territories, or dominions, so that her Majesty's fleets and ships shall and may lawfully seize all ships, vessels, and goods belonging to the Emperor of all the Russias, or his subjects, or others inhabiting within any of his countries, territories, or dominions, and bring the same to judgment in such Courts of Admiralty within her Majesty's dominions, possessions, or colonies, as shall be duly commissioned to take cognisance thereof. And to that end, her Majesty's Advocate-General, with the Advocate of her Majesty in her office of Admiralty, are forthwith to prepare the draft of a commission, and present the same to her Majesty at this board, authorising the Commissioners for executing the office of Lord High Admiral to seal and require the High Court of Admiralty of England, and the Lieutenant and Judge of the said Court, his Surrogate or Surrogates, as also the several Courts of Admiralty within her Majesty's dominions, which shall be duly commissionated to take cognisance of, and judicially proceed upon, all and all manner of captures, seizures, prizes, and reprisals of all ships, vessels, and goods, that are or may be taken, and to hear and determine the same; and, according to the course of Admiralty and the law of nations, to adjudge and condemn all such ships, vessels, and goods, as shall belong to the Emperor of all the Russias or his subjects, or to any others inhabiting within any of his countries, territories, or dominions; and they are likewise to prepare and lay before her Majesty, at this board, a draft of such instruction as it may be proper to send to the said several Courts of Admiralty for her Majesty's dominions, possessions, and colonies for their guidance herein.

From the Court at Buckingham Palace, this twenty-ninth day of March, one thousand eight hundred and fifty-four.

Cranworth, C.	Abercorn.	Ernest Bruce.
Granville P.	Aberdeen.	Sidney Herbert.
Argyll, C. P. S.	Clarendon.	J. R. G. Graham.
Newcastle.	Drumlanrig.	Stephen Lushington.
Bread albane.	Mulgrave.	W. E. Gladstone.
Lansdowne.	J. Russell.	William Molesworth.

At the Court at Buckingham Palace, the 29th day of March, 1854.

Present, the Queen's most Excellent Majesty in Council.

It is this day ordered by her Majesty, by and with the advice of her Privy Council, that no ships or vessels belonging to any of her Majesty's subjects be permitted to enter and clear out for any of the ports of Russia until further order; and her Majesty is further pleased to order that a general embargo or stop be made of all Russian ships and vessels who sooner, now within, or which shall hereafter come into, any of the ports, harbours, or roads, within any of her Majesty's dominions, together with all persons and effects on board the said ships or vessels; provided, always, that nothing herein contained shall extend to any ships or vessels specified or comprised in a certain Order of her Majesty in Council, of the 27th day of March, for exempting from capture or detention Russian vessels under specified conditions; and her Majesty is pleased further to order, and it is hereby ordered, that the utmost care be taken for the preservation of the said entire part of the cargoes on board any of the said ships or vessels, so that no damage or embezzlement whatever be sustained; and the Right Honourable the Lords Commissioners of her Majesty's Treasury, the Lords Commissioners of the Admiralty, and the Lord Warden of the Cinque Ports, are to give the necessary directions herein as to them may respectively appertain.

C. C. Greville.

At the Court at Buckingham Palace, the 29th day of March, 1854.

Present, the Queen's Most Excellent Majesty in Council.

Her Majesty being compelled to declare war against his Imperial Majesty the Emperor of all the Russias, and being desirous, as much as possible the evils thereof, is pleased, by and with the advice of her Privy Council, to order, and it is hereby ordered, that Russian merchant vessels now in any of the ports within her Majesty's dominions, shall be allowed until the 10th day of May next, six weeks from the date hereof, for loading their cargoes and departing from the ports or places; that such Russian merchant vessels as may be met at sea by any of her Majesty's ships, shall be permitted to continue their voyage, if, on examination of their papers, it shall appear that their cargoes were taken on board before the expiration of the above term. Provided, that nothing herein contained shall extend to any Russian vessels having any goods on board which shall be taken to any port or place belonging to the enemy, or any vessels which shall have been despatched from their ports after the knowledge of the existence of war with Russia shall have arrived at the port from which such vessel shall have been despatched; and that any vessels which shall have been laden with any goods for the enemy, and which shall have been despatched from their ports after the knowledge of the existence of war with Russia shall have arrived at the port from which such vessel shall have been despatched, shall be liable to be detained by her Majesty's dominions, and to be brought into port for adjudication; and if condemned as lawful prize, to be confiscated to her Majesty's use; but that all such vessels shall be allowed to depart with their cargoes, if any, without molestation, and that any such vessel may be met with by any of her Majesty's ships, shall be permitted to continue her voyage to any port not blockaded.

And the Right Honourable the Lords Commissioners of her Majesty's Treasury, the Lords Commissioners of the Admiralty, and the Lord Warden of the Cinque Ports, are to give the necessary directions herein as to them may respectively appertain.

C. C. Greville.

A Proclamation follows, which, after reciting the declaration already given as to the granting of general reprisals against the ships, goods, and subjects of the Emperor of Russia, explains the terms upon which the prizes shall be shared. In the first place, it is ordered that when ever any prize shall have been taken by any of our ships, while acting in conjunction with any fleet in alliance with us, a fair division of the proceeds shall be assured. Ships in sight of the prize, "under circumstances to cause intimidation to the enemy and encouragement to the captor, shall be alone entitled to share as joint captors." After having deducted the portion set apart for our allies, if they have been acting along with us, the flag-officer, or officers, shall have one-twentieth of the net proceeds of all prizes, and then, as the proclamation proceeds to say—

The remainder of the net proceeds shall be distributed in ten classes, so that each officer, man, and boy, composing the rest of the complements of our ships, sloops, and vessels of war, actually on board at the time of any such capture, and every person present and assisting, shall receive shares or, a share, according to his class, as set forth in the following scale:—

First Class.—Master of the fleet, inspector of steam machinery afloat, when embarked with a fleet, medical inspector, or deputy medical inspector, when embarked with a fleet—Forty-five shares each.

Second Class.—Senior lieutenants of a rated ship not bearing a commander, under the captain, secretary to the admiral of the fleet, or admiral commanding in chief Thirty-five shares each.

Third Class.—Sea lieutenant, master, captain of marines, of marine artillery, or land forces doing duty as marines, whether having higher brevet rank or not, secretary to an admiral, or to a commodore of the first class, not commanding in chief, chief engineer—Twenty-eight shares each.

Fourth Class.—Lieutenant or quartermaster of marines, lieutenant of marine artillery, lieutenant, quartermaster, or ensign, of land forces doing duty as marines, secretary to a commodore of the second class, captain's secretary, paymaster, naval instructor, marine assistant surgeon, assistant surgeon, chief engineer, engineer, gunner, boatswain, carpenter, purser's steward—Twenty shares each.

Fifth Class.—Lieutenant's assistant, clerk (not purser's), assistant-surgeon, chief gunner's mate, chief boatswain's mate, chief carpenter's mate, chief captain of the forecastle, admiralty convoy, chief quartermaster, seaman's schoolmaster, ship's steward, ship's cook—Ten shares each.

Sixth Class.—Naval cadets, clerk's assistant, captain's coxswain, ship's corporal, quartermaster, gunner's mate, boatswain's mate, captain of the forecastle, captain of the afterguard, captain of the hold, captain of the maintop, captain of the foretop, coxswain of the launch, sailmaker, ropemaker, caulker, leading stoker, blacksmith, sergeant of marines, of marine artillery, or of land forces doing duty as marines. Nine shares each.

Seventh Class.—Captain of the mast, forecastle, admiralty convoy, chief of the signals, coxswain of the barge, coxswain of the pinnace, coxswain of the cutter, second captain of the forecastle, second captain of the maintop, second captain of the foretop, second captain of the afterguard, sailmakers' mate, caulker's mate, musician, cooper, armourer, corporal of marines or of land forces doing duty as marines, bombardier of marine artillery, head kroosman—Six shares each.

Eighth Class.—Leading seamen, shipwright, second captain of the hold, able seamen, carpenter's crew, sailmaker's crew, cooper's crew, armourer's crew, yeoman of the storerooms, steward's assistant, ordinary seaman, blacksmith's mate, private and fifer of marines or of land forces doing duty as marines, gunner of marine artillery, painter, stoker, coal-trimmer, second head krooman, sick-birth attendant, bandsman, tailor, butcher—Three shares each.

Ninth Class.—Cook's mate, ship's steward's boy, admiral's domestic, superintendent's domestic, admiral's steward and cook, captain's steward and cook, ward-room and gun-room steward and cook, subordinate officers' steward and cook, commander's servant, secretary's servant, second-class ordinary seaman, assistant stoker, barber, boy of the first class, first and second class, krooman, supernumeraries, except as hereinafter provided, persons borne merely as passengers, and not declining to render assistance on occasion of capture—Two shares each.

Tenth Class.—Boy below first class—One share.

THE FLEET IN THE BALTIC.

Sir Charles Napier arrived at Copenhagen in the *Valorous* steamer on the 20th ult. The Danes were excessively pleased with him for taking the first bat on landing at the Custom-house steps. Sir Charles paid a visit to Mr. Buchanan, the English Minister, and with him proceeded to pay his respects to the Danish Minister for Foreign Affairs.

It is said that the King of Denmark refused to see the gallant Admiral, on the plea of ill-health, but, in reality, from an indisposition to offend the Russian party, which is rather strong there. Next morning Sir Charles returned in the *Valorous* to Winga Sound.

A letter received from an officer on board the fleet, while at that station, says:—

I am now writing to you from Winga Sound, where we arrived after a pleasant passage of six days. Many of the vessels separated from the main body in a fog, that lasted for nearly two days; but we found them all collected here, without accident. We are lying at anchor about four miles from the town of Gottenburg, wait ng to complete coal and water, before starting for the Island of Aland, which we are to take possession of, if the Russians are not before us. It is not so cold as we expected to find it; but they say the Russians are still shut up by the ice at Riga and other ports. The good people here obtain all their news from England, and seem to be quite in the dark as to what the Russians are doing, for they gave us an English paper of the 12th, as containing the latest news. Boats have to go for water five miles, the thermometer nearly at freezing point.

The Russians affirm confidently that, even if things go well with the allies, a portion of the fleet will be fit for service by the time it gets up to Cronstadt. The sand-banks are numberless; and, in addition to these, they say the ships will have to contend with the Scheeren flotilla, which is likely to be very destructive to single vessels. This flotilla of gun-boats is stationed behind the Scheeren (the archipelago of islets and reef or ridges of rocks which line the coast on both sides of the Baltic is so called), where there is not sufficient depth of water for larger vessels. The greater part of the Russian fleet is at Cronstadt, "which is being fortified so as to bid defiance to all attacks." The island is connected with the continent by means of an artificial dam, which is covered with batteries. The strand batteries which command the channel leading up to the harbour have been doubled; and, before Cronstadt can be attacked, these batteries, which contain 800 guns of the largest calibre, must be destroyed. There are three artillery parks in reserve. A private letter of the 15th, from Stockholm, also speaks of the fearful preparations of the Russians for defence. The Grand Duke Constantine had been a whole fortnight at Helsingfors superintending the works. It is generally believed the first hostile collision will take place at the island off Oesel, which may be considered as the advanced port to Revel. Sveaborg is so protected by sand-banks, cliffs, and strand batteries, that an attack is almost impossible. All the lamps have been removed from the lighthouses, and the buoys taken up, so that the most experienced Russian pilot would be at a loss to find his way up to Cronstadt.

The Gulfs of Finland and Bothnia are still firmly frozen over. Last year the re-opening of the navigation at Cronstadt took place towards the end of April; in 1852, on the 12th May; in 1851, on April 20th; and in 1850, on April 30th. It is said that there is little probability of the ice breaking up this year any earlier. At Revel it is forbidden to light the lamps in the lighthouses, and the destruction of all buoys and other helps to navigation is commanded. Between Riga, Revel, and Petersburg a regular estafette service has been established, and a courier passes at least once a day. In the Gulf of Finland, which is so difficult of navigation for deep drawing vessels, large masses of rock are being conveyed along the ice to the site of the usual sailing channel, so that, when the ice melts, these masses will sink and choke up the channel, which was difficult enough before. All dwelling-houses at Cronstadt have been evacuated by their inmates, and those that are not susceptible of fortification are pulled down, the inhabitants receiving indemnity. It is to be a second defence of Saragossa.

CAVALRY FOR THE EAST.

At the present time only eight weak regiments of cavalry have received instructions to hold themselves in readiness for embarkation, for the purpose of acting, in conjunction with the infantry and artillery, against the Russians. This mounted force is numerically disproportionate to the other branches. What may hereafter be determined respecting their augmentation remains undeveloped. Two thousand cavalry apportioned as a co-operative force with 25,000 foot and 2000 artillery annihilates the supposition of immediate necessity existing for the presence of a strong body of dragoons. Doubtless, the authorities have good reason for their proceedings, and time will develop their intentions. The country in the vicinity of the supposed seat of action is flat, and peculiarly adapted for the evolutions of cavalry; and, without the support of dragoons, the rapidity of movement so admirably perfected by our horse artillery, must necessarily be cramped. The regular cavalry of Russia—especially the Guard, are excellently mounted. Their horses are inured to the climate. They could bring many thousands into the field, and would prove no despicable adversaries. Difficulties have been started respecting transport; and letters frequently appear in the public prints having reference to this point. It is affirmed that steamers do not offer the readiest facilities for conveying horses. It is true, they cannot carry so many as a sailing vessel of equal tonnage could stow; but, as the Cold-stream Guards reached Malta lately in nine days, ships of equal power might land a quota of cavalry wherever required with similar expedition, and immediately return for more if needed. Should sailing vessels be considered preferable for carrying out this object, there must be abundance of craft available at very short notice, which could promptly be fitted up for the purpose. These, if accompanied by a due proportion of steamers, might, without difficulty, hold their course, avoiding delay consequent on calms and adverse winds. In the Straits of Gibraltar ships may frequently be observed for days unable to proceed on their voyage. Such inconvenience would be obviated by the aid of steamers taking the transports in tow. Probably some such arrangement is contemplated, in which case, little difficulty need occur in carrying as many horses as may be required. Hitherto, Lisbon has been the extreme point at which we have landed cavalry; but, at the period of their exportation from England, the powers of steam had not been made applicable to maritime purposes. The 7th Dragoon Guards and 12th Lancers, when ordered to the Cape of Good Hope left their horses at home, and were mounted on arrival at the colony. Regiments proceeding to India are similarly placed. At the present crisis such a plan could not be followed, since it would be hopeless to expect a sufficiency of horses available for our service on reaching Turkey. No alternative, therefore, remains for regiments to carry their horses with them. Subjoined is a brief account of the cavalry now under orders to form part of the expeditionary force.

The Eighth, or The King's Royal Irish Hussars.

Was raised in 1693, and served with marked distinction in Spain, Portugal, Flanders, Holland, and Germany. In 1743 it was conspicuous in energetic enterprise, and greatly contributed to the annihilation of the Pretender's forces. The regiment embarked for the Cape of Good Hope in 1795, and from thence proceeded to India. It did not return home until 1823, having been on continuous foreign service the unprecedented period of twenty-seven years. The dashing gallantry displayed by the 8th Light Dragoons will long be remembered in India. To recapitulate the deeds of daring, so universally acknowledged by the troops with which it served would be superfluous, as it has imperishably stamped its fame. At Leswaree, Callinger, Aurung, Bhurtpore, Ufzulghar, Nepaul, Kalunga, and Hattrap, its unsurpassed intrepidity was universally acknowledged. The highly complimentary orders issued by the Governor-General in Council, on the occasion of the regiment embarking for England, bears ample testimony to the estimation in which it was held by those who had opportunity of witnessing the valour of this chivalric corps. The 8th Hussars bear on the banners of the kettle-drums and its appointments the Harp and Crown; with the motto, "Pristinæ virtutis memores;" together with the words "Leswaree" and "Hindostan," in commemoration of its services in the East.

The Seventeenth Lancers.

This admirable regiment carries, as a badge, the figure of a Death's head, having the motto "Or Glory" inscribed underneath. It was raised during the reign of George II., and has seen a variety of service in different parts of the globe. The duties performed by the 17th, through a long course of years, were more varied than perhaps before fell to the lot of a cavalry regiment. It was in Germany, and in North America, at Bunker's Hill, and in Nova Scotia. At the action of Brooklyn it was complimentarily noticed, as invariably was the case when engaged during the protracted and harassing encounters with the enemy, from 1776 to 1781. In 1793 it was in the West Indies, and occasionally detached parties to serve as marines on board the King's ships. It was present at the capture of Monte Video, and took part in the attack on Buenos Ayres. In 1808 it sailed for India. During the period this corps remained in the East it had a full share of danger and glory, wherever engaged. Anecdotes innumerable are extant, recording acts of individual heroism—almost bordering on romance—achieved both by officers and men of this highly popular regiment.

Fourth, or the Royal Irish Regiment of Dragoon Guards.

During the first year of the reign of James II. several regiments of cavalry were raised, and among others the present 4th, or Royal Irish Dragoon Guards. It was originally a body of cuirassiers, and proceeded abroad in 1691, and took part in the battles of Steenkirk and Landen. Throughout the Irish rebellion this regiment was constantly employed. In 1811 it embarked for Portugal, and aided in covering the operations in the siege of Ciudad Rodrigo and Badajoz. It reaped its share of honours gathered by the British cavalry at Llerena, and accompanied the army of the south to Madrid. On the standards of the regiment are emblazoned the Harp and Crown, together with the Star of St. Patrick; also the motto, "Quis separabit," and the word "Peninsular."

The Fifth, or Princess Charlotte of Wales' Regiment of Dragoon Guards.

This regiment, long known by the appellation of "The Green Horse," on account of its facings, was raised in 1685, and was likewise equipped as cuirassiers. At that period the uniform was red and buff, which was not altered until 1717. In 1689 it was employed in forcing the siege of Carrickfergus, and afterwards displayed great gallantry at the battle of the Boyne. The regiment proceeded to the Netherlands in 1694. It was present at the siege of Namur, and likewise at the skirmish near Enghien, and the brilliant charges made by this body of cavalry on the heights of Schellenberg, in 1704, elicited high commendation; and its subsequent gallantry at the battle of Blenheim was most conspicuous. At Ramilies, Oudenard, and Malplaquet, the 5th took a prominent part, and exhibited many traits of its characteristic daring. In 1793 the regiment proceeded to Flanders, and shared in the glories of the battle of Cateau and an action near Tourney. It performed good and arduous service during the Irish rebellion, in 1798. In 1811 it sailed for Portugal, and at Llerena it charged and overthrew several squadrons of French, numbering three times its own strength; many of the enemy were taken prisoners, and 100 horses captured. At Salamanca the magnificent charges made by the 5th Dragoon Guards are eulogised in Napier's imperishable "History of the Peninsular War." At the battles of Vittoria and Toulouse further opportunities were afforded this distinguished corps for signalising its valour. In 1814 it returned to the United Kingdom, and in a few months after was ordered to the East. The 5th Dragoon Guards bear on its standards the motto, "Vestigia nulla retrorsum;" with the words "Salamanca," "Vittoria," "Toulouse," "Peninsular."

The First, or Royal Regiment of Dragoons

Bears on its guidons, as a regimental badge, an Eagle, with the words "Peninsular" and "Waterloo." The Royal Regiment of Dragoons was raised by the Earl of Peterborough, in 1701. It was armed with cuirasses, iron head-pieces, long swords, and large pistols; and was first employed at Tangiers, which it reached in the succeeding year. Frequent encounters took place between it and the Moors, in which the British were uniformly triumphant. It gained renown for its bravery at the battles of Sedgemoor and the Boyne. In 1694 it was actively engaged in the Netherlands. The Royal Dragoons embarked for Holland in 1702, and became equally conspicuous for its gallantry in that campaign. From thence it proceeded to Portugal, and—exclusive of numerous skirmishes, and attending the operations of various sieges—it was present in the battles of Almanara and Saragossa. In 1742 it embarked for Flanders, and served nobly at Dettingen and Fontenoy. It joined the expedition to St. Malos and Cherbourg; and, when in Germany, fought at Warbourg, Campen, Kirch-Denkern and Groebenstein. The services of this gallant corps were again put in requisition in 1793; and it gained high credit at Vremen, Villers en Couché, Cateau, and Tourney. It was afterwards at Busaco, Sabugal, Vittoria, Toulouse, and Waterloo, besides innumerable affairs of cavalry with the enemy during the Peninsular War. At Waterloo, Captain Kennedy Clark, of the 1st regiment, had the good fortune to capture the eagle belonging to the 105th French regiment of the line.

The Thirteenth Light Dragoons.

On their chacos and appointments are inscribed the motto, "Virtute Recurram," with the words "Peninsular," "Waterloo." The regiment was raised in the midland counties of England, by General Munden, in 1715. The dress originally worn by officers and men was scarlet, lined with light green, with an aiguilette on the right shoulder. It was employed during the Scotch rebellion in 1745. In 1784 the uniform was changed to blue with buff facings; and during the spring of that year the horses, for the first time, were turned out to grass. Two troops were afterwards ordered to Jamaica, while the remainder of the regiment embarked for Barbadoes. The corps was, however, soon reduced to a skeleton, from the effects of the climate. It lost twenty officers and two hundred and forty non-commissioned officers and privates in six months. The regiment displayed great gallantry and endurance during the harassing warfare against the Maroons in 1796. The 13th Light Dragoons embarked for Portugal in 1810, and highly distinguished itself at Lndoera, Busaco, Torres Vedras, Campo Major, Albuera, Usagre, Vittoria, Nive, Orthes, Toulouse, and, in fact, throughout the Peninsular War. It proceeded to Flanders in 1815, and was engaged in the battle of Waterloo. The regiment embarked for India in 1819, where, as usual, it performed good service, and returned to Europe in 1840.

The Sixth, or Inniskilling Regiment of Dragoons.

The Castle of Inniskilling, with the word "Waterloo."—The Inniskilling Regiment was placed on the establishment of the British army in 1689, and was present at the battle of the Boyne; and, in the year following, at Aghrim. It served in Scotland, at Dumblain; and afterwards shared in the glories gained at Dettingen, Fontenoy, Roucoux, and Val. It accompanied the expedition to St. Maloes and Cherbourg, and was present in the actions of Minden, Wetter, Warburg, Campen, Kirch-Denkern, and Grebenstein. In 1794 the Inniskillings fought at Veux, Cateau, Tourney, and Beauvines; and eventually became conspicuously noted for its heroic bearing at Waterloo.

The Eleventh, Prince Albert's Own Hussars.

Shortly after the accession of George I. to the throne of England this regiment, now styled Prince Albert's Own Hussars, was raised. As it may be supposed, the dress worn by the cavalry at that period was widely dissimilar to the uniform of the present day. Few cavalry corps have been more employed since their enrolment than the 11th. It was at the Battle of Culloden, in 1746, and accompanied the expedition to Saint Maloes and Cherbourg, in 1758. In 1760 it was ordered to Germany, and fought at the Battle of Warbourg. It was likewise in the actions of Kirch-Denkern, Copenhagen, Foorwohle, and Groebenstein, and was present at the battle of the Boyne; and, in the year following, at Aghrim. It served in Scotland, at Dumblain; and afterwards shared in the glories gained at Dettingen, Fontenoy, Roucoux, and Val. It accompanied the expedition to St. Maloes and Cherbourg, and was present in the actions of Minden, Wetter, Warburg, Campen, Kirch-Denkern, and Grebenstein. In 1794 the Inniskillings fought at Veux, Cateau, Tourney, and Beauvines; and eventually became conspicuously noted for its heroic bearing at Waterloo.

The Eleventh, Prince Albert's Own Hussars.

Shortly after the accession of George I. to the throne of England this regiment, now styled Prince Albert's Own Hussars, was raised. As it may be supposed, the dress worn by the cavalry at that period was widely dissimilar to the uniform of the present day. Few cavalry corps have been more employed since their enrolment than the 11th. It was at the Battle of Culloden, in 1746, and accompanied the expedition to Saint Maloes and Cherbourg, in 1758. The Seventeenth Lancers.

This admirable regiment carries, as a badge, the figure of a Death's head, having the motto "Or Glory" inscribed underneath. It was raised during the reign of George II., and has seen a variety of service in different parts of the globe. The duties performed by the 17th, through a long course of years, were more varied than perhaps before fell to the lot of a cavalry regiment. It was in Germany, and in North America, at Bunker's Hill, and in Nova Scotia. At the action of Brooklyn it was complimentarily noticed, as invariably was the case when engaged during the protracted and harassing encounters with the enemy, from 1776 to 1781. In 1793 it was in the West Indies, and occasionally detached parties to serve as marines on board the King's ships. It was present at the capture of Monte Video, and took part in the attack on Buenos Ayres. In 1808 it sailed for India. During the period this corps remained in the East it had a full share of danger and glory, wherever engaged. Anecdotes innumerable are extant, recording acts of individual heroism—almost bordering on romance—achieved both by officers and men of this highly popular regiment.

Fourth, or the Royal Irish Regiment of Dragoon Guards.

During the first year of the reign of James II. several regiments of cavalry were raised, and among others the present 4th, or Royal Irish Dragoon Guards. It was originally a body of cuirassiers, and proceeded abroad in 1691, and took part in the battles of Steenkirk and Landen. Throughout the Irish rebellion this regiment was constantly employed. In 1811 it embarked for Portugal, and aided in covering the operations in the siege of Ciudad Rodrigo and Badajoz. It reaped its share of honours gathered by the British cavalry at Llerena, and accompanied the army of the south to Madrid. On the standards of the regiment are emblazoned the Harp and Crown, together with the Star of St. Patrick; also the motto, "Quis separabit," and the word "Peninsular."

The Fifth, or Princess Charlotte of Wales' Regiment of Dragoon Guards.

This regiment, long known by the appellation of "The Green Horse," on account of its facings, was raised in 1685, and was likewise equipped as cuirassiers. At that period the uniform was red and buff, which was not altered until 1717. In 1689 it was employed in forcing the siege of Carrickfergus, and afterwards displayed great gallantry at the battle of the Boyne. The regiment proceeded to the Netherlands in 1694. It was present at the siege of Namur, and likewise at the skirmish near Enghien, and the brilliant charges made by this body of cavalry on the heights of Schellenberg, in 1704, elicited high commendation; and its subsequent gallantry at the battle of Blenheim was most conspicuous. At Ramilies, Oudenard, and Malplaquet, the 5th took a prominent part, and exhibited many traits of its characteristic daring. In 1793 the regiment proceeded to Flanders, and shared in the glories of the battle of Cateau and an action near Tourney. It performed good and arduous service during the Irish rebellion, in 1798. In 1811 it sailed for Portugal, and at Llerena it charged and overthrew several squadrons of French, numbering three times its own strength; many of the enemy were taken prisoners, and 100 horses captured. At Salamanca the magnificent charges made by the 5th Dragoon Guards are eulogised in Napier's imperishable "History of the Peninsular War." At the battles of Vittoria and Toulouse further opportunities were afforded this distinguished corps for signalising its valour. In 1814 it returned to the United Kingdom, and in a few months after was ordered to the East. The 5th Dragoon Guards bear on its standards the motto, "Vestigia nulla retrorsum;" with the words "Salamanca," "Vittoria," "Toulouse," "Peninsular."

The First, or Royal Regiment of Dragoons

Bears on its guidons, as a regimental badge, an Eagle, with the words "Peninsular" and "Waterloo." The Royal Regiment of Dragoons was raised by the Earl of Peterborough, in 1701. It was armed with cuirasses, iron head-pieces, long swords, and large pistols; and was first employed at Tangiers, which it reached in the succeeding year. Frequent encounters took place between it and the Moors, in which the British were uniformly triumphant. It gained renown for its bravery at the battles of Sedgemoor and the Boyne. In 1694 it was actively engaged in the Netherlands. The Royal Dragoons embarked for Holland in 1702, and became equally conspicuous for its gallantry in that campaign. From thence it proceeded to Portugal, and—exclusive of numerous skirmishes, and attending the operations of various sieges—it was present in the battles of Almanara and Saragossa. In 1742 it embarked for Flanders, and served nobly at Dettingen and Fontenoy. It joined the expedition to St. Maloes and Cherbourg; and, when in Germany, fought at Warbourg, Campen, Kirch-Denkern and Groebenstein. The services of this gallant corps were again put in requisition in 1793; and it gained high credit at Vremen, Villers en Couché, Cateau, and Tourney. It was afterwards at Busaco, Sabugal, Vittoria, Toulouse, and Waterloo, besides innumerable affairs of cavalry with the enemy during the Peninsular War. At Waterloo, Captain Kennedy Clark, of the 1st regiment, had the good fortune to capture the eagle belonging to the 105th French regiment of the line.

The Thirteenth Light Dragoons.

On their chacos and appointments are inscribed the motto, "Virtute Recurram," with the words "Peninsular," "Waterloo." The regiment was raised in the midland counties of England, by General Munden, in 1715. The dress originally worn by officers and men was scarlet, lined with light green, with an aiguilette on the right shoulder. It was employed during the Scotch rebellion in 1745. In 1784 the uniform was changed to blue with buff facings; and during the spring of that year the horses, for the first time, were turned out to grass. Two troops were afterwards ordered to Jamaica, while the remainder of the regiment embarked for Barbadoes. The corps was, however, soon reduced to a skeleton, from the effects of the climate. It lost twenty officers and two hundred and forty non-commissioned officers and privates in six months. The regiment displayed great gallantry and endurance during the harassing warfare against the Maroons in 1796. The 13th Light Dragoons embarked for Portugal in 1810, and highly distinguished itself at Lndoera, Busaco, Torres Vedras, Campo Major, Albuera, Usagre, Vittoria, Nive, Orthes, Toulouse, and, in fact, throughout the Peninsular War. It proceeded to Flanders in 1815, and was engaged in the battle of Waterloo. The regiment embarked for India in 1819, where, as usual, it performed good service, and returned to Europe in 1840.

The Sixth, or Inniskilling Regiment of Dragoons.

The Castle of Inniskilling, with the word "Waterloo."—The Inniskilling Regiment was placed on the establishment of the British army in 1689, and was present at the battle of the Boyne; and, in the year following, at Aghrim. It served in Scotland, at Dumblain; and afterwards shared in the glories gained at Dettingen, Fontenoy, Roucoux, and Val. It accompanied the expedition to St. Maloes and Cherbourg, and was present in the actions of Minden, Wetter, Warburg, Campen, Kirch-Denkern, and Grebenstein. In 1794 the Inniskillings fought at Veux, Cateau, Tourney, and Beauvines; and eventually became conspicuously noted for its heroic bearing at Waterloo.

The Eleventh, Prince Albert's Own Hussars.

Shortly after the accession of George I. to the throne of England this regiment, now styled Prince Albert's Own Hussars, was raised. As it may be supposed, the dress worn by the cavalry at that period was widely dissimilar to the uniform of the present day. Few cavalry corps have been more employed since their enrolment than the 11th. It was at the Battle of Culloden, in 1746, and accompanied the expedition to Saint Maloes and Cherbourg, in 1758. In 1760 it was ordered to Germany, and fought at the Battle of Warbourg. It was likewise in the actions of Kirch-Denkern, Copenhagen, Foorwohle, and Groebenstein, and was present at the battle of Minden, Wetter, Warburg, Campen, Kirch-Denkern, and Grebenstein. In 1794 the Inniskillings fought at Veux, Cateau, Tourney, and Beauvines; and eventually became conspicuously noted for its heroic bearing at Waterloo.

TROOPS FOR THE WAR.—CAVALRY OFFICERS.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE ROYAL MESSAGE—WAR WITH RUSSIA.

The Message from the Crown, announcing the rupture with the Emperor of Russia (which we have given in another part of the paper), was brought up by the Earl of ABERDEEN, and read from the woolsack by the Lord CHANCELLOR.

The Earl of CLARENDON gave notice that, on Friday, he should move an answer to her Majesty's most gracious message.

The Earl of DERBY expressed a hope that the noble Earl would take that opportunity of stating the precise objects of the war.

Earl GREY further hoped that the answer to the Royal message would be drawn so as to secure the most perfect unanimity.

METROPOLITAN INTERMENTS.

The Bishop of LONDON called the attention of the House to certain great evils resulting from the recent measure respecting metropolitan interments. He regretted very much, in the course of his speech, mentioned a considerable number of facts to show that it was absolutely necessary for the Government to give immediate attention to the subject. By the course that had been adopted, burial-grounds had been closed without other places being provided for interments; and thus, whilst injustice had been done to the clergy, much hardship had been inflicted on the poor, and the parishes themselves had been embarrassed; the public health, too, had been greatly endangered.

The Earl of ABERDEEN cordially concurred in feeling that there was a necessity for some intervention on the part of the Legislature, with the view of providing a speedy remedy for a state of things which was disgraceful to the metropolis.

The Bishop of LONDON said he had not thought it necessary to move for a committee, because he was sure the subject must receive from the Government that care and attention which its importance demanded. At the same time, he was perfectly satisfied with the reply of the noble Earl.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

The Royal message, which was the same as had been made to the Lords, having been read by the Speaker, Lord J. RUSSELL moved that it be taken into consideration on Friday.

THE SETTLEMENT AND REMOVAL BILL.

Lord J RUSSELL, in answer to Mr. Walpole, stated that the Government was not prepared to state the details connected with the irremoveability of the Irish and Scotch poor; but that was no reason why the adjourned debate should be postponed.

Mr FACKE moved the adjournment of the debate till April 28, so as to give time for the production of the necessary information on the subject of the Irish and Scotch poor.

Mr WALPOLE deprecated the introduction of imperfect measures. He would support the amendment, believing that the whole subject ought to be submitted in a distinct shape before the opinion of the House is called for.

Mr. BAINES contended that the principle of the present bill was simple, and ought to be pronounced upon, without reference to any extension of the principle to the Irish or Scotch poor. Materials existed for solving the question as regards England, but they did not yet exist as regards Ireland.

Mr R Palmer supported the amendment, as did Mr. H. Herbert, Sir J. Packington, and the Marquis of Granby.

Lord PALMERSTON saw no reason why the House should not proceed to decide upon the principle involved in the bill, because there were not materials for fully arranging the details connected with the Irish poor. He admitted that some additional inquiry was needed, not as regards the reasonableness of the change, but with the view of removing unfounded prejudices. It might, perhaps, in the case of Irish paupers, be advisable to have the test of a short industrial residence, say a year or so, in England before becoming chargeable

Sir J. TROLLOPE would vote for postponement, believing that the measures for the three kingdoms should be considered simultaneously.

Sir G. GREY saw no reason for further postponement of the debate.

Colonel DUNNE accused the Government of a breach of promise to Irish members. He would vote for the amendment, believing that if the bill for England be carried, there is little chance for Ireland.

Mr. E. DENISON apprehended that the course taken by the Government was calculated to convert the question into a party one, a shape which it did not assume at the outset.

After remarks from Mr. Maguire and other members,

Lord J. RUSSELL replied to the objections urged by the Irish members, assuring them that if the principle of the bill were affirmed by the House, the application of the same principle to Ireland would become irresistible.

The House divided—For the adjournment, 209; against it, 183: majority against Ministers, 26.

The result was hailed with a loud cheer by the majority.

The Bribery, &c. Bill, the Bribery Prevention Bill, and the Controverted Elections Bill, were read a second time. The Ministers' Money (Ireland) Bill, the Church Building Acts Continuance Bill, and the High Treason (Ireland) Bill, passed through committee.

HOUSE OF LORDS.—TUESDAY.

No business of importance came under discussion.

HOUSE OF COMMONS.—TUESDAY.

CONVENTUAL AND MONASTIC INSTITUTIONS.

On the motion for nominating the Committee on Conventual and Monastic Institutions,

Mr. BOWYER moved, as an amendment, that the order for the appointment of a committee be discharged; and contended at considerable length that such an inquiry ought never to have been agreed to, and should not now be persevered in, there not being even the shadow of a necessity for subjecting the inmates of these institutions to such a revolting and offensive ordeal.

Lord LOVAINE said, the question was not a Roman Catholic question only—it was a constitutional one and a Protestant one, because it was stated that it was possible that persons might be confined in these institutions against their will; and because, also, the wife of a Protestant, if she turned Catholic, might go into a convent, and he would then see her no more.

Lord J RUSSELL said, no Parliamentary ground had been laid for such an inquiry, for no cases had been adduced in which any persons had been kept in force contrary to their will. Looking at the names of the committee, he did not think they were impartially chosen, but were selected rather on account of their extreme prejudices, and would be very likely to ask for power to send for papers, persons, and records, in which case the privacy of those ladies would be very materially interfered with.

Colonel NORTH stated a case which had occurred at Banbury, in Oxfordshire, in which a Miss Fitzallen sought to be released from a nunnery in vain, as a writ of habeas corpus was quite not apply.

Mr. H. DRUMMOND contended that there was as much reason for inquiry now as there was when the noble Lord called upon him and others to support the Ecclesiastical Titles Bill. The Popish aggression, which that act was intended to put down, had never been retracted; and, until it was retracted, this question could never be set at rest. The object was to investigate girls who had got money into these establishments; and, when they got them there, to make them leave their money away from their relatives.

Mr FORTESCUE said, it did not present a seemly spectacle to the Catholics of England and Ireland, that the Protestants of England should be legislating for them, not merely without their consent, but absolutely against it.

Mr SPOONER said the fact was, that practices were carried on in these monastic institutions which dared not face the light, and hence the opposition to inquiry.

Colonel BLAIR and Mr. FACKE agreed with Mr. Spooner, that there must be something to conceal, or the inquiry would not be so strenuously opposed.

Mr. C. CHAMBERS said, the amendment was unprecedented, for the vote for inquiry was not carried by a snatched division, but after a long debate, in a full house, and by a large majority. The question would have to be dealt with, and he asked the noble Lord when he proposed to do so if they had not monastic institutions by hundreds. Would the noble Lord wait until they had them by thousands? Their property now amounted to tens of thousands. Would he wait until it amounted to millions? He never contemplated dragging ladies bound by conventual ties before a committee of that House; but he did think it was high time to inquire whether their rules and the inmates and property to a foreign power, and whether, also, there existed any power of imprisoning or banishing the inmates.

Mr. B. CAVENDISH would support the amendment for the purpose of preserving the principles of religious liberty. He would prove that the promoters of this inquiry, of whom Mr. T. Chambers was the unconscious instrument, viewed this motion for inquiry as only the means to an end—their real object being to procure the repeal of the Act of 1829.

Mr. WHITESIDE contended that they had ample proof in decisions in the courts of law that there were abuses in those institutions; and then came the question, would they not resort to an inquiry, with a view to their remedy. The Roman Catholics should not resist this inquiry; as, if the surmises against these institutions were false, its result would be to remove the prejudices now existing with respect to them.

Mr. COGAN moved the adjournment of the debate, which was put, after some discussion, and negatived by a majority of 333 to 91.

Mr. G. A. HAMILTON moved the adjournment of the House.

A desultory conversation ensued, terminating in a division, on which the motion for the adjournment of the House was negatived by a majority of 223 to 55.

Mr. F SCULLY then gave notice that, on the nomination of the committee, he would move that it be nominated that day six months.

The House then divided on Mr. Bowyer's amendment, which was negatived by a majority of 177 to 120.

Mr. CHAMBERS afterwards consented to move the appointment of the committee on Thursday.

HOUSE OF COMMONS.—WEDNESDAY.

THE EPISCOPAL AND CAPITULAR ESTATES BILL.

The Marquis of BLANDFORD moved the second reading of this bill in a speech of some length.

Sir W. CLAY moved that the bill be read a second time that day six months.

After some discussion the debate was adjourned to next Thursday.

HOUSE OF LORDS.—THURSDAY.

The Earl of MALMESBURY inquired if it was true that Russian vessels had quitted Sebastopol for the purpose of conveying troops to the garrisons on the coast of Circassia, and whether, while they were so engaged, the French and English fleets had remained at anchor at Beicos Bay?

The Earl of CLARENDON was not in a position to say if the rumour were true or false, but he would say that the information which he had officially received rather contradicted than supported the truth of such a rumour, so far as it related to Circassia. He had received a telegraphic message that Russian ships of war had left Sebastopol, but had not gone to Circassia. The steam-vessels of the English and French fleets had made a cruise in the Black Sea, but had returned without having seen a single Russian vessel.

The Earl of MALMESBURY asked whether any convention had been signed by France, Turkey, and England; and if so, whether it would be laid on the table of the House?

The Earl of ABERDEEN said that such a convention had been signed by England, but, owing to an oversight, had been only provisionally signed by France. When completed, there would be no objection to its production.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Sir W. SMYTH presented a petition from Messrs. Sturgeon and Sons, of Grays, Essex, denying the charges made against them, and praying for a full inquiry.

Mr OLIVEIRA asked the President of the Board of Trade whether any negotiations were in progress for a postal treaty with Spain, by which the present high rates may be reduced?

Mr. CARDWELL said, such negotiations were in a state of progress.

Mr HEADLAM asked whether, upon a Russian vessel being sold to avoid a capture, and purchased *bond fide* by a neutral having notice of the cause of the sale, the sale would be recognised by the British fleet, in the event of the vessel continuing to be navigated by a Russian crew, or in the event of the vessel, after the sale, being navigated by a fresh crew of neutrals?

The ATTORNEY-GENERAL said that, in the case named, the sale would be recognised, if there was no reason to believe it was not *bond fide*

Lord J. RUSSELL laid upon the table the address which he intends moving to-morrow in reply to her Majesty's most gracious message respecting Russian aggression. The address was in effect an echo of the message itself.

Mr. BAINES drew attention to circumstances in which he was personally concerned as far as related to his position as the Poor-law Board. In framing the settlement and removal Bill, he had acted without any reference to Irish paupers, the bill being confined to England and Wales. Within a few days, however, of the second reading of the bill, a memorial was presented to Lord Palmerston from a number of Irish members, requiring that Irish paupers should be put upon the same footing as to removal as those of England. A communication was subsequently made that it was the intention of the Cabinet that this proposal should be adopted, and this communication had been made to the Irish memorialists without his knowledge. He felt much hurt on learning this, and, although quite convinced that there was no intentional disrespect towards him on the part of those with whom he was officially connected; yet he also felt that there were other considerations not to be overlooked. On looking at the facts, it was evident that there would be much difficulty in the future discharge of his duties, and in the proper conduct of the bill, the success of which he had so much at heart. The Irish gentlemen who had sent the memorial construed the reply to it into a pledge that the removal or non-removal of Irish paupers would form part of the existing bill, while, on the other hand, he was of opinion that the Irish question was not yet ripe for legislation, and that it ought to form the subject of a separate bill. Influenced by these considerations, he, on Tuesday last tendered his resignation to the noble Earl at the head of the Government; and subsequently he received a reply, in which the noble Earl expressed a hope, in order to avoid public inconvenience that he would reconsider his determination, and at all events remain until it could be seen whether anything could be done to smoothe away the difficulties which he contemplated as likely to arise. Under these circumstances he had referred the question to the judgment of two friends. On receiving the result of their consideration of the subject, he communicated to Lord Aberdeen that, as he could, in the opinion of his friends, remain without injustice to his own character; and as his retirement would lead to inconvenience, he would remain in office for the present, reserving to himself the right of renewing his resignation if he should ultimately find that he could not agree with the views of the Government on the subject.

After a few words from Mr. FRENCH, Lord PALMERSTON disclaimed for himself and his colleagues, all idea of offering a slight to his right hon. friend.

Mr. T. DUNCOMBE thought it was evident that the right hon. gentleman had not been treated with the consideration which he deserved. The Crown was in danger of losing an efficient servant in consequence of the flirtation that was going on between Tiverton and Tyrone.

Mr. DISRAELI said that the manner in which the right hon. gentleman discharged his duties entitled him to the respect of every member of that House.

The subject then dropped.

THE INCOME-TAX BILL.

On the order of the day for the third reading of the Income-tax Bill,

Sir J. PAKINGTON called the attention of the House to the circumstances which have led to the proposed increase of the Income-tax, and to the declared intentions of the Government with respect to defraying the costs of the war. The right hon. gentleman referred to the Eastern correspondence, in order to show that when the Chancellor of the Exchequer brought forward his Budget last year, he must have been perfectly aware of the intention of Russia to partition Turkey; and yet, in the face of that knowledge, he had asked the House to repeal the soap and other duties—a course which the House assented to, in ignorance of the position of our foreign relations. Had the House been aware of the information in the possession of Ministers, it never would have consented to the repeal of those duties.

Mr CARDWELL defended the financial policy of the Government. The measures referred to by the right hon. Baronet had been followed by unexampled prosperity, and he had not been deemed necessary to increase the burdens of the mass of the people or to add to the National Debt in order to defray the expenses of the war.

After some further discussion, the bill was read a third time and passed.

It was agreed on the suggestion of the Committee to inquire into Conventual and Monastic Institutions was then proceeded with, and continued up to the rising of the House. Very little progress was made in the appointment of the committee.

HOUSE OF LORDS.—FRIDAY.

THE QUEEN'S MESSAGE.

Their Lordships met at Six o'clock.

The approaches to the House were thronged with persons eager to obtain admission to hear the expected discussion upon the Address in answer to the Queen's Message. The Galleries at each side of the House were also occupied by a number of fashionably-attired ladies.

Lord RODEN asked the noble Lord at the head of the Government whether it was his intention to advise her Majesty to issue her commands that a day should be set apart for the purpose of humiliation, and also asking the blessing of the Almighty upon our arms, in the great contest in which we were about to embark?

Lord ABERDEEN said that it was the intention of the Government to advise her Majesty to command that a day should be set apart for the object to which the question of the noble Earl referred.

After a few observations from the Bishop of CANTERBURY, in approval of the announcement which the noble Earl had just made,

The Earl of CLARENDON, amid the deepest silence, rose to move the Address in answer to the Message of her Majesty. He said that upon an occasion of such great importance, when the peace they had so long endeavoured to maintain was at an end, he could not approach the subject, familiar though it was, without feeling of pain and regret. Some of their Lordships were of opinion that her Majesty's Government had not acted with that promptitude which became them as the Ministers of a great nation. But he was of opinion that the energy and unanimity which were at present displayed throughout the empire did not respond to what some were inclined to regard as a just charge. With respect to the Secret Correspondence which had lately been laid upon the table, it had been the opinion of the Government that that correspondence could not have been produced at an earlier period than it had been, without a betrayal of the confidence which must be supposed to exist in the case of communications of a private character. As regarded the terms sought to be imposed upon the acceptance of the Porte by Russia he could only say that those terms had been from the first rejected by the Turkish Government; and that nothing could be more unworthy of the Czar than to attempt, as he had done, to ascribe the rejection of those terms entirely to the influence of Lord Stratford de Redcliffe. The noble Earl then proceeded to enter into a history of the course which the aggression of Russia had taken, and the time which negotiations had occupied during the period at which the Russian forces had crossed the Pruth. Since that period the demands of the Emperor of Russia, instead of having lost any of their original injustice, had become still more arrogant, and still more inconsistent with what was due to the dignity and the independence of the Porte. This country had resolved that those demands should, at any sacrifice, be resisted, and it was in accordance with that resolution that he now called upon them to assent to the Address, in answer to her Majesty's Message, which had been communicated to their Lordships on Monday last. We had determined to check her unjust aggression, but to what consequences the contest may lead could by no means be at the present moment ascertained. He could not, therefore, give an answer to the question which had been put to him some time since as to the terms on which her Majesty's Government would be prepared to conclude a peace with Russia.

The Earl of DERBY would not oppose the motion, but he must say he did not approve of the course pursued by Her Majesty's Government. On the contrary, he would say that had the noble Lord, at the head of the Government, not been in that position, there would have been no necessity for the war at all.

After some discussion, in which the Earl of Aberdeen, the Earl of Malmesbury, and other noble Lords joined, the answer was agreed to, and their Lordships adjourned.

HOUSE OF COMMONS. FRIDAY.

The Speaker took the chair at four o'clock

Mr BARROW brought up the report of the Committee on the Dungarvan Election Petition, which stated that J. F. Maguire, Esq., was duly elected at the last election for that borough; that treating had taken place; but it had not been proved that Mr. Maguire was, by himself or his agents, connected therewith.

In reply to a question from Mr. Spooner, Lord J. RUSSELL said he would not proceed with the Oaths' Bill before Easter.

HER MAJESTY'S MESSAGE.

Lord J. RUSSELL, in moving an answer to her Majesty's most gracious Message, said it was now nearly a month since a similar Message had been brought to the House, and for forty years the country had enjoyed all the blessings of peace. Considering the prosperity which was interrupted by war, and the misery which it created, he thought nothing but absolute necessity could justify a nation in incurring all its evils. He would show, however, that unless we were prepared to submit to the further aggrandisement of Russia, and the probable destruction of Turkey, it was impossible to refrain from supporting the answer which he was about to move to the Message from the Throne. He referred to the changes which had taken place in the internal affairs of Turkey within the last thirty years, and to the increased liberality displayed by the Government towards the Christian subjects of the Porte. In treating of that subject he would not take any view of all reference to the Holy Places, because they were only the pretence for, and not the cause of, the aggression which had taken place. This was evident from the fact that no sooner was the question of the Holy Places settled than the Czar set up fresh demands until at length he proclaimed rights which, if conceded, would make him the ruler over the Greek subjects of the Sultan. The course pursued was menacing towards Turkey, and deceptive towards the other Powers of Europe. In speaking of the conduct of Russia on a former occasion he had used very strong language, but on reflection he could not say it was at all too strong for the conduct he intended to condemn. That language, however, had excited great indignation in Russia; and an article was inserted in the organ of the Russian Government which compelled the British Government, in its own defence, to produce the Secret Correspondence—the publication of which he felt they had no reason to regret. Lord Clarendon and himself had declined to be any parties to the designs of Russia on Turkey. The noble Lord then entered into a lengthened detail of all that had taken place subsequent to the mission of Prince Menschikoff, and commented forcibly and severely on the insincerity of the course pursued by Russia throughout the negotiations. In consequence of the wrongs inflicted upon Turkey by the occupation of the Principalities by the Russians, the Sultan had at length been driven to the necessity of declaring war, in which course it was impossible to say he was not justified. Under these circumstances France and England had jointly called upon Russia to withdraw her troops, intimating that the refusal to do so would be considered tantamount to a declaration of war. The Emperor of Russia had declined to answer the demand; and it became necessary for England and France to declare war, which had accordingly been done.

Mr. LAYARD quoted at great length the Secret Correspondence, with the view of fastening upon the Government, or some of its members, a charge of so far falsifying the Secret Correspondence, as to seek to warp public opinion to these views, by communicating to the *Times* newspaper, despatches which had been withheld from Parliament, in order that it might write leaders calculated to prepare the public mind for the fall of Turkey. Some of these despatches were communicated to the *Times*, even before they would have been communicated to more than a very few members of the Cabinet.

Mr BRIGHT condemned the course pursued by the Government, not thinking there was anything very unnatural in the demands made upon Turkey by Russia.

Mr. J. BALL defended the course pursued by the Government.

The Marquis of GRANBY did not think that the demands of Russia were unreasonable.

After some remarks from Lord D. Stuart,

Lord PALMERSTON replied to the attack made by Mr. Layard, and replied with much humour to the speech of Mr. Bright, whose only ideas upon European policy resolved themselves into a question of pounds, shillings, and pence.

Mr. DISRAELI supported the Address, and commented at great length on the correspondence in order to show that there was an agreement between England and Russia, which was called a Memorandum, by which Turkey was to be partitioned by Russia, Austria, and England, to the exclusion of France.

Lord J. RUSSELL shortly replied, and expressed the determination of the Cabinet not to allow any portion of Turkish territory to be appropriated to the aggrandisement of Russia.

After some observations from Colonel Sibthorpe, the Address was agreed to, and it was arranged that it should be carried up by the whole House.—Adjourned.

DESTRUCTION OF HUNGERFORD-HALL BY FIRE.—Last night (Friday) the large building in the centre of Hungerford-market, known as Hungerford-hall, was totally destroyed by fire. About half-past seven o'clock flames were seen to issue from that portion of the building occupied by the tavern and Wellington Funeral, recently removed from the Strand, between Gwydyr, Hyde-park-corner; and before any engine could be got to work in operation the fire, having [illegible] the building, [illegible] the upper [illegible] portion of the [illegible] In [illegible] Strand [illegible] [illegible] [illegible]

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

Londoners are becoming less clubbable than formerly. Last New Year's-day witnessed the dissolution of the Erechtheum Club, in St. James's-square; and last Lady-day brought the Coventry Club, in Piccadilly, to a close. The Erechtheum depended for existence mainly on the reputation of its cook; and the Coventry was supported chiefly by young Guardsmen. many of whom are now on the eve of starting for Constantinople. But the dissolution of two clubs within three months is to be attributed not altogether to indifference and to the Autocrat of Russia, but rather to railways, which carry men away from London, and in some degree, to a fashion in such matters; for it is not to be denied that clubs are much in vogue as when the Pall-mall rage for building commenced under the late Mr. Nash and Mr. Decimus Burton. Our great clubs were never more prosperous, we believe, than now; but it is found that Londoners can do with fewer club-houses than were at one time thought necessary for the clubbable character and likings of Belgravia and Tyburnia.

The Strawberry Hill Eagle, the feathered king with ruffled plumes and flagging wing, one of the best-known features in Horace Walpole's gallery, was sold on Saturday last by Messrs. Christie and Mason, for 530 guineas. At the memorable dispersion by George Robins of the contents of the Gothic Castle—known to every reader of English literature—this eagle sold for 200 guineas. War, therefore, is not affecting art. The ancients, it is said, have left us but five animals of equal merit with their human figures: the Tuscan boar, the Barberini goat, the Jennings or Duncombe dog, the Mattei eagle, and the Strawberry Hill eagle. The Jennings dog was sold in 1778 for 1000 guineas; and it is now at Duncombe Park, in Yorkshire, the seat of Lord Feversham. The high price at which it sold gave rise to a curious conversation between Johnson and a friend, sold gave rise to a curious conversation between Johnson and a friend, reported by Boswell in his best manner. The talk last week about the eagle at Christie's was scarcely less curious: some would enshrine it in the British Museum; others condemned it to the Eagle Insurance Office, or the Eagle Tavern in the City-road.

There is an impressive passage in old Stow (our chroniclers are now too little read), in which the fearful evils of war, as conducted in the reign of Queen Elizabeth, are placed before one in very few, but very effective words. At this moment, when we are sending out an army and a fleet at the same time (than which a nobler never left our shores), the contrast between the mode now adopted of manning the navy with that in force in the reign of Queen Elizabeth will be read with interest. Living in warlike times, we have yet to be thankful that this impressment system is no longer in force; that the chroniclers of the reign of Queen Victoria have not to record such violent removals as those recorded by the annalists of Queen Elizabeth. Here is the passage:—

> The 9th of April being Good Friday, in the afternoon the Lord Mayor and Aldermen of London, being in Paul's Churchyard, hearing the sermon at Paul's-cross, were suddenly called from thence; and forthwith, by a precept from her Majesty and Council, pressed 1000 men, which was done by eight of the clock the same night; and before the next morning they were furnished of all manner of furniture for the wars, ready to have gone towards Dover, and so to the aid of the French in Calais against the Spaniards: but in the afternoon of the same Saturday they were all discharged. Notwithstanding, on the 11th of April, being Easter-day, about ten of the clock before noon, came a new charge, so that all men being in their parish churches, ready to have received the Communion, the aldermen, their deputies, constables, and other officers, were fain to close up the church doors till they had pressed so many men to be soldiers, that by twelve of the clock they had in the whole city 1000 men: and those, forthwith furnished of armour, weapons, and all things necessary, were—for the most part that night, and the rest on the next morning—sent away towards Dover, as the like out of other parts of the realm: but about a week after they returned back again, for the French had lost Calais. The Earl of Essex had the command of these men.

Neither Sir Charles Napier, nor Admiral Dundas, we take it, would care for the command of such raw recruits.

The well-known rooms of Sotheby and Wilkinson have been wearing a very different aspect this week from their usual appearances. Instead of being lined with well-bound books or choice water-colour drawings, they are decorated profusely, in every place, with a most important assemblage of examples of ancient, mediæval, and modern art. As the collection will still be on view till Monday, this brief notice of what is to be seen there may prove of use to some of our readers.

There is a revival this week, or an attempt at a revival, of an Authors' Publishing Association. It is time we are told that a class of men who do nothing for literature should cease to be the tyrants of literature, and that the degrading vassalage of intellect to the counter should no longer continue. The scheme is very visionary. For instance, we find in one part of the prospectus the assertion that "no book ever is published (unless at the author's risk) that does not pay the necessary expenses;" a statement of which we could give, in common, we believe, with every bookseller and author (who knows anything of bookselling), many striking examples to the contrary. We have heard it laid down as a safe rule, that any book of which one would be afraid to print more than five hundred copies, is a book not worth printing as a remunerative speculation. It is a mistake to suppose that publishing is a lucrative business. Let us look around us, and see in this great London of ours, how many publishers there are who have made fortunes by publishing only? The great houses in the Row are rich rather from bookselling than from publishing—from their wholesale trade with what others publish and put for th, than from what they originally issue themselves. Mr Murray owes much of his competency to the skill and liberality of his father; his own income, though no doubt handsome, is less than that of the leading partners in the great houses in the Row. Mr. Moxon is not a wealthy man, though a man well to do in the world. Then, to revert to earlier times, your Tonsons and Lintots grew rich by the Government monopolies they enjoyed, more than by the poetry and prose they put forth. That the class of publishers requires some enlightenment, and, perhaps, in some cases, a little more liberality, we will not deny; but we think that the description of the calling given by a distinguished author, who certainly has had opportunities of seeing publishers at their own houses, is far from true. He calls publishing "a trade more remarkable for the misvaluation of its raw materials than any other." We shall have more to say on this subject, and on the hazard (too much lost sight of in this question) that a good book runs on its first appearance.

Mr. Panizzi's scheme of a new reading-room will be carried out, and that formidable complaint, the Museum headache, and that objectionable insect, the Museum flea, will never more be felt. His scheme is freely this. He is to erect a circular court, of glass, in the open quadrangle of the building—set apart, at present, for cats and sparrows. He is to accommodate three times the number of readers he has now room, chiefly, to annoy; and he is to bring his book attendants, as well as his readers, a great deal closer to the main supply of books. As the Chancellor of the Exchequer has undertaken to find money, and Mr. Panizzi is to have his own way, we may soon expect to have an excellent public reading-room in our national library.

Crosby Hall Elocution Class.—At a meeting of this class recently, a silver inkstand was presented to Mr. Leopold Smart, the teacher, with a few suitable remarks by the committee.

Arrivals from Australia.—Plymouth, Thursday.—The *Tolaera*, which left Melbourne on the 18th of December, has arrived off [illegible], she landed some passengers, twelve mail-bags, and two boxes, [illegible] a pilot boat, and proceeded to the Thames. She has on board 40 000 ounces of gold, and a full cargo of wool and tallow.—Falmouth, [illegible] the *Bridgnorth* [illegible] Philadelphia, left Philadelphia, and proceeded to London.

[illegible] Election.—[illegible] was decided on Thursday, [illegible] Brewery, 113; Read, [illegible] majority of thirty-two. A large [illegible] were liberal.

MUSIC.

Mendelssohn's "Elijah" was performed at Exeter hall on Monday evening, by the members of the Harmonic Union, in aid of the funds of the Middlesex Hospital, one of the oldest and best charitable establishments in the metropolis. There was a numerous list, headed by the Queen and Prince Albert at its head of royal, noble, and distinguished patrons and patronesses; and this patronage was not of that sort which consists in giving merely one's name, without either contribution or support, but real and substantial. The professional musicians were not called upon (as they too often are) to perform gratuitously; that is to say, to give their time and talents (which are their money) to an object in which they have no personal interest, while a body of aristocratic and wealthy patrons complacently themselves with an ostentatious display of their names. They were adequately remunerated; and yet the concert, as we were informed, produced a clear surplus of £1200. The performance was magnificent. The list of principal singers included the names of Signor Belletti (who as the representative of the Prophet has now no rival), Mr. Sims Reeves, Miss Louisa Pyne, Miss Dolby, and Miss Stabbach. The chorus and instrumental orchestra were complete and powerful; and the whole was under the direction of the society's able conductor, Mr. Benedict. Notwithstanding the high price of admission, the hall was completely full. Of guinea tickets alone, a thousand were sold, and the lower rates were in proportion.

Miss Birch's Concert, on Tuesday evening, at St. Martin's Hall, deserves honourable mention on account of the classical character of the selection, as well as the remarkable excellence of the performance. Its principal features were a scene from Handel's fine but comparatively little-known "Semele;" large extracts from Mehul's beautiful sacred drama, "Joseph and his Brethren;" and the grand finale to Mozart's "Don Giovanni," including those persons which, though beautiful in themselves, yet, not being well fitted for dramatic representation, are always omitted on the stage: and therefore, cannot be heard in public, unless in the concert-room. Besides these, there were several choice pieces of smaller dimensions, particularly Beethoven's overture to "Coriolanus," and Mendelssohn's "Isles of Fingal," played by a small, but exceedingly select orchestra; Hummel's Pianoforte Sonata in F sharp minor, executed by Herr Ernst, with his wonted excellence; and Osborne's Sestet for the Piano and Wind instruments—a most masterly work, exquisitely played by the composer, with Messrs. Nicholson, Rockstro, Mann, Lucas, and Howell. Miss Birch sang the scena, "Ah parlate," from Cimarosa's "Sacrifizio d'Abramo," and Mendelssohn's song, "Now the dreary Winter flies:" Miss Dolby gave Hutton's "Day and Night;" and Mr. Augustus Braham, in the air, "The Child and the Old Man," from Hullah's "Village Coquettes," reminded us of his fabled swan-singing, which contributed so much to the popularity of this pretty opera when it was first produced at the St. James's Theatre, and ran fifty nights without interruption. This excellent concert proved very attractive. St. Martin's Hall being filled to the doors by a highly gratified audience.

A concert of quite another kind, but not without merit in its way was that given by Mr Case, at Exeter hall, on Wednesday evening. It was a remarkable specimen of the *concert monstre*. Mr. Case had gathered together some thirty solo singers, and nearly as many solo instrumentalists, among whom there were a few eminent individuals of both sexes; and he had, moreover, an orchestra of fifty performers. His bill of fare was sufficient to satisfy the most ravenous appetite for music. It was, indeed, more ample than *recherché*; being a heterogeneous mixture of all sorts of things—of no common and familiar kind, however, that they stood in need of no previous rehearsal or preparation on the part of the performers. The prices of admission were low, ranging from a shilling to five; and the hall, consequently, was crowded to excess by the audience, which, somewhat noisy and boisterous in their plaudits and encores, seemed to enjoy the entertainment mightily. Such concerts as this are not intended for the more musical portion of the public, but for such as, not being in the habit of frequenting the more expensive concerts, are glad to profit by the means thus afforded them of hearing eminent performers and excellent music, which has, to them, the further charm of novelty. They thus receive a great deal of enjoyment, while their taste is refined and improved.

The celebrated violinist Ernst has arrived in London, after an absence of three years. He appeared for the first time at Ella's concert, on Thursday evening, when he performed the first violin part of a quartet of Mendelssohn, and his own beautiful "Elégie," with which he used to delight the public during his last visit, and which was now found as charming as ever.

Jenny Lind (Madame Goldschmidt) is giving concerts at Vienna with great éclat. This celebrated lady has always been famous among other things for not knowing her own mind, and she seems still to be as unstable of purpose as ever. She has been coming and not coming to London this season half-a-dozen times within the last six months. Mr. Benedict, when he returned from his late trip to Germany, communicated directly from her—of her intention to visit London; then it was intimated that she had altered her mind, and would remain in Germany; and now, it appears, she has changed her mind again, and is positively to be here for the purpose of giving concerts in the course of the season.

Miss Bushy, a rising pianiste, gave her annual Concert, at Willis's Rooms, on Wednesday evening last. She had a numerous and well-pleased audience; and gave undeniable proofs of her progress in art, as in the good graces of the public. She was, as became her, the principal actor in the evening's performance, playing Hummel's Trio in C major, with Messrs. Molique and Gelder; Beethoven's Sonata in C sharp; Mozart's Sonata in A Major, with Herr Molique; and two Solos by Mendelssohn and Weber. Mozart's music was exquisitely performed, warming both the artist and the audience, and giving extreme satisfaction. Herr Molique's performances are well known; but Herr Gelder, violoncellist, from the Netherlands, is, we think, new to London. He played a Fantasia of his own composition, not particularly well, appearing deficient both in strength of arm and general vigour.

On Wednesday a Grand Musical Festival will be given at Exeter-hall for the Benefit of the Widows and Orphans of the Workmen killed at the Crystal Palace, Syde ham.

THE THEATRES.

PRINCESS'.

One of the cleverest pieces within our recollection was produced on Saturday—a drama, in two acts, entitled "The Married Unmarried," and founded on a tale of Balzac's, "La Grande Bretèche." The playwright, Mr. Morris Barnett, is certainly one of the most adroit of his class; but in the present instance he has been more than commonly felicitous, not only in the choice and treatment of his subject, but in the selection of his histrionic coadjutors. The scene is laid at Vendôme during the Empire; and the action commences with one *Colonel de Malâ* (Mr. Ryder), who in a soliloquy reveals his disposition. Boldness, dexterity, and military perseverence are evidently his divinities; and the actor looked the man to the life. Never was a character assumed with so much facility, and yet with so much apparent truth. Nor is this result due to any peculiar histrionic skill; it is simply the fitness of the person to the part, as to figure, voice, and natural manner. Sternly imperative, the image of indomitable wilfulness, *De Malâ* has no toleration for the submissive virtues of his wife, *Adèle*—a character, again, which was almost as happily impersonated by Miss Heath. Her entry on the scene was prepossessing. Her head and peculiar countenance seemed indeed classical—yet so modified as to be quite appropriate to the period. It was evident that she entered into the part with timidity, but, also, with that degree of perception which would secure the intended outline, notwithstanding any troublesome interference of nervous unsteadiness. In a young performer, we are, indeed, inclined to look upon this sensitiveness as a favourable condition: this tendency is generally found to be conducive to care and indoor extra care. The condition, comported well with the opening scenes, in which the trembling, patient wife has to support the rude assaults of a husband, who is nothing, if not warlike. He might have loved the wife, but he had a still more unmanageable passion—ambition, and afforded him justification for his conduct: but perpetual surrender without the concession of a victory, proved intolerably inconsistent with his habits and notions. Eagerly he seizes on some ground of complaint, and finding that she had formerly a lover, *Juan de Vilarela* (Mr. J. F. Cathcart), who still persecutes her, would evidently rather throw her into the way of temptation than send her out of it. This is a natural trait of character, which, with others, re-dites this drama to a higher rank than that of a mere vaudeville; and it should at once be considered as an interesting play, brief in its development as simple in its theme, but thoroughly legitimate in its class and treatment. The impression is much assisted by the very genial acting of Miss Murray, in a soubrette part, *Thérette*, who is made "the screen" by *Juan*, the better to carry on his designs on her mistress, and who possesses herself of the letter that renders the *Colonel's* presence in Paris needful. A former wife, in fact, has laid her appeal before the Emperor; and thus *Adèle* becomes informed of her approaching deliverance. The *Colonel*, however, returns unexpectedly; and *Juan*, who is now of *Adèle's* council, is hurriedly concealed in a closet. The *Colonel* surprises the fact, and orders the closet to be walled up with cement, while he, with *Adèle*, proceeds to supper. The situation is most exciting; but is concluded by the entrance of gendarmes. *Juan*, also, is found to have escaped at the back; while *De Malâ* is restrained by his captors from doing further mischief, on which he is still intent. This incident produced a strong impression, and secured not only the success, but unequivocal triumph, of the piece.

DRURY-LANE.

The engagement of Mr. Brooks having been brought to a conclusion—somewhat prematurely, if we may judge from the non-production of two new four-act plays in which it was announced that the "great tragedian" would appear—the manager has prudently turned his attention to the more miscellaneous business of the theatre. A Chinese troupe of histrionic gymnasts appeared on Monday evening: they are respectively named Wan shing, Yau Gyn, Zun Ban, Ar Cow, Ar-hee, Chong-Moon, Chin-gan, Arling, and Arsam, the interpreter. The title of the quasi drama which serves as the vehicle for their marvels, is "The Feast of the Dragon," celebrated in the presence of the Emperor, who is, on this occasion, humorously personated by a dwarf. The athletic and other tricks performed by these conjurors and posture masters, though not all new, were striking and well done. For ease and agility these Chinese are indeed the rivals of the French artists, and practise the most difficult feats with the greatest apparent nonchalance. Balls and knives are thrown about in all imaginable directions, with the utmost precision and grace of movement. The former are absorbed into different parts of the body, and reproduced at pleasure. Fire is eaten, and the consumed paper reproduced in interminable lengths of red tape, these being next converted into a walking-stick—a trick, however, not very novel. Another feat was more striking, requiring real agility, that of throwing several summersaults with an entire service of china in the hands, under the arms, and between the teeth, without breaking a single article. Some vaulting over lofty tables was extraordinary; and the energy with which, in their gyrations, the clowns spurned each other backwards by a kick on the breast was astonishing. The concluding scene of the exhibition "the Impalement," as it is termed, we shall engrave next week.

ADELPHI.

An occasional piece, entitled "The Moustache Movement," was produced on Tuesday. There is no attempt at plot, but the movement alluded to is caricatured by presenting a butcher, a baker, a waiter, and a lawyer's clerk, with the specified ornament on the upper lip. The last-named worthy is personated by Mr. Keeley, and wins the heart of a milliner by wearing a false moustache. This, by a series of mistakes and escapades, he is at last compelled to confess, and cuts his lip of the appendage which he surrenders into the hands of Mrs. Keeley, who, thereupon, addresses the audience in a parody of Rosalind's epilogue to Shakspeare's "As You Like It," in favour of whisker and beard. The whole thing is the veriest trifle; but, by the aid of good acting, sufficed to please the pit—which, indeed, seemed to be exceedingly amused.

MARYLEBONE.

A new *débutante* has appeared at this theatre in the character of *Juliet*—a Miss Cleveland, who has lately won laurels, as an amateur, at the Soho. This young lady possesses rare personal qualifications for a tragedienne; and, we doubt not, with a little practice, will prove an efficient actress. Mrs. Wallack performed *Romeo* with a beauty of style that was highly pleasing, and with a fervour of feeling that proved sympathy with the passions of the text of Shakspeare, usually omitted, were restored, particularly the punning banter between *Mercutio* (Mr. J. W. Wallack) and *Romeo*, which, acted with infinite spirit, was remarkably effective. The appointments of the revival are rich and accurate, and nothing has been spared to render it worthy of the attention it is evidently receiving.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, MARCH 30.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the barometer decreased from 30.40 inches at the beginning of the week, to 29.86 inches by the morning of the 28th; increased to 30.49 inches by the morning of the 27th; and decreased to 30.16 inches by the afternoon of the same day; increased to 30.37 inches by the 30th, and decreased to 30.15 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.1170 inches.

The mean temperature of the week was 45·49, being 2·69 above the average of the corresponding week during 38 years.

The range of temperature during the week was 32·99.

The mean daily range of temperature during the week was 22·86.

The weather throughout the week was fine; but, with the exception of the 27th and 30th, and the latter parts of the 27th and 28th days, the sky has been for the most part overcast. The wind has been in gentle motion only during the week.

Lewisham, March 31st, 1854. JAMES GLAISHER.

Health of London.—The births of 1805 children were registered in the week ending March 25: of these 912 were boys, and 893 girls. The average number of boys in the same week for the preceding six years returns were 776, and 729 girls. The deaths registered within the week were 1200, showing a small increase on those of the previous week. These deaths were distributed in three periods of life:—those of children, under fifteen years of age; 361 men and women, from fifteen to sixty years; and 295 at sixty and upwards.

Municipal Donations.—The Corporation of London have made a further donation of £100 to the Society of London Artists for Decorating the Crest, towards the fund for completing the new building at the Victoria-park. It is proposed to open the Crystal for the reception of public pictures, if the requisite amount, although it falls short, will be required to meet the heavy claims of the tradesmen, and which the committee are anxious to discharge before the funds are appropriated to the objects of the exhibition, it is considered to be equally as eminently deserving of the encouragement and support of all classes.

The Wages Movement.—The Preston [illegible]. A public meeting of the operatives of the [illegible] Monday last, for the purpose of [illegible] the arrest of Mr. Cowell and the other leaders of the [illegible] Preston, and to take measures for their defence and vindication. The room was literally crowded to excess. The chair was taken by Mr. W. Coningham, barrister-at-law, the late candidate for Westminster. Mr. Cowell, Mr. Newton, and others addressed the meeting, and a series of resolutions were passed in favour of the operatives and their leaders, and pledging the meeting to support them. Mr Cowell and the other delegates were liberally supported by the Preston operatives, on Tuesday; but the committee have stopped that they had not had time to prepare their defence, the trial was postponed till the next assizes.

Society of Arts.—During the past quarter the Society of Arts has received into their union thirty-one literary and scientific institutions and mechanics' institutes. The total number now in union is 348. The following have also been incorporated with them—The Hull Chamber of Commerce and shipping; and the Liverpool Chamber of Commerce, in the belief that many of the objects taken up by these bodies might be greatly promoted by united action.

Fire at the West India Docks.—On Monday morning [illegible] at the Pier Head, West India Docks, [illegible] the premises [illegible]. The fire broke out in the Master's Office and storehouse. The engines were quickly on the spot, and, owing to the combustible nature of the stock in the storehouse, the flames made great havoc. The cause of the outbreak was the [illegible] The Master's [illegible]

SCENE FROM THE NEW DRAMA OF "TWO LOVES AND A LIFE," AT THE ADELPHI THEATRE.

ADELPHI THEATRE.—"TWO LOVES AND A LIFE."

MESSRS Reade and Taylor's meritorious drama, thus entitled, continues to be attractive, and fully justifies the commendations which have been bestowed upon it. It is desirable to encourage literary merit in productions for the stage; and particularly where, as at the Adelphi, much account is made of certain theatrical effects. Far are we from undervaluing these; for well we know, taught both by precept and experience, that unless the proprieties of the stage are observed, the best writing may prove inoperative. Melodrama is the skeleton of a play, to which poetical or literary ornamentation is as the flesh and the blood, charming both by its texture and its tinct. Too frequently the ordinary audience of a theatre has been satisfied with the bony spectre, and been terrified and agitated with its ghastly doings, by which such audience has heretofore, at any rate, been strongly moved and excited, though the cultivated taste has been outraged. The general enlightenment of the people is now no longer content with such meagre stage exhibitions; and hence the most popular of theatres is becoming every day more classical in its entertainments. The scenery and appointments, at the same time, judiciously receive the same attention as ever, as may be witnessed by the illustration herewith presented. The scene is that of Bardwell Hole by moonlight—the rendezvous for the Jacobite con pirators, whither the poor schoolmaster *John Daw* (Mr. Keeley) is compelled to journey by *Father Radcliffe* (Mr. Webster), much against the grain, in dread of the pistol which he believes to be levelled at his head behind. Here the gentlemen of the northern counties consult as to the best means of promoting the Pretender's claims, and renew their oaths of fidelity to his cause. But all is in vain. The troops of the Duke of Cumberland are upon their track, and they are taken in the snare. Like the other incidents of this drama, there is not much novelty in the situation just described. The merit in this, and the other instances, lies in the skill with which the interest is prepared for and elaborated. The whole serves to show how successfully genius or talent may deal with old materials, giving new life even to the obsolete, and stamping its peculiar impress on the outworn details of traditional stage-craft, thereby making its own what must otherwise have passed into oblivion as either dull or dead. Thus re-animated, these ancient sources of interest again rightfully challenge public attention, and command a legitimate success.

ROMAN TESSELATED PAVEMENT, DISCOVERED ON THE SITE OF THE EXCISE OFFICE, OLD BROAD STREET, BISHOPSGATE.

PROCEEDINGS were commenced on Monday last for the removal of this pavement, under the direction of Mr. Minton—its destination being, we understand, the new Crystal Palace at Sydenham.

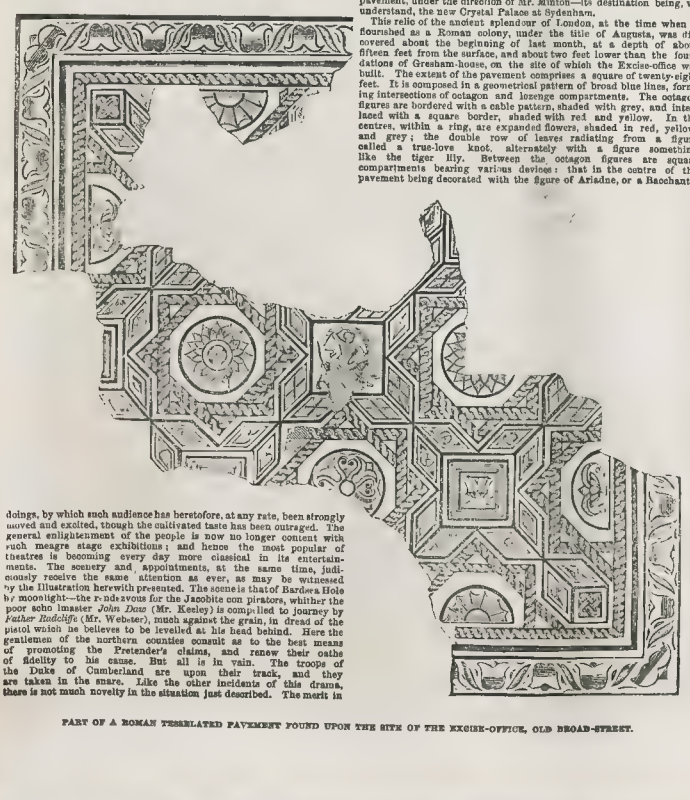
This relic of the ancient splendour of London, at the time when it flourished as a Roman colony, under the title of Augusta, was discovered about the beginning of last month, at a depth of about fifteen feet from the surface, and about two feet lower than the foundations of Gresham-house, on the site of which the Excise-office was built. The extent of the pavement comprises a square of twenty-eight feet. It is composed in a geometrical pattern of broad blue lines, forming intersections of octagon and lozenge compartments. The octagon figures are bordered with a cable pattern, shaded with grey, and interlaced with a square border, shaded with red and yellow. In the centres, within a ring, are expanded flowers, shaded in red, yellow, and grey; the double row of leaves radiating from a figure called a true-love knot, alternately with a figure something like the tiger lily. Between the octagon figures are square compartments bearing various devices: that in the centre of the pavement being decorated with the figure of Ariadne, or a Bacchante, reclining on the back of a panther, the remains of which indicate spirited action; but only the fore paws, one of the hind paws, and the tail remain. Over the head of the figure floats a light drapery, forming an arch, which she retains with the right hand, while the left appears to have rested on the panther's neck. Another square contains a two-handled vase. In the demi-octagons, at the sides of the pattern, are lunettes, one of which contains a fan ornament; another, a bowl, crowned with flowers. The lozenge intersections are variously embellished with the figures of leaves, shells, true-love knots, chequers, and an ornament shaped like a dice-box. At the corners of the pattern are true-love knots. Surrounding this pattern there is a broad border, composed of a cable pattern, broad bands of blue and white alternately; then a bold enclosure of a floral scroll; and beyond this an edge of demi-lozenges in alternate blue and white. An outer border, composed of plain red tesseræ, surrounds the whole.

The ground of the pavement is white, and the other colours are a scale of full red, yellow, and a bluish grey; agreeing with the description by Lucretius of the decorations of a Roman theatre—

> The theatre, whose awnings broad,
> Bedued with crimson, yellow, or the tint of steel cerulean.

This pavement is evidently of late workmanship, but it is probable that, on its removal, another, or vestiges of another of earlier date will be found. This is indicated by an edge which appears at about a foot lower, and is to be perceived a little off at the side. Various Roman and mediæval articles have been turned up in the same excavation, among these are a silver denarius of Hadrian, several copper coins of Constantine, a small copper coin, bearing on the reverse the figures of Romulus and Remus suckled by the traditionary wolf under the fig-tree, at the foot of the Palatine hill; and several Roman and mediæval tiles, a small glass of a fine blue colour, and fragments of Roman and mediæval pottery, and mediæval coins. Several tradesmen's tokens were likewise picked up.

About the same time with the discovery in Broad-street, a large deposit of Roman *débris* was found, in an excavation upon the site of the Church of St. Benets Fink, in Threadneedle street; consisting of Roman tiles, flue-tiles, fragments of pottery of the black, pale, and red Samian fabrics; glass, &c. Among which were stags' horns, a horse's skull, and a quantity of red tesseræ, were also found; together with some other mediæval remains. Fragments of two ancient stone coffin-lids were turned up—the most ancient of which bears on the side of a circular-headed cross an ornament of interlaced work, similar to that used in Saxon ornamentation. It is figured in the accompanying Engraving



PART OF A ROMAN TESSELATED PAVEMENT FOUND UPON THE SITE OF THE EXCISE-OFFICE, OLD BROAD-STREET.

FRAGMENT OF AN ANCIENT STONE COFFIN-LID, FOUND IN THREADNEEDLE STREET.

This slab was found at a depth of ten feet. The other was discovered five feet lower. It bears a treisil headed cross; and on the edge of the stone is an inscription, in characters of the thirteenth century, which appears to have read as follows:—

LAM:BRVN:PRIE:PATARE

(Of your charitie for the soul of William Brun pray a paternoster.)

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

The Thirty-first Annual Exhibition of the Incorporated Society of British Artists opened on Monday last. The works exhibited, inclusive of water-colour paintings, and a few pieces of sculpture, are 760 in number; about the usual quantity. In merit we are sorry to say that we cannot acknowledge any improvement upon the stock of many previous seasons. Why this is we will not undertake to say; albeit we have our own suspicions upon the subject. The fact is notorious, that the time is gone by when the artist shared the poet's penury and neglect; and, when both laboured at their calling for their arts' sake, and in pursuit of the bubble reputation—whether posthumous, or not, they little cared. The Art-Unions have provided a large market for works of pictorial decoration, and the artists of our day demand and obtain prices for their works which the Wilsons, Hogarths, Morlands, and Barrys, of an age gone by, would have most incredulously stared at; and yet, in return for all the money encouragement bestowed upon them, it must be asserted that artists have done little, very little, for the advancement of art. They have ceased to share the poet's penury; have they also ceased to share the poet's heart-engrossing and all-enduring enthusiasm? We fear so.

'Tis true, 'tis pity;
Pity 'tis 'tis true!

Looking round upon the walls of the present Exhibition, we see, for the most part, as on too many previous occasions, a class of works apparently designedly adapted to the meanest capacities; works which, when they pass beyond the range of the ordinary platitudes of every-day performance and experience, seem to have been composed with the hope of commanding attention simply by their extravagance. Why is this? again we ask. Are the annual subsidies from the Art-Unions, to say nothing of those from individual collectors, not sufficient to maintain art with dignity in its decent province; or are those emoluments disposed of so capriciously, by ignorant patrons, that art must forsake its high purpose to pander to their humble tastes? From whatever cause it springs, the fact is undeniable that, since the existence of Art-Unions, and since the growing taste for pictorial decorations, the prices of pictures have gone up, and the character of art has gone down.

The first work that attracts attention in the present collection—attracting by its extraordinary size, and its extravagant aspect—is "The Golden Age" (237), by J. P. Pettitt. Mr. Pettitt has for some years been in search of the marvellous in effect, no matter at what cost obtained; and he has here succeeded in obtaining it in unprecedented amount, by the simple process of outraging every principle of art; composition, grouping, light and shade, tone—all, all sacrificed to the puerile idea of realising an archæological representation of the supposed economy of the Court of the renowned Nebuchadnezzar (after Daniel, chapter iii); the idea of which, however, has been palpably taken from Mr. Kean's recently produced archæological representation of the Court of Sardanapalus, as described by Mr. Layard. The minutiæ of costume, armour, and furniture, are the same in both; the wooden stiff out of the figures the same also; so also the stagy atmosphere in both. One principal point of ambition with Mr. Pettitt was to represent the setting sun in the back of his picture, its splendid rays being killed—or, rather the shadow attributable to its rays, neutralised—by the blaze of numberless lamps in the foreground; so that we have a large canvas without a single cool spot for the eye to repose upon, a single indication of atmosphere to help us breathe again after the first shock of astonishment is over. The whole affair looks like the lid of an enormous Chinese tea-chest; and the numberless figures and details, which are repeated throughout with unexampled monotony, must have taken many months' labour of many hands to execute. For the sake of art and of critics, to whom such things are no sinecure, we sincerely trust that no Art-Union patron may come forward to purchase this absurd production; but that the artist, in after-contemplation of it, may learn that there is a limit to human folly and human endurance.

Hurlestone, the President, exhibits nine pictures, amongst which portraits and Spanish girls, as usual, predominate; but one of which at least aims at the higher attributes of art. His "Columbus" picture of last year elicited from ourselves and others well merited commendation; and if we cannot speak so highly of the "Last Sigh of the Moor" (178), in the present Exhibition, it is not because we do not recognise in its production an equally creditable ambition for high achievement as in its predecessor, but because in artistic accomplishment it is not so happy. The story represented is that of Boabdil, the last Moorish King of Granada, who, after his overthrow, traversing the route of the Alpuxarras, pauses upon a rocky eminence to contemplate the scenes of his departed greatness. His heart is subdued by misfortune, and he gives way to grief; when his intrepid Sultana, Ayxa la Horra, amiably upbraids him with the remark, "You do well to grieve as a woman for what you failed to defend like a man." The subject is disagreeable—like most subjects, indeed, in which strong-minded women are introduced; but it has not been exaggerated in the hands of Mr. Hurlestone. The figure and expression of Boabdil are well studied and picturesque in themselves; those of Ayxa expressive, without being repulsive;

"CORN-FLOWERS."—PAINTED BY J. J. HILL.

"THE THREE RAVENS."—PAINTED BY D. W. DEANE AND T. EARL.

while the two attendant females weeping sympathise well with the story. The drawing throughout is good, and the colouring massive, but hardly laid on, and, as a whole, wanting in harmony. Amongst the artist's other works, "A Jewess of Barbary" (300), a capital study, pleases us the most.

Sad or less only four pictures this year, amongst which is a Judith (110), conceived in the higher school of art. There is much grandeur and severity about the head; and the attitude is that of determined purpose. The figure, however, of herculean physique, which was hardly necessary to realise the poetical conception of the character. Raphael treated it differently, uniting exquisite beauty with the nervous fortitude and resignation of a heroine fated to the performance of daring deeds of mighty import. Still, however, Mr. Salter was not to blame because he chose to follow out an idea of his own, rather than work upon the model of others. We must add that the drapery is disposed with much freedom, and the colouring well studied, and generally effective. The little group, "Freedom to the Slave" (40), is a pretty little subject, treated with great taste and brilliancy of colouring. Of this artist's other two works, one is a Portrait; the other, a study of an Italian Girl at a Well.

Immediately over Mr. Hurlestone's picture of "Bosbill" is a work of considerable merit, the joint production of D. W. Deans and T. Earl, entitled the "Three Ravens" (177), founded upon the celebrated, but quaint old ballad of that name. The principal object in the centre of the picture is the prostrate form of "the knight, slain, under his shield." The steed, at his feet, his faithful dogs keeping watch over him; and above, the three ravens threatening to pounce on their prey. The story has been understood by the artists, who have infused its wild romantic spirit into their performance. The animals are admirably painted; the figure of the dead knight is surrounded by an awful solitude, which the sharp rays of the rising sun, falling on his armour, serve the more powerfully to illustrate. Of this performance we have much pleasure in giving an Engraving.

Amongst the figure subjects—which, by the way, are unusually few in the present Exhibition—are two by Hill, both remarkable for their exquisite feeling for nature, and their soft harmonious colouring. We have selected for Engraving the smaller and carefully painted "Corn Flowers" (83), which consists of a pretty group, of a woman and children, in a corn-field, and surrounded by various rustic emblems, under a smiling sky; in short a perfect picture of calm content. The colour is in harmony with the sentiment: delicate yellows, greens, pinks, russets, &c., combine to greet the vision pleasurably. In the other picture, entitled "Morning," introducing a girl sallying forth to her daily work in the fields, and carrying a rude basket, the gorgeous tints effect of the rising sun are, perhaps, a little exaggerated.

Baxter's female heads have few rivals in this or any other exhibition of the day. They exhibit a refinement of sentiment, combined with a delicacy of texture and a tenderness of colouring which must satisfy the most fastidious. One work in the present collection, entitled "La Pensée," and represen ing a young lady, holding a miniature pressed towards her bosom, her dark expressive eyes evidently reverting dreamily to the past, may be signalised as especially beautiful.

We can but name the industrious as usual, producing eight of his fanciful subjects, in his own pale, glittering, but somewhat meretricious style of colouring. "The Well in the Wood" (72), founded upon a passage in the "Pensées" of Rousseau, represents a young girl at a well, in the midst of a grove, a youthful shepherd playing upon a pipe, and a few sheep. The incident is trifling, but there is a want of sylvan simplicity, and of truly sylvan atmosphere, which leads to failure. In "Aladdin and the Wonderful Lamp" (78) a long vista through a grove is cleverly represented, and the romance of the situation is ably suggested.

C. Rolt has a rather impressive study—"And he went out and wept bitterly" (378): St. Peter, after denying our Lord. It is a single figure, represented only down to the waist. The colouring is unostentatious, but there is an intensity of expression in the tear-filled eye and clasped hands—in the penitent Apostle's cause forward to support himself against a wall or balustrade, which denotes the gift of considerable power in the pencil of the artist.

In the landscape department, Beddington, Tennant, Clint, Cole, and Fyne are, as usual, large contributors; each acquitting himself ably in his own peculiar style. We have also to speak with very high praise of a comparatively new artist, Mr. Gosling, who, in several works, evidences a true feeling for nature, and a power of execution which, when combined, go far to the formation of a commanding and enduring style. A very happy specimen of his talent is found in No. 39, representing a thickly wooded spot, the sky breaking through the trees there; which, though perhaps a little spotty in parts at present, is almost certain, which will wear off in time), is full of one and harmonious effect. A small study of sheep, entitled "The Ramblers" (54), shows great mastery in animal painting also.

We have not space to enumerate the other principal landscape works in our present notice; we must, however, speak of a few of them.

Beddington's "On the Ouse at Sketch Green Manor" (90), is very delicately painted; so, also, and most tasteful in treatment in every respect, is Tennant's "Llangattor Rocks." "Amongst the Welsh Mountains" (136), by the former, presents the fine vista of a sloping glen, traversed by a winding river; the depth and warmth of which, however, is destroyed by the forcible introduction of a bright blue piece of water at the base in the foreground.

Tyne's large "View of Berne" (118), is a marvel of silvery execution, under an almost impossible atmosphere, the town of Berne, of which it pretends to give a representation, is almost lost in excess of light, and the foreground is, unhappily, washy in appearance.

Clint's "Scarborough" (92), with a bold sea running, under a fresh rising gale, is, in many respects, a masterly production and may be pointed out as one of the distinguishing gems of the collection. The tone is dark and cold, however; and therefore it does not attract so many admirers as it would otherwise do. We have in this a signal evidence that, whatever its merits of weight and strength, it is impossible to make a picture

JOURNEY TO THE EARL OF ELGIN.—A complimentary dinner is to be given to this Nobleman on Thursday next, by gentlemen connected with our Canadian dependencies. Lord John Russell has consented to take the chair, and among the noblemen and gentlemen who have already signified their intention of being present are his Excellency James Buchanan, United States Minister at this Court; the Duke of Newcastle, Lord Lansdowne, the Earl of Ellesmere, the Earl of Durham, Lord Glenelg, Lord Ashburton, Lord Monteagle, Lord Stanley, M.P., the Chancellor of the Exchequer, Right Hon. E. Cardwell, M.P., Sir George Grey, Bart., the Right Hon. Sidney Herbert, M.P., Right Hon. Sir John Pakington, M.P., Mr. Hernal Osborne, M.P., and nearly fifty other members of the House of Commons.

THE NEW RECEIPT STAMPS.—The time for exchanging receipt stamps rendered useless by the Act of the last session for the new penny receipt stamps, now in force, is limited by the Act to the 11th day of April inst., and no claims can be received, under any circumstances, after that day. Receipt stamps rendered useless by the new Act will only be allowed on the usual days for the exchange of spoiled stamps, viz., Tuesdays, Thursdays, and Saturdays, from twelve at noon until two o'clock in the afternoon.

NATIONAL SPORTS.

NEWCASTLE-ON-TYNE SPRING MEETING.—MONDAY.

RACES FOR NEXT WEEK.—On Tuesday and Wednesday the Croxton Park meeting takes place; and on the same day the Spring Cheltenham course. On Thursday the Epsom Spring will be held, the bill of fare for which holds out a good promise, there being four races and a match for the day.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The immense preparations now making, both here and in France, to repel the Russian invasion of the Principalities, together with the decline in the stock of Bullion held by the Bank of England, have had a most decreasing influence upon the value of Public Securities. The fall in the quotations has been as at 2½ per cent; and numerous parties in the Stock Exchange are finding it a further depository in them. We may observe that Stock, arising from the extensive sales on account of the *Bears*, has become very plentiful; and that money for all commercial purposes has been in good demand. The consequence is that, though the supply of money is still abundant, the rates of discount have been on the advance, and present with [illegible] known even by the leading bankers, in respect to the rate at which paper is offered to them.

At the usual meeting of the Directors of the Bank of England, this morning, it was resolved that the Rate of Discount should be 5 per cent, instead of 4 per cent. The Three per Cent Reduced [illegible] 85 to 85½; India Stock [illegible]

On Tuesday [illegible]

[illegible] activity prevailed in the Consol Market on [illegible] decline of ¾ per cent. The Three per Cent Reduced [illegible] Consols [illegible] 85 to 85½; India Stock [illegible]

On Tuesday [illegible]

[illegible] Money Securities has been in a [illegible] a general by rules followed lower. In many instances the [illegible] ness nominal. Joint Stock [illegible] [illegible] Crystal Palace [illegible] [illegible] Peel River Land [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

ROYAL ITALIAN OPERA.—OPERA BOXES and STALLS in the best situations and on the most moderate terms, can always be secured at HAMMOND'S MUSICAL LIBRARY, 9, New Bond street, opposite the Clarendon Hotel. Open Th Tickets and Private Boxes at all the Theatres

TORQUAY, DEVON

MESSRS. STARK and BURT are instructed to SELL by PUBLIC AUCTION, at WEBB'S ROYAL HOTEL, TORQUAY, on THURSDAY, the 27th day of APRIL next, at Three o'clock in the afternoon precisely, the same should be previously disposed of by private contract, of which due notice will be given, the undivided one-fourth part of the beautifully-situated residence called Rock End, with the extensive Gardens, Lawns, and Closes of Land in connection therewith, containing 7a. 2r. 8p., all contiguous, and now in the possession of the Hon. Miss Hare, the owner. This very elegant property (with a build f e residence of an excellent term of 40 years, commencing at Lady-Day, 1838, at a small ground-rent), compris s a range of land on the town of Torquay, and bounded on the s by the sea. The house is situated in a most sheltered and picturesque position, the windows having views of Torbay, Torquay, and Paignton, and is replete with every convenience. It contains a drawing-room, about 27 feet by 17 feet, a dining-room, about 21 feet by 16 feet, exclusive of a bay window, a library 20 feet by 15 feet, with capacious kitchen, housekeeper's room, and other appropriate offices on the ground floor. There are six bed-rooms, and six servants' bed rooms over. The out offices comprise stables, for 4, coachman's house, and other requisite conveniences; and the whole is in complete repair, and fit d in every respect for the occupation of a family of distinction. The house is approached through a lodge entrance, by a good carriage road winding through a lawn of 10 acres, from which the most extensive views of land and sea are obtained. The pasturage is excellent, and the ground well supplied with water. The property is very valuable for a dairy, and there are also about four or five acres of land kept in tillage of a very superior quality. Possession will be given, the above mentioned property, and the whole estate in the p Babbingham, with the exception of the Lodge and a few acres, a freehold, and the woods of £13 5s., but subject to a land-tax of 4s. 8d. The Estate is situated in a ring fence, and divided into several farms, with suitable homesteads and convenient cottages in an excellent state of cultivation, and the right of fishery in a fine river abounding with excellent trout, and extending several miles. The Living is a rectory, and is certified at £239 and the present income is upwards of £300 per annum. The cradle in the church font is said to be that in which Queen Elizabeth was baptized. The Estate is the property of Sir Thomas Hesketh, Bart., and is now let to a tenant at will, at a rental including a moderate rent-charge for the Rector, amounting to £1,170 per annum. There are a few small pieces of land on the estate, and a consequent materially increased income may be obtained from the same by the purchaser. The estate is peculiarly adapted for the erection of villas, and in consequence of its proximity to Dunstock and Barbey, Solsetters, 2, and Lodgers and Sons, Shoffield, and Salmon and Co., Liverpool.

BALTIC FLEET, DENMARK, TURKEY, &c. The SUBMARINE and EUROPEAN TELEGRAPH COMPANIES (London Offices, 30, Cornhill; and 49, Moorgate, Piccadilly) have established DIRECT SHIP Communication with Denmark, the North of Germany, and Turkey. Office, 30, Cornhill. March 28th, 1854. G. L. PARROTT, Sec.

MEDICAL.—An ARTICLED PUPIL will be received, for ONE, TWO, or THREE YEARS, into the house of a medical man practising in an English Midland County. He will have every opportunity for gaining a practical knowledge of the profession, and of preparing for College.—Apply to Dr. Spencer Thomson, Hamden, Burton-on-Trent

GODDARD'S NON-MERCURIAL PLATE POWDER.—Hundreds of the principal silversmiths in London have pronounced this Powder the best and surest article for cleaning and restoring plate. See the testimonials. Sold by all chemists, with cork box. Sold by ironmongers, silversmiths, and chemists, in packets, 1s. and 6d. each; wholesale, by the Inventor, J. Goddard, Chemist, Leicester; Barclay and Sons, Farringdon-street, London; Lodgers and Son, Sheffield; and Salmon and Co., Liverpool.

ROUSSILLON, 26s. per Dozen, with fine violet tinge, and rich, pure and mellow flavour. It resembles Port, but is fresher on the palate, and has the merit of not exciting acidity or any unpleasant sensation during the night, as is usual with Port. "A better wine I never wish to drink."—(See Evidence of Mr. Gladstone, M.P., before the Committee of the House of Commons on the Wine Duties, 1852.) Dinner Sherry, 26s., 32s.; standard Sherry, 36s., 42s.; Pale or Golden Sherry, 42s., 48s.; Marsala (unfortified flavour), 36s., 42s.; Milk Punch, 30s.; Sparkling Champagne (of the celebrated 1846 vintage), 42s.—FOSTER and INGLE, Wine-merchants, Milk-street, Cheapside. Cash. Carriage free.

BOOSE'S Unrivalled CORNET-à-PISTONS. The great success that has attended the introduction of Mr. Boose's new Patent Cornet, and the many flattering testimonials to the beauty of the model and the exceeding richness of its tone have induced him, at the earnest request of many performers to extend the improvements still further, and they have now the pleasure of announcing that they have succeeded in adjusting to the same model the Rotary Valve instead of the Piston, which is free from all the objections to which the latter is liable, and by which the most rapid passages can be executed with marvellous quickness and with perfect ease. Price, with Rotary Valves, 5 guineas; with the new Patent Compensating Piston, 4 guineas. Either instrument securely packed and forwarded to any part of the country on receipt of Post-Office Order. Agents wanted in Rhyl, Ramsgate, &c.—BOOSEY and SONS, 28, Holles-street.

HARMONIUMS at CHAPPELL'S, 50, New-Bond-street.—The HARMONIUM by ALEXANDRE, of Paris, is the only instrument of the kind that remains perfectly in tune, and, from the simplicity of its construction, is best adapted for the Church, Schoolroom, or Drawing-room.

The following descriptions are those most liked:

No. 1. In oak case, with expression stop, price 12 guineas

No. 2. In handsome Gothic case, with percussion stop, 25 gs

No. 7. In mahogany or rosewood case, with the patent percussion action, and one stop, 18 g

No. 8. In oak c rosewood, 25 gs.

No. 9. In oak c and twelve stops, 40 gs.

The most perfect H m. The most powerful and rosewood case, 55 gs.

Descriptive Lists sent on applica street.

MRS. GILBERT, 13, Soho-square, and 65, Oxford-street.

THE DAILY NEWS LONDON MORNING PAPER, Price 2d. This leading Liberal Journal, the advocate of free commerce, financial reform, Law Reform, and the Extension of the Suffrage, has attained a circulation unprecedented in the Newspaper Press of this country. In the extent and value of its General News, it offers to the Public the most complete Newspaper of the day. In the interests and value of its Commercial and Monetary Articles, it is unsurpassed. In the number of its Advertisements published, it contains more than any other Journal. The last Return of Stamps issued for the year 1853, to the London Newspapers shows that this Paper (the youngest in point of time) has, in its five years' history, risen to a position unparalleled in the annals of the British Press.

A NEW AND ENLARGED EDITION
This day is published, Part I. of a New and Enlarged Edition of
THE PHYSICAL ATLAS; illustrative of the Geographical Distribution of Nature. By ALEXANDER KEITH JOHNSTON, F.R.S.E., F.R.G.S., F.G.S.
"The rapid progress of Physical Science renders it now a desire to remodel the PHYSICAL ATLAS since every day the reception it has met with, have induced him to prepare an entirely new and carefully revised Edition, in which several subjects not contained in the first impression of the Work, will be supplied, and the whole will be brought into accordance with the present state of information on the different Points to be contained in the same as will appear on the first time. All will be re-engraved and rewritten from fresh sources; and the remainder will receive such additions or alterations as have been rendered necessary by the advancement of science. The Text, in many cases, will be re-written; it will be further extended by the introduction of smaller Maps and Diagrams, as also numerous Cuts not now to be appended.
The Edition will be issued in Twelve Parts on the 1st of each alternate month, from the 1st of June. Proofs have may be had of all respectable Booksellers, or from the Publishers.
PART I. will contain:—
I.—The DISTRIBUTION of MARINE LIFE. By Professor Edward Forbes, F.R.S., President of the Geological Society
II. The MOUNTAIN SYSTEMS of EUROPE. Constructed on the Basis of Oscar Lieps. By Dr. H. Berghaus and A. K. Johnston, F.R.S.E.
III.—The GEOGRAPHICAL DISTRIBUTION of the CURRENTS of AIR, TRADE-WINDS, HURRICANES, &c., with their effects on Navigation. By A. Keith Johnston, F.R.S.E.
WILLIAM BLACKWOOD and SONS Edinburgh and London.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to the latest Patent Inventions, and other important improvements now in use on upwards of 1000 miles of railway.—Extract from the Half-yearly Report of the Directors of the Midland Railway, February 11th, 1854:—"An important feature in the contract for the maintenance of the permanent way" is, that the Contractors are bound to reduce their charges £50 per mile per annum, proportionate to the extent the Fish Joint, or certain other improvements are hereafter introduced." Every information may be obtained on application to the Secretary, CHARLES MAY, C.E., the Manager, or Mr. William Howden, the Secretary, 26. Great George street, Westminster.

HARROW.—To be LET, FURNISHED, for the Next Year (or the 27th of April next), an excellent and commodious FAMILY RESIDENCE, situate on the south west side of the Hill, commanding extensive views of the surrounding country. The House contains four public rooms, ten bed-rooms, two dressing rooms, kitchen, and usual domestic offices, coach-house, harness-room, two-stall stable, capable of containing four horses, and a double coach-house with large and well-arranged garden. Another year's occupation can be had if required. Apply on application three months previous to the expiration of the first. For further particulars apply to Mr. W. Winkley, Jun., House Agent, Harrow.

THE SEVENTEENTH PUBLIC DRAWING. The CONSERVATIVE LAND SOCIETY'S Office, 33, Fleet-street, will be closed, at twelve o'clock on Saturday, the 8th of April, the Seventeenth Public Drawing to regulate the order of rotation for drawing the Society's Estates in various counties as will take place. Shares taken up to the time of drawing will be included in the advantages thereof. Members holding unconditional shares, and shareholders with shares numbered under 1000, which are not fully paid up, are invited on the order of rights by number: are requested to refer to their pass-books to ascertain that their subscriptions be not in arrear on the 8th of April
CHARLES LEWIS GRUNEISEN, Secretary.

FIVE PER CENT INTEREST.—The CONSERVATIVE LAND SOCIETY, Office, 33, Norfolk-street, Strand, London.—The increased rate of interest on the subscriptions of completed shares (now £2 10s. each, with the fees) is payable half-yearly, one month after Lady-day and Michaelmas. Five per cent interest is allowed on subscriptions of a year in advance (price £5 5s. 6d. per share with the fees). The year's payment in advance on two shares is £10 5s.; three shares, £15; five shares, £25 0s. 6d.; four shares, £20 10s.; five shares, £25 15s. 6d.; ten shares, £51 5s.; one hundred shares, £512 15s. Monthly payments on uncompleted shares, 5s. per month, with 1s. every three months for quarterage. The first payment of a new member is 12s 6d., which includes entrance fee, quarterage, and pass-book. No restriction on the number of shares held by one member, and on the amount of his investment. A completed share is at once entered on the Order of Rights. Each member may pay up his instalments in such a manner as he thinks fit, so that it be at the rate of not less than 5s. per month. No pecuniary liability for members. The prompt withdrawal of shares is ensured. The taking of allotments of shares is quite optional. Prospectuses, and the Rules of the Society may be had of
CHARLES LEWIS GRUNEISEN, Secretary.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV. SATURDAY, APRIL 1, 1854. [GRATIS.

TURKISH COFFEE-SELLER.

We might imagine that, among the people who indoctrinated us first in the merits of coffee, the temples of the fragrant beverage would be peculiarly magnificent. Quite the contrary. Neither man nor berry is esteemed a prophet at home. What one drinks is excellent; where one drinks it is another affair. The scene of the Illustration is a street in Constantinople.

There is in Turkey, between coffee and tobacco, the same sort of marriage which has been solemnised in England between roast beef and plum pudding. And one consequence is, that the most stimulating of "conversational drinks" cannot loose the tongues of the most silent of nations. The pipe neutralizes the cup; and words evaporate in smoke. The conversation in our Engraving—if the reader will permit that expression—is, of course, upon the subject of the Eastern question, and the war actually raging. But the whole discussion is carried on by puffs of smoke, and ruminating glances, with a change of posture every thirty minutes on the part of each debater.

The refreshments are all confined to coffee, water, and tobacco—the latter, in some instances, being heightened by the potent flavour, and more potent influence, of opium. Generally the coffee is drunk black and sugarless; if sweetened, sugar-candy is the edulcorating element.

Imagine a rough wooden chair, raised clean of all back, and that is the stand on which you see the accompanying street scene.

TURKISH COFFEE-SELLER, AT CONSTANTINOPLE.

THE THOUSAND COLUMNS, CONSTANTINOPLE.

The point most remarkable about the scene of this Sketch is perhaps its name. So far as we ought to limit ourselves by what is ascertained, and incontestable, there is nothing in the thing (to borrow from Pope) either "rich or rare," though there may be a wonder "how the deuce it got there." The atmosphere in this subterraneous establishment is always cool, even in the most oppressive months of the Constantinople summer. The place called "the Thousand Columns" (it is strange that they do not ensure *thousand and one* for the due gradation, that cipher being of the highest mystical popularity in the East), has excited very little interest among travellers. Lamartine derives no inspiration from

THE "THOUSAND COLUMNS," AT CONSTANTINOPLE.

it; Stephens, the American—an infinitely superior writer of travels—passes it by; even our discursive countryman, Albert Smith, says not a word upon the subject, in his "Month at Constantinople."

You descend suddenly out of the street some ten or fifteen steps, and there you are in the vast, humid, dirty, dim, low-browed hall of "The Thousand Columns." The workmen that fit by you, wheeling their ropes and barrows, are the only objects of human interest.

Still, even in this huge den (however equalled it may now be) much appeals to the imagination. The Byzantine annals are ignoble, cruel, and, above all, obscure. In some such place treasures might have been secured; in some such place a worse inquisition may have wreaked its barbarism on many unknown victims; in some such place (for such a placeit was necessary to find), the most interesting and important State secret ever possessed by the "Lower Empire," may have found protection and seclusion for its operations. For seven hundred years the Greek sway was prolonged by the invention of Callinicus; for seven hundred years the receipt by which the magical war-fire was manufactured remained the safe monopoly of the Emperors of the East. The traveller, without incurring the blame of extravagant romanticism, might picture to himself the well-selected stronghold in which the furtive production was carried on; he knows that it was concealed from the common view, and would not be surprised if the operation was often, or, indeed, chiefly, prosecuted under ground. Why has not Lamartine given us a poem, chaining, with his usual contempt for authorities, the *Thousand Columns* as the scene of seven centuries of labour so destructive and so mysterious?

THE REFORM OF THE UNIVERSITY OF OXFORD.

IT will have been the singular fortune of Lord John Russell to leave the broad mark of his reforming hand on a larger number of our ancient institutions than any other single statesman whom this country has produced. He has invaded more immunities, attacked more prescriptions, hunted over more preserves, made larger clearings through the rank growth of old English prejudices, than any legislator who can be named. and this, to some extent, in spite of himself. The currents which himself created have at times swept him onward when he would willingly have paused. With the word finality for one of his weapons, his career has been one long assault upon finalities. The powerful leverage supplied by his earliest reforms has not only rendered possible, but in a manner compelled, reforms which even the sanguine spirit of his youth would not have dared to contemplate. He who invokes public opinion becomes in a more direct sense than others its subject; and the attack upon Gatton and Sarum, which Lord John led, conducted him by a chain of consequences which he could not then have foreseen to the position which he has now taken up against the two great remaining strongholds of antiquated abuse—Oxford and Cambridge.

A reform of these two great institutions had become a thing so inevitable amid the pressure on every side of the spirit of the age, that the blindness within which continued to suggest resistance was itself the strongest amongst all the evidences for the necessity of the reform so resisted. Accordingly, the opportunity for free and spontaneous action liberally accorded to both Universities having been allowed to pass unfruitfully away—the measure of compromise offered by the governing authorities of Oxford being wholly inadequate to the urgency of the demand,—Lord John Russell has at length come forward with his scheme of amendment for that University. A measure it is conceived in a large reforming spirit,—with a careful regard for all of prescription that does not work a wrong, and all that is venerable for some better reason than that it is old. Lord John's is, in fact, the true reading of prescription itself. He translates the literal fact, wherever he can, into the original intention. Throughout his measure, that which his opponents stigmatise as innovation is in fact renovation,—and that which they call change, is a mere return, where practicable, upon the spirit (not the letter) of the past. To use Lord John's own words: "The reforming party might say with truth that antiquity was for them—that it was only modern times which could be quoted against them." With a view, then, to give scope and efficiency to the reforming spirit which Lord John lets loose in the old high quarters of exclusiveism, he abolishes the subsisting oaths by which the members of the University are bound not to reveal the statutes of the colleges, and pledged to resist all changes therein.

The projected reform embraces the following leading points.—A re-constitution of the University itself, so as to give to the governing body a real representative character, to which all the elements of the University may duly contribute. An extension of the University, as distinguished from the colleges, and by means of help from the overgrown college endowments, so as to effect a reconciliation between the professional and the tutorial systems, thereby at once raising the standard and widening the area of education.—The opening up of fellowships and scholarships, by the removal, with certain exceptions, of limitations restricting their enjoyment to narrow specified classes.—An extension of the University system in the direction also of numbers, so as to let in a larger public to the enjoyment of its vast educational means, and lower the cost at which they are dispensed.—These great leading features resolve themselves, of course, into varieties of clause and detail for securing their full effect; and there are supplementary arrangements,—such, for instance, as those by which the tenure of a fellowship is controlled and limited, and its enjoyment made contingent on the performance of some corresponding duty.

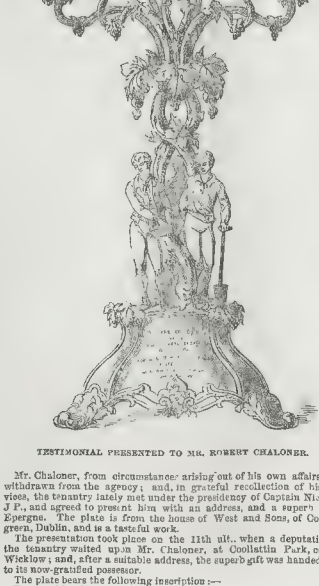
Of these measures, the most sweeping is that which re-constitutes the University as a representative body. Hitherto, as most of our readers know, the government has been in an oligarchy composed of the Vice-Chancellor, the two Proctors, and the Heads of Houses, and called the Hebdomadal Board. The powers and functions of this body are to be transferred to a new authority, to be called the Hebdomadal Council, and constituted as follows.—The Vice-Chancellor and Proctors will be of the government, as before,—and the outgoing Chancellor, if not otherwise elected. Six Heads of Houses, six Professors, and six members of Convocation of a certain standing, will be elected by the deliberative body called Congregation. To these the Chancellor for the time being will add one Head and one Professor; and an additional Professor will be elected—also by Congregation—from the theological ranks of the University. This will give a governing body of either 24 or 25 members; and the elective body, or Congregation, will contain all the elements of a true University representation. It will consist of all Heads of Houses, and Masters of Halls Tutors, and Deans of Colleges, Professors, Canons of Christchurch,—all members of the Hebomadal Council, University officers, and public Examiners,—all residents who have held any of the foregoing qualifications for three years, and non-residents who have held them for twelve,—all residents, likewise, who have certificates of engagement in any branch of learning or science;—and power is reserved by the University to appoint, by statute, additional members, subject to the acceptance of the Crown. To the body thus largely based will be submitted for previous deliberation all measures to be proposed in Convocation:—the body which (retaining its present powers) makes up, with the other two, the new Constitution of the University.

University extension as here proposed strikes at the monopoly of colleges in various ways. By the new measure, power is given to any Master of Arts to open a private hall, with a license from the Vice-Chancellor, and, of course, under strict regulations. It is this provision which will open the University fountains to a more general thirst; as, under the competition thus established, the minimum cost of an Oxford education will soon be reached. For the purpose, too, of enlarging the means of University, as distinguished from College, education—all colleges having as many as twenty fellowships may be called on to contribute a portion of their funds towards the endowment of new public professorships, and lectureships:—and a multitude of minor provisions are made to assist in the good work of giving vitality to what lay buried beneath the incumbrances of ages, and diverting old motives of beneficence from the choked up channels in which they had ceased to flow, into parallel courses, and converting them into fructifying streams.

Such is a broad outline of the new and important measure which will, we hope, add another triumph to the history of Lord John Russell's long political life. If we miss certain features which we had hoped to see embraced in any scheme for the reform of the Universities, we are willing to believe that such have been omitted for the express purpose of avoiding the danger which they would have brought on all the rest,—and that Lord John has gone as far into the spirit of the age as he could hope to carry the House of Lords with him. It remains only to say, that to the University is still left the show of being its own reformer. The principles laid down it may itself practically carry out if it will. The measure provides for the establishment of a Parliamentary Commission, empowered to examine and authorise all statutes and rules which the University, or the Colleges, may propose for effecting the objects which it has in view. Such statutes and rules, if not proposed by the academical authorities before Michaelmas, 1855, are to be enacted by the Commission itself.

THE FITZWILLIAM ESTATES, IRELAND.

THE extensive and beautiful estates of the noble Earl Fitzwilliam, in the county Wicklow, have been for years presided over, in the capacity of agent, by Mr. Robert Chaloner, a gentleman who possesses an independent property in Yorkshire, but preferred a residence in Ireland, where a larger amount of usefulness was open to him. The same post was occupied for many previous years by Mr. Chaloner's highly-respected father, to whose plans the son admits he was materially indebted for the success which attended him in his office. During the period of the famine, Mr. Chaloner's devotion to the relief of the distressed, whilst it fulfilled the benevolent objects of the owner of the soil, set an example to others of the most salutary nature.



TESTIMONIAL PRESENTED TO MR. ROBERT CHALONER.

Mr. Chaloner, from circumstances arising out of his own affairs, has withdrawn from the agency; and, in grateful recollection of his services, the tenantry lately met under the presidency of Captain Nickson, J.P., and agreed to present him with an address, and a superb silver Epergne. The plate is from the house of West and Sons, of Collegegreen, Dublin, and is a tasteful work.

The presentation took place on the 11th ult., when a deputation of the tenantry waited upon Mr. Chaloner, at Coollattin Park, county Wicklow; and, after a suitable address, the superb gift was handed over to its now-gratified possessor.

The plate bears the following inscription:—

Presented by the tenants of Earl Fitzwilliam's Irish estates to ROBERT CHALONER, Esq., on his resigning the agency, as a token of their esteem and respect. February, 1854.

THE PEACE DEPUTATION TO THE EMPEROR OF RUSSIA.

(See the Engraving in the ILLUSTRATED LONDON NEWS, No. 672.)

ON Friday evening week, Mr. H. Pease, one of the late deputation to the Czar, gave a very interesting account of his journey, and the reception of the deputation by the Czar, before the members of the Mechanics' Institute, at the Central Hall, Darlington.

The deputation proceeded from London to Berlin, where they remained over one Sabbath, in order to obtain some introductions for St. Petersburg. At the first Russian custom house their passport were demanded, and their chests and papers all turned over, in order that nothing obnoxious to the Emperor might be allowed to enter Russia. An old *Darlington Times* wrapped round a parcel, was no sooner caught sight of by one of the officials, than it was immediately torn up and trampled under foot. They now had to travel by means of sledges, to which six Russian horses were attached. Some of these sledges were well appointed, and the style in which the drivers were dressed was far superior to the style of clothing in this country. They usually travelled two nights out of three during this time. In about fourteen days they reached St. Petersburg, after being out about five nights. They were fortunate enough to meet with a comfortable English hotel, kept by Mrs. Benson, who was also at a neighbour, having previously lived at Sunderland. Before seeing Count Nesselrode, they had to explain their motives for visiting Russia; and how their motives for coming to Russia were duly inquired into. These were but three motives that were allowed to influence people in visiting Russia, and these, as far as he could recollect, were business, health or pleasure, and science. At this office they were very civilly treated, and they had no reason to complain. For this they were indebted to Prince Menschikoff, who had written to Count Nesselrode, saying what their mission was, and telling him to expect them.

The Emperor was very kind to them. He is a man of about fifty-six, and, on the whole, a very fine-looking specimen of humanity. There was a very splendid view from the Emperor's room window. He saw a long way down the river, and the docks and fortifications were under his immediate surveillance. There was no want of everything grand and imposing—gilded flowers in splendid vases, and galleries of the finest pictures met their view at every step. Here, in fact, was everything that was attractive and interesting. He (Mr. Pease) could not help remarking a very great improvement in these large houses in Russia over those in England: in every part a uniform and moderate heat was diffused. The reception-room was 300 feet in length, and took 20,000 wax-lights to illuminate it. Here the collections in every department of art from all parts of the world were on the most magnificent scale. Here were a large number of articles in malachite, and those who visited the Great Exhibition of 1851 would alone be able to form any adequate conception of the splendid effect which large quantities of this fine mineral and gold had when brought together. He was not a very good judge of fine painting; but here was gallery after gallery filled with paintings by the best masters. The effect of the whole was admiration and amazement. There was in one of the halls a very large vase, which had lately been brought from Finland, and which was supported on a huge pedestal, all cut out of a solid piece of granite. The kindness they met with at the Court was far above that usually extended to visitors, and they were taken to see the room of Peter the Great. Here was everything that would suggest itself as being of use to a great king. As Peter was many ingenious tools and other things of his own invention, and many beautifully carved ornaments in ivory and wood. On one of the tables in a plain case was an old steel pen, which the late Duke of Wellington used, and which had been sent as a present to the Emperor by the present Duke. Among other curiosities were some huge lumps of native sulphur, and a large piece of gold as it had been found. These specimens from those interminable sources of wealth, the Siberian mines, were of the most interesting and wonderful nature.

After describing the churches of St. Petersburg, and the winter amusements of the population, Mr. Pease remarked, that the reason why Russia had made no more progress in civilisation was the way in which she trampled down the press. He brought with him a number of an illustrated paper which had passed the ordeal of examination by the Post-office authorities. Several articles had been cut out wholesale, as containing something not quite respectable. One of the articles so cut away had been originally an illustration of the Emperor, and had no doubt contained some thing considered derogatory to his dignity. In some cases the obnoxious articles were expunged, and not cut out; but one of these plans was always adopted as the papers passed through the Post-offices.

They were well aware that serfdom very extensively prevailed in Russia. Many of these serfs were of the better class, such as waiters in hotels, and these all had to pay so much yearly to their lords. A waiter in the hotel where he stayed paid his nobleman £4 a year, and the income which those of these nobles received in this way amounted to £300,000. To these noblemen the war was a very great loss. There had already been two conscriptions within the last six months, each of which would reduce the revenue of some of these noblemen to the extent of about £10,000. Very much to the discredit of the Russians, the barbarous slaughter of Sinope was performed every night in the theatres of St. Petersburg.

He had purposely refrained from alluding to the subject of the war now happening, because his only object in giving this lecture was to detail a few of the incidents which had befallen him in making a journey which he had undertaken in fulfilment of what he conceived to be a matter of duty. They would perhaps expect that he should tell them a little more, particularly the nature of the interview with the Emperor. After getting the necessary introduction, they were ushered into the palace, where a very *beau ideal* of a king's servant conducted them through several suites of rooms, and up a great many stairs, at the landing on every one of which was a body of guards stationed, standing as mute as the walls beside them. After waiting about half an hour, a messenger was sent to tell them that the Emperor was ready to receive them. On going into the room where the Czar was, he rose from his seat and came across the room about half way to meet them. Baron Nicholay was present during the interview. The conversation has already appeared in the papers. The Emperor spoke chiefly in English, which he spoke very well; but some parts of the conversation, and the reply to the address, he addressed to Baron Nicholay in French: the reason why he did so was that the Emperor knew better the full import of the words he used in that language than in English. The interview lasted about half an hour. He expressed a wish that they should, before they left, call upon the Empress, which they did. When they arrived in the room where she was, they found that the Emperor had arrived first by a private passage. The Empress seemed to be suffering from ill-health, caused partly from the unjustifiable attacks which had been recently made on the character of her husband by the British press. He (Mr. Pease) at once saw how painful a subject it was to the Empress and the Grand Duchess Olga, and he could not but regret the course which the press of this country had pursued in this respect—in resorting to abuse and calumny instead of reasoning. Many of the most respectable British residents in St. Petersburg were of the same opinion, and expressed the very great pain this subject had caused them. All that he saw of the Emperor led him to a very different opinion of his character. The people of St. Petersburg almost idolized him, and he frequently went out amongst them unattended. Setting aside the question whether the Emperor was right or wrong in the course he had lately adopted, he could not see anything unreasonable or deserving of ridicule in the fact of a body of Christians who have been in existence two hundred years, and who have averaged 20,000 in number, who have always cherished the belief that liberty can neither be advanced, nor national disputes settled, by the use of the sword, and who had always endeavoured to be good citizens, sending three of their number to endeavour to bring about a pacific settlement of the present difficulties. He firmly believed that either vast sums of money had been spent, and thousands of lives had been sacrificed, the question would remain just where it at present was, and arbitration would be resorted to. After men had tried the irrational, the inhuman, unreasonable—he had almost said—God-blaspheming practice of war—causing thousands of families the deepest misery—when all saw the great curse a war was, then they would be led to acknowledge that there was nothing irrational or unreasonable in their endeavouring to avert it. All would then be ready to acknowledge that the money had been submitted to thoroughly Christian principle. After apologising for having omitted to notice many points of interest, as being too much to include in one lecture, Mr. Pease resumed his seat.

ROYAL GEOGRAPHICAL SOCIETY.—Through the exertions of Mr. Joseph Hume, M.P., and others, the Treasury have resolved that the sum of £500 shall be placed annually in the civil estimates to the service of the society, the Government requiring, in return, that a public hall be fitted up, with models, &c., for the inspection of the public, and that a report of the society's proceedings be presented annually to the Houses of Parliament.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The bands of several regiments of the garrison of Paris have been for some time practising the air "God save the Queen," in order to play it on the arrival of the English auxiliaries; whose bands will, no doubt, return the compliment by playing the now appropriate air of "Partant pour la Syrie."

At one of the oldest clock manufactories in Connecticut; 250 men are employed. The clocks are made at the rate of 600 per day, and at a price varying from one dollar to ten dollars, the average price being three dollars.

The *Ocean*, a newspaper published at Brest, has taken the trouble to calculate the average of the ages of the Admirals in the French navy. This calculation gives 61, as nearly as may be, for the age of the Vice-Admirals, and 55 as that of the Rear-Admirals. It is added that in England the average is higher in both cases by six years.

The sentence of death passed upon Abel Burrows, at the last Bedford Assizes, for the murder of Charity Glenister, has been commuted to penal servitude for life.

On Saturday last the remains of the once celebrated western mail coaches were taken off the road, the Dorchester and Exeter mail coach being on that day withdrawn.

The two companies which light Dublin have announced a rise of from 2s. to 3s. 10d. the 1000 cubic feet of gas.

The *Liberté*, of Lille, states that the Turkish Ambassador in Paris has demanded from the French Bishops aid and protection for a Capuchine Father, who is now in France, collecting the means for building a Catholic church at Constantinople.

The French Government has decided that a periodical, containing reports and papers of scientific and literary societies, accounts of missions &c., shall henceforth be published, under the title of *Bulletin des Sociétés Savants*.

The Belgian annual exhibition of the works of living artists is to commence at Brussels on the 1st August, and to continue to the 30th September. Foreigners will be allowed to exhibit.

The *Scientific American* speaks of a new marine locomotive, with which the inventor says he can cross the Atlantic in four days.

A smart shock of an earthquake (the second within six months) was experienced at St. Sebastian, north coast of Spain, on the 15th ult., at half past ten p.m. The walls of the houses trembled, and the horizontal oscillations which accompany such phenomena were apparent.

Mr. Dargan has granted the use of the Industrial Exhibition Building to the Royal Dublin Society for their spring cattle-show, which takes place this month.

The report of the Tynemouth states that more than one-seventh of the electors of that borough are publicans.

Prince Albert has given a donation of £200 for the extension of the electric telegraph to Aberdeen.

Considerable transactions in foreign commodities are said to be meditated this spring by the smugglers on the north and east coasts of England.

The Admiralty have adopted private signals in their telegraphic communications, in order to ensure secrecy for their orders to the dockyards.

The action for damages by the family of Mr. Bateman, of Cork, who was killed at Straffan, against the Great Southern and Western Railway, has been compromised for £3000, paid to the plaintiffs.

The accounts for the Duchy of Lancaster for the year ending at Michaelmas last show that £15,800 was paid over to her Majesty's privy purse.

A vessel was sent to sea the other day from Yarmouth, entirely manned by master mariners; the rise of wages and the attractions of the navy having so closely reduced the number of common seamen.

James Hagan, who was convicted at Belfast assizes of being a member of a Ribbon Lodge, has been sentenced to four years' penal servitude.

Mr. Calvert intends shortly to commence erecting his reduction and smelting works in Merionethshire, for the purpose of extracting gold from various ores and rock. The establishment will cover several acres of ground, and will be capable of treating about 5000 tons per week.

A Brazilian company, with a capital of 600,000 dollars, has successfully introduced steam navigation on the entire length of the river Amazon.

The Russian Pera and country palaces are to be fitted up as residences for the English and French Commanders-in-Chief when they arrive at Constantinople.

The Rev. Mr. Perowne, M.A., censor of King's College, has been appointed by the council to the new professorship in English History, and to the lectureship of Modern History, vacant by the resignation of the Rev. J. J. Brewer.

M. De Maupas, the late French Minister at Naples, has arrived in Paris. It is said that he is to be appointed Minister at Madrid, in the place of the Marquis de Turgot.

Tenders were delivered for the navy contracts for hemp on Tuesday, but at such high prices that the Government did not entertain them.

The Supreme Court at Boston has decided that the section of the Massachusetts Liquor Law, which authorises the seizure and destruction of liquor, is unconstitutional.

Accounts have been received in Sydney of a considerable reinforcement to the French naval squadron in the South Seas.

The great Ganges Canal, the most important public work yet executed in India, is to be opened on the 8th of April.

An English company, directed by Messrs. Gandell Brothers, has just commenced the draining by means of steam-engines the lake of Capestang, in the arrondissement of Beziers. The superficies of the ground so be reclaimed is about 4700 acres.

A letter from Rome of the 20th ult. states that the assassin of Count Rossi has been found out, and arrested.

The value of the gold exported from Victoria during the year 1853 was about £14,000,000 sterling; from New South Wales, £6,500,000.

An exhibition of *tableaux vivants* is at present taking place in Madrid. Amongst the incidents represented are the Crucifixion and the Ascension of Christ.

Dr. Weitzstein, Prussian Consul at Damascus, has purchased at that place nearly 500 Arab manuscripts for the Royal Library at Berlin. Amongst them are two fragments of the Koran, several autographs and treatises on history, geography, natural history, medicine, mathematics, and astronomy.

The Imperial Library of France has purchased for 250f., the original manuscript of the chronicle of "The Cid," a poem of the fifteenth century, illustrated by curious pen-and-ink sketches.

Baron de Brunnow left Darmstadt on the 22nd ult. for Brussels, but was to return in about a fortnight. His family and his two secretaries remain at Darmstadt.

Nine Turkish and Egyptian steam ships, intended for the conveyance of troops (some 17,000) to Greece and Constantinople, are lying at Alexandria, waiting for a supply of coal.

The railway from the canal to the Nile will be called into requisition for the next transit of the Overland Mail and passengers.

A letter from Warsaw of the 15th ult. states that the Vistula had on that day overflowed its banks, and inundated several of the streets of that city.

The Chinese emigration to California has again commenced. Eight hundred Celestials, in three vessels, reached San Francisco last February.

A launch containing a large number of pass agers was recently capsized in Virgin Bay, Lake Nicaragua. Twenty-four persons were drowned.

An order has been sent to England by the French Admiralty for the purchase of all the largest and best maps of the Baltic to be found in London. The French maps are good as far as they go, but they are not the result of recent surveys.

There have been 1280 deaths from cholera within the Glasgow bills of mortality since the last return of the first outbreak.

The net revenue paid into the Exchequer in 1840 was £47,567,569; the net revenue last year was £54,150,544 increase, £6,582,975. In 1840 the expenditure was £47,1.1.6., last year it was £51,1.1.9. Increase, £2,013,305.

The Lord Chancellor Shrewsbury, Lord Edward Howard, and a number of other Roman Catholic noblemen and gentlemen, have published a declaration of their "Protestant fellow-countrymen," in which they say "that they regard the access of the motion of Mr. Chambers in the House of Commons as a direct attack upon the Catholic religion, and as an insult to those who profess it."

It is expected that, in deference to the wishes of the sailors of the British navy, who prefer serving in ships launched on a Saturday, that the launch of the *Royal Albert* will take place between three and four o'clock on Saturday, April 29.

It is currently believed among military circles that, in addition to the late augmentation, there is to be a further increase to the army of 50,000 men.

The Ceylon advices report the coffee crop of 1853 at 450,000 cwt., and, but for a deficient supply of labour, it would have been some thousand cwt. more.

CHESS.

TO CORRESPONDENTS.

ROTUS.—Your best plan will be to procure a set of what are called the "Staunton Chessmen;" and with them you will receive the Chess "Text-book"—a little work of the kind you want just adapted for beginners.

M. F.—Yes, we are not quite right, even now. See our Solution.

C. A. J., Dublin.—Many thanks. They shall be applied.

T. L., of Hereford.—1. Your solution is correct. 2. The copies of the *Chess-player's Chronicle* is 4d. per month. Monthly periodicals may be ordered of any bookseller in the country, and obtained without any extra charge. As they are published, too, in London, a day or two *before* the 1st of every month, it is the country bookseller's fault, or the fault of his London agent, if subscribers do not get them in most parts of England by the 1st, or at farthest the 2nd, of the month.

J. G. C.—It shall have favorable notice.

G. W. S., Hollybourne.—We will submit the inquiry to the composer, and give his solution if space admits, next week.

R., of Stuttgardt.—1. With the emendation last sent, it appears to be quite correct, and worthy of the ingenious author? 2. Your solution of No. 525 is the true one.

LANCASTER.—The first prizes in the Irish Society, just finished at the Manchester Chess-club, was won by the Honorary Secretary, Mr. Kipping. 2. The Club holds its meetings on Monday, Wednesday and Friday evenings, at the Star Hotel, Deansgate.

DELTA, WITNEY, M. F. of Kew, A. K., Lambeth.—Our opinion of your Problems shall be given next week.

HUTTI, Chertsey.—We cannot see a second mode of effecting mate. You must have entirely overlooked the check with Black's Kt.

R. N., Manchester.—You are mistaken. The mate cannot be given in the way you suggest.

*** The majority of our answers to Chess communications are unavoidably postponed.

SOLUTION OF PROBLEM No. 524.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to K 2nd	R to K B 6th (best)	4. Kt to Q B 3rd (ch)	K to Q B 5th
2. P to Q B 4th (ch)	P takes P	5. P to Q 5th (dis. ch)	Mate.
3. R to K 4th	P takes P

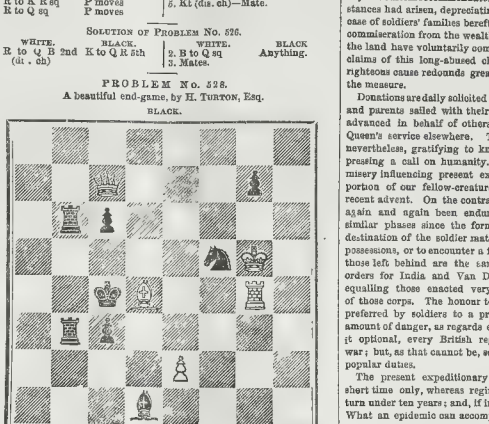
1. R to Q B 2nd (dis. ch)	K to Q K 5th	2. B to Q sq 3. Mates.	Anything.

PROBLEM No. 528.

A beautiful end-game, by H. TURTON, Esq.

BLACK.



WHITE.

White to play, and give mate in four moves.

CHESS IN THE METROPOLIS.

Stirring little skirmish played at the St. George's Chess-club, between Mr. WYVILL, M.P., and Mr. LÖWENTHAL.

(Sicilian Opening.)

BLACK (Mr. L.)	WHITE (Mr W.)	BLACK (Mr. L.)	WHITE (Mr. W.)
1. P to K 4th	P to Q B 4th	14. Q to K sq	Kt to K 5th
2. B to Q B 4th	Q Kt to Q B 3rd	15. K to K B 2nd	B takes K Kt
3. P to Q 3rd	P to K Kt 3rd	16. R takes B (b)	Kt takes Q B P
4. Q Kt to Q B 3rd	B to K Kt 2nd	17. Q to K 4th (c)	Kt takes Q R
5. B to K 3rd	Kt to Q 5th	18. P to K 5th	Q to K Kt 4th
6. P to K B 4th	P to K 3rd	19. P to K R 4th (d)	Q to Q B 6th (ch)
7. Kt to K B 3rd	P to Q 4th	20. K to R 2nd	Q to K Kt 4th (ch)
8. P takes P	P takes P		
9. B takes P	Kt to K 2nd	21. K to Kt 3rd	Kt to Q B 7th
10. B to Q B 4th	Q B to K Kt 5th	22. Kt to K 2nd	Q to K 8th (ch)
11. Castles (a)	Castles	23. K to R 2nd	R to K B 3rd
12. B takes Q Kt	B takes B (ch)	24. R to K Kt 3rd (e)	Kt to Q 5th
13. K to R sq	Kt to K B 4th	25. P takes P	Q takes Kt
		And Black resigned.	

(a) In a more thoughtful game Black would probably have preferred taking the K Kt, to double the adversary's Pawns on the K B file; a fi

(b) If he had taken with the Pawn, White must equally have won the exchange by taking the Bishop with his Kt, and then Rook with Bishop.

(c) This total surrender of his Q Rook to the new bold, but he gained a promising attack, though not one sufficiently lasting to compensate for such a sacrifice.

(d) If he had played the Rook to B 3rd, White might, we believe have played his *King's* Rook to Kt 2 square and have won it also. It is obvious he must never play the Q Rook to that square without loss, as soon as the Black Kt is taking his K B Pawn with his Bishop checking.

(e) Better, perhaps, to have taken Pawn with Pawn, permitting an exchange of Queens, and have fought for a drawn battle.

This eccentric little affair was played at the St. George's Chess club the other day, be ween two of our best players—Mr. WYVILL, M.P., and Mr. EVELYS, M.P.

(Sicilian Opening.)

BLACK (Mr. E.)	WHITE (Mr. W.)	BLACK (Mr. E.)	WHITE (Mr. W.)
1. P to K 4th	P to Q 3 4th	11. Q to her sq	P to Q Kt 4th
2. P to Q 4th	P takes P	12. P to Q B 3rd (b)	P takes B
3. K Kt to K B 3rd	Q Kt to Q B 3rd	13. P takes Kt	B to Q Kt 2nd
4. Kt takes P	P to K B 4th	14. P to K B 3rd	Q to K Kt 5th (ch)
5. P takes P	Kt takes Kt (c)	15. K to her 2nd (c)	B takes Q P
6. Q to K R 5th (ch)	P to K Kt 3rd	16. Q to K sq	Q R to K B sq
7. P takes P	B to K Kt 2nd	17. Kt to Q B 3rd	Q R to K B sq (d)
8. P to Q B 4th (dis ch)	K to Q sq	18. Q to K R 3rd (ch)	K to B 2nd
9. P takes Kt (be-	K takes Q	19. B to K Kt 5th	Q to K B 4th
coming a Q) (ch)		20. K Kt to Q sq	Q to K Kt sq
10. K B to Q B 4th	P to K 3rd	21. P to K R 4th	P to K 4th
(ch,		22. Kt to Q Kt 5th	

And, in a few moves, White surrendered.

(a) White plays this opening at random. It is surprising, after the deplorable position he was driven to take up, that he should have recovered hi ses so far as he did.

(b) This is a somewhat feeble, timorous move; and is subject to a good deal of criticism.

(c) Had he interposed the Kt's Pawn, White would of course have taken it with his Queen.

(d) This was a fault. The move to be regretted, too, because it occurred at the moment when White had retreated his forces in the opening, and stood fair to win the game. If, but out of the move made he should have played his K Kt to K 6th, we believe he must have gained the game.

17		K R to his 6th	
(It is hardly necessary to say that if Black takes the Rook he will be mated in two moves.)			
18	K to Q sq (best)	Q to K 4th (ch)	
		B takes K R P	

We unreservedly the better game.

(e) 18. Q to K B sq, or (c)	Q R to K B sq	20. K to Q 2nd (best)	B takes Kt (ch)
19. P takes K R (ch)	B takes K P (c)	Q to K B 5th (ch)	
	And White must win.		
(c) 18. Kt to K 4th	B takes Kt	20. Q, or R to K B sq	Q to K Kt 3rd
19. P takes B	K to Q 6th	And ought to win.	

CHESS ENIGMAS.

No. 885.—By J. B., of Bridport.

White: K at Q Kt 4th, Q at K Kt 4th, Kt s at Q 4th and 5th, P at K B 2nd, *Black:* K at K 4th, R at Q 2nd, B at Q 6th, P at K 4th.

White to play, and mate in three moves.

No. 886.—By Signor ASPA.

White: K at K Kt 7th, Q at K B 4th R at Q R 8th, Bs at Q Kt 4th and 7th, K s at K Kt 1st and 4 h, P at K B 6th.

White to play, and give mate in four moves.

THE WIVES OF SOLDIERS ON FOREIGN SERVICE.

(From our Military Correspondent.)

In the annals of English history the British nation has never demonstrated such enthusiastic approval of approaching warfare as at this present crisis. Applauding multitudes cheer the troops when marching to their points of embarkation, and accompany the battalions with excitement hitherto unparalleled. Of the truth of such unequivocal feeling no two opinions can be entertained. Apathy, which for years has stagnated efforts endeavouring to draw attention to the soldier's grievances, now holds promise of being supplanted by noble and generous sympathy. To dwell upon the past is futile. What has gone before us is irremediable. Happily, old standing indifference to the welfare of the army is in course of abrogation by open avowal of acknowledged neglect. In time of peace the soldier has hitherto been regarded as an incumbrance, and many cavilled at the "Estimates." Advocating reduction, without possessing a thorough knowledge on the subject, they would gladly have disembodied the whole force. But, to realise our supremacy, we must evidence power; for indifference as to means of protection when lulled into fancied security, will avail nought when the period for action arrives. That epoch is now present; and the consequence of procrastination in reforming errors becomes apparent. Wrongs entailed on the land service of the country's defenders have already been touched upon in the ILLUSTRATED LONDON NEWS; and other journals partially exposed the inefficacy of regulations possessing nothing beyond custom recommendatory of continuance. As though new circumstances had arisen, depreciating the justice of our military system, the case of soldiers' families bereft of their protectors has at length gained commiseration from the wealthy. Many of the highest and fairest in the land have voluntarily come forward in support of the indisputable claims of this long-abused class; and the movement thus given in a righteous cause redounds greatly to the honour of those who originated the measure.

Donations are daily solicited by advertisement for those whose husbands and parents sailed with their regiments for the East; but nothing is advanced in behalf of others belonging to soldiers employed in the Queen's service elsewhere. Tardy as the demonstration has been, it is nevertheless, gratifying to know the country is at length aroused to so pressing a call on humanity. But it should be borne in mind that the misery influencing present exertions in compassion for so numerous a portion of our fellow-creatures, does not originate from occasions of recent advent. On the contrary, misery, bereavement, and want have again and again been endured by women and children in precisely similar phases since the formation of our army. In this respect, the destination of the soldier matters little—whether to protect our colonial possessions, or to encounter a foreign foe, the inevitable consequences to those left behind are the same. At this moment regiments are under orders for India and Van Diemen's Land, and heart-rending scenes equalling those enacted very recently will occur on the departure of those corps. The honour to be gained on active service is naturally preferred by soldiers to a protracted sojourn in the tropics; but the amount of danger, as regards existence, may be nearly balanced. Were it optional, every British regiment would volunteer for the seat of war; but, as that cannot be, some must be necessitated to perform less popular duties.

The present expeditionary force may possibly be engaged for a short time only, whereas regiments destined for the Colonies never return under ten years; and, if in India, their absence exceeds that period. What an epidemic can accomplish in destroying human life was fearfully exemplified a few months since at Bermuda; and in 1841 the 92nd Highlanders lost fifty-two men, during four months, out of a detachment consisting of one hundred and seventy-eight; while, of nine officers then quartered in the garrison, five died in the island, or on passage home. This occurred at Dominica. The chances, therefore, of those at home again beholding their relatives, whether actually engaged in the field, or located in a pestilential climate, do not greatly preponderate on either side. But the hope of glory, that powerful incentive to action glowing in every soldier's breast, cannot find existence in a combat with tropical fevers, and utter annihilator of health.

Previous to the embarkation of troops on board the *Himalaya*, numbers of persons visited the steamer, anxious to witness the mode in which she was fitted up for the soldiers' reception. From these a small sum was demanded on admittance, which amounted to several pounds, and was bestowed on some local charity. Surely the donation would have been more appropriately applied if divided among the sorrowing women, who, standing on the quay, watched the departing vessel till she vanished in the distance, bearing away—perhaps for ever—those whom they held most dear.

In time of general excitement, when a nation becomes unanimous in a popular cause, appeal in behalf of women suffering by the occasion, finds ready sympathy in England. That a large sum will eventually be collected for soldiers' wives, is more than probable. But the intended benefit ought not to arise from private donations, but rather be accorded by Government at the nation's cost. A more deserving charity could not be patronised. Announcement of such a purpose being in progress of realisation would be cordially greeted by all parties. It has been urged that provision being made for wives debarred from accompanying their husbands on service, would hold out objectionable inducements for marrying. That soldiers, equally with others, contract imprudent alliances needs no argument, but that the prospect of their wives being probably left destitute acts as a preventative to such engagements is erroneous. In regiments where commanding officers refuse men leave to marry, the motive is generally frustrated by the soldier having the ceremony performed without the cognisance of his superior. A woman thus situated is denied the trifling advantages granted to others who entered wedlock with the colonel's approval. Nevertheless, she is wedded, and though the custom of the service may render her position somewhat more wretched than is the case with those living in barracks, her grief is in no degree assuaged by close companionship with penury and privation, when torn from her husband, who is compulsorily obliged to leave her homeless, and to starve. A fund might be granted, or other means devised, by which the well-conducted woman would find opportunity offered for obtaining an honest livelihood, and her children protected in the hour of need.

Many a soldier on foreign service would march with a lighter heart, and many a bitter pang of anguish would be spared, if something substantially permanent was effected by those in power, for accomplishing such an act of mercy.

GOLD ROBBERY.—The *Sydney*, while on her homeward passage from Melbourne, lost a box containing 1000 oz. of gold. It is supposed to have been abstracted from the hold at the Cape, where some boxes of gold had to be landed. The missing box was consigned to the London and Westminster Bank, and was valued at nearly £5000.

DR. BARTH'S ARRIVAL AT TIMBUKTU.—A letter from Mr. Augustus Petermann, of the Geographical Society, announces the arrival, at the celebrated city of Timbuktu, of Dr. Barth, whose expedition to Central Africa we have more than once had occasion to notice. The letters received from Dr. Barth are dated Timbuktu, Sept. 7, and Oct. 5. No letters had previously been received since March, 1852. He had the friendship of the Sheikh of Bakay, ruling chief of the city—a fortunate circumstance, considering the fanatical character of the people—and by his advice assumed to be a messenger from the Great Sultan of Sambool. He was, consequently, welcomed and saluted by the festive multitudes. The geographical position he has attained, we need scarcely add, is very important.

"Cry *Havock*, and let slip the Dogs of War."—Shakspeare.

DECLARATION OF WAR.

"LETTING SLIP THE DOGS OF WAR."

ODE TO THE EMPEROR NICHOLAS.

Shame on thee, Nicholas! History never
Showed lust of dominion more brutal than thine:
Thy deeds shall be black in her pages for ever,
And infamy follow thy name on her line.

Woe to thee, Nicholas! Murder and plunder
May guide thee to battle, but vengeance is near;
'Tis written in lightning, 'tis spoken in thunder,
And peals through the earth on the popular ear.

Shame on thee, Nicholas! Justice invoked thee;
Vain was her voice: thou wert deaf to her call.
Robbery armed, and Hypocrisy cloaked thee,
But Arrogance dug thee a pit for thy fall.

Woe to thee, Nicholas! Golden and splendid,
The head of the idol may gleam to the day;
We gaze, and it crumbles; its glories are ended;
The ground is unstable, its feet are of clay.

Shame on thee, Nicholas! Shame and perdition!
The curse of mankind on thy name shall be hurled,
To loose, for the sake of thy selfish ambition,
The bloodhounds of war on the innocent world.

Woe to thee, Nicholas! False and perfidious,
If sane—the detested! if mad—the abhorred!
Invoking to aid thee, with blasphemies hideous,
The name of Religion, the word of the Lord!—C. M.

WAR WITH RUSSIA.

Consequent upon the termination of amicable relations with the Czar, the most important message which Parliament has received from the Queen, or from her immediate predecessor, was brought down by her Majesty's Ministers on Monday evening, and an unusual number of persons were attracted in and around Westminster-hall and the approaches to the Houses of Parliament, by the interest and novelty

War with Russia.—The Lord Chancellor reading the Queen's message to the House of Lords.

THE BALTIC FLEET ENTERING WINGA SOUND.—DRAWN BY O. W. BRIERLY.—(See next page.)

of the event. The Lord Chancellor took his seat upon the woolsack at a few minutes before five o'clock, at which hour the Peeresses' Gallery was filled with ladies, and the space at the foot of the Throne, which it is the privilege of the sons of Peers to occupy, was also crowded. The space below the bar was crowded with members of the House of Commons and others having the privilege of the *entrée*. Among the Peers earliest in attendance were Lord Brougham, the Earl of Harrowby, Lord Beaumont, the Earl of Cardigan, the Earl of Ellenborough, and the Earl of Shaftesbury. The Earl of Aberdeen and the Earl of Clarendon entered the House together at five o'clock. The Premier was engaged in conversation with Lord Grey for a few minutes, and Lord Clarendon was similarly engaged with Lord Brougham. When the Ministers took their seats, there were present upon the Treasury bench —the Earl of Aberdeen, the Marquis of Lansdowne, the Earl of Clarendon, Earl Granville, the Duke of Newcastle, the Duke of Argyll, and Lord Stanley of Alderley. Upon the Opposition bench were the Earl of Derby, the Earl of Malmesbury, the Earl of Eglinton, the Earl of Lonsdale, the Marquis of Salisbury, and Lord Colchester. Several prelates—among whom were the Archbishop of Canterbury, the Bishop of London, the Bishop of Exeter, and the Bishop of St. Asaph—took their seats upon the Bishops' bench.

Several petitions having been previously presented, precisely at five minutes past five o'clock the Earl of ABERDEEN rose, and, amidst cries of "Order" advanced to the table, and laying a paper upon it, simply said, 'My Lords, a message from the Queen."

The Clerk immediately carried it to the Lord Chancellor; and

The LORD CHANCELLOR, rising, but not stepping to the side of the woolsack as when addressing their Lordships, proceeded to read in clear and emphatic tones, amidst the most perfect silence, the following message of her Gracious Majesty:—

"Victoria Regina. Her Majesty thinks it proper to acquaint the House of Lords, that the negotiations in which her Majesty, in concert with her allies, has for some time past been engaged with his Majesty the Emperor of All the Russias, have terminated; and her Majesty feels bound to afford active assistance to her ally, the Sultan, against unprovoked aggression. Her Majesty has given directions for laying before the House of Lords copies of such papers, in addition to those already communicated to Parliament, as will afford the fullest information with regard to the subjects of these negotiations. It is a consolation to her Majesty, to reflect that no endeavours have been wanting upon her part to preserve to her subjects the blessings of peace. Her Majesty's just expectations have been disappointed; and her Majesty relies with confidence upon the zeal and devotion of the House of Lords, and on the exertions of her brave and loyal subjects, to support her in her determination to employ the power and resources of the nation to protect the dominions of the Sultan against the encroachments of Russia."

The Address having been again read by the Clerk at the table, the Earl of Clarendon moved that the Address be taken into consideration on Friday.

ROYAL DECLARATION.

(From a Supplement to Tuesday night's *Gazette*.)

DECLARATION.

It is with deep regret that her Majesty announces the failure of her anxious and protracted endeavours to preserve for her people, and for Europe, the blessings of peace.

The unprovoked aggression of the Emperor of Russia against the Sublime Porte has been persisted in with such disregard of consequences, that, after the rejection by the Emperor of Russia of terms which the Emperor of Austria, the Emperor of the French, and the King of Prussia, as well as her Majesty, considered just and equitable, her Majesty is compelled by a sense of what is due to the honour of her crown, to the interests of her people, and to the independence of the states of Europe, to come forward in defence of an ally whose territory is invaded, and whose dignity and independence are assailed.

Her Majesty, in justification of the course she is about to pursue, refers to the transactions in which her Majesty has been engaged.

The Emperor of Russia had some cause of complaint against the Sultan with reference to the settlement, which his Highness had sanctioned, of the conflicting claims of the Greek and Latin Churches to a portion of the Holy Places of Jerusalem and its neighbourhood. To the complaint of the Emperor of Russia on this head justice was done; and her Majesty's Ambassador at Constantinople had the satisfaction of promoting an arrangement to which no exception was taken by the Russian Government.

But while the Russian Government repeatedly assured the Government of her Majesty that the mission of Prince Menschikoff to Constantinople was exclusively directed to the settlement of the question of the Holy Places at Jerusalem, Prince Menschikoff himself pressed upon the Porte other demands of a far more serious and important character, the nature of which he in the first instance endeavoured, as far as possible, to conceal from her Majesty's Ambassador. And these demands, thus studiously concealed, affected not only the privileges of the Greek Church at Jerusalem, but the position of many millions of Turkish subjects in their relations to their Sovereign the Sultan.

These demands were rejected by the spontaneous decision of the Sublime Porte.

Two assurances had been given to her Majesty—one that the mission of Prince Menchikoff only regarded the Holy Places; the other that the mission would be of a conciliatory character.

In both respects her Majesty's just expectations were disappointed.

Demands were made which, in the opinion of the Sultan, extended to the substitution of the Emperor of Russia's authority for his own over a large portion of his subjects, and those demands were enforced by a threat; and when her Majesty learned that, on announcing the termination of his mission, Prince Menschikoff declared that the refusal of his demands would impose upon the Imperial Government the necessity of seeking a guarantee by its own power, her

Majesty thought proper that her fleet should leave Malta, and, in co-operation with that of his Majesty the Emperor of the French, take up its station in the neighbourhood of the Dardanelles.

So long as the negotiation bore an amicable character, her Majesty refrained from any demonstration of force. But when, in addition to the assemblage of large military forces on the frontier of Turkey, the Ambassador of Russia intimated that serious consequences would ensue from the refusal of the Sultan to comply with unwarrantable demands, her Majesty deemed it right, in conjunction with the Emperor of the French, to give an unquestionable proof of her determination to support the sovereign rights of the Sultan.

The Russian Government has maintained that the determination of the Emperor to occupy the Principalities was taken in consequence of the advance of the fleets of England and France. But the menace of invasion of the Turkish territory was conveyed in Count Nesselrode's Note to Redschid Pacha, of the 9th (21st) May, and re-stated in his despatch to Baron Brunnow, of the 20th May (June 1), which announced the determination of the Emperor of Russia to order his troops to occupy the Principalities, if the Porte did not, within a week comply with the demands of Russia.

The despatch to her Majesty's Ambassador at Constantinople, authorising him, in certain specified contingencies, to send for the British fleet, was dated the 31st May; and the order sent direct from England to her Majesty's Admiral to proceed to the neighbourhood of the Dardanelles was dated the 2nd of June.

The determination to occupy the Principalities was, therefore, taken before the orders for the advance of the combined squadrons were given.

The Sultan's Minister was informed that, unless he signed within a week, and without the change of a word, the note proposed to the Porte by Prince Menschikoff, on the eve of his departure from Constantinople, the Principalities of Moldavia and Wallachia would be occupied by Russian troops. The Sultan could not accede to so insulting a demand; but, when the actual occupation of the Principalities took place, the Sultan did not, as he might have done in the exercise of his undoubted right, declare war, but addressed a protest to his allies.

Her Majesty, in conjunction with the Sovereigns of Austria, France and Prussia, has made various attempts to meet any just demands of the Emperor of Russia without affecting the dignity and independence of the Sultan; and, had it been the sole object of Russia to obtain security for the enjoyment by the Christian subjects of the Porte of their privileges and immunities, she would have found it in the offers that have been made by the Sultan; but, as that security was not offered in the shape of a special and separate stipulation with Russia, it was rejected. Twice has this offer been made by the Sultan, and recommended by the Four Powers—once by a Note, originally prepared at Vienna, and subsequently modified by the Porte; once by the proposal of bases of negotiation agreed upon at Constantinople on the 31st of December, and approved at Vienna on the 13th of January, as offering to the two parties the means of arriving at an understanding in a becoming and honourable manner.

It is thus manifest that a right for Russia to interfere in the ordinary relations of Turkish subjects to their Sovereign, and not the happiness of Christian communities in Turkey, was the object sought for by the Russian Government. To such a demand the Sultan would not submit; and his Highness, in self-defence, declared war upon Russia. But her Majesty, nevertheless, in conjunction with her allies, has not ceased her endeavours to restore peace between the contending parties.

The time has, however, now arrived when the advice and remonstrances of the Four Powers having proved wholly ineffectual, and the military preparations of Russia becoming daily more extended, it is but too obvious that the Emperor of Russia has entered upon a course of policy which, if unchecked, must lead to the destruction of the Ottoman Empire.

In this conjuncture her Majesty feels called upon by regard for an ally, the integrity and independence of whose empire have been recognised as essential to the peace of Europe, by the sympathies of her people with right against wrong—by a desire to avert from her dominions most injurious consequences—and to save Europe from the preponderance of a power which has violated the faith of treaties, and defies the opinion of the civilised world, to take up arms, in conjunction with the Emperor of the French, for the defence of the Sultan.

Her Majesty is persuaded that in so acting she will have the cordial support of her people; and that the pretext of zeal for the Christian religion will be used in vain to cover an aggression undertaken in disregard of its holy precepts, and of its pure and beneficent spirit.

Her Majesty humbly trusts that her efforts may be successful, and that, by the blessing of Providence, peace may be re-established on safe and solid foundations.

Westminster, March 28, 1854.

DECLARATION.

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, having been compelled to take up arms in support of an ally, is desirous of rendering the war as little onerous as possible to the Powers with whom she remains at peace.

To preserve the commerce of neutrals from all unnecessary obstruction, her Majesty is willing, for the present, to waive a part of the belligerent rights appertaining to her by the law of nations.

It is impossible for her Majesty to forego the exercise of her right of seizing articles contraband of war, and of preventing neutrals from bearing the enemy's despatches, and she must maintain the right of a belligerent to prevent neutrals from breaking any effective blockade which may be established with an adequate force against the enemy's forts, harbours, or coasts.

But her Majesty will waive the right of seizing enemy's property laden on board a neutral vessel, unless it be contraband of war.

It is not her Majesty's intention to claim the confiscation of neutral property, not being contraband of war, found on board enemy's ships; and her Majesty further declares, that, being anxious to lessen as much as possible the evils of war, and to restrict its operations to the regularly organised forces of the country, it is not her present intention to issue letters of marque for the commissioning of privateers.

Westminster, March 28, 1854.

BUSINESS IN THE COURT OF CHANCERY.—The Courts of Chancery, which rose for the Easter recess on Wednesday last, will not sit again before the first day of Easter term, which falls this year on the Wednesday in Easter week. Nearly all the causes set down for hearing in the respective courts are disposed of, and there will not remain in any one court, at the termination of this sitting, more than ten causes. Such a scarcity of business has not been known during the period of the year for a considerable time. An application has been made to the Lord Chancellor by the members of the bar, and also by the United Law Society, to induce his Lordship to consult the judges of the Court of Chancery throughout the vernal recess, at their residence, West minster Hall, Lincoln's-inn, or elsewhere, to frame any course most agreeable to the judges, and there can be no doubt as to the wishes of the profession upon this subject, and it is to be hoped that the arrangements of removing the courts to Westminster for six weeks in every year, and thus bringing the causes, and the counsel and solicitors engaged in them, more immediately under the eye of the judges, to the great detriment of their clients' interests, will at length be finally abolished.

THE HAY CONTRACTORS.—Messrs. Sturgeon and Sons, the hay contractors for the troops, forwarded a letter stating that they have presented petitions to both Houses of Parliament, praying for an immediate examination of the hay returned to them by the Victualling-office, and of the stacks from which they had pressed for the Government. They assert with the fullest confidence, that neither water, nor filth, nor any rubbish will be found in a single bale.

THE FLEET IN THE BALTIC.

(From our own Correspondent.)

St. Jean d'Acre, WINGA SOUND, 18th March.

In the accompanying Sketch part of the Fleet are seen steaming into Winga Sound, headed by Sir Charles Napier in the *Duke of Wellington*: part, which arrived here a day before him, are lying at anchor. I mentioned in my last, that before leaving the Downs, a signal from the Admiral had appointed this as a place of rendezvous for the Fleet, in case of accidentally parting company during our passage to the Baltic. The event has proved the wisdom of the precaution. On Monday evening, 13th inst., we weighed and stood out to sea. All the ships, with the exception of the paddle steamers, taking advantage of a favourable breeze, from the S.S.W., were under sail. But the impatience of the Admiral to arrive at the scene of his future operations, was soon evinced by a signal to get up steam. We proceeded in the same order as before, leaving the English coast: the in-shore squadron, under Admiral Plumridge, to windward; Sir Charles leading the starboard, and Admiral Chads the port line. Towards evening, however, a light wind from the northward rolled down upon us a dense mass of fog, which soon made the relative positions of the ships a mere matter of conjecture. Nothing could be seen save an occasional flash from the position guns of the Admiral, or the topgallant mast-heads of some tall ship towering above the vapour. During the night even these uncertain guides failed; and though we, from our position immediately astern of the flag-ship, were enabled to keep station with some degree of certainty, the remainder were not so fortunate. Morning came, and with it a strong wind, which swept away the fog, and revealed our straggling squadron. The recal signal, hoisted by the flag-ship, was promptly repeated and obeyed by those within sight. Mere specks in the far away horizon gradually increased into great ships, as they hastened to take up their positions; and by twelve o'clock all who had not hopelessly strayed were again in order of sailing.

The paddle squadron of Admiral Plumridge, and the *Princess Royal*, *Impérieuse*, *Amphion*, and *Royal George*, were not to be seen. This morning, on arriving, we found them all (excepting the *Royal George*, who has not yet turned up), anchoring at Winga.

The *Euryalus*, which started from Sheerness on the same day as we from the Downs, having been ordered to proceed with all speed, was here on Thursday. She is spoken of as a wonder of naval architecture, and though she has as yet had no opportunity to test her rate of sailing with any of the crack vessels of the fleet, no doubt is entertained that she will be at least one of the foremost. This makes the present strength of our squadron as follows:—

Duke of Wellington (flag)	Tribune
St. Jean d'Acre	Arrogant
Princess Royal	Impérieuse
Royal George (hourly expected)	Amphion
Cressy	Euryalus
Edinboro' (flag)	Leopard (flag)
Esmeheum	Valorous
Hogue	Dragon
Ajax	

I give you the gossip of the fleet for what it is worth, believing that all the sayings and doings of our naval armaments have an interest, at the present moment, for readers at home. On arriving this morning we heard that the Russians had declared war.* Rumour said that the *Dragon*, which was sent out to tow in some colliers laden with fuel for the fleet, had gone to bring back in triumph a little Russian merchant vessel, who, in the morning, had saucily refused to show her colours till the *Duke of Wellington*, who could have stowed her away on her booms amidships, pretended to chase: a proceeding which gave great amusement to the fleet, and produced the required display of bunting.

The Admiral takes his departure to-morrow, in the *Valorous*, for Copenhagen—for the purpose, it is believed, of conferring with the British Minister there. He will probably be absent four or five days, during which time Admiral Plumridge will take the command. Our vicinity to Gottenburg has afforded facilities for crowds of Swedish sight-seers to visit the fleet. Their little steamers, gaily decked out with national colours, have been cantering about all day, cheering each ship with almost as much enthusiasm as their brother excursionists of our English south coast. I need hardly say that the rigging is manned, and the ensign dipped on board all the ships at each fresh demonstration of Swedish kindly feeling. This enthusiasm for the English is, I am told, very general throughout the country; but I cannot speak from personal knowledge.

The bay in which we are lying is surrounded on three sides by low rocky coast. The land represented in the illustration is that which guards the west. The lighthouse is Buska Light. Winga Beacon is seen a little to the left.

The town of Gottenburg, distant some six or seven English miles, would be in the rear, and a little to the left of one looking in this direction. There are no houses but those belonging to the light keepers; and a more bleak, uninteresting spot could hardly be imagined: the weather during the last few days has been bitterly cold.

March 19. The *Royal George* arrived at half-past eight this morning. The Admiral left at eight, in the *Valorous* steamer for Copenhagen; the rest of the squadron remaining here.

* The report was afterwards traced to a German paper, which, also informed its readers that the English fleet had passed the Sound.

LITERATURE.

ALGERIA: the Topography and History, Political, Social, and Natural, of French Africa. By JOHN RAYMOND MORELL. Cooke.

Splendid settlements, kingdoms, and republics have flourished along the southern shores of the Mediterranean. When we think of them, the mind passes insensibly back through many ages, and still finds, even in the remotest part of history, that this land was connected conspicuously with the revolutions and vicissitudes of mighty nations, and with the more memorable destinies of mankind. As early as the days of the Hebrew patriarchs, it is probable that the Arab stock, which is like the twin of the Jewish race itself, began to people the sandy coast-lands of North Africa with warrior shepherds. From the days when the Egyptian yoke was fastened far and near, on the necks of the tribes around, what an immense intervening space the eye traverses until it reaches the age in which we live. After Egyptian domination Phœnician settlements—settlements still germinating others, and sending many a vagabond migration to colonise Spain, and even the distant valleys of Ireland. Then came Tyrian Carthage, to furnish one of the most exciting episodes in ancient history. Rome next rules from Mauritania to Egypt, but not with fixed or uncontested sway; and groups of minor dramas—in which figure Rome's ready ally, Massinissa; and Rome's still readier enemy, Jugurtha—are cast here into the main current of the historic plot. Then, with vast convulsions, and a crash which made the world tremble, down went the Western Empire; and the victorious Vandals passed onwards into Africa. For a time, by the sword of Belisarius, Constantinople revenged the overthrow of Rome. A new picture had also been unrolled. There land had been famous in war and policy. They were the seats of having become renowned during the first four or five centuries of Christianity, for the eloquence, the general genius, and the erudition of some men whose superiors no subsequent age has produced. Here arose the tyrant mind of Tertullian, like (to borrow from himself a comparison which he uses on another occasion, some ebon figure, at once dark and shining. Here flourished the great Bishop of Hippo, St. Augustin, whose tender and patient eloquence is united to so marvellous an amount of knowledge, and to so keen an edge of argument. Yet a short time, and the scene is materially changed into the early and fantastic brilliancy of Saracenic civilisation; armies in war, cities in peace, skilful in architecture, in medicine and in such matters in numerals, in divination. Charles V. and his Spaniard have here left their impress on these shores; which, passing under Turkish sway, and then bursting into the licentious and bloody independence of organised piracy, fell at last, in our own day, beneath the control of the French sword.

The war in which we are now engaged in union with France, sheds a strong additional interest around Algeria. When France goes to war in the east of Europe, Algerias her advanced right wing, by which she overlaps the enemy, and in which she possesses an outflanking post. But more important in the present struggle is the nature of the troops which France is despatching from Algeria. They are peculiarly fitted to take part in a conflict conducted on one side in a semi-Oriental fashion, and on the other according to the principles of regular warfare; for they are eminently experienced and skilful in both. For the last twenty years the French in Algeria have been inured to the climate of Africa, and the Arabs to the discipline and the arms of the French. In the late war between the Turks and the Russians, the Russians were easily victorious, because the Turks were not yet imbued with the European arts, nor furnished with the European appliances, of conflict. Twenty-five years have removed the old generation, and partially introduced the new tactics; and what a difference between the resistance Turkey then offered, and that which she makes now! But far more formidable than any Turkish force, even under improved organisation, is the naked army which France is sending from Algeria. With the entire control and formation of the Arabian recruits, France has made them passionable soldiers, not devoid of one quality expected in regular troops, and adding to that character a peculiar value of their own. With these are joined their conquerors and masters; but not, when the Arabs are officered by the latter, their superiors.

In Mr. Morell's volume a full account is given of Algeria; and when we say full, we mean not only that the present state of this new French Regency is described, and that a brief history is supplied of the events which have brought matters to their actual condition, but a succinct and very agreeable survey is presented of the vicissitudes of the past in those remarkable lands, from the most distant antiquity. More than this; the physical attributes of that region—geographical, atmospheric, pastoral, agricultural—are all noticed with clearness. In fact, a very great quantity of practical information is to be got from these pages. We must add that Mr. Morell appears to us to have both selected judiciously, and examined carefully the authorities on which he founds his statements.

The remaining division is history, physiology, manners and customs, stories, remarks, and social and religious state. In this part there is an immensity of curious matter, collected from modern authorities. Mr. Morell, who is well read, increases the interest, here and there, by noticing some remarkable coincidences and approximations between the ancient and the actual state and circumstances of that region. It is exceedingly droll, but a fact, that the Kabyles, who have dwelt in the same grim and adust solitudes ever since the time of Regulus, *think that the French are the Romans come again*; and that they actually speak of enlisting in the Zouaves, as of taking service with the Legions. How profound and indelible the impression everywhere left by those wonderful conquerors, those old masters of the world! Time cannot efface the prints of their mighty footsteps.

Two very suggestive chapters on colonisation and government bring us to that in which the French army of Africa is analysed. We may really dispense with any observations respecting the importance and interest of such an inquiry. The annals of Barbary follow, from before Dido till after Abd-el-kader.

In an appendix are treated some subjects of collateral bearing—the antiquities, language, commerce, geology, &c., of this great French acquisition; once the granary of Rome, and, perhaps, destined yet again to become a flourishing emporium.

APRIL FOOL.

(*See Illustration* page 308.)

Very aptly, happy painter,
Hast thou chosen thy school's time
For thy subject: nothing quainter
Might befit our April's prime.

For now the early year is green,
And hence appropriate art's applaunce,
That April fooleries should be seen
In youth and folly's green alliance.

And to thy lively picture turning,
April tricks are there portray'd,
With mingled mirth and anger burning,
As the various parts are play'd.

There (some wag the spooney tasking
On a fruitless quest to rove),
The fool for "oil of strap" is asking
From that irate cobbler cove.

He's a cobbler won't stand chaffing—
"What d' you say, you saucy chap?
Your mouth o' th' wrong side will be laughing
When you get *my* oil of strap."

Mark the tricksters three, provoking
That proud youth of taste refin'd,
By their low-bred April joking,
To cast a lofty look behind.

"Don't you see the lady's garter
As she dropt?" one urchin cries—
Behold the indignant fair one dart her
Lovely anger from her eyes.

But why should April laugh and jeer
For *backward* looks be kept in store
When every day throughout the year
Expectant Folly looks *before?*

Of varied life, through every phase
The fools of Hope run madly on,
Deluded by a happy haze:
Each mother thinks her goose a swan.

And "I must catch some golden heiress,"
Cackles young goose before his glass;
Miss Gosling cries, "I'll be a Peeress—
Less likely things have come to pass."

"And I will be a millionaire!"
Exclaims some headlong speculator.
"The sinking state I will repair!"
Stutters some would-be legislator.

And M.P.s hope for power and pay,
And lawyers for judicial ermine,
And curates, in *their* humble way,
Of mitres dream through sleepy sermon.

How end such dreams the world can tell,
And yet the world is not the wiser:
And here, in mocking mood, how well
Our painter plays the moralizer.

For see (with satire's keen assistance),
As emblem of defeated will,
He paints a donkey in the distance,
Up in a bleak and barren hill.

In dreams of thistles fondly straying,
Poor Neddy wanders round in vain;
And, while for sunshine loudly braying,
Only brings down a shower of rain.—SAMUEL LOVER.

NEW MUSIC, &c.

MR. HENRY LESLIE'S VOCAL and PIANOFORTE COMPOSITIONS are published by JULLIEN and CO., 214, Regent-street.

NEW SONG—NORAH SPINNING. Composed by FRANK MORI. Price 2s.; post free 24 stamps.
This eminently successful song, being of a decidedly Irish character, may be sung by either male or female voices. It has already been introduced by Miss Messent, Miss Thirlwall, Mr. Sims Reeves, &c., when it has been universally encored.
London: DUFF and HODGSON, 65, Oxford-street.

GOOD BYE, SWEET HEART, GOOD BYE. Sung by Mr. Sims Reeves and Sig. or Mario. Composed by J. L. HATTON. SAY, MY HEART, CAN THERE BE LOVE Composed by W. VINCENT WALLACE. Price of each, 2s. A. 6d. Newly published. SILAS'S confession song, OH WOULD I WERE TON SILVER MOONBEAM. Sung by Madame Castellan. Price 2s. London. CRAMER, BEALE, and CO.

GOD DEFEND the RIGHT! Words and Music by GEORGE LINLEY. Dedicated to Admiral Sir Charles Napier. Price 2s. Sent post free.
London: JOHN SHEPHERD, 98, Newgate-street.

THE HYMN of PEACE.—Composed by W. HUTCHINS CALLCOTT. Price 1s. 6d.; postage free. By the same Composer, a re-edition of "The Last Man," and "Nearer to Thee, my God." LEADER and COCKS, 63, New Bond-street.

WAR-SONG, from "BALDER."—The BRITISH LANZE, 40 guns, Fighting the MENSCHIKOFF, 74. The stirring words the Percy Janet Duncan, and the Monachiff. The Words from the celebrated poem "Balder," the Music by Dr. Paul. Price 2s. 6d.; post free, 30 stamps. CRAMER and Co.'s, Conduit-street, Regent-street; and, 67, Paternoster-row.

KITTA KATTA KYNO (Third Edition.), now sing up night by by Vocals, in "Once Upon a Time," 2s.; Little Harry Hall (Comic), 2s.; Tom Tit's Hunt, laughing song, 2s. Post free 24 stamps each.
"The most comic songs written these twenty years."—Observer.
CRAMER, BEALE, and CO., Regent-street, and 67, Paternoster-row.

NEARER to THEE.—The Third Edition of the Irish HYMN composed by W. H. CALLCOTT, is now ready, price 1s. Its simple words and melody admirably harmonise with the subject. Review.—"Exquisitely beautiful." Review ULLIVIER, 19, Old Bond-street; Cramer, Beale, and Co., 201, Regent-street (and at Brighton).
Nearly ready, PEACE: a Sacred Song. By the same Composer.

VILKINS and his DINAH, with all the Words to Music, price 2s.; post free 2s. 6d. Also of the MUSICAL BOUQUET, with Portrait of Mr. Robson as "Jem Bags." Also, the VILKINS and DINAH POLKA, portraying "Vilkins' Dream upon the discovery of the Old Corpse, and introducing Giles Scroggins, Dinah, Old Bill, and Sally Tayler. Dinah's encore. Price 2s.; post free, 2s. Catalogues of the MUSICAL BOUQUET Gratis. "The contents of the 'Musical Bouquet' come up from the stage to the 'Parlour Library' of music, and enjoy much the vast circulation they find."—Illustrated London Journal, Jan. 21, 1854.
"Musical Bouquet" office, 104, High Holborn, and 20, Warwick-lane, Paternoster-row.

HENRY RUSSELL'S COPYRIGHT SONGS CAUTION to the TRADE.—The only Cheap Edition of Mr. Henry Russell's Copyright Songs is that now Long Copies have been, and Mighty Niagara, priced 6d. each, to the West, to the West; the Parting Heart, and Land, Land, Land, &c. The three 24th Editions, published in the Musical Bouquet, at 2s. 6d. each, are published in the MUSICAL BOUQUET, at the Office, 198, High Holborn. At present [illegible] the Proprietor of the "Musical Bouquet" is alone entitled to publish cheap editions of the above songs, all others being illegal. (Signed) HENRY RUSSELL."

A PIANOFORTE, a handsome Rosewood Cabinet 6½ octaves, for sale, and in excellent condition. The proprietor is only going abroad. Price £20. To be seen at Cornish's Inn, 19 Bailey

PIANOFORTES for INDIA and the COLONIES.—D'ALMAINE and CO.'S ROYAL PIANOFORTES, prepared expressly to resist the effects of extreme climate, in Mahogany or rosewood, securely packed in tinned cases, and delivered at the Docks, at 20 Guineas each.—D'Almaine and Co., 20, Soho-square. Established 1795.

D'ALMAINE and CO.'S PIANOFORTES, for India, Australia, and the Colonies.—The ROYAL PIANOFORTE combines a full rich tone, with every modern improvement, prepared expressly to set at the effects of extreme climate, in Mahogany or

"THE FIRST OF APRIL.—ALL FOOLS' DAY."—(SEE PAGE 306.)

PARIS FASHIONS FOR APRIL.

For some time past we have reported specially of ball dresses; but at length their variety is exhausted. They will be succeeded by costumes for morning visits, and anticipations of Longchamps, of which, however, little is known at present. Moreover, the recent cold weather has caused the disappearance of some early spring dresses, which had been brought out by the fine sunny days of the commencement of the month. At the last fête—a concert, given at the Tuileries, in honour of the Prince of Saxe-Coburg—the Empress wore a dress of blue and pink. The petticoat was of watered silk, old style, sky blue, lined with stiff muslin, which gave the dress an extraordinary amplitude. Around it were two wreaths of pale pink flowers—one at the height of the knee, the other quite at the bottom. The body was exceedingly low; and the sleeves, which were very shallow, were ornamented with flowers, similar to those of the petticoat, mixed with turquoises, stones, and topazes; headdress to correspond. The other dresses presented no features of novelty. Another grand concert, about to be given in the Champs Elysées, will certainly bring out some new costumes for the season. The shops begin to display some novelties, but in limited numbers.

PARIS FASHIONS FOR APRIL.

Taffetas silk is preferred: when plain, it is worn with four volants edged, to correspond with the body, sleeves, and basques. Figured taffetas are extremely varied. Many have a black ground, and volants, with wreaths of flowers of lively colours, or in small bunches, which increase in size towards the bottom of the volant; also, small patterns, which remind one of the Greek classic style. Those worn without volants are either plaid patterns, large squares of cherry colour, blue, and green, or violet, on black ground, or with large wide bands alternately. Other taffetas for the approaching warmer season are of extremely small squares, which pattern, when seen from a short distance,

PARIS FASHIONS FOR APRIL.

appear like a plain stuff: these taffetas are intended principally for young ladies.

A charming article of morning dress is a peignoir, or fancy dressing-gown of white jaconet, having a collar of pointed lace (*engrêlure*), trimmed with Valenciennes; the turned-back parts of the sleeves are ornamented in the same manner, and besides, a band of pointed lace starting from the top, and growing larger as it reaches the bottom. This trimming is lined with Florence pink, or sky-blue colour; and the ribbon which confines the waist is of the same colour.

Mantelets will be of taffetas, grenadine, or plain muslin, or *à ramages*. The variety will be infinite, as the pelisse mantelet; the fichu mantelet, round or pointed behind, volants, of the same stuff, or of lace, will be the indispensable trimmings; and every wearer will be able to choose according to her taste and her figure. It is hard to foretell which of these forms of mantelet will be the most popular.

Bonnets are of the same form as hitherto: equally small, and thrown towards the back of the head; nearly all trimmed with blonde at the edge of the poke, or even with a half voilette in white blonde. Flowers begin to supersede feathers and other ornaments; jet and small strung pearls or beads are mixed with flowers and light tulle, as a trimming for the inside of bonnets near the face.

In gentlemen's dress there is little change. A few more coats of blue or bronze colour, with gilt buttons, have been seen, but only at the theatres: the sleeves are large, but without separate wrist pieces. The materials for trousers are grey and bronze; and the few plaid patterns which are seen are not showy.

THE ILLUSTRATED LONDON NEWS

No. 677.—VOL. XXIV.] SATURDAY, APRIL 8, 1854. [WITH A SUPPLEMENT, SIXPENCE.

Newspaper Stamps.

THE return of the number of Newspaper Stamps at one penny issued to Newspapers in the United Kingdom in 1851, 1852, and 1853, has been laid before the House of Commons. It appears, from the return, that in the year

1853,

The *Times* (published every day) consumed Stamps to the number of	13,909,670
Average circulation	41,244
The ILLUSTRATED LONDON NEWS (published every Saturday) consumed Stamps to the number of	4,116,598
AVERAGE CIRCULATION	**79,165**

It results from the foregoing figures that, during the year 1853, the ILLUSTRATED LONDON NEWS had nearly double the circulation of the *Times*. It is not necessary for us to publish the details of the circulation of all our contemporaries, daily and weekly, or we could show, by the statements of this parliamentary document, that our Journal has a circulation ten times that of any daily paper, the *Times* excepted, and far beyond any weekly paper published at sixpence.

1851.

Although our regular circulation, in 1851 (*the year of the Great Exhibition*), was less than it is at present, the number of Samps taken, including Stamps upon Supplements—abolished by Mr. Gladstone's Budget in 1853—amounted to 7,574,214.

1852.

In 1852 (*the year of the Death and Funeral of the Duke of Wellington*) the Stamps, including Stamps on Supplements, consumed by the ILLUSTRATED LONDON NEWS amounted to 5,649,905.

1854.

During the Present Year, the circulation of the ILLUSTRATED LONDON NEWS has far exceeded that of all previous years. We may add that it is increasing every week, in consequence of the great public interest excited by the War, and that it now amounts to

UPWARDS OF **100,000** WEEKLY!

Office, 198, Strand, April 6, 1854.

THE CONDUCT OF THE WAR.

THE public mind has lately begun to show symptoms of impatience as to the progress and conduct of the war. Such anxiety was abundantly justified. When it was found that the Black Sea fleet, under the command of Admirals Dundas and Hamelin, was stationed as quietly in Beicos Bay, as if there were no such place as Sebastopol in the world, no such sea as the Euxine, and no such enemies to meet and punish as the Russians, it was natural that some degree of anxiety should be felt. When it was further announced in the public journals, that the Russians, knowing they had the Black Sea to themselves, had succeeded in transporting no less than 4000 men from the Crimea to the outlets of the Danube; and that the Russian army, under the command of Prince Gortschakoff and General Luders, had passed into Bulgaria, and laid siege to and taken three Turkish fortresses, anxiety deepened into alarm, while alarm, in its turn, gave way to a feeling that somewhat resembled indignation. That feeling has happily subsided. Admirals Dundas and Hamelin, after their lengthened and unaccountable delays in Beicos Bay, steered for the roadstead of Varna on the 24th ult. As it is reported that not a ship of war is left in Sebastopol, and that the Russians meditate a naval as well as a military attack upon Varna, it is probable that we shall soon hear of a serious conflict in that quarter. The people of England are satisfied to learn that the period for inactivity has at length passed. They have their hearts in this business. They feel to the full extent all the responsibilities which they have undertaken. They know that the war is a great war; and are determined that it shall be conducted with the energy and courage that befit a struggle on which the peace, civilisation, and happiness of Europe may depend for ages yet to come. They have made up their minds to tolerate no delays that shall not be clearly proved to be inevitable. They hear with disfavor of half-measures. They have but one desire, which is to conquer a lasting peace, and to restrain, if they do not punish, the Imperial madman, who has so wantonly set the world in a blaze of discord. They expect acts of decision, and encourage the hope that British commanders will rival the deeds of the departed heroes whose names shed lustre upon our national history. Although they may have a strong opinion that, in the earlier stages of the transactions which have unfortunately led to this rupture, the British Government did not display an energy commensurate with the occasion, they are content to "let bygones be bygones," provided that the war—now that we have fairly entered into it—be conducted in all its details with a strength, a promptitude, and single-mindedness worthy of the mighty interests that are at stake. They do not sympathise with the carping politicians of the Opposition benches in Parliament, who forget the needs of the present in their ill-natured reminiscences of the past. On the contrary, they look upon that man as a public enemy who endeavours to weaken the hands of the Executive by idle criminations. Parliament has in reality no further control over the progress of the war. Its sole duty is to strengthen the Government by all possible means, unless it have no confidence in the Government, and have it in its power to substitute another. But the most vehement member of the Opposition has no such design or hope. If any other Government were possible it would not be desirable at a crisis like the present. We, therefore, hope that with the debates on the Address in answer to her Majesty's Message, we have heard the last of the retrospective criticisms of the Opposition, and that the efforts of men of all parties will be strenuously directed to the one great object for which the nation is willing to put forth all its strength and to expend all its resources. The Earl of Derby, Lord Grey, and Mr. Layard, having disburthened their consciences, will, perhaps, be silent for the future if they have nothing better or more novel to excite their eloquence than the abortive conferences and negotiations of 1853, and the many diplomacy of Blue-books that have already become antiquated. It will be too much to expect that Mr. Disraeli should remain silent. A statesman, who seems to consider it his function to amuse the House of Commons, and to "make barren spectators laugh," though he "make the judicious grieve," is not to be restrained by the motives which influence other men. The public may, therefore, make up its mind to be amused, if it be not edified, by the sarcasms of this brilliant debater, but unavailable and unstable politician.

It is scarcely worth while for the public journalist to call public

PROCESSION OF THE HOUSES OF LORDS AND COMMONS, WITH THE ADDRESS TO HER MAJESTY.—(SEE NEXT PAGE.)

attention to such speeches as that which was delivered by Mr. Bright in the debate on the Address to her Majesty. If Mr. Bright have no monopoly of the opinions which he expressed, he shares them with so few people beyond the limits of his own little sect, that he may be fairly said to represent an infinitesimal minority of the English people. In this free country every man is at liberty to be eccentric. Mr. Bright has the additional privilege of belonging to a sect whose members like to differ, not only in doctrine, but in dress and modes of speech, from other people. His sentiments will surprise nobody; and the eloquent and earnest manner in which he promulgates them will gain him admirers, though it may fail to procure him adherents. It is a happy thing, however, for this nation that such opinions are not common. If they had been, England would long ago have ceased to be a free country. It would have been overrun and conquered, and those who agree with Mr. Bright, if they had not been exterminated altogether by invading Russians or other enemies, would have been reduced to the extremity of becoming citizens of Pennsylvania, and of leaving the comfortable pastures of England, where they had thriven and grown comfortable. The Commerce of England might find reason to regret that Pennsylvania should rob us of such estimable and well-to-do people as the members of the Society of Friends; but Patriotism would have no reason to deplore the emigration of a body of men who consider offensive and defensive war to be alike unjustifiable, and who condemn even more fiercely resistance to oppression and wrong than the wrong and the oppression which make resistance a duty and a necessity.

But more interest attaches at present to the conduct of the Austrian and Prussian Cabinets than to any proceedings in the British Parliament, however important. Neither of these Powers has yet declared itself, although considerable pressure is exerted upon each by its own subjects to induce it to take the course which honour and prudence alike dictate. The sympathies of the German people are with France and England; and the dynastic interests of King and Emperor must give way to the superior considerations of national safety. While the King of Prussia hesitates and runs his head against a tree, the Committee of the Chamber, to which the demand of the Government for a loan of thirty millions of dollars had been referred, only grants the money because it believes "that the King's Government intends to persevere, for the future, in the course of policy followed up to this time, in conjunction with the Cabinets of Vienna, Paris, and London; but more especially with Austria and the German States; namely to labour for the restoration of peace on the basis of right, as it has been laid down in the protocols of Vienna, and reserving to itself the power of deciding in favour of an active intervention." This is a sufficiently broad and intelligible hint of the wishes of the Prussian people; a state of things for which the world is, no doubt, to some extent indebted to the publication of the "Secret and Confidential Correspondence." The exposure has fairly opened the eyes of the German people, both in Prussia and in Austria, and has greatly increased the traditional animosity which the Germans bear against the Russians. In Austria the effect has been even more powerful than in Prussia. The Czar only treated the Prussians with contempt; but towards Austria he exhibited perfidy of a kind which the young Emperor is likely to feel as acutely, and resent as strongly as his people. The progress of hostilities in Bulgaria and the advance of the Russians by their ancient route through the pestilential marshes of the Dobrudja towards Varna must expedite the decision of Austria; and when Austria takes her course, Prussia must follow. In the meantime it appears that the Czar has declared his willingness, if the Allies can obtain from the Porte guarantees for the immunities of its Christian subjects, to withdraw his troops from the Turkish territory on condition that the Allied Fleets are simultaneously withdrawn from the Black Sea. If this rumour be correct, the conduct of the Czar can only proceed from fear or from cunning. If it be dictated by fear, the Allies know what course to adopt; and they will subject him to much severer pressure of the same wholesome feeling before they condescend to make terms with him. If his proposal proceed from cunning, they know equally well what course to pursue.

THE WAR.—PRESENTATION OF THE ADDRESSES TO HER MAJESTY.

MONDAY being the day appointed for the presentation to her Majesty of the Addresses agreed to by the Houses of Lords and Commons, a large crowd collected in and about Palace-yard to see the anticipated pageantry. At about two o'clock, the names of the Peers having previously been called over, the Lord Chancellor took his departure from the principal entrance of the House of Lords. His Lordship was attired in his State robes of office, and headed the cortége from the House of Peers in a handsome state carriage. The junior Peers followed in their order immediately after the Chancellor. Nearly all their Lordships were clothed either in Windsor or in Militia uniforms, or in their military uniforms as Lords-Lieutenants of counties; consequently under this disguise but few were recognised by the crowds in waiting. Lord Aberdeen, Lord Derby, Lord Clarendon, and a few of the leading and better-known members of the Upper House, were pointed out and warmly cheered.

While the Lords were still moving slowly away from Palace-yard up Parliament-street, the members of the House of Commons commenced taking their departure, the richly painted and carved and gilded state carriage of the Speaker leading the way. Lord J. Russell, Sir C. Wood, Mr. Cardwell, Mr. Strutt, Mr. Frederick Peel, and other members of the Government wore the Ministerial uniforms; as did also Mr. Disraeli, Mr. Baukes, Sir John Pakington, and the leaders of the Opposition. Lord John Russell was instantly recognised, and warmly cheered; Mr. Disraeli also was very loudly cheered. Some of the members wore Court suits, and a great many wore their uniforms either as officers of militia or as Deputy-Lieutenants of counties. The procession proceeded up Parliament-street, through the Horse Guards, into the Mall. Round the entrance to Buckingham Palace a large crowd had collected; and Lord J. Russell, Mr. Disraeli, and a few other leading members, were loudly cheered as before.

PORTRAIT OF SIR CHARLES NAPIER.—Mr. M'Lean has just published a very spirited full-length portrait of Admiral Sir Charles Napier, by J. M. Joy, the engraving by W. Carlos. The gallant Admiral is represented in a spirited attitude, advancing to the assault of St. Jean d'Acre, his word in one hand, the other pointing to the attack, as leading forward the assaulting party. The portrait is very like, and the expression admirable for its manly and intelligent character. The pictorial effect of light and shade is skilfully managed, and the whole may be pronounced a very interesting and successful performance.

CORPORATION ENACTMENTS.—In the town books of the corporation of Youghal, county of Cork, among other singular enactments of that body, are two which will now be regarded as curiosities. In the years 1688 and 1703, a cook and a barber received their freedom, on condition that they would respectively dress the mayor's feasts, and shave the corporation gratis.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The fêtes of the Mi-Carême have terminated; the *salons* are closed for dancing, and the season of concerts has set in with its usual vigour. All the diplomacy, all the address, all the boldness of the one portion of the world of society, and the world of art in the musical branch is brought into play to place concert-tickets: all the *ruses*, all the tactics, all the ingenuity of the other, to avoid taking them. Enter a drawing-room, and the mistress of the house, with a mixture of amiability and assurance, tells you she has put down your name for five tickets, at five francs a-piece, for the Matinée Musicale of her infant *protégée*, who, at four years old, plays the harp with her hands and the piano with her feet; she also confides to you twenty more to place before twelve o'clock to-morrow—*et ainsi de suite*.

In the meanwhile commerce languishes deplorably. It is to be hoped that the spring season will give some impulse in this respect, but it is a positive fact that during the whole of the winter, many of the great *magasins* of the capital, have kept but one-half of their usual number of assistants.

The title to be borne by the new institution of the Palace Guards—which were at one time to be called the Guards of the Emperor, at another, of the Empress—is finally decided on as the *Cent-Gardes*. The uniform of this body was first inaugurated at the *bal costumé* by the Emperor himself.

The health of the Empress, though not in a state to excite any actual alarm, continues delicate. By the advice of her medical attendant, she takes sea-baths, the water for which is brought every day by rail from Dieppe, and the effect appears to be salutary. Visiting, a short time since, in company with the Emperor, one of the public charitable institutions, her Majesty, struck by the beauty of a child which a woman of the lower class was holding by the hand as the Imperial visitors were quitting the establishment, stooped and kissed it. In an instant the Empress was beset by some dozen of "anxious mothers," each presenting one of her offspring, many of which were in a state which rendered the process of ablution a highly desirable preliminary. The Empress however, nothing daunted by a demonstration of loyalty more flattering than agreeable, and which she, doubtless, considered would have been more honoured in the breach than in the observance, distributed kisses with due impartiality among the infant candidates, amid reiterated cries of "Vive l'Impératrice!" and earnestly-expressed wishes to the effect that her Majesty might soon have home claims for similar favours.

The theatrical *Censure*, which has lately been somewhat strict on the subject of hostile allusions to Russia, is now, at the point to which affairs have come, relaxing its surveillance, and allowing the expression of the public feeling to find its way through this channel. At the first repetition in costume of the new piece, "Constantinople," which is shortly to appear at the Cirque Napoléon, an incident expressive of this feeling, and amusingly characteristic of French impetuosity, occurred. At the moment when the party representing the Russian troops were about to pass the Danube, those playing the parts of the French soldiers attacked them so vigorously as not merely to drive the enemy back, as the programme of the piece required, but to repulse them with such roughness as to require the interference of the director, who was obliged to place himself between the combatants and insist upon their moderating their warlike ardeur.

The officers of the garrison of Paris have appointed a commission for the organisation of a fête to be offered to the English *état-major*. The progress of events rendering a greater activity of measures necessary, the departure of the Maréchal St. Arnaud, which had again been deferred till the end of the month, is now stated as certain to take place by the 10th. An appeal made by the Minister of War to such soldiers of infantry as have ever served in the cavalry, or who have any knowledge of horsemanship, has collected a considerable body of recruits to the latter service, and a number of youths of the Jura, between sixteen and eighteen, have applied for means of conveyance to Toulon or Brest, in order to enter the navy.

The only party in France which still keeps aloof from the interest of the day, and views with the old feelings of national jealousy and prejudice, the alliance of England, is that of the Legitimists. Certain members of the party in question express aloud their regret that, as there must be war, the arms of France are not turned against England, instead of combating by her side! So much for the patriotism and common sense of the partisans of M. le Comte de Chambord!

The works of embellishment in the Bois de Boulogne are being carried on with undiminished activity, and are already giving a new aspect to that beautiful resort. Two lakes of very considerable extent—the one divided by a large island, wooded, and intersected by charming walks and both decorated with rock-work—are now completely excavated, and, only await the supply of water, which is to be brought by force-pumps from the Seine. Other improvements, in the way of planting and clearing, are also in progress; and such openings have been made as to afford, from an artificial mound at the head of the upper piece of water, a most extensive and beautiful view.

The theatres have nothing new of much interest. The Variétés has a piece entitled "L'Argent du Diable," which has a good deal of originality, and a reasonable share of success. The Vaudeville has produced a play called "La Vie en Rose," the distribution of the *rôles* of which has contributed somewhat to the amusement, if not to the edification, of the public, by causing a paper war in the daily press between Madame Page and Madame Doche, not on any question of art or general interest, but on the relative claims of the rival actresses to youth and inexperience—the latter point especially, each violently rejecting for herself, and indignantly casting on her antagonist the accusation of *experience*.

The Empress, in order to encourage the lace trade, has ordered the different manufactories to prepare designs for the dresses, the one in *point d'Angleterre*, the other in *Chantilly*, to be examined by a jury, and those selected to be executed for the Exposition d'Industrie.

After the solemnities of Easter, the Archbishop of Paris intends to proceed to Rome, where, it is said, he purposes to remain some months.

On Sunday took place the second steeplechase at La Marche, which was, owing to the continued fineness of the weather, as brilliantly attended as the first.

The unfortunate Lieut. Bellot, whose melancholy death in the Arctic Expedition excited no less interest in England than in France, has left a most interesting journal, which has been set in order by his family, and is about to be published, with a portrait, and short biographical notice, by M. Julien Lemur.

THE ENGLISH CAVALRY IN FRANCE.

The *Constitutionnel* of Sunday says the English cavalry will not arrive in Paris for ten days; that they will, on their arrival, be lodged in the banlieue, until complete, and then enter Paris and be reviewed by the Emperor. The officers of the garrison of Paris are, it adds, getting up a banquet to be offered to the English officers. Saturday being the 1st of April, some wags played off a trick which took an immense number of persons to the station of the Northern railroad. They sent round circulars with a printed head, as if coming from the railroad company, inviting the persons to whom they were addressed to come in the evening to witness the arrival of the first squadrons of the English dragoons. This was not all. When the crowd had assembled, the same wags spread a rumour that the line of route had been changed, and that the English would arrive by the Rouen line. A few persons suspected the hoax, and went home; but the majority went off to the station of the Rouen line.

DEPARTURE OF FRENCH TROOPS FOR TURKEY.

An official article in the *Moniteur* states that the Emperor having ordered the departure of a *corps d'armée* to the Levant, a first convoy of ships of the line, steam frigates and steam corvettes, has already put out to sea. The first convoy consisted of the following vessels—The *Alger*, the *Montebello*, the *Ville de Marseille*, and the *Jean-Bart*, 5400 men. The *Asmodée*, the *Ulloa*, the *Labrador*, the *Coligny*, the *Météore*, and the *Gorgon*, 3450 men and 225 horses. The *Mouette*, the *Eclaireur*, the *Lapiace*, and *Infernal*, 1495 men and 40 horses. The *Caffarelli*, the *Véloce*, and the *Brandon*, 1130 men and 20 horses. The *Napoléon* and the *Steffren*, 3040 men. The *Montézuma*, the *Panama*, the *Albatros*, the *Canada*, and the *Titan*, 4563 men and 80 horses. This total, with the contingent of the *Christophe-Colomb*, amounts to 20,078 men and 365 horses. Each day a part of the 200 commercial vessels chartered at Marseilles are setting sail, carrying out the cavalry, artillery, ammunition, stores, articles of encampment, &c.

ANOTHER OFFER FROM THE CZAR.

Prince George of Mecklenburg-Strelitz arrived in Berlin on Saturday, the bearer of a letter from the Emperor of Russia to the King of Prussia, in answer to the mission of General Lindheim. Its tenor is as follows:—"When the Western Powers succeed in securing the emancipation of the Christians in Turkey by treaty, the Czar will be willing to evacuate the Principalities simultaneously with the evacuation of the Euxine by the combined fleets."

THE GERMAN POLICY.

Most of the letters from Vienna speak of the Austrian Government having adopted a policy more favourable to the Western Powers; and some of them state that General Hess has succeeded at Berlin in inducing the Prussian Government to incline less towards Russia. Many facts are mentioned, however, which are of a nature to create doubts. The Austrian Government is making great military demonstrations, and has even, it is said, caused a bridge to be thrown over the Danube near Belgrade; but so long as Austria is not bound by a direct treaty with France and England, there is no guarantee that this preparation for war may not, if Russia should have any successes, be turned to her advantage. Several Austrian Generals, who have been summoned from the provinces, have arrived at Vienna to assist in a military council, and among them are the celebrated Baron Jellachich, from Hungary, and Count Giulai, from Lombardy. This may either be with a view to operations annoying to Russia, or a precaution against revolutionary movements in the event of the Austrian Government persisting in a neutrality which should excite distrust on the part of the Western Powers. We shall know nothing positive until we see the long-talked of Manifesto, and even that may be so drawn up as merely to form ground for conjecture as to the real intentions of Austria. The *Independance* of Brussels stated that the Manifesto had reached Paris, but this was not correct. Up to the 30th ult. it had not been published at Vienna. The *Cologne Gazette* mentions a circumstance which is very far from showing a disposition on the part of the Prussian Cabinet to do anything disagreeable to the Emperor of Russia. It has given orders for the free transit of the large quantity of muskets, on their way to Russia, which were stopped at the Prussian frontier.

RUSSIAN INTRIGUES IN MONTENEGRO.

The Emperor of Russia is said to be using all his efforts to stir up the Montenegrins to rebellion. Letters to Vienna, state that Russian couriers have lately been passing in rapid succession, between the mischievous little Russianised territory and St. Petersburg. The *Agram Gazette* also states that a courier from St. Petersburg had arrived at Cettinje in twelve days, bearing positive orders for the Montenegrins to attack the Turkish province of Herzegovina.

On the other hand, we are glad to see that Austria is resolved not to allow her frontier to be placed in danger by the Czar's revolutionary machinations.

The importation of ammunition and military supplies into Montenegro, from the adjoining Bay of Cattaro, has been forbidden by the Austrian Government, on the ground that such proceedings would be an act of hostility, and a breach of Austrian neutrality.

THE GREEK INSURRECTION.

Telegraphic despatches from Constantinople of the 27th ult. state that the Greek Ambassador there had applied for his passports.

According to reports from Albania and Greece, up to the 24th ult., the insurgents have not yet been able, in spite of all their efforts, to possess themselves of a single fortress. The troops of the fortress of Arta were 3000 strong; the besiegers numbered only 1550, and had not a single piece of cannon.

Sir Henry Ward has paid a visit to Fuad Effendi, at Prevesa.

The English and French Admirals at Constantinople have sent off several war-steamers, to prevent any hostile manifestation of the freebooters against the Turkish islands of the Archipelago. The *Gomer* and the *Highflyer*, under the orders of Admiral Barbier de Tinan, are now in the Greek waters.

When Nechet Bey, Ottoman Chargé d'Affaires at Athens, asked that the Greek officers who had joined the insurgents should be recalled, the Government replied that they had resigned their commissions. When he complained that their resignations had been accepted, he received an evasive answer. The Government refused to admit that there were insurrectionary committees at Athens, although the fact is notorious. Seeing that the Greek Ministers were determined to evade all their obligations, Nechet Bey demanded his passports. The representatives of France and England have notified to the Greek Cabinet that their Governments will hold Greece responsible for the consequences of the rupture.

THE FLEETS IN THE BLACK SEA.

The news from Beicos Bay and Sebastopol is still very unsatisfactory. A letter from Constantinople, of the 20th, states that, immediately after the return of the *Retribution*, English frigate, and the *Caton*, French corvette, from the Danube, with information that the Sulina channel had been rendered impassable, and that 90 grain vessels had been shut up in the river, the two Admirals sent off the *Caradoc* with despatches for the Russian authorities at Bucharest, demanding that the obstructions should be removed, and all merchant vessels in that part of the Danube be allowed to navigate freely. After leaving the Sulina, the *Retribution* and *Caton* proceeded to Sebastopol, and ascertained that the Russian fleet had not moved. Their report on the subject arrived at the very moment when the ambassadors at Beicos were making preparations for departure, in order to look after the Russian fleet, which some masters of merchant vessels said they had seen at sea. The two English and French frigates, the *Samson* and the *Cocyte*, which returned on the 19th from the coasts of Circassia, had seen a division of seven Russian frigates which bore away from them; and, at another time, a brig, which the bad weather prevented them from boarding. From the accounts brought by the *Cocyte* and the *Samson*, it appears that the Russians have evacuated and destroyed all the small fortresses which they had constructed and occupied on the coast of Circassia; they only retain the two most important—Anapa and Sukhem-Kale. The ships of the allied Powers are to at present in an extraordinary state of agitation, and promise to resume hostilities more warmly than ever the moment the fine weather returns, and particularly so if they are supplied with arms and ammunition.

The statement that the Russian fleet had ventured out of Sebastopol has been repeated by the *Independance Belge*, which says:—"It is not positively certain that while the Russians were crossing the Danube, five Russian steamers from Sebastopol, after having touched at Odessa, succeeded in disembarking 4000 soldiers on the island of Dunavetz, on the Dobrudja, at the entrance of the St. George's mouth of the Danube. Having accomplished this service the five Russian steamers regained the port of Odessa." Dunavetz is within two days' march of Babadagh, and if the Russians, by the aid of their ships, which it was understood Admiral Dundas had been commissioned to blockade, have been able to advance upon that important position without so much as the trouble of crossing the Danube. This statement of the Belgian paper confirms what Lord Clarendon said, when asked by Lord Malmesbury if it were true that the Russian fleet had been seen on the coast of Circassia. Lord Clarendon, in reply, said the Russian vessels had not been seen at that direction, but in the neighbourhood of Perecop. The latter place is only about a hundred miles from the mouth of the Danube.

The *Caradoc* steamer, which arrived at Malta on the 30th ult., from Constantinople, brought news of the departure of the allied fleets on the 24th for Varna; to which place the *Inflexible* and other steamers were conveying troops, all armed with the Minié rifle.

THE PASSAGE OF THE DANUBE.

The passage of the Danube by the Russians commenced on the 22nd in three columns, by means of four raft bridges. The principal column, under the orders of General Lüders, started from Galatz; Prince Gortschakoff crossed the river with the troops between Isaktcha and Toltscha, protected and accompanied by the division of General Anrep; and the third column effected its movement below Braïlow, at a place called Geoshit, on the right bank, but which is not mentioned in the maps. These forces amount together to 50,000 men, including 41 battalions of infantry, 3 regiments of cavalry, 1 of Cossacks, and 140 pieces of cannon. This movement in advance of the Russians has produced some uneasiness; but, strategically speaking, there is no cause for it. The Russian army, which is now on the right bank of the Danube, does not occupy one of those threatening positions by which events are ruled. It has arrived, not in Bulgaria, or on the road to Constantinople, but in the Dobrudja—that is to say, on an immense plain, intersected with marshes, without resources and without communications. It has behind it, between Toltscha and Matschin, a Turkish *corps d'armée* of 30,000 men with 60 pieces, under Halim Pacha; and before it a barrier of fortified places—Irsowa, Silistria, Custendje, Varna, and Schumla, which bar the road to the Balkans. It is thus difficult to explain the reason why Prince Gortschakoff has chosen this place for crossing the Danube. It is true that in 1828 the Russians entered the Dobrudja by Irsowa, in order to attack Varna and Silistria; but at that time they had possession of the Black Sea. The battle of Nasarino had destroyed the Turkish navy, and the Russians were, therefore, free in all their communications. Irsowa, besides, is only half-way between Braïlow and Bulgaria, and the Russians were not the less obliged to pass a month in forming an embankment in order to cross the marshes. As they are now deprived of the Black Sea, it is difficult to comprehend the movement which they have adopted.

Omer Pacha, who ought to know the effect of it, regards the passage of the river as the greatest piece of service the Russians could have rendered him. The movement, now that it has commenced, will continue; the Turks do not offer any resistance; Bucharest is about to be completely evacuated, all the troops who were in that place having received orders to march on the 1st of April towards the Danube. On the other hand, something significative is preparing on the Austrian frontier. An order has been given to form a moveable head-quarters at Buda. The administrative personnel has been made, and all measures have been taken as if a forward movement was in contemplation. Steamers full of troops and with cannon every day go down the Danube, as if a military emigration were going on. The army on the frontier, including the inhabitants who are performing permanent military duty, is not less than from 250,000 to 280,000 men, although the contrary has been stated; and supplies are being collected on a very extensive scale.

The country into which the Russians have penetrated is described in one of the newspapers as a complete morass. More recent accounts characterise it as utterly sterile, through want of water. At Tchernavoda, the Danube approaches within thirty-four miles of the Black Sea, but is separated from it by a peninsula or tongue of high land, extending north, nearly opposite to Galatz: this peninsula is called Dobrudja. From Tchernavoda, a road runs to Kostendje, on the Black Sea, partly parallel with a stream, or rather a chain of lakes, called Karasou. At Bouriack the stream ceases, and the valley is shut in by hills covered with downs, from which the sea is visible. Kostendje (Constantina), a small village on a height above the shore, has a little port, with remains of a Roman mole, now destroyed. From a point a little south of this, to Rassova, on the Danube, runs the rampart of Trajan, or Trajan's Wall; behind which the Turks have entrenched themselves. The district of the Dobrudja is, at most seasons, a wilderness—partly owing to its having been deprived of its Tartar inhabitants, after 1829, by the Russians; but chiefly owing to its subsoil, which, according to the north extremity, where rise the hills of Matschin (granite?), consists of porous limestone, which retains no water, and produces no springs on the surface. Population is scanty, and villages widely scattered, and drinking water is obtained only through a few deep wells. Corn is scarcely cultivated at all; hay and fodder are very scarce; the scanty herbage dries up early in the summer, and the flocks of sheep and herds of buffaloes repair to the borders of the Danube for pasture. The desert extends south of the Wall of Trajan, nearly as far as Bazarjik and Varna. It is not tenable by troops, unless they carry food, forage, and water with them. A canal was at one time projected between the Danube at Tchernavoda and the Black Sea at Kostendje; and a survey made by a Prussian engineer proved that the head of the valley of Karasou was 164 feet above the sea, and that not a drop of water was to be obtained on the summit-level (limestone hills) to feed a canal, if it was made.

Letters from Schumla of the 26th, describe the impression which the news of the passage of the Danube by the Russians at Ibraila had made on Omer Pacha. He does not, they say, seem to have altogether anticipated so imprudent a step on the part of the Russians, simply because it was too good to be hoped for. He immediately advanced with the whole of his disposable forces, to make a counter-move at Rustchuk: whilst Achmet Pacha was at once instructed to take the offensive at Kalafat, and thus give them employment on their own side of the water.

UNITED STATES.

The *Asia*, steam-ship, which sailed from New York on the 22nd ult., arrived at Liverpool on Monday. The most important political intelligence received, is that relating to the Nebraska Bill, which has been referred to a committee of the whole House. This is thought to be equivalent to its rejection. It is said that information has been received from Washington, to the effect that the United States Government has made formal demand on Spain for some executive authority in Cuba, with power to settle such difficulties as that of the *Black Warrior*, with the United States, without the delay and inconvenience of sending to and fro. Advices from Havannah, to the 14th ult., state that nothing of importance had transpired at Havannah since the seizure of the *Black Warrior*. She was still in possession of the Government authorities.

NATIONAL SPORTS.

CHELTENHAM STEEPLE-CHASES.—TUESDAY.

United Hunters' Stakes Handicap.—Charley, 1. Gaylad, 2.
Grand Military Steeplechase.—Hawk, 1. The Linnet, 2.
Berkeley Hunt Steeplechase.—Farmer, 1. Buckskin, 2.
Selling Hurdle Race was won by Janus.
Selling Steeplechase did not fill.

WEDNESDAY.

Hunters' Stakes.—Stanley, 1. Macomo, 2.
Grand Annual Steeplechase.—Trout, 1. Columbine, 2.
Selling Steeplechase.—Bullfinch, 1. Janus, 2.
Match, £50.—Valentine, 1. Emigrant, 2.
Welter Stakes.—Robin Hood, 1. Brevet, 2.
Sandiway Hurdle Race.—Forestrider, 1. Gay Lad, 2.
Curry Stakes.—Westwood, 1. Battery, 2.

CROXTON PARK RACES.—TUESDAY.

Farmers' Plate.—Plantagenet 1.
Curry Stakes.—Leybourne, 1. Scarcity, 2.
Belvoir Castle Stakes.—Sine qua Non, 1. Folly o'the Day, 2.
Granby Handicap.—Bourton, 1. Sackbut, 2.
Sweepstakes.—F by Epirus, 1. Donald, 2.

WEDNESDAY.

Farmer's Handicap.—Iago, 1. Pastime, 2.
Hide Cup.—Gerard, 1. Sackbut, 2.
Belvoir Castle Coplow Stakes.—Newman Noggs, 1. Dandy Jim, 2.
Croxton-park Plate.—Georgey, 1. Lamartine, 2.

EPSOM SPRING MEETING.—THURSDAY.

Trial Stakes.—Rataplan, 1. Cranbourne, 2.
Railway Plate.—Crinoco, 1. Inder, 2.
Two-Year-Old Stakes.—Katerfelto, 1. Rose, 2.
City and Suburban Stakes.—Virago, 1. Mark Antony, 2.
Metropolitan Handicap.—Virago, 1. Muscovite, 2.
No betting announced.

FRIDAY

Selling Flat Race.—Lioness, 1.
Selling Steeplechase.—Rob Roy, 1. Eugenie, 2.
Metropolitan Steeplechase.—Needwood, 1. Farmer, 2.
Hurdle Race.—Theodine, 1.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

WIDDIN, March 10, 1854.

SYMPTOMS are rapidly appearing which furnish some idea of the intended movements of the Turks. The forces at Kalafat have been daily reinforced for some time past. Battalions of redifs, or troops of the reserve, more than 1200 strong, have been followed by squadrons of cavalry and masses of irregulars. Tents of every hue have been pitched, and filled with men. The ground, already well covered with barracks and underground huts, is now everywhere cut up into small ditches, in which horses may be sheltered from the wind. The bashi-bozouks—usually so lazy that they require the hope of plunder or fear of blows to force them to action—may be seen digging out these extempore stables, many of them having valuable Arab chargers, the loss of which would be to them irreparable. The regulars content themselves with picketing their steeds in rows, the poor beasts remaining thus exposed to all varieties of wind and weather. Their appearance and number make the camp look extremely busy. The arrival of so many reinforcements at this point is a proof that an advance into Wallachia is meditated by Omer Pacha. I think it will not be a betrayal of secrets to write to London that, within ten days, the troops in Kalafat will be increased to forty battalions of infantry and thirty squadrons of regular cavalry. The irregulars it is needless to count, although their number is even now considerable. The Russian movement towards Slatina and Karakal, and the withdrawal of so much of their force from the villages in front of the lines, are symptoms that the Generals of the Czar are in expectation of some movement across the Danube at a place lower down the stream. I am not certain, though I believe, that Omer Pacha intends to march two corps across the Danube at once; but, I am informed, that simultaneously with the advance of the troops from Kalafat into Lesser Wallachia, a corps of thirty-five battalions, amounting in all to 20,000 men, with thirty-four guns and cavalry, will cross the Danube at Nicopoli, under the command of Ismail Pacha. The troops are at present cantoned in Rahowa, Plevna, and Nicopoli. It remains to be seen whether so large a force as that just mentioned will be permitted to land in Wallachia unopposed. In this respect the advantage of possessing Kalafat is very great, and favourable to Turkey. It is evident from the document which I transcribe that its importance is not undervalued by the General-in-Chief, but, on the contrary, is rather considered in a more important light by him than by other persons qualified to give opinions on strategy.

Omer Pacha, Commander-in-Chief of the army of the Danube, thus addresses the corps at Kalafat in a general order, dated the 28th Djemasijal evel 1270 :—

Generals of Division and of Brigade, officers—superior and subaltern—non-commissioned officers, corporals, and soldiers of the Imperial army,—The position of Kalafat, which you gained with so much gallantry has at once become of the utmost importance to our cause. In your hands now rests the honour of the country. If you are able firmly to maintain that position by your bravery, and if you are ready to shed the last drop of your blood in its defence, the advantages which must inevitably follow will be innumerable. If, on the contrary, the enemy should succeed in storming your camp (which God in his greatness prevent), the honour of our country would be turned to shame before the world. The Sultan, our most gracious Sovereign, trusts entirely in your well-tried courage. May I count upon you? Possessed as you are of that extraordinary courage of which you have so often exhibited, full of devotion to his Majesty and of love for your country, you will not say, our entrenchments are finished, and we have no more to do. Soldiers! I am certain that no fatigue will deter you from giving to the lines which cover your camp as much strength as possible. If the Russian army attacks us, you will fight with perseverance and courage; and, with God's assistance and the help of the Prophet, conquer it. Even should the enemy succeed in gaining one of your redoubts, you will take no step in retreat, but attack him with the bayonet, and expel him. Soldiers! if you fall, supreme happiness awaits you above. If you are victorious, honour and esteem are your reward on earth.

Whether this document be meant as an encouragement to the soldiers in the immediate expectation of an attack, or whether it is merely an official blind, it is difficult to say. It is hard to suppose, however, that Omer Pacha is really misinformed as to what is going on in Wallachia. He, doubtless, knows extremely well that there are no more than 12,000 Russians in front of Kalafat. The document which he has sent to the army of Kalafat, and which was read there with great ceremony before the troops, must therefore be an endeavour to conceal from the men the real meaning of the large reinforcements which daily pour into Kalafat.

The same system of allowing the enemy to appear before the lines, and depart unmolested, continues to be pursued, in order, probably, to further the end of blinding the Russians as to the real strength within the lines. On the 8th two squadrons of cavalry and a cloud of Cossacks made their appearance on the right of the intrenchment, drew themselves up in order of battle, and, being supported by two guns, waited for the Turks to come out. The position they had taken seemed so imprudent that the Turks determined on marching out, and accordingly twenty-two squadrons were called to horse, and emerged from the intrenchment at a place where their movements were concealed from the Russians. It would have been easy to capture or destroy the whole force of the enemy by cutting off the retreat of his squadrons; but, instead of doing this, the Turks went out and showed their force, which they might have concealed, and the Russians, after firing two shots from their six-pounders, disappeared at a gallop, and escaped without pursuit, from a most perilous position. Yesterday again the alarm guns were heard, and the batteries of the island beginning to play, informed us that the Russians had again appeared in the same direction as on the previous day. On this occasion, however, they had not committed the same imprudence as on the last; for there stood in masses on the plain, far out of gunshot from the forts, seven battalions of infantry, with twelve guns, five squadrons of regular cavalry, and hosts of Cossack skirmishers, who patrolled the front. The presence of the latter, who had at first advanced within the range of the lines, had been the signal of alarm, and one Cossack lost his life by a Turkish shot. Whilst the Russian force on our right was thus drawn up in battle array, another force of four battalions, cavalry and guns, was in position on the left between Golens and Kalafat. With the exception of a few officers who went forward, and in whose company I had a tolerably near view of the Russians, the Turks sent out no single man. A few bashi-bozouks, with long rifles and a spirit of adventure, went out to exchange shots with the Cossacks, but Achmet Pacha, Moustapha Pacha, and Halib Pacha might be seen in an outer fort sitting on four-legged stools, smoking their chibouks, while all around them were the soldiers at the parapets officers of every grade, spying at the enemy through telescopes, foreign officers lounging, and Albanians in their gilded and laced dresses, looking into vacancy. For four hours the Russians stood in array without moving, after which, seeing that no enemy appeared, they retired.

P.S.—It is said that Omer Pacha's main movement will be at Matchin, on the Lower Danube. If the forces of England and France come up to support this movement, there is hardly a doubt that the Russians will find themselves in a disagreeable position. The English, it is affirmed here, will operate in the Crimea. It is certain that quarters are now prepared for them at Varna. Whether from thence they are to move towards Sebastopol or towards Schumla no one here knows with certainty. Doubtless, this is a point better known in England than at Kalafat.

ORRERY.—Next week (Passion-week) Mr. C. H. Adams will deliver his popular lecture on Astronomy, at the Adelphi Theatre, on every evening except Friday. The lecture will be illustrated with magnificent transparent moving scenery.

The *Giornale di Roma* states that, on the day of the Annunciation of the Virgin Mary, the Pope assisted in the Sixtine chapel at a solemn mass, celebrated by Cardinal Wiseman.

THE CAVALRY REGIMENTS.

ADDITIONAL regiments have received orders to hold themselves in readiness for embarkation, while others are at this moment waiting for transport. Several corps have reached Malta, and from thence departed, as it is said, for Gallipoli. But the cavalry destined for Turkey remain stationary at home; and but few artillery horses have been shipped.

The first ebullition of enthusiasm among the people having evaporated, the excitement of the moment gives place to less exuberant feelings. At the primary demonstration on the part of England in favour of the Turks, the generality stopped not to scrutinise details. It was enough to know that regiments were on the route for active service in behalf of an ancient ally. Inquiry at the moment did not exceed this point. Confident of success, the nation hailed the march of battalions with reiterated cheers; but the display of patriotism cannot long obscure rational reflection. It is now asked, and with apparent reason, why so much dilatoriness has been shown in rendering our aid to the Sultan? If it was purposed that the force destined for the seat of war should land together at a given point, the present proceedings negative such arrangement. Many of the vessels which conveyed regiments to Malta, returned after performing their contract, leaving the troops certainly nearer the expected scene of action, but as powerless to reach it as though quartered in England. Ships carrying out the reliefs can only embark an equal number from the Mediterranean, leaving the augmentation stationary. Should steamers be despatched for conveying the latter, Government must encounter an enormous outlay. The intentions of the authorities respecting the embarkation of the cavalry have been variously asserted; but it is now generally understood it will march through a part of France. This branch of the service will not at present exceed 2000 horses; and, were they to go direct, conveyed by steam, it would save not alone expense, but an additional shipment, and consequent disembarkation, together with much time. The excuse of want of tonnage advanced as the reason for delay seems incredible. If the mercantile navy of England cannot embark so trifling a number of horses, we must greatly have overrated our capabilities for years past. But, unless a sufficiency of steamers are appropriated for the purpose of accompanying the cavalry transports, the horses will, in all probability, suffer greatly, and may prove useless on landing.

The experiment practised on some of the artillery horses by sending them without steam has met the expected result. The ships were for days delayed by contrary winds. One put into Plymouth after a gale, when she was found to be "crank." As yet, not a troop horse belonging to the cavalry has embarked, and in all likelihood they will be found in England at the termination of the week next ensuing.

Expedition is of vital importance to the cause we have espoused, and long before this the cavalry might have been shipped at one of our western ports, thus avoiding delay in getting down Channel. The cause of procrastination appears unaccountable. If the infantry reach Gallipoli without cavalry or artillery, they must perforce remain inactive until joined by such indispensable auxiliaries.

DINNER TO THE EARL OF ELGIN.

A COMPLIMENTARY dinner was given by gentlemen connected with Canada to the Earl of Elgin, on Thursday evening, at the London Tavern; Lord John Russe l in the chair.

Amongst the company present were—

The Earl of Elgin, the Duke of Newcastle, his Excellency Mr. Buchanan, the Marquis of Abercorn, Earl Grey, the Earl of Harrowby, the Earl of Ellesmere, Earl Dunham, Lord Dufferin, Earl Desart, Lord Montague, Lord Glenelg, Sir W. Molesworth, Bart., M.P., Sir Alexander Cockburton, Sir J. Pakington, M.P., Mr. W. E Gladstone, M.P., Mr. E. Elliee, M.P., Mr. S. Herbert, M.P., Mr. T. Hincks, Sir G. Grey, M.P., Lord Stanley, M.P., the Chief Justice of Lower Canada, Sir H. L. Rulwer, Sir J. Young, Bart., M.P., Sir F. Bond Head, Bart., Mr. F. Peel, M.P., Sir T. Stephen, Lieutenant-General Sir J. Macdonnell, Sir Gore Ousley, K.C.B., Mr. Osborne, M.P., Mr. H. B. Row, Hon. E. P. Bouverie, M.P., Hon. G. Waldegrave, Mr. B. Hawes, Mr. C. C. Franci, Mr. J. Hume, M.P., Captain Murray, Mr. Poulett, M.P., Mr. J. Thomas, Mr. Ewart, M.P., Mr. J Lawence, Mr. J Bates, Mr. T M. Peto, M.P., Mr R. Campbell, Mr. S. Moss, Mr. Mr. Hogg, Mr. H Labouchere, Mr. S. Stanley, Mr H S Tremenheere, Mr. P Cazenove, Major Master (Lord of Sheffield, Mr. W. G. Thompson, Mr R. Lamont, Lord J. Stewart, the Rev. Mr Hind, Mr E. Tennent, Lord M. Kerr, Mr. W. Keogh, M.P., the Hon. D Daly, Rear Admiral Kelly, Mr R Stephenson, M.P.; Mr W. Strutt, M.P.; Mr F Locker, Mr C B. Adderley, M.P., Colonel Macumber Captain Sir G Bach, R.N., Captain Hamilton; Mr. C. L. G. Bruce, M.P., Sir R J. Routh, Mr. F Grant, Captain Farrell, Mr. J. Pilkington, M.P.; Mr J. Kerr-haw, M.P., Rear-Admiral Boxer, Mr. R. Harvey, M.P., Mr. F. Elice, Mr. G Grach, M.P., Mr. G C. Glyn, M.P.; Mr T. B. Wall, M.P., Mr S Laing, M.P., &c.

At half-past seven Lord John Russell entered the room, accompanied by Lord Elgin, who was received with plaudits by the brilliant and distinguished company whose names we have already enumerated. The banquet was of an unusually *recherché* character. Whatever the most profuse liberality, guided by the most fastidious taste, could produce, abounded on all hands; and every accessory that could minister to the enjoyment of such an occasion was forthcoming in superabundance: the appointments of the tables, and the general decorations of the room, being a theme of general admiration, no less than the rarity and excellence of the viands and wines.

Lord John Russell, in proposing the Earl of Elgin's health, delivered a characteristically "Constitutional" speech, in which, after a graceful allusion to the presence of the American Minister, he traced the rise and progress of Canada, its fiscal and legislative difficulties, and the degrees in which its emancipation from the later of those was due to the wise and temperate policy pursued by the noble Earl.

Lord Elgin, in acknowledging the compliment, which he did at considerable length, gave a very comprehensive *resumé* of the history of the colony during his administration; and expressed, in feeling and eloquent terms, how much he had been indebted to the support he had ever received from the Home Government, no matter what party happened to be in power; and also made special allusion to the aid he derived from such gifted councillors as the Hon. Mr. Hincks, his Prime Minister, who was also present; and made an admirable speech, illustrative, in a brief compass, of the relations between the mother-country and the colony in respect to legislative measures, and the peculiar requirements of the public servants of Canada in their efforts to reconcile the different classes to the obligations they owed the local as well as the Imperial Government.

The remaining toasts of the evening were received with enthusiasm, and the whole proceedings passed off with the utmost éclat. A large number of ladies occupied the galleries; and an excellent musical party, under Mr. Frank Bodda, greatly enhanced the pleasure of one of the most remarkable and memorable réunions that have occurred in the metropolis for many years.

THE EARL OF ELGIN AND KINCARDINE, K.T., GOVERNOR-GENERAL OF CANADA.

Few families claim a more illustrious lineage, direct or collateral, than that of the distinguished recipient of Thursday night's banquet at the London Tavern. It is questionable, however, if there be any more predicable incident, at least in the civil annals of the heroic house of Bruce, than its present head being the guest of a circle of contemporary celebrities, whose miscellaneous political characteristics, apart from their exalted rank and intellectual eminence, rendered the assemblage, probably, the most remarkable of its kind that has done honour to any individual of our time, with the exception of the Duke of Wellington.

James Bruce, Earl of Elgin and Kincardine, Baron Bruce, of Kinloss and of Torry, in the Peerage of Scotland, and Baron Elgin of Elgin, in that of the United Kingdom, claims

common ancestry with the Royal family of the same name, so illustrious in the earlier records of Scotland. One of his comparatively later predecessors, Edward Bruce, of Blairhall, was among the Commissioners nominated to witness the nuptials of Queen Mary with the Dauphin, in 1558, and was supposed to have been poisoned—a circumstance but too significant of the long train of disasters that followed that luckless union. His second son, Edward Bruce, of Kinloss, was accredited by James VI. to the Court of Elizabeth to congratulate her Majesty upon the suppression of the commotions excited by the Earl of Essex; and furthered the interests of his Royal master so well in this mission, that, on his return, he was created Baron Bruce of Kinloss, county Elgin; and, on the accession of James to the throne of England, was nominated of the Privy Council, and appointed Master of the Rolls. Thomas, third Baron, was created Earl of Elgin in 1633: but Charles, fourth of that title, dying without surviving male issue in 1747, the family honours reverted to his relative and namesake, ninth Earl of Kincardine, descended from the third son of Edward Bruce, of Blairhall, already mentioned. Uniting the two dignities, his Lordship assumed the title of Elgin and Kincardine; and was succeeded, on his death in 1771, by his eldest son, William Robert, who died a few months afterwards; the Countess surviving him many years, and discharging with great credit to herself the responsible station of governess to the lamented Princess Charlotte of Wales. His Lordship's honours devolved upon his brother Thomas, who married the only daughter of William Hamilton Nisbet, Esq., of Dirleton, in Haddingtonshire.

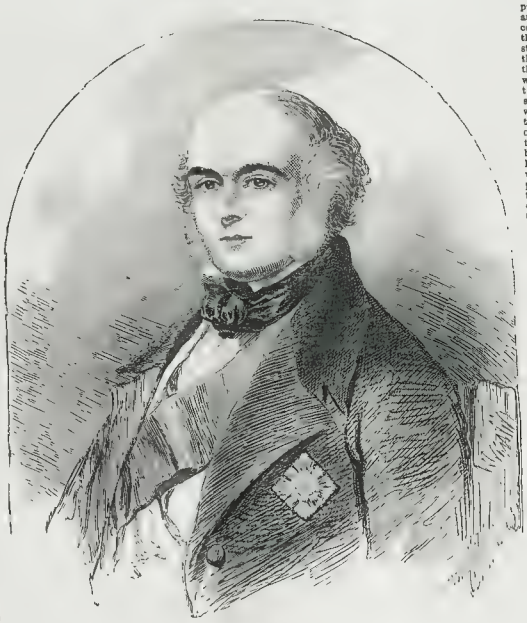
This accomplished nobleman filled several important diplomatic appointments, and, while Ambassador Extraordinary in Turkey, formed the design of collecting and transporting to England the invaluable remains of Grecian art (chiefly consisting of decorations from the Parthenon) now in the British Museum, and known as the Elgin Marbles.

Lord Elgin married, in 1810, Elizabeth, youngest daughter of James Townshend Oswald, Esq., of Dunnikier, in Fifeshire; of which union the present Earl is the eldest child, being born in Park-lane, in 1811; consequently, he is now in his forty-third year—a very early age at which to date services so prolonged as those he has rendered to his country in exalted and responsible office. He received his education at Christchurch, Oxford; where, in addition to a large development of the hereditary predilection for art, he attained first class in Classics in 1832; and subsequently became a Fellow of Merton College. In 1841 he married Elizabeth Mary, only child of Lennox Cumming Bruce, Esq., of Roseisle, Stirlingshire; and the same year was elected to represent Southampton in Parliament—in the proceedings of which Assembly, however, he scarcely took part, owing to the death of his father, the November following, when he succeeded to the family honours. But though till then untried in public life, his administrative aptitude was discovered by the Cabinet in power at the time, and the result has been alike creditable to their prescience and his capacity. In March, 1842, he was nominated by the Earl of Derby (Lord Stanley), then for the second time Colonial Minister in Sir R. Peel's Ministry, as Governor of Jamaica, where, singularly enough, he succeeded Sir Charles (afterwards Lord) Metcalf, whom he subsequently succeeded in Canada (Lord Cathcart intervening); and higher praise can hardly be bestowed upon Lord Elgin than the fact, that in either sphere he proved himself in every way worthy of so impartial, enlightened, and discriminating a predecessor. For four years, during a most eventful period in the history of the island, while, in what may be called the transition stage of society consequent on recent legislative alterations affecting the staple of the colony, he conducted its affairs with exemplary prudence, and with a degree of satisfaction to the inhabitants of which vivid remembrance is borne to the present day.

In August, 1846, his Lordship resigned the Governorship of Jamaica, and in the following month was appointed Governor-General of Canada, with a salary of £7000 per annum. Of his conduct in this important post, perhaps the most emphatic eulogium that can be expressed is conveyed in the fact, first, that he has been continued in it by four successive Colonial Ministers, and, secondly, that these four were all at the festival in his honour, on Thursday night—viz., Mr. Gladstone, Earl Grey, Sir John Pakington, and the Duke of Newcastle; while the president of the evening, Lord John Russell, had likewise filled the same office, as also had another of those present, Lord Glenelg. Thus was the conduct of Lord Elgin as a Colonial Governor practically sanctioned in the most complimentary manner by six Secretaries of state for the Colonies. A seventh may be virtually said to have done so too; for the Earl of Derby, in declining the invitation on the score of an important prior engagement, expressed his "respect and regard" for the guest of the evening; and, moreover, the noble Earl's son, Lord Stanley, was present.

When Lord Elgin assumed the government of Canada, he took the earliest opportunity to avow the principles on which he proposed to administer the trust reposed in him by his Sovereign, and thus avowal obtained for him the general confidence of the Canadian people. The attempts were continued by them during the early part of the Earl of Elgin's Government, his Lordship affording every facility to the members to effect a coalition. After the failure of these negotiations, the Administration, not feeling itself sufficiently strong to meet Parliament, resorted to a dissolution, the result of which was, that on the meeting of the new Parliament, a vote of want of confidence was carried by a considerable majority. On this the Ministry resigned; and the Earl of Elgin sent for a leading member of the Opposition, with whose aid he formed an Administration possessing the confidence of the majority of the Commons House of the Canadian Parliament. Since that period to the present, the same party has furnished the members of the Administration, although many changes have taken place in the position of individuals. It would be wholly out of place here to discuss the political measures brought forward by the advisers of the Earl of Elgin. According to the recognised principles of the Canadian Government, the Ministers of the Crown are responsible for every act of the Government, and from that responsibility they have never shrunk. It must not, however, be supposed that the Governor-General's duties are either light or unimportant. The zeal displayed by the Earl of Elgin in advancing the material interests of the provinces, by countenancing every measure calculated to promote them, has been admitted on all hands. His able despatches to the Secretary of State for the Colonies have been read with admiration by Canadians of all classes; who have likewise appreciated his efforts to promote, by the offer of prizes and otherwise, all really useful projects for the improvement of the agriculture, commerce, or export manufactures of the provinces. Although at particular periods of the Earl of Elgin's Government party politics unfortunately ran higher than the true friends of their country would desire, yet his Lordship, by maintaining inflexibly the position which he had assumed at the outset, and which he himself most happily characterised as one of "dignified neutrality," has succeeded in obtaining the great confidence and respect of the Canadian people, and the admiration not only of the most distinguished English statesmen of all parties, but likewise those of the great Federal Republic, who have been watchful observers of passing events in Canada. Hence the presence at Thursday's banquet of the Minister from Washington to the Court of St. James's, which exhibits, in the most unmistakable manner, that thoroughly friendly feeling between the two freest, wealthiest, and most advancing countries in the world, and which is a guarantee for the ultimate liberties and progression of mankind, let despotism deport itself as overbearingly as it may for the moment in other quarters.

Lord Elgin finds a most effective auxiliary to his deserved popularity in the person of his present estimable and accomplished Countess. This lady, the life and light, as she is the ornament, of the circle which her husband's courteous hospitality, no less than his official position, draws around him, has also hereditary claims on Canadian feeling. She is the eldest surviving daughter of the late Earl of Durham, formerly Governor-General of Canada; his son, her brother, the present Earl, being also among those who assembled to honour Lord Elgin on Thursday.



THE EARL OF ELGIN AND KINCARDINE, K.T., GOVERNOR-GENERAL OF CANADA.

TROOPS AT ALEXANDRIA.

A CORRESPONDENT at Alexandria has favoured us with the accompanying Sketch of part of the Egyptian contingent for the Turkish army. A very large force (says our Correspondent) is collected here, variously estimated at from seventeen to twenty thousand men, two-thirds of whom are destined for the seat of war. Twelve thousand men were reviewed outside the walls this morning (the 18th inst.), one third of whom marched through the Grand Square in the forenoon, and presented a very fine *coup d'œil*—the day being remarkably fine, an unusual thing of late here, the weather having been for some time very severe, cold and heavy rain being the order of the day.

The large building on the extreme right of the View is the Dutch Consulate; next is the French Consulate, the Belgian Consulate, the entrance to the Frank-street, and the Public Clock.

TROOPS AT ALEXANDRIA, PART OF THE EGYPTIAN CONTINGENT FOR THE TURKISH ARMY.

THE FRENCH SCREW WAR-STEAMER "AUSTERLITZ," PASSING DOVER.

THE FRENCH BALTIC SQUADRON.

THE *Austerlitz*, 100 guns, French steam-ship, of which we have given a Sketch as it was seen from Dover on the afternoon of Sunday week, sailed from Brest on the 20th ult., to join Sir Charles Napier's fleet in the Baltic. In passing Dover, accompanied by the *Conflict* steam-ship, the *Austerlitz* saluted the port, a compliment which was returned from the Drop Redoubt. She cast anchor in the Downs that evening, and on Tuesday sailed for Wingo Bay, where, however, she does not appear to have arrived till after the English fleet had left that station. A telegraphic despatch, dated April 4, afternoon, Kroge Bay, (about a couple of hours' sail south of Copenhagen) says:—"The *Austerlitz* and other ships are visible from the mast-head of the *St. Jean d'Acre*." The other ships mentioned in the despatch will probably be the other vessels belonging to the French Baltic squadron, which sailed from Toulon about the same time as the *Austerlitz* sailed from Brest.

The following is the order of the day addressed by Vice-Admiral Parseval Deschênes, to the commanders, officers, and sailors of the Baltic Squadron:—

Called on by the Emperor to the honour of commanding you at a moment when your courage may be useful to the country, I feel the most lively satisfaction at finding myself once more in the midst of you. As I have frequently done in my long career, I am about once more to appreciate that discipline, that devotedness to their duty, and that abnegation of French seamen which lead to success, and which render me proud to be at your head. Let your confidence in me be as in times past: mine is assured to you. Let us unite all our efforts at the outset of a laborious campaign; and let us know, in the accomplishment of our task, how to inspire ourselves with the sentiments of patriotism which must be caused by the cry of "Vive l'Empereur!"

THE RAILWAY ELECTRIC TELEGRAPH IN INDIA.

MADRAS (writes a Correspondent from Fort St. George, Feb. 8), will, before two months have passed, be placed in electric communication with Bangalore. The telegraph, which has been begun (as the accompanying Illustration will show) has already been extended as far as Poonamallee, a place about thirteen miles from Madras. The line commences in the Fort, on one of the south ramparts, where two tents have been pitched for the accommodation of the superintendent; the line then cuts across the Esplanade and the road which leads to the South Beach, the only place in Madras where there is any amusement, if such it can be called; the garrison band, and the band of the European corps which may be stationed at Fort St. George, play alternately nearly every evening on the beach; and a double object is gained by resorting thither of an evening—the enjoyment of the sea-breeze, and a little music; the former most precious, indeed, to one subject to the relaxing heats of an Indian clime.

The building to the left, seen in the distance, and which is almost hidden from view by trees, is known by the name of the "Marine Villa;" it formerly belonged to the Nabob of the Carnatic, who presented it to the Government of Fort Saint George. It is a favourite residence of Sir Henry Pottinger's during the summer months, in consequence of its proximity to the sea. The other building in the distance is the Nabob's Palace.

THE ELECTRIC TELEGRAPH AT MADRAS

RETURNING THE COMPLIMENT.—In the year 1543 the Sultan Selim II., at the request of the King of France, sent a large army and fleet to his assistance, under the command of the celebrated Turkish Admiral Barbarossa, who, according to the record, was the grandson of a French renegade. This army and fleet occupied the town and port of Toulon at the express wish of Francis I., from the end of September, 1543, to the end of March, 1544. And in March, 1854, a French army and fleet have sailed from the same port of Toulon to succour the descendant of the Sultan Selim in his distress.

RETURN OF "THE AUSTERLITZ" SALUTE, AT DOVER.

CALENDAR FOR THE WEEK.

SUNDAY, April 9.—6th Sunday in Lent. Lord Bacon died, 1626.
MONDAY, 10.—Catholic Emancipation Bill passed, 1829.
TUESDAY, 11.—Canning born, 1770. Napoleon I. abdicated, 1814.
WEDNESDAY, 12.—America discovered, 1492.
THURSDAY, 13.—Maunday Thursday. Handel died, 1759.
FRIDAY, 14.—Good Friday. Bishop Portius died, 1809.
SATURDAY, 15.—Easter Term begins. Mutiny at Spithead, 1797.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING APRIL 15, 1854.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday
M h m 11 40	A h m No Tide	M h m 0 35	A h m 1 0	M h m 1 15	A h m 1 35	M h m 1 55
A h m 2 15	M h m 2 35	A h m 2 55	M h m 3 15	A h m 3 35	M h m 3 55	A h m 4 20

TO CORESPONDENTS.

A SUBSCRIBER.—The *Duke of Wellington* is 278 feet long, 56 feet beam, 24½ feet hold; 700-horse power, and 3760 tons burthen. The *Himalaya* is 372½ feet long, 56 feet beam, 25 feet hold; 700-horse power, and 3550 tons burthen. The *Atrato* is 350 feet long, 42 feet beam, 24 feet hold; 800-horse power, and 3466 tons burthen.

G. F., Upper Clapton.—The only persons to apply to, will be the superintendent of the dockyard, or the master shipwrights, who have the disposal of the tickets.

J. D.—The thanks of Parliament were given to Lord Gough, in 1849, for "the conspicuous intrepidity" displayed by him in the last contest in the Punjaub, which was terminated by the victory of Goojerat.

FER FALE.—Burke's "Encyclopædia of Heraldry" and Burke's "Commoners" are perfectly distinct works. The former is much fuller than Edmonson.

J. DE L.—The Queen might have married a commoner.

A SUBSCRIBER.—An Admiral of the Red ranks first, of the White next, and of the Blue third.

G. C.—William III. is "King of the Netherlands."

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 8, 1854.

THE quarterly returns of the Revenue, made up to the 5th of April, will rejoice the hearts, not only of the British people, but of the friends of the liberty and independence of nations in every part of Europe. For the last eight years it has been the policy of successive Administrations to reduce or abolish imposts of injurious operation upon industry and trade; and year after year the Revenue returns have proved the wisdom of this course. Abolition of taxation has not led to loss, but to increase, of Revenue. The returns for the last quarter are of the same gratifying description. The Emperor of Russia enters upon war with a depreciated and paper currency, with a trade that our hostilities will seriously injure, if they do not ruin; and with no means, except the forced contributions of his subjects, for raising the supplies necessary to support the war. Great Britain, on the contrary, commences the struggle with a surplus of Revenue over Expenditure, with an increasing commerce with every part of the world, and with taxation at so low and inoppressive a point, as to leave ample room for its extension without seriously interfering with the necessities and pursuits, or even with the luxuries, of the people. The Emperor of Russia, and, more especially, the wavering Sovereigns of Austria and Prussia, should take warning from these facts. The increase of Revenue for the year ending on the 5th of April, over the year ending on the 5th of April, 1853, amounts to £1,485,056. The increase on the quarter, over the corresponding quarter of the preceding year, amounts to £213,744. There is a decrease in the Customs for the quarter as compared with the returns for April, 1853, of £106,891; caused, no doubt, by the reduction of the tea-duties to the extent of 4½d. per lb. There is also a decrease of £155,231 upon the Excise, caused by the total abolition of the duty on soap. Upon the financial year there is, however, an increase in all these; and, indeed, in every other branch of Revenue, with the sole exception of the Miscellaneous. These figures need no comment; they will tell their own story; and will be a source of gratification not only to the statesmen and legislators, to whose enlightened commercial and fiscal policy we owe the result, but to the whole population of these islands.

THE inability or unwillingness of the *roi-fainéant* of Greece to prevent his subjects and generals from aiding the insurrection in Albania, threatens to seriously complicate the difficulties of the Eastern Question. The Ottoman Government having reason to believe in the complicity of the Greek Monarch with the Albanian insurgents, has suspended diplomatic relations with the Court of Athens, and if the insurrection be not immediately suppressed, will, no doubt, follow up this step, by a declaration of war. The Greeks need expect no sympathy from Europe, and will find to their cost that their patron, the Czar, will not be able to render them any aid in the measures that will be taken against them, not only by Turkey, but by France and England. The French and English Governments are quite decided as to the course they will adopt. The feelings of the French Government with respect to the Insurrection are identical with those of the English Cabinet. In a letter to the Earl of Clarendon, dated February 10, Lord Cowley stated that:—

M. Drouyn de Lhuys had informed him that the last accounts received by the French Government from Greece represent so much excitement to prevail against the Turks—excitement which had already led to a collision in the neighbourhood of Arta—that he had at once written to the French Envoy at Athens, directing him to call the immediate attention of the Greek Government to this state of things. The French Government offered the Greek Government the choice between the advantages which must follow the observation of a strict neutrality, throwing into her hands the commerce of the Levant, or the disasters which would be the consequence of any acts of aggression in Turkey; for France would not permit Greece to enjoy the advantages of neutrality and to be a belligerent at the same time; and she would employ the means at her disposal to prevent it.

In another letter, dated the 22nd of February, his Lordship stated,—

M. Drouyn de Lhuys told the Greek Minister, M. Mavrocordato, that France, more than any other Power, had a right to complain of the conduct of the Greek Government, because she had been the Power which had unfortunately stood up most for the honest intentions of the Greek Government, but that she could not tolerate the present state of things. It was nonsense, said the French Minister, to say that the Greek nation was *entraînée*, as was pretended, in this war. There was no *entraînement*, but what was fostered by the King and Queen, and encouraged by the Greek Government. Not a soul in the Peloponnesus—not a soul in any of the islands—had stirred; a few brigands from the interior of the northern provinces were the only culprits. But M. Drouyn de Lhuys said that it was useless addressing the Greek Ministers; and that perhaps M. Mavrocordato would do well to lay personally before the King a faithful exposition of the dangers he was incurring. M. Mavrocordato replied, that, without leaving Paris, he could ensure the King's being made acquainted with the sentiments of the French Government, and that he would write to his Majesty immediately.

It will be seen from these significant passages that the Government of France is determined to act in a resolute and summary manner against Greece, if the perfidious Court persist in abetting insurrection in the dominions of the Sultan. The following letter, from the Earl of Clarendon to Mr. Wyse, under date February 16, shows how cordially the British Government will co-operate with that of the Emperor Napoleon:—

I told M. Tricoupi (says the Earl of Clarendon) that, although his Government might not openly promote insurrection, yet they, in fact, did nothing to discourage it, nor even to make known that it would be regarded unfavourably by the King or his Government, that the Russian organ in the press was calling the people to arms, and announcing the speedy downfall of the Ottoman Empire, and the triumph of Russia; and that no sign of disapprobation was ever given by the organs of the Government; nor (I said) were other proofs wanting to justify the belief—now general throughout Greece—that the insurrectionary movement was viewed with favour by the Government, and I distinctly warned M. Tricoupi that his Government had now to choose between the goodwill of England and France and the blockade of Athens; as the two Governments, while engaged in defending the Ottoman territory from Russian aggression, would certainly not tolerate that the Greek subjects of the Sultan should be excited to rebel against his authority, in consequence of measures sanctioned by the Greek Government. M. Tricoupi expressed much alarm at the thought of a blockade, which, he said, would be fatal to the commerce and mercantile navy of Greece and would not be deserved, as the Greek Government had *made steels unpopular by carrying out the wishes of her Majesty's Government* in opposition to the popular sentiment which was most bitter to the Turks. I replied *that I was well aware of the unpopularity of the Government, but that it was not attributable to the cause assigned by M. Tricoupi*; and that, if the Government desired to avoid the evils that a blockade would entail, they must lose no time in adopting an entirely different line of conduct upon the great question now at issue.

It would further appear from the correspondence submitted to Parliament, that the Austrian Government disapproved, as highly as those of Great Britain and France, the treacherous conduct of King Otho, who, if he have learnt nothing else in Greece, has learned to imitate the proverbial perfidiousness of his people. The Earl of Westmoreland informed the Earl of Clarendon, in a letter dated March 1st, that "Count Buol had expressed his satisfaction at the policy declared by her Majesty's Government, and had made similar representations at Athens, through the Austrian Minister;" so that in this, as in all other circumstances in connection with the Eastern Question, Austria has had the sagacity to know the right course, if she have not, in all instances, had the courage to pursue it.

WE too often hear of railway accidents and unintentional neglect of duty arising from the carelessness and incapacity of railway officials, both of the higher and the lower grades; but we seldom hear of any acts of gross brutality, or even of incivility, on their part. When accidents occur, affecting both rich and poor, the world is duly informed of them; but railway officers respect the rich, or those supposed to be so, and are only brutal or uncivil to the poor, who make no complaints sufficiently loud to reach the ear of newspaper readers. We cannot but take the opportunity of the melancholy death of Colonel Gordon of calling the attention of railway directors and the public to the systematic contempt with which railway officials, from directors down to porters, regard the feelings, the comfort, and the health of those whom necessity forces to travel in third-class carriages. On many of the great Continental lines, the second-class carriages are quite equal in their appointments and fittings to first-class carriages in England; while their third-class carriages are more comfortable than our second. In France, Belgium, and Germany, the third-class passengers have cushions to sit upon and to lean against, and are thoroughly protected from the weather. In England a second-class passenger may get civil treatment; but a third-class passenger seldom obtains a taste of a commodity so cheap and yet so agreeable. But, on the Continent, railway servants not only treat third-class passengers as human beings, but bestow upon them quite as much courtesy as upon those who pay higher fares. The death of Colonel Gordon is no more remarkable in itself than many other cases that are never brought under notice, in which the sufferers are obscure individuals who have none to take their part, or say a word for them. It is the rank of the victim, as well as the melancholy catastrophe of his death, that so powerfully draws public attention to this particular case. We may be tolerably certain that, if Colonel Gordon had travelled in a first-class carriage, a drunken and offensive fellow-passenger would not have been obtruded upon him, and that the Inspector on duty would not have treated any complaint which he might have had to make, either with coarse incivility or brutal outrage. But, being only a third-class passenger, it was thought that the companionship of a man maddened by excess of drink was good enough for him, and that he might be rudely assaulted for daring to complain and to insist upon his right of being treated like a gentleman. We would impress upon railway managers and officials of all degrees the duty incumbent upon them of behaving with as much courtesy to one class of travellers as to another. The servants of railway companies acting upon the premises, and in the business of their employers, used to be considered as police constables; and if the Stafford Inspector had acted, as he should have done, in that capacity, a valuable life might have been saved to society. Wealth-worship is bad enough in itself, even if it lead to nothing worse than sycophancy towards those who can pay both for respectful behaviour and accommodation. But when neither the one nor the other can be procured without a fee, which the poor cannot pay, it becomes still more repulsive, because it becomes inhuman.

THE HAY CONTRACT FOR THE ADMIRALTY.—It appears from the proceedings in Parliament on Tuesday evening last, that Messrs. Sturgeon and Sons, of Grays, in Essex, accused by the Duke of Newcastle of having furnished to the Admiralty trusses of hay fraudulently filled with straw, shavings, and offal, were guiltless of that offence. The firm of Sturgeon and Sons were not the only contractors in this business. The quantity of hay required by Government was seven hundred and fifty loads, of which not more than fifty were provided by Messrs. Sturgeon. In a report sent to the House of Commons by Mr. Bernal Osborne, furnished to him by Colonel Whinyates, that officer stated that "the whole of the supplies delivered by Messrs. Sturgeon were rejected on the 27th February, and none has since been received. Their supplies have been the worst offered—those samples opened were found to be of mixed hay, some portions good, but the bulk of each truss of very inferior sedgy marsh hay, much of it of the worst description—mouldy, and full of dust." The report of the Victualling Department stated "that, although the contractors on this important occasion are more than ordinarily culpable in tendering for delivery an article which they must have been fully aware was not in accordance with their agreements, and nothing in explanation can be offered, yet we deem it only just to state that we are of opinion no systematic fraud has been intended; for, had it been so, care would have been taken to remove every indication of its not being upland or meadow hay, and to cause a good external appearance to be presented." Who the parties were that sent in straw, shavings, and offal, has not yet been stated. We think that Messrs. Sturgeon and Son have almost as much interest as the public in insisting that the name, or names should be published.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 6.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

,, 6	30.358	67·6	33·2	51·3	+ 6·9	64	S.W.	0.00

Note.—The sign + denotes above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied but little during the week, the highest reading being 30·51 inches on the morning of April 4th, and the lowest 30·17 inches on the afternoon of the 1st. The mean for the week, at the height of 62 feet above the level of the sea, was 30.393 inches.

The mean temperature of the week was 50·3°, being 0·4° above the average of the corresponding week during 38 years

The range of temperature during the week was 33·9°, being the difference between the highest reading on April 1, and the lowest on the 4th.

The mean daily range of temperature during the week was 13·1°. The greatest was 16·6° on April 1; and the lowest 18·9°, on the 3rd.

The weather, throughout the week, was very fine, and the sky almost free from cloud. The wind has been light and variable in direction, but mostly S.W. Rain has not fallen since March 20.

For the month of March, the mean reading of the barometer at the level of the sea was 30.339 inches. The highest temperature during the month was 65·2° on the 12th, and the lowest was 24·0° on the 4th. The range of temperature during the month, therefore, was 41·2°. The mean of all the highest temperatures by day was 53·8°; and, of all, the lowest by night was 34·8°. The mean daily range of temperature during the month, therefore, was 19·0°. The mean temperature of the month was 44·3°, being 3·1° above the average of thirty-eight Marches, and the hottest March since the year 1842, when the mean temperature was 44·6°. The mean temperature of evaporation was 41·3°. The mean temperature of the dew point was 37·2°. The mean degree of humidity was 78, complete saturation being represented by 100. The fall of rain during the month was 0·4 inch (four-tenths of an inch).

Lewisham, April 7, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 1948 children were registered in the week ending April 1; of these 1015 were boys and 933 were girls. In the nine corresponding weeks of the years 1845-53 the average number was 1548. The number of deaths registered within the same week was 1489, being 167 above the corrected average of the ten corresponding weeks of the ten preceding years.

ROYAL HUMANE SOCIETY.—This society celebrated its eightieth anniversary by a dinner on Wednesday evening, at the Freemasons' Tavern; Lord Dudley Stuart in the chair. The annual report shows that 97 persons who had met with accidents or attempted suicide during the past year, 153 were treated with success, and twelve only found beyond recovery. The total number of persons who had bathed in the Serpentine during the year had amounted to 23,380; twenty-one were rescued from drowning by the activity of the society's boatmen, and not one fatal accident had occurred. During the late frost fifty persons broke through the ice and were saved by the society. The number of lives saved by the society since its formation had been about 30,000. The medal of the society having been presented to Captain Henry Grierson, of the 15th Regiment; Mr. W. B. Cooke, Mr. Kinnear, the Rev. H. G. Kinnear, Mr. W. Elleray, Mr. Wainewright, Captain W. N. Finley, and other gentlemen, who had saved the lives of persons from drowning during the past year, donations in support of the society were announced to the amount of about £300.

CHARING-CROSS HOSPITAL.—At a quarterly meeting of the committee on Tuesday last—Major W. Lyon in the chair—the report of the operations of the charity for the past quarter was read, from which it appears that the total number of 2990 sick poor were admitted for relief. Out of this number 857 were cases of accident, or emergency of so dangerous a character, as to require immediate admission to the wards. The donations were recorded of valuable friends of the hospital, including the late Marquis of Londonderry, Sir John Conroy, Admiral Falcon, and several others, whose loss to this charity, it is hoped, will be supplied by the accession of new members, of which the hospital stands greatly in need, to maintain its highly useful objects.

THE NEW REFORM BILL.—A public meeting was held at the Court-house, Marylebone-lane, on Monday evening, for the purpose of considering the new Reform Bill proposed by Lord John Russell, and to urge upon the Legislature the necessity of passing it without delay: Mr. Joseph Hume, M.P., in the chair. The chairman, in opening the business, said he considered the measure one of great importance, from the number of cases that had recently occurred disgraceful to a representative Government; and, from interviews he had had with many parties, the general opinion appeared to be in its favour. He did not think they would ever have a fair and proper representation until the electors were protected by the ballot, but the question was whether they ought not to take what they could get. There was one valuable clause—the alteration in not making the suffrage dependent on the payment of taxes. Every step they progressed must be favourable, and he was surprised this bill had been so lightly passed over by the public. Mr. Graham then moved the following resolution:—"That the bill introduced into the House of Commons by Lord John Russell, further to amend the representation of the people, is entitled to the cordial support of all parliamentary reformers, inasmuch as it greatly increases the number of voters, disfranchises nineteen nomination boroughs, and transfers their representation to more populous districts." The resolution was carried by a large majority. Sir Benjamin Hall, M.P., and Dudley Stuart, M.P., addressed the meeting at some length in favour of the measure; and, a petition to Parliament having been agreed to, the proceedings terminated with a vote of thanks to the chairman.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.—A meeting of shareholders in the Chartered Bank of India, Australia, and China (adjourned from the 16th March), was held at the London Tavern, on Tuesday, to receive a report from the committee, detailing the result of their interview with the directors, to induce them to abandon the undertaking. It appeared that the board refused to entertain the views of the committee. It was urged by the committee that circumstances had changed most materially during the last two years, and that, in consequence, a large majority of the scripholders and allottees were now opposed to the scheme. In 1852, when the bank was first contemplated, there was general peace; in 1854, a European war and an insurrection in China; in 1852, Consols were at 100; in 1854, at 88; in 1852, taxes were repealed: in 1854, the income-tax was doubled. In 1852, wheat was at 40s.; in 1854, at 80s.; in 1852, discounts at 2½ per cent; in 1854, at 6 per cent; in 1852, Australia required banking accommodation; in 1854, Australia was provided with upwards of £10,000,000 for banking purposes. These arguments, however, had not been strong enough to convince the directors, who declared their intention to proceed, in order to preserve the privileges of the charter. After some discussion, resolutions were passed condemning the policy of the board, and authorising a subscription not exceeding 2l. per share, to raise funds to defray the expenses attending a settlement of the question.

ST. PANCRAS, MARYLEBONE, AND PADDINGTON FREEHOLD LAND SOCIETY.—On Friday (last week) the promoters and members of this association presented to Mr. Samuel Spong, the able secretary, a massive silver tea service, in recognition of the success which had followed his efforts in behalf of this society, which was the first association of the kind registered in the metropolis.

MR. THOMAS BARING, M.P., has consented to be nominated to the chairmanship of the Institution for the Preservation of Life from Shipwreck, which has become vacant by the demise of Mr. Alderman Thompson, M.P.

STATUE OF LOUIS XVI.—A curious discovery has been made in Paris, within the last few days. A colossal statue of Louis XVI. had been ordered from a celebrated sculptor early in 1830, for the city of Bordeaux. It was in the mould when the revolution of 1830 broke out, and it appears to have been forgotten, for it was only discovered a few days ago by some workmen who were clearing the site for some new building, to be erected on the Quartier Beaujon, in Paris.

CURIOUS COPYRIGHT.—The Imperial Court of Austria gave a judgment last week of considerable interest to printsellers and sculptors. It was to the effect that statues and statuettes cannot be copied by photographical means, without the consent of the authors and proprietors. Several tradesmen, who had taken on themselves to reproduce statues in this way, were condemned to pay damages to the different plaintiffs, varying from 160f. to 500f.

THE WAR.

DEPARTURE OF OFFICERS AND TROOPS FOR TURKEY.

The *Tonning*, which sailed on the 4th, took out Brigadier-General Sir Colin Campbell, Brigadier-General Pennefather, Brigadier-General Eyre, Major Sterling, Captain Shadwell, Captain Thackwell, Captain Harding, Major Hope, Lieut. Graham; Captain Walch, Aide-de-Camp Harding, Major Hope, Lieut. Graham; Captain Walch, Aide-de-Camp to Lord de Ros; Captain Woodford, Deputy-Assistant-Quartermaster-General; Captain Blane, Deputy-Assistant-Quartermaster-General; an officer and detachment of the 19th Regiment; and Lieut. Pearce.

The *City of London*, which sailed on the 6th, has on board Major-General Sir De L. Evans, Captain Gubbins, Captain Boyle, Captain Allix, Captain Clifton, with his Royal Highness the Duke of Cambridge's establishment. Lieutenant-Colonel Gordon, Assistant Adjutant-General, and Lieutenant-Colonel Herbert, Assistant Quartermaster-General. A company of Sappers from Woolwich were also to embark with this ship, and another from Gibraltar, where she touches.

The *Emperor* starts to-day, and takes out Sir Richard England, Brigadier-General Cator, Royal Artillery; Lord De Ros, Deputy Quartermaster-General; Captain Neville, Captain Bradford, Captain Gage, Captain Paok, Captain Kingscote, and Lord Raglan's horses and establishment, Lieutenant Calthorpe, Lieutenant Carson, Surgeon Mapleston, and a detachment of the 19th Regiment.

Commissary-General Filder and Deputy Commissary-General Adams, accompanied by a numerous staff, left London on Tuesday, to join the army in the East. Deputy Commissary-General Cowan, and six Assistant Commissaries-General, have received orders to proceed to France, and make the necessary arrangements with the French authorities for the passage of our cavalry regiments through that country for embarkation at Marseilles, on the arrival of the transports at that port from England.

The 23rd Royal Welsh Fusiliers left Portsmouth garrison on Tuesday morning at half-past eight o'clock for Southampton, for embarkation for the East. They were accompanied by the bands of the regiments in the garrison as far as the railway station, and were loudly cheered on the road, a large number of persons having assembled, although the hour at which they left barracks was so early as seven o'clock. The regiment left Southampton Docks in the *Trent* steamer. They were to remain at Southampton Water in order to take on board fourteen days' more provisions, when the *Trent* would proceed direct to Gallipoli. After landing the Fusiliers at Gallipoli, the *Trent* will go to Malta, and assist in conveying the troops stationed there to the Turkish territory.

The 7th Fusiliers left Manchester 900 strong, on Tuesday morning, by the London and North-Western Railway, in 44 carriages. The men appeared to be in capital spirits, and both divisions of the troops were accompanied in their march through the streets by some thousands of people, who cheered them loudly. They arrived at Southampton on Tuesday evening, and embarked on board the *Orinoco*.

The means of transport have still to be provided for twenty-two officers and seventy-two horses of the general staff.

The Light Brigade and the 4th Regiment embarked from Malta on the 31st ult. on board the *Golden Fleece*, for Gallipoli; the 5th, on board the *Georgiana*; and detachments of the 24th, 41st, 49th, and the 1st company of Sappers and Miners, on board the *Cape of Good Hope*, for the same destination.

Major-General Sir G. Brown arrived at Malta on the 28th, and sailed on the 31st for Gallipoli.

ADMIRAL BERKELEY'S ADDRESS.

On Wednesday last, Rear-Admiral Berkeley was sent on board the *Cumberland*, 70, which was commissioned in January, 1851, and which has been ordered to the Baltic, in order to explain to the men the circumstances under which their services have been required. All hands having been piped on the quarter-deck, Admiral Berkeley addressed the men as follows:—

My Men,—I am sent down here by the Board of Admiralty to acquaint you that we are at war with Russia. Had there been no war, you would not have come home till June, as your time of service would not have expired till that period. The country now requires your services in another direction, and I feel assured that I am addressing a ship's company so well disciplined, that it gives me the utmost satisfaction in knowing you will be a valuable augmentation to the fleet now in the Baltic under the command of Sir Charles Napier, who has fifteen sail of the line with him, besides frigates and corvettes, the most of which are steamers. These, in conjunction with the gallant French, will, I trust, bring the war to a speedy issue. It is not likely that your services will be required longer than October next, because at that period the ice will prevent further operations; and, unless events should happen which no one can foresee, I trust that in October next we shall be enabled to pay you off, and that will only be a few months more than your time of service. If, however, the Russians should have the temerity to venture down amongst you, I well know the material we may rely on, and that you will give a pretty good account of the meeting. At present, should any of the ship's company want money, they may have it. If also there are medals or rewards to be distributed, that also will be immediately attended to. In this respect I will consult with your captain; and, in conclusion, although you may probably feel a little disappointment at what I have made known to you, yet, as British sailors and a gallant ship's company, you will act with loyalty, and I know you will do your duty as becomes you.

The address was well received by the men.

SIR CHARLES NAPIER IN THE BALTIC.

On Monday week the British fleet, consisting of twenty-two vessels, carrying 1252 guns, and 12,000 men, arrived at Kiel, where it remained till Thursday. Crowds of people from Hamburg, Altona, and other towns in that neighbourhood, flocked to see the marvellous spectacle. Throughout the whole of Thursday the trains from Altona continued to bring fresh visitors from Berlin, Leipsic, and many other large places in the interior of Germany to Kiel, after the fleet had sailed; but the want of certain knowledge where it was to proceed kept many from engaging some kind of conveyance to follow it.

On Tuesday last the fleet was at anchor in Kioge Bay, a short distance from Copenhagen, where it was joined by the *Auxiliaries*, 100 guns, from Brest.

An electric despatch from Copenhagen of April 5, says:

The fleet left Kioge Bay this morning. The news that the Russians have evacuated Aaland is officially confirmed.

The *Miranda* steamer, which returned last Sunday from a cruise of observation in the Baltic, brings intelligence that the Russian fleet is anchored at Revel, from which it cannot be freed by the breaking-up of the ice until the end of April.

PREPARATIONS FOR THE WAR.

The Government purpose sending out all kinds of clothing and food, which can in any way conduce to the health of the troops. A large quantity of tea will be shipped, as the use of water alone in any way will be prohibited, owing to its deleterious character, without the operation of boiling. The French propose shipping a large quantity of wines, and it is supposed that some arrangement will be made by means of which our Government will be able to follow the example.

Those of the Greenwich Pensioners who are fit for service are now recalled to active duty. On Saturday, in pursuance of orders, the Greenwich pensioners of Liverpool, 42 in number, assembled at the Naval Rendezvous, Redcross-street, for inspection by Commander Bevis, R.N., who informed them that such of them as were found fit for service should be drafted on board ship. Upon inspection it was found that 22 were fit for active service.

Notice has been given that engineers at present working for private establishments, if they have had about two years' experience in the mercantile steam-vessels at sea, may be entered as acting assistant-engineers in the Royal Navy.

In addition to the *Tyrocles*, already despatched with horses of the Royal Artillery for the Mediterranean, Mr. Dunbar has five other transport-ships now ready at Deptford; two, the *Merseyshire* and another new ship fitted for the conveyance of horses; and three, the *Dunbar*, the *Bowsprit*, and the *Canterbury*, fitted for the conveyance of infantry. It is supposed the sailing-vessels for infantry will be employed for conveying a portion of the six regiments of the line, which it is contemplated to send with a siege battery of artillery to the Baltic, to operate with the fleet under the command of Sir C. Napier.

On Sunday the prayer prescribed for time of war was offered in the various churches of the metropolis; and in most of the nonconformist places of worship supplications were made for the triumph of truth and justice, and a speedy return of peace.

The following arrangements have been taken with the Porte regarding the first expedition of 10,000 British troops. The Turkish Government is bound to furnish daily—10,000 lb. of bread (first quality); 10,000 lb. of meat, half beef, half mutton; 30,000 lb. of wood; 18,000 lb. of barley; and 15,000 lb. of straw. These articles will be paid for monthly by bills on the London Treasury. The troops are to be lodged in the spacious barracks situated in the Turkish quarter called Daout Pacha, and the military Governor of Constantinople has received orders to repair that establishment.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

Whatever the Royal Academy Exhibition may be like this year, all the pictures have been sent in—Tuesday being the last day on which pictures were received. From what we have seen, we can confidently state that our painters have not been idle; and that there is every promise of a very choice Exhibition.

A little bit of landscape gardening in London has just been temporarily laid open to public view. Who in West-end London has not walked from Piccadilly down Berkeley-street into Berkeley-square? Who does not remember the dead wall on the left enclosing the gardens of the Duke of Devonshire and the Marquis of Lansdowne? Well, a large portion of that wall has been pulled down to be rebuilt; and the view laid open has been a source of astonishment to the whole of May-fair. How few had a notion of what was behind that wall! Let us suggest something. Give a half-wall, with railing, and what a charming view might the public gain, at no loss whatever to the noble Duke or the noble Marquis. His Grace, we may add, commands a capital north view from Devonshire-house. He has not only his own garden, but the view is of such extent, for London, that both Lansdowne-house-garden and Berkeley-square seem to belong to his Grace.

Mr. John Bruce has resigned the office of treasurer to the Society of Antiquaries. Well, the society suffers a loss, but the public will gain by the resignation. The duties of the office seriously interfered with Mr. Bruce's literary labours. We have now a chance of obtaining the long-promised life of Prynne, the Puritan and antiquary, on which Mr. Bruce has been so long engaged, and which no one is so well competent to give us. Prynne's was a busy and important life, and the study of his career will throw light on the manners, and political and religious prejudices of a great period in our history.

John Wilson—better known as "The Professor," or "Christopher North"—died on Sunday last, near Edinburgh, in the sixty-eighth year of his age. He had long suffered from paralysis; but his mind, though his body was disabled and weak, was bright and vigorous to the last.

This highly original and influential poet and critic was born at Paisley, North Britain, in, it is said, May, 1789. His father was a rich cloth manufacturer in that town, who had risen to wealth by his own industry and honesty. His mother was a Miss Sym, sister to that Sym known to every reader of *Blackwood* under the assumed name of "Timothy Tickler."

After the usual domestic education, which, from the character of his father, may be reasonably supposed to have given him strong impressions of morality and perseverance, he was committed to the care of the Rev. George M'Latchie, and was soon distinguished among his school-fellows. "Not to name the school or the masters of men illustrious for literature," says Johnson, "is a kind of historical fraud, by which honest fame is injuriously diminished."

From Mr. M'Latchie's care he was removed, while yet a boy, to the University of Glasgow, and placed there under the roof of Mr. George Jardine, Professor of Logic and Rhetoric in that University. Here he went through a full course of education in languages, philosophy, and *belles lettres*; and was remarked among his fellow-students as uncommonly original in his views, animated in his prosecution of them, and unrivalled in the powers he possessed of *pressing* them on the minds of those to whom he had occasion to address them. "He lived in my family," says Professor Jardine, "during the whole course of his studies at Glasgow; and the general superintendence of his education was committed to me; and it is but justice to him to declare, that during my long experience I never had a pupil who discovered more genius, more ardour, or more active and perseverant diligence." If other proof were wanting of the truth of this, it may be found in the earliest of his writings, and in those testimonials which he collected when he became a candidate for the chair of Moral Philosophy in the University of Edinburgh.

From Glasgow he removed to Oxford, and was entered amongst the non-foundationers of Magdalen College; where his tutors were—first, the Rev. Thomas Collins, and afterwards the Rev. Benjamin Chester, the Rev. Thomas Collins, and afterwards the Rev. Benjamin Chester, the late Archdeaconship of Bishop Heber and Bishop Philpotts; and was distinguished, both within and without the walls of his college, for the originality and vigour of his views, his skill in clothing them with proper words, his genius for poetry, and his love of all manly and honourable pursuits. The President of Magdalen still lives to remember the appearance made by the young non-foundationer in every classical examination, and the early promise which he gave of his after reputation.

The chief honour he obtained at Oxford was the Newdigate Prize for the best Poem on Painting, Sculpture, and Architecture, of which Heber and others thought most favourably; but which the author himself viewed only as a college exercise, for he has not admitted it among his collected poems.

On leaving Oxford, his time was passed chiefly at Elleray, on the banks of Windermere, where he bought a house, most beautifully situated; and in Edinburgh, where he was now and then to be seen sweeping the boards of the Parliament-house as a briefless barrister. He was not, however, idle, and became first known as a poet without the pale of the University by a poem to the memory of James Grahame, author of "The Sabbath." This he has admitted among his works, and it merits the partiality which he evinced for it. Sir Walter Scott, to whom he became known about this time, describes him in 1812, to Joanna Baillie as "an excellent, warm-hearted, and enthusiastic young man," and adds, "something too much, perhaps, of the latter quality, places him among the list of originals."

His reputation was importantly increased, in the spring of 1812, by his poem, called "The Isle of Palma," a poem in four cantos, something in the style of Southey; and again, in the spring of 1816, by a drama, in three acts, called "The City of the Plague," descriptive of the great Plague of London, in 1665. "The Isle of Palma" passed unnoticed by the two great leaders of taste—the critics of the "Quarterly" and "Edinburgh." "The City of the Plague" was equally neglected by Gifford, but Jeffrey welcomed it as the work of a true poet.

While at Elleray, he married Miss Ferrier, sister to the authoress of "Marriage" and "Inheritance," by whom he has left two sons and three daughters. He survived his wife, and lamented her loss with that fervent sorrow which all who knew the man, or knew her, might be sure 'he would feel. One of his daughters is married to Professor Aytoun—himself a true poet.

In the year 1820 he became a candidate for the chair of Moral Philosophy in the University of Edinburgh, vacant by the death of Dr. Thomas Brown. The chair was in the gift of the Town Council, and there was a strong opposition to him, placed on the score of politics—the then humorous political pieces having much exacerbated the Whigs of the North against him. There was, however, no resisting his claims. His printed testimonials are such as any man might be proud to see, even for the general range of literature," says Sir Walter Scott, "there are few topics which you have not considered; and I conceive that it would only require the direction of your powerful and original mind to any one particular study, in order to render yourself perfectly master of it." Wordsworth is still more to the point: "If the choice is to depend upon pre-eminence of natural powers of mind, cultivated by excellent education, and habitually directed to the study of ethics, in the most comprehensive sense of the word; upon such powers, and great energy of character, with correspondent industry, I have no hesitation in saying that the electors, the University, and Scotland in general, must be fortunate in no common degree, if, among the competitors, there be found one more eligible than yourself."

A few years before he obtained the University chair, which he retained to his death, he became acquainted with Mr. Lockhart, a younger man than himself, just fresh from Oxford, and anxious for distinction, both at the bar and in literature. They were soon allies, for they had congenial tastes, and the same High Tory range of politics. Edinburgh was then governed in politics and literature by Jeffrey and the *Edinburgh Review*. *Blackwood's Magazine* had been newly started, to spread other opinions, and find employment for the pens of a few younger satirists. To this magazine Wilson devoted much of his leisure time; Lockhart did the same; and now that Wilson is no more, Mr. Lockhart is the last of that little band that gave life and early reputation to *Blackwood*. They are all gone: Blackwood himself, Galt, Allan Cunningham, Hogg, Delta, Sym, and now Wilson.

Though it is not for a moment to be doubted that John Wilson is a poet, yet his claims to a hereafter will mainly rest on his prose contributions to *Blackwood*. His "Noctes Ambrosianæ" abound in humour, in passages of fine poetry in prose, pieces of subtle criticism, and bursts of eccentric, but heart-moving merriment. We fear, however, that they are, at times, too local, too personal, and too temporary, in their allusions, to be enjoyed by those who are not well up in the private history of Edinburgh, and in matters now little remembered. Not so his other contributions—since collected by himself, and called "The Recreations of Christopher North." Here he is indeed a warbler of poetic prose, original both in thought and style, hurrying his reader on in a breathless haste of delight, and then allowing him to recover himself, by the matter he affords him for his amusement and instruction. What word-painting is to be seen in this small portrait of Scott:—

> The mighty Minstrel recited old ballads with a warlike march of sound that made one's heart leap; while his usually sweet smile was drawn in, and disappeared among the glooms that sternly gathered about his lowering brows, and gave his whole aspect a most heroic character. Rude verses that, from ordinary lips, would have been almost meaningless, from his came inspired with passion. Sir Philip Sidney, who said that "Chevy Chase" roused him like the sound of a trumpet, had he heard Sir Walter Scott recite it, would have gone distracted. Yet the "best judges" said he murdered his own poetry: we say, about as much as Homer.

Mr. Lockhart should transfer this master miniature to his master biography of his illustrious father-in-law.

As a poet he will descend to posterity, chiefly, we suspect, through his small lyrical pieces—such as his "Edith and Nora," and his "Address to a Wild Deer:" in the former there is much pastoral beauty and Doric delicacy; in the latter, an elasticity of language, and swing and vigour of versification that mark it out for a long popularity. In his larger pieces, it will be found, we fear, that almost the only passions with which his poetry is conversant are the gentler sympathies of our nature, tender compassion, confiding affection, and guiltless sorrow. He has little invention—he would not appear, indeed, to have cared much about a story. He can stir emotions by scenes and situations. The same observations will apply to his prose writings—such as his "Trials of Margaret Lindsay;" in which there is a slender thread of incident, but situations that command and merit attention, with pathos and landscape nature, each of a very high kind.

In person he was tall and well made, barely six feet; strong, active; with very handsome features, and a profusion of half-yellow, half-sandy hair. Hogg described him in his famous "Chaldee MS." as a man "with hair like eagle's feathers, and nails like bird's claws;" and Wilson himself enjoyed and admitted the truth of the portraiture. His eyes were fine, and his copiousness of imagery and of language, with his expression, were extremely fascinating. He enchained the listener. There is a good portrait of him by Sir John Watson Gordon, and a poetic bust of him, in marble, by the late Mr. Fillans.

There is current, among authors, a capital story of the Professor and Charles Lamb; and one, moreover, that is entirely spoilt by the late Mr. Justice Talfourd, in a note to the letters of that delightful Essayist. Wilson entertained a hearty admiration for Elia, and when last in London (for his London visits were few and far between) he called on Lamb, and took a quiet stroll with the Essayist about Edmonton and Enfield. Lamb's liking for London porter in the middle of the day deserves to be proverbial. He seldom went out for a stroll but what he indulged in a pint of his mid-day beverage. His long endeavored to quiet this desire in his walk with Wilson, remembering that his companion was a public Professor of Moral Philosophy, and therefore, it was to be supposed, not particularly anxious to be seen walking with one who entered a public-house with the familiar air of an old frequenter. Thirst and custom, however, got the better of prudence, and Lamb at length asked Wilson to walk on, and he would soon overtake him. Now Wilson knew the failing of his friend, consented, and let Lamb get round the corner. As soon as Lamb was in seeming safety, Wilson ran down the lane, saw him enter a public-house, hurry to the tap, and call for "a pint of porter," as fast as his stuttering manner would allow him. "Make it a pot," said Wilson, throwing down a shilling, and eyeing Lamb with a look of unutterable good feeling. Lamb closed the Professor's hand with an intensity of warmth, and the pot was enjoyed as never pot of porter was perhaps enjoyed before. Lamb thought well of the Scotch from that moment.

(A Portrait of Professor Wilson is engraved in the Illustrated London News, No. 119.)

THE NEW COMET.

Mr. Hind has published an ephemeris indicating the approximate position of the Comet in the heavens. The elements are adapted to eight o'clock, Greenwich time, which is about the most favourable hour for observation:—

	Right Ascension. h. m.	North Declination. deg. min.	h. m.
Saturday, April 8	.. 3 14	12 28	
Sunday 9	.. 3 23	11 31	Sets at 9 14 p.m.

THE COMET AS IT APPEARED ON SATURDAY EVENING LAST.

This evening, at eight o'clock, it will appear in the vertical of the Pleiades, 18 degrees below them; and on the 13th its position will be 10 degrees below the bright star Aldebaran, in the Hyades, in nearly the same vertical. The Comet was at its least distance from the sun on the 24th of March. Mr. Hind states that the nucleus on Sunday evening was rather more than 6000 miles in diameter, and the extent of the tail 6,000,000 miles. At his best views Mr. Hind was certain of the existence of a bituminous jet, thrown out from the star-like point some 30,000 miles along the preceding border of the tail—an appearance which has been remarked in several previous comets.

Election for Westmoreland.—The election of a member to represent Westmoreland, in the room of the late Mr. Alderman Thompson, took place at Appleby, yesterday week; when the Earl of Bective, son-in-law of the late member, being the only candidate, was duly elected.

North Durham Election.—The election of a member for the northern division of this county—in the room of Lord Seaham, raised to the peerage by the title of Earl Vane, consequent on the death of his father, the Marquis of Londonderry—took place on Saturday, at the County Court House, Durham, when Lord Adolphus Vane, son of the late Marquis, and brother to Earl Vane, was returned unopposed.

C R O N S T A D T.

FORT ALEXANDER.—150 GUNS.

THE TOWN AND FORTRESS OF CRONSTADT.

Cronstadt, the "Malta of the Baltic," as the Russians style it, is a town, fortress, and port in the Government of St. Petersburg, from which city it is thirty-one miles distant. It is built at the south-east extremity of Kothnoi-Ostrof, an island in that part of the Gulf of Finland called the Bay of Cronstadt about sixteen miles from the mouth of the Neva. This island, a bed of chalk, formerly called Rétouzari, or Rat Island, by the Finlanders, is seven miles in length, and about one mile in breadth. At the entrance of the harbour, on an island opposite the citadel, lies the castle or fortress of Cronschlott, built by Peter the Great. This fortress and the mole bristle with guns, and the harbour itself is approachable only by one channel, which is well defended. A late visitor says that 600 heavy guns can be brought to bear on a vessel lying at the mole. The passage between Cronschlott and Cronstadt is 3000 paces in width, and has ample depth for the largest vessels. Besides its importance as the great naval station of the Russian fleet, Cronstadt is the harbour of St. Petersburg. All vessels proceeding to that port are searched here, and their cargoes sealed; and such as are too large for the shallow waters of the Upper Neva unload their cargoes at Cronstadt, and transport them in smaller craft. The channel is marked by stakes the whole way, and vessels built at Petersburg are placed on a "camel," or kind of raft, by which their draught of water is lessened one-half, and then floated down the Neva, and over its bar, on which there is often only seven feet water. There are two navigable approaches to the Neva: the northern is by nature difficult, on account of the sand-banks, and is said to have been made inaccessible lately by sinking vessels filled with stones in the channel; the southern arm, though nearly seven versts (about 4½ miles) broad, has an exceedingly narrow channel, close to the island of Cronstadt, and this is enfiladed by the guns on the works.

Cronstadt, which is built in the form of an irregular triangle, is strongly fortified on all sides. It has three harbours, lying to the south of the town. The outer, or military harbour, which is entirely surrounded by a massive and strongly-fortified mole, is a rectangle stretching out into the sea, and is capable of containing, besides smaller vessels, about thirty-five ships of the line. It is now, however, so shallow at low water, that many of the ships are obliged to anchor in the middle harbour, which is properly intended for the fitting-out and repairing of vessels. It contains the slips, a powder magazine, a manufactory of pitch, tar, &c. The third, west, or innermost harbour which has space for 600 merchant vessels, and runs parallel with the middle harbour, admits only merchantmen, for which there is besides an

FORT PRINCE MENCHIKOFF - 75 GUNS.

excellent roadstead, immediately outside of the port, which is defended also by the citadel, constructed on a rock in the middle of the sea of Cronstadt. All these harbours are well secured: but, in consequence of the freshness of the sea water, no vessel can be preserved in them above twenty years. They are besides detained a great part of the year by the ice in the bay of Cronstadt, which usually prevents vessels from entering after the end of November, or leaving before the end of April, or sometimes even later. For nearly six months the bay of Cronstadt is as lifeless as a desert; the whole surface is then frozen to one solid level, broken only by three roads—one to St. Petersburg, one to Oranienbaum, and a third to Sestezbek. In 1849 the summer season commenced on the 15th May, and ended on the 26th November.

Vessels are repaired and built in the large canal of Peter the Great, which runs directly into the town between the middle and merchants' harbour. It is 2160 feet long, 56 wide, and 26 deep; the side abutments, &c., are of solid masonry, and it is filled with water by means of sluices, which is again pumped out by steam-engines. It was commenced in 1721, and finished by Elisabeth, daughter of Peter the Great. Near it are the various docks, in which ten ships can be repaired at once; the foundry, which supplies annually 1200 tons of bombs, balls, &c; the Admiralty rope-walk, tar-works, and excellent wet docks. By the new Catherine canal, commenced in 1782, which communicates with the merchants' port, and is 1850 fathoms long. Government vessels are enabled to take their stores, munition, &c., directly from the storehouses. The town, which, with its garrison, contains about 10,000 inhabitants, is very regularly built, and contains many fine, straight, and well-paved streets, and several public squares. The houses, however, with the exception of those belonging to the Government, are chiefly of one story, and built of wood. The city has three gates, and is divided into two parts—the Commandant and Admiralty quarters, which are subdivided into four districts. Between the Peter's and Catherine canals is the old Italian palace, built by Prince Menschikoff, who took this island from the Swedes in 1709. It is at present occupied by the school for pilots, a very excellent institution, which contains 400 boys, from ten to seventeen years of age, all sons of naval officers. Here they are carefully instructed during the winter months in the scientific branches of their profession; and, during the summer, all the older ones are at sea, either in men of war or merchant vessels, learning to become pilots for the Baltic and Gulf of Finland.

Among the chief buildings are the Admiralty, Exchange, Custom-house, barracks, a Protestant gymnasium, various schools, an invalid asylum for sixty females, the nobility's club, and the house of Peter the Great, where he resided for some time; but, with the exception of a few old oaks, which he is said to have planted with his own hand, there are no remains of the former garden. The permanent population of Cronstadt, exclusive of the garrison, the pupils of the naval school, workmen, and sailors, is not considerable; during the summer it amounts to upwards of 40,000 individuals, of various nations; of these, next to the Russians, the English are most numerous. The inhabitants derive their chief support from the fleet, trade, and shipping. The town presents an appearance of great activity and bustle during the summer, but in winter all is dead and stagnant. The town and port were laid out, and the buildings far advanced, by Peter the Great, who founded Cronstadt in 1710; but it did not receive its present name (the City of the Crown) till 1721. At the northern extremity of the island is Fort Alexander, built of massive blocks of Finland granite, intended to mount 150 guns, but having only 120. In the centre is a court-yard, and in it is a barrack, not bomb-proof, capable of containing 750 men. The guns are chiefly of the largest size, but the fort is said to labour under the same disadvantage as those of Sebastopol—the back part of the casemates being solid, and the loopholes very small, there is no proper passage for the smoke, so that the men serving the guns would be half smothered after a few rounds had been fired.

The next fort on the left from Alexander is Fort Peter, which mounts 88 guns, and one side of which commands the anchorage and passage to St. Petersburg. Fort Menschikoff, built in 1851, mounts 48 guns—all 8in. Paixhans. Fort Alexander, on the right bank of the channel, stands Fort Riesband, which, when completed, was to mount 250 guns.

Late accounts from St. Petersburg affirm that the strand batteries, which command the channel leading up to the harbour, have been doubled, and that, before Cronstadt can be attacked, these batteries, which contain 800 guns of the largest calibre, must be destroyed. They also say that there are three artillery parks in reserve.

By a ukase of the 11th of March, addressed to the Russian Senate, General Dehn, of the Engineers, has been named Military Governor of Cronstadt, *ad interim*, and to supply the place of Vice-Admiral Lütke, the actual Commandant. General Dehn enjoys all the prerogatives of a General commanding an independent corps, and has the garrison of Cronstadt, and all the troops there placed, under his orders.

Letters from Bromberg announce a somewhat novel mode of establishing submarine mines for the special and complete destruction of all British ships approaching Cronstadt. Russian engineers they say have sunk vast blocks of granite into the channel, in which blocky chambers filled with powder have been excavated, and are to be fired by voltaic batteries at the critical moment. A pleasant story!

DATES OF THE CHIEF EVENTS IN THE LAST WAR BETWEEN RUSSIA AND TURKEY.

1828.
May 7, 8. Russians cross the Pruth.
" Besiege Ibrail.
June 8. Cross the Danube at Isaktschi: Operations between it and Trajan's Wall.
" 16. Capitulation of Ibrail.
" 30. Capture of all other places up to Trajan's Wall.
July 16. Operations against Varna and Schumla.
" 27. Arrive before Schumla.
" 16. Invest Varna.
Aug. 3. Russians met with reinforcements.—Siege began.
Oct. 10. Capitulation.
July 21. Invest Silistria.
Oct. 25. Abandon the siege.
Sept. 27. Battle at Kalafat to the disadvantage of the Russians; but the place carried by a night surprise.

1829.
April 15. Diebitsch leaves Jassy for the army.
" Sisoboli taken by sea without resistance.
May 8, 9. The Danube crossed at Hirsova and Silistria.
" Silistria re-invested.
[Varna being in the possession of the Russians, made this more easy to effect.]
June 12 Battle of Kulewtscha between Schumla and Paravadi.
" 26. Capitulation of Silistria.
July 18. Schumla passed, and head-quarters on road to Adrianople.
Aug. 19. Adrianople reached.
Sept. 7. Mediah on the Black Sea occupied by advance along the coast from Bourgos and Sisoboli.
" 8. Enos on the Mediterranean (south of Adrianople) occupied.
Aug. 26. Treaty of Adrianople signed.

THE COURT.

On Monday the Queen received the Addresses from both Houses of Parliament, and afterwards gave audiences to the Earl of Clarendon, the Earl of Aberdeen, Lord John Russell, Sir James Graham, and the Duke of Newcastle. In the evening the Queen had a dinner party; the company including her Royal Highness the Duchess of Kent, the French Ambassador and the Countess Walewski, the Duchess of Inverness, the Earl and Countess Cowper, Viscount Drumlanrig, Viscountess and Viscountess Malden, Lord Adolphus Fitzclarence, Lady and Miss Peel, Col. Wylde, and Mr. Gibbs.

On Tuesday the Queen and Prince Albert, accompanied by the Princess Royal and the Princess Alice, took a drive in an open landau and four. In the evening her Majesty and the Prince Consort honoured the Princess' Theatre with their presence.

On Thursday the Queen and the Prince took a drive in an open landau and four. In the evening her Majesty and his Royal Highness honoured the Olympic Theatre with their presence.

Yesterday (Friday) her Majesty held a Privy Council at Buckingham Palace.

The Viscountess Canning has succeeded the Countess of Desart as Lady-in-Waiting to the Queen. Lord Charles Fitzroy and Lieut.-Col. Francis Hugh Seymour have relieved Col. the Hon. C. Grey and Capt. the Hon. H. de Ros in their duties as Equerries-in-Waiting to the Queen and the Prince.

The Duke of Argyll (Lord Privy Seal) gave a grand dinner to the Cabinet Ministers on Wednesday evening.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

PRESENTATION OF THE ADDRESS.

The presentation by the House of its Address in reply to her Majesty's Message occasioned their Lordships meeting at two o'clock, three hours before their usual hour.

A few Peers were sitting, hearing appeals, during the earlier part of the morning—Lords Harrowby and Montesgle, Brougham, and St. Leonards. Of these the Earl of Harrowby and Lord Montesgle found time to divest themselves of the costume in which they had been discharging their judicial functions, and they returned in time to assist at the ceremonial. Lord Brougham, despairing of such celerity in the doffing of those well-known garments to which comic art has given a historical value, and Lord St. Leonards, who in the order of Jumority adopted on these occasions, would have enjoyed a painful pre-eminence, prudently kept their seats, and let the more active and more ancient peerage come and go in singularly tasteful uniforms, and with very innocuous swords, on the warlike mission which formed the solemn business of the day.

Shortly after two o'clock, Lords Derby and Malmesbury appeared; and the House began to fill with regimentals, mostly attributable to the recent Act for the Enrolment of the Militia. A few old noblemen, objecting to such subterfuges, stood forth in court dress, and three Bishops lent the variety of lawn. All who proposed to go having arrived, the Usher of the Black Rod called over their names. There were present—the Archbishop of Canterbury, the Duke of Montrose, the Marquises of Chandosdeley and Bath, the Earls Derby, Eglinton, Denbigh, Delawarr, Carnarvon, Malmesbury, Desart, Erne, Lumesborough, Lucan, Powis, Sheffield, Howe, Harrowby, Cawdor, Strathmore, Donoughmore, and Clare; the Bishops of London, Oxford, and Llandaff, the Barons Colville of Culross, Lyveden, Charlemont, Redesdale, Colchester, Montesgle, Campbell, and Dufferin. These gentlemen, with the Lord Chancellor, then set off in their carriages, in procession, to the Palace.

THE QUEEN'S REPLY.

At five o'clock their Lordships re-assembled at the House.

The Lord Chancellor then rose and said: My Lords, I have to acquaint your Lordships that the House has waited this day on her Majesty, with the Address which you voted on Friday last. Her Majesty has been pleased to return to it the following most gracious answer:—

I thank your Lordships for your loyal and dutiful address. It is highly gratifying to me to receive the assurances of your co-operation in giving effect to measures which I consider necessary for the honour of my Crown and the welfare of my people.

CHURCH BUILDING ACTS AMENDMENT BILL.

The Earl of Harrowby, in moving the second reading of the Church Buildings Act Amendment Bill, described the objects of the bill, and showed its application to the city of London. There were in the City churches with no population attending them; whilst, in other parts of the metropolis, there was population without churches—evils which were exceedingly injurious to the cause of religion. The bill would remove churches from places where they were not wanted, and place them where they were wanted. It had been objected that it was proposed to interfere with consecrated buildings. He admitted that this objection was entitled to the highest respect; but he contended that, where the purpose in view was the real interest of religion, all minor considerations must give way.

The Earl of Powis objected to the bill, on the ground that it proceeded to pull down churches without making provision for free seats for the population turned out of them.

The Bishop of London gave his support to the bill. Its object was, under certain safeguards and with certain securities, to provide for the taking down of churches where they were not wanted and rebuilding them where they were wanted. It would effectually meet the case of the city of London, and provide for the wants of districts outside its walls; and he showed that owing to existing circumstances such a measure was necessary.

Lord St. Leonards suggested that the bill should designate the churches which it was intended to pull down.

The bill was read the second time, and referred to a select committee.

HOUSE OF COMMONS.

PRESENTATION OF THE ADDRESS.

The Speaker took the chair at half-past two o'clock.

There were about 150 members present, who were distributed equally on both sides of the House. Amongst those present on the Treasury bench were Lord J. Russell, Mr. Sidney Herbert, Mr. Strutt, and Mr. F. Peel—all of whom wore the Ministerial uniform. On the front Opposition benches were Mr. Disraeli, Mr. Walpole, and Sir J. Pakington, also clad in Ministerial uniform—a privilege usually accorded to ex-members of the Cabinet. The House presented an unusually gay appearance in consequence of the number of uniforms—deputy-lieutenants, militia, and yeomanry enlivening the usually sombre aspect of the benches.

The Speaker having called upon Lord J. Russell, the noble Lord proceeded to the bar of the House and announced that he had the commands of her Majesty to state that she would be graciously pleased to receive the Address of the House of Commons at three o'clock.

A great deal of amusement was created by the circumstance of the Speaker proceeding at the head of the House without the mace. The right hon. gentleman's attention was called to the fact by Lord Charles Russell, the Serjeant-at-Arms, who shouldered the unwieldy ornament amid much laughter.

Westminster-hall, and all the approaches to the House, were crowded with persons anxious to get a glimpse of the different members as they passed; among whom the hon. and gallant Member for Lincoln received as large a share of public notice as fell to the lot of any other hon. gentleman or noble lord.

On the motion of Lord J. Russell, the House adjourned until half-past five.

THE BLACK SEA FLEET.

The House having re-assembled at the above hour,

Sir J. Graham, in answer to Captain Scobell, stated that large quantities of coal had been sent out for the Black Sea fleet, and that a despatch had been that day received, stating that the fleets had departed for Varna.

THE BRIBERY BILL.

On the motion for going into committee on the Bribery Bill,

Mr. V. Smith moved that it be referred to a select committee, by which only would justice be done to the various proposed measures on the subject. He observed that, though unusual animosity against bribery had been lately manifested in that House, there was a feeling out of doors that such vehemence savoured a little of hypocrisy. He condemned the severity of the contemplated disqualifying enactment, and said that it rendered candidates to prevent bribery. There was no public opinion to support this penal measure.

Mr. Deedes supported the amendment.

Lord J. Russell was disappointed at the course taken by his hon. friend Mr. V. Smith. The reference to a select committee was equivalent to postponing the bill to another session. All objections to the measure might be taken in the committee of the House, and he proposed to take Sir F. Kelly's bill second in order to his own, and to postpone the controverted clauses in the latter until an agreement had been come to as to a definition of the offences to be legislated against. He also observed that it would be impossible for him to attend a select committee, and he urged that there was no real difficulty in considering the measure he proposed.

Mr. Walpole felt the advantage of going to a select committee, but did not consider it advisable to press the amendment after what had fallen from Lord J. Russell, who had proposed to proceed in the fairest possible manner.

Col. Sibthorp was opposed to the whole measure.

Mr. Napier thought that the sooner the subject was got rid of the better; and, though he was aware of the desirability of a select committee, would not oppose the motion of Government.

Lord Hotham supported the amendment, and observed that the Prime Minister, in disposing of his patronage, would violate the proposed law every day.

The House then divided, and the numbers were—For the original motion, 146; for the amendment, 76: Majority for Government, 70.

The House then went into committee, and the discussion occupied the greater part of the sitting.

The Ministers' Money (Ireland) Bill was read a third time and passed.

HOUSE OF LORDS.—TUESDAY.

BILLS OF EXCHANGE.

The Bills of Exchange Bill was read a second time, on the motion of Lord Brougham, and ordered to be referred to the Select Committee on the Common Law Procedure Bill.

CHIMNEY-SWEEPERS BILL.

The Chimney-sweepers Bill was ordered to be referred to a select committee, on the motion of Lord Shaftesbury.

HOUSE OF COMMONS.—TUESDAY.

THE DAMAGED HAY.

Mr. Osborne, in reply to Mr. Sadlier, stated that it appeared that no ground existed for charging Messrs. Sturgeon and Sons with deliberate fraud; and that the truss of hay in which the carcass of a lamb was found was not one of the trusses sent in by Messrs. Sturgeon.

DUBLIN UNIVERSITY.

Mr Fagan moved for leave to bring in a bill to make provision for the better government of the University of Dublin; for the establishment of a second college therein, with co-ordinate authority and equivalent income with Trinity College, to be called the Queen's College; and for the extension to students of all religious denominations of the honours, degrees, emoluments, and offices in the said Queen's College. He complained of the narrow sphere within which the rich endowments of Trinity College were distributed; and proposed that there should be two colleges, with separate provosts, under a council of twenty-four members elected by both colleges, the second college having its fair share of the large property now belonging to Trinity College.

The motion, which was supported by Mr. Heywood, Mr. Hume, Mr. Fitzgerald, and Mr. O'Brien; and opposed by Sir J. Young, Mr. C. A. Hamilton, Mr. Whiteside, Mr. Butt, Mr. Napier, and Mr. George, was withdrawn withdrawn without a division.

PROTECTION OF WOMEN.

Mr. Boyer moved for leave to bring in a bill to amend the law regarding actions for criminal conversation and the protection to women in such actions. He proposed by this bill, that no damages should be hereafter awarded, but that in the event of a verdict for the plaintiff, the court should have the power of imposing a fine upon the defendant. In all actions for crim. con. the wife was unheard, and a verdict for her husband was nothing less than destruction to her. In order to remedy this state of things he proposed that no action should be brought against a defendant without notice being given to the woman, and that at the trial she should be allowed to appear by counsel and witnesses.

Mr. Fitzroy said that, in the absence of Lord Palmerston, he would not oppose the introduction of the bill, but guarded himself against being considered favourable to its principle.

Leave was given to bring in the bill.

THE SLAVE TRADE IN CUBA.

An address for returns of vessels seized, on suspicion of being engaged in the slave trade, and of her Majesty's ships employed on the coast of Cuba for the prevention of the slave trade, was moved for by Sir G. Pechell, and agreed to, after a discussion.

LARCENY.—IMPROVEMENT OF CRIMINAL PROCEEDINGS.

Mr. Aglionby obtained leave to bring in a bill to amend the law of criminal proceedings, and to enable justices in petty sessions to take pleas of "guilty" in cases of larceny.

THE ARCTIC EXPEDITION.

Sir T. Acland moved for copies of any instructions issued, or hereafter to be issued, to the Commanders of her Majesty's ships now engaged in Arctic regions in the search for Sir John Franklin's Expedition. The motion was granted.

EDUCATION (SCOTLAND) BILL.

The Lord-Advocate stated the reasons which had induced him to postpone the second reading of the Education (Scotland) Bill, until the 5th of May, and mentioned certain modifications he was prepared to make in the measure.

HOUSE OF COMMONS.—WEDNESDAY.

MIDDLESEX INDUSTRIAL SCHOOLS BILL.

The second reading of the Middlesex Industrial Schools Bill led to considerable discussion, an amendment having been moved by Lord D. Stuart, to the effect that the bill be read a second time that day six months. The chief objection was, that the Government was pledged to bring in a general measure on the subject, which was one of too much importance to be discussed upon a local private bill. Eventually the amendment was withdrawn, and the bill read a second time.

PUBLIC LIBRARIES AND MUSEUMS BILL.

Mr. Ewart, in moving the second reading of this bill, referred with satisfaction to the results which had been produced throughout the country by the Library and Museums Act. The object of the bill before the House was to further extend the operations of that act to towns which, like Cheltenham, had no municipal government; to other places which, like the metropolitan boroughs, were governed neither by municipal corporations, nor by improvement acts, and also to parishes uniting for a common purpose among themselves. The existing act did not extend to Scotland or Ireland; but the present bill, at the desire of many persons, he proposed should extend to both countries. Under the existing Libraries Act, Town-councils were not allowed to levy for the maintenance of those libraries a rate exceeding one half-penny in the pound. But by this bill, upon the representation of a great number of places, he proposed to extend that power, and enable them to levy a rate to the amount of one penny in the pound. By the existing act, too, there was no power given to purchase books and works of art; the present bill would provide for that omission, and confer the necessary powers.

Mr. Fitzroy opposed the bill on the part of Government. Several other members also opposed it; and it was ultimately thrown out by a majority of 5.

The Uniform Rate of Assessment Bill was withdrawn after a short discussion.

The County Court Extension Act Amendment Bill was read a second time.

A discussion on the second reading of the Property Disposal Bill, which lasted to a quarter to six, was adjourned to next day, in accordance with the rules of the House.

HOUSE OF LORDS.—THURSDAY.

THE RUSSIAN FLEET IN THE BLACK SEA.

The Earl of Malmesbury called the attention of Lord Clarendon to the various reports which have appeared in the public papers, to the effect that several Russian ships had recently left Sebastopol in considerable force, some with troops on board, some without troops; that these ships of war had landed about 4000 troops near the mouth of the Danube, and that a similar operation was performed on the Circassian coast. He asked the noble Earl whether he had received any confirmation of these reports, and he also asked whether he had any objection to state why the English and French fleets had continued to lie inactive in Beicos Bay; and how it happened that the Russian ships had been enabled to act in the Euxine, while the English ships thought it dangerous to do so?

The Earl of Clarendon could not agree with the noble Earl, that the English or French fleet had remained at all inactive since they approached the neighbourhood of the Black Sea. During the winter the Admirals of the combined fleets considered it better not to expose their ships to the dangers of the Black Sea and the wear and tear of the weather there, while the Russian ships were lying snug in their ports. Beicos Bay was considered by them the best place for the main body of the fleet to stop, while they, from time to time, sent out cruisers into the Black Sea, to observe the movements of the enemy. In respect to the recent report of the arrival of Russian ships at Varna and Circassia, the Government had every reason to suppose that no such event had taken place. The first notice of such a circumstance having occurred was communicated by the master of a Bremen frigate. On Sir E. Lyons becoming acquainted with this report he immediately proceeded to Constantinople, to which place he was informed the frigate had gone. Having succeeded in seeing the master, he was informed by this person that the statement was untrue, for he had seen nothing whatever of the kind in the Black Sea. On the 22nd ult. Sebastopol was reconnoitered by an English ship of war, and the Russian fleet was observed lying inactive in the harbour. On the 24th the whole of the combined fleet sailed from Beicos Bay into the Black Sea, and he (Lord C.) had that day seen letters from Admiral Dundas and Sir E. Lyons, who respectively reported that no such event as that related had taken place (Hear, hear).

SCOTTISH RIGHTS.

The Earl of Eglinton presented a petition from the National Association of Scotland for the Vindication of Scottish Rights, and moved an address to her Majesty, praying for an additional Secretary of State, for an increase in their representation, and for the restoration of Holyrood Palace.

The Earl of ABERDEEN objected to the motion, on the ground that Scotland had no grievances to complain of, to warrant such a proceeding.

The Duke of MONTROSE supported the motion.

Some discussion then took place, which resulted in the motion being withdrawn.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. HAYTER moved a new writ for the borough of Southampton, in the room of Sir A. Cockburn, who, since his election, has accepted the office of Recorder of Bristol.

TURKEY AND GREECE.

Mr. M. MILNES asked Lord J. Russell whether the Government were informed that diplomatic relations have ceased between the Ottoman Porte and the Government of Greece, in consequence of the refusal of the Government of Greece to accede to demands which they considered derogatory to an independent state?

Lord J. RUSSELL said that diplomatic relations were broken off between Turkey and Greece; and he thought that Turkey had good reason to feel angry with Greece, for the whole insurrection was a concoction of the Court of Greece, and not voluntary on the part of the subjects of the Porte. Her Majesty had given instructions as to the course to be pursued, and the Court of Greece must be held responsible for the consequences which might ensue.

In reply to a question from Mr. Bright, Lord J. RUSSELL said that there was no convention between France, England, and Turkey as to the internal government of the latter country.

Mr. HUTT asked the Solicitor-General whether the *bonâ fide* sale of a Russian vessel to a British subject, since the declaration of war, but within six weeks of that event, would be regarded by the British Government as a legitimate transaction?

The SOLICITOR-GENERAL said that the license granted to Russian ships, at present in British ports, to clear out before a certain time would naturally extend itself to *bonâ fide* sales of Russian vessels under the circumstances stated.

HENRY STONOR.

Mr. MOORE moved that a Select Committee be appointed to take into consideration the case of the appointment of Henry Stonor having been reported by a Committee of this House to have been guilty of bribery at the election for the borough of Sligo in 1853.

Some discussion took place, and the motion was agreed to after a division, in which there were 115 in favour of it, and 37 against it.

RAILWAY AND CANAL TRAFFIC.

Mr. CARDWELL moved for leave to bring in a bill for the better regulation of traffic upon railways and canals. The chief object of the measure was to secure uniformity in the arrangements of all the railways in the kingdom, so as to make them what public roads were—the Queen's highway. For this purpose the bill gave to railway companies powers which they did not now possess—of entering into combinations and agreements, with a view to enable them to work in harmony to this end.

After a discussion, in which Mr. M'Gregor, Mr. Wilkinson, Mr. Marjoribanks, Mr. Lock, Mr. Malins, Mr. Hudson, Mr. B. Denison, and Mr. Waddington, took part, leave was given to bring in the bill.

HOUSE OF LORDS.—FRIDAY.

INTERCOURSE WITH FOREIGN POWERS.

Lord CAMPBELL laid upon the table a bill, the title of which was an act to prevent any unauthorised negotiations or intercourse touching public affairs between the subjects of her Majesty and any foreign potentate or state. The object of the bill was to enforce the law of nations, by which it was clearly provided that the intercourse between independent nations respecting public affairs shall only be conducted by the Governments of those nations, or their ambassadors, or other representatives duly authorised and responsible for their conduct. It was his intention to move the second reading of the bill, if their Lordships assented to it, soon after the Easter holidays.

The bill was then read a first time.

NATIONAL PRAYER.

The Earl of SHAFTESBURY asked the noble Earl at the head of the Government whether any day had as yet been fixed for a national prayer in reference to our existing state of affairs.

The Earl of ABERDEEN said that the most rev. prelate the Archbishop of Canterbury, had fixed Wednesday, the 26th of this month, as the day of national prayer and humiliation.

THE ARMY.

Earl GREY moved for copies of any correspondence between the different departments of her Majesty's Government with respect to any additions which have been made to the department of the Secretary of State for War and the Colonies; and also with regard to any change which has been made in the transaction of business relating to the administration of the army. The noble Earl observed that it was physically impossible that the Minister charged with the complicated relations of our various colonial possessions could devote his attention to the administration of the affairs of our army.

The Duke of NEWCASTLE said, there would be no objection to the production of the papers. He admitted that there were faults in many departments of the Government, and he did not think the department of the army was exempt from these defects.

A discussion then took place, in the course of which it was urged by Earl Grey, the Earl of Ellenborough, and other noble Lords, the impropriety of establishing one department in the Government that would have the conduct of the war; with undivided responsibility and almost undivided power.

The motion for the production of the papers was agreed to.

The Testamentary Jurisdiction Bill was read a third time and passed.

—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

THE AUSTRIAN ARMY.

Lord D. STUART asked Lord J. Russell whether the Austrian Government is not concentrating a large army on the frontier of Servia; and whether any explanations have been obtained from that Government as to the object of such proceeding, or generally as to the intentions of Austria in regard to Turkey?

Lord J. RUSSELL said, it was true that the Austrian Government was concentrating a large army on the frontier of Turkey. Certain explanations had been given with respect to the object of that movement and, generally speaking, Austria had explained her intentions with regard to Turkey. Further explanations had, however, been asked of her, and the correspondence on the subject was still going forward.

OXFORD UNIVERSITY BILL.

On the order of the day for the second reading of this bill,

Sir W. HEATHCOTE said that, although willing to admit that the bill was conceived in no unfriendly spirit towards the University, yet he should find himself under the necessity of proposing several amendments in committee. It was for the trustees, and not for the Crown, to deal with the property, for the purpose of carrying out the views of the grantors; and the courts of law had no power of interference, unless in cases where there was supposed to be maimproprietion of the fund.

Mr. BUNG supported the bill, and said, it would be highly creditable to the University that its blessings should be more extensively bestowed, so as to include those whose religious tenets are not in accordance with those of the Established Church.

Sir J. PAKINGTON would not oppose the second reading of the bill, but would reserve his objections for discussion in the committee. He regretted to see in the bill an opposition to every University authority, and also regretted the mode in which it proposed arbitrarily to deal with the disposition of the property of the founders of those colleges.

After a prolonged discussion the Bill was read a second time.

Adjourned.

SUBMARINE NAVIGATION.—The great invention of the day—the submarine navigation of Dr. Payerne—is about to be put in practice at Cherbourg, the company purchasing the invention having volunteered to cleanse that harbour free of expense to the Government. The secret consists in the discovery of a means whereby artificial air may be produced in sufficient quantity to enable a crew of fourteen men to breathe freely beneath the water for the space of four hours. A curious experiment has been already made at Marseilles, where Dr. Payerne, in company with three sailors, went to the bottom in presence of hundreds of spectators, and rose at a considerable distance, and climbed the port-holes of a man-of-war without being perceived by the crew. Many experiments are about to be tried of the efficacy of this novel means of attack. A submarine fleet of small boats, each to contain a crew of twenty men, is already talked of as being about to be organised for the Black Sea.

THE REVENUE.

An Abstract of the Net Produce of the Revenue of Great Britain, in the Year and Quarter ended 5th April, 1854, showing the Increase or Decrease thereof.

LATEST INTELLIGENCE.

ADDRESS OF SIR CHARLES NAPIER TO THE FLEET.

COPENHAGEN, Thursday, Noon.

The fleet has returned to its anchorage in Kioge Bay. The Admiral has issued the following order of the day:—

SIR CHARLES NAPIER'S ADDRESS, MADE BY SIGNAL, TO THE FLEET IN KIOGE BAY.

"Lads,—War is declared. We are to meet a bold and numerous enemy. Should they offer us battle, you know how to dispose of them. Should they remain in port, we must try to get at them. Success depends upon the quickness and precision of your fire. Lads—sharpen your cutlasses, and the work is your own."

The navigation from Revel to St. Petersburg is reported to be quite free, and the ice broken up.

THE WAR ON THE DANUBE.

Despatches were received on Thursday at the Turkish Embassy in Paris, from Vienna, confirming the news of the defeat of the Russian General Liechkoff, and the retreat of his corps in Bessarabia. It is also stated that the forts said to have been captured are still in the hands of the Turks; that the Turks have crossed the Danube at a point between Nicopolis and Rustchuk; that 20,000 Turks are on their way to Trajan's Wall or Rassova, and 25,000 for the same direction from Schumla. The General-in-Chief of the Russian army, after the passage of his troops into the Dobrudja, is said to have considered his position so critical that he immediately demanded reinforcements from Bessarabia, Odessa, and even Sebastopol.

THE FLEETS IN THE BLACK SEA.

According to a letter from Constantinople, brought by the *Cavadoc*, the English and French squadrons entered the Black Sea on the morning of the 26th ult., steering in the direction of Varna. The *Charlemagne* was the only ship remaining at Beicos. It was reported that the measure was combined with a movement of Omer Pasha.

LETTER FROM THE EMPEROR OF AUSTQIA.

An autograph letter to Louis Napoleon, from the Emperor of Austria, has excited some speculation. One account of the missive is, that Austria now promises to join France and England, if Russia should pass the Balkans. Another account describes the letter as vague, merely reiterating approbation of the course pursued by France and England throughout the negotiations, but saying nothing about what it will do.

AMERICA.

The *Ottawa* steamer, from Portland, arrived at Liverpool yesterday (Friday) with news from New York to the 24th ult. The Money-market was easy, the flour-market firm, and the general news unimportant.

SPAIN.

BARCELONA, April 1.—An insurrection of the workmen took place here on the 30th ult., but on the following day authority was re-established. The troops behaved well. Punishment has been inflicted on the agitators.

PARMA.

PARMA, April 3.—A man named Bocchi, a turner, has been arrested on suspicion of being the assassin of the late Duke; but it is not yet certain that he was the murderer.

PARIS, April 6th.—There has been a considerable rise to-day. Three per Cents, 65.25; Four-and-a-Half per Cents, 89.70; Bank Shares, 2,590.

FAREWELL DINNER TO THE EASTERN STAFF.—The Commander-in-Chief, Viscount Hardinge gave a grand farewell banquet, on Thursday evening, to his gallant companions in arms, the commanders of the expeditionary force now assembling in Turkey, at his Lordship's mansion, Stanhope-street, May-fair. The guests upon this occasion comprised all the leaders of the expedition who yet remain in England, with the principal officers of their respective staffs.

The Duke of Cambridge and Lord Raglan start, on Tuesday, for Paris, *en route* for Constantinople. The *Caradoc* is waiting at Marseilles for them.

It was currently rumoured in military circles yesterday that the cavalry under orders for active service will not pass through France, but will be conveyed to the East in transports.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Prebendal Stall:* The Rev. W. Hey to York Cathedral. *Minor Canonries:* Rev. W. W. Johnstone to Manchester Cathedral; Rev.—Lowe to Durham Cathedral. *Rural Deans:* Rev. J. Deedes to Sutton; Rev T. Sikes to Dunstable. *Rectories:* Rev. C. Bailey to Elsdon, near Newcastle-upon-Tyne; Rev. P. Brett to Mount Bures, near Colchester; Rev. H. Dowson to Little Horsted, near Uckfield; Rev. W. Elliott to All Saints Church, Worcester; Rev. H. J. Hawke to Wilbraham by Stow, Lincolnshire; Rev. P. W. Preedy to Kittesford, Somerset; Rev. G. V. Reed to Hayes, Kent; Rev. J. C. Rowlatt to St. Paul's, Exeter; Rev. F. Stonehouse to Honiton, near Warwick. *Vicarages:* The Rev. J. Graves to Kilmacar, Kilkenny; Rev. W. J. Scott to Attborpe, near Towcester. *Incumbencies:* The Rev. J. Cronshaw to St. Thomas's, Wigan; Rev. G. Freeman to Emmanuel Church, Bolton-le-Moors; Rev. Rowland Hill to Wormsley; Rev. W. Verdon to St. John's Church, Pendlebury.

THE COLOGNE CHORAL SOCIETY (eighty men voices) will commence their concerts at the Hanover-square Rooms, on the 5th of May. The appearance in London of this unrivalled Choral Union will be limited, as last year, to a short period of fifteen days, during which they will give eight concerts.

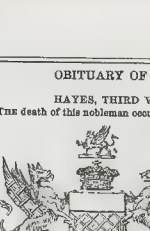
THE ADMIRALTY HOAXED.—Last week a large Dutch steamer, bound for Rotterdam, passed through the Caledonian Canal. The rumour readily ran through the town that she was a Russian steamer acting as a spy; and some enthusiastic patriot wrote up to the Admiralty, stating in positive terms that a Russian steamer was actually in our harbour. The simple liege of Inverness knew nothing of this until Tuesday morning, when a splendid Government steamer (the *Princess*, six guns) anchored in Kessock Roads, and immediately instituted inquiries into the truth of the report. It appears that, so soon as the intelligence was received at the Admiralty, orders were sent to the *Princess* to proceed at once to Inverness.

THE GOSSIP OF CONSTANTINOPLE.—We generally have a battle at Kalafat or a sortie from Sebastopol every Wednesday, which is sufficiently explained by the fact that Wednesday is the principal day at the Bourse. The battle at Kalafat is usually supposed to be brought across the country by a Tatar, who, covered with dust and shaking from fatigue, rides up to the Porte: while the operations in the Black Sea have been communicated by the master of a merchantman, who strangely enough has just again weighed anchor from the Bosphorus. The captain of the vessel here has seen so many Russian fleets as to have incurred the reprimands of his superiors, since which time his range of vision has been limited.—*Letter from Constantinople.*

OBITUARY OF EMINENT PERSONS.

HAYES, THIRD VISCOUNT DONERAILE.

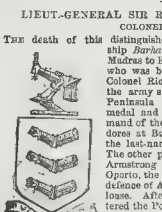
THE death of this nobleman occurred at Doneraile House, county Cork, on Monday, the 27th ult. His Lordship had completed his sixty-seventh year, having been born 9th May, 1786. He was only son of Hayes St. Leger, second Viscount Doneraile, by Charlotte, his wife, sister of Francis, first Earl of Bandon, and grandson of St. Leger Aldworth, Esq., who succeeded to the estates of his maternal ancestors, the Viscounts Doneraile, assumed the surname of St. Leger, and was



raised to the peerage of Ireland in 1776. Few families in the empire are more ancient or distinguished than that of St. Leger. The patriarch in England was Sir Robert Sent Legere, one of the companions in arms of the Conqueror; and, according to tradition, the person who supported that Prince with his arm when he quitted the ship to land in Sussex. The late Lord Doneraile married, 14th June, 1816, Charlotte Elizabeth, second daughter of Francis, first Earl of Bandon; and by her (who died 7th February, 1846), leaves an only son, Hayes, present and fourth Viscount, born 1st October, 1818, who married, 30th August, 1851, Mary Anne Grace Louisa, only daughter of G. Lenox Conyngham, Esq., and has issue. The deceased Peer was Colonel of the South Cork Light Infantry, and one of the Irish representative Peers.

LIEUT.-GENERAL SIR RICHARD ARMSTRONG, K.C.B., COLONEL 32ND FOOT.

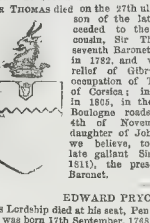
The death of this distinguished officer took place on board the ship *Barham*, on the homeward journey from Madras to England, on the 3rd ult. Sir Richard, who was born in 1783 (he was the only son of Lieut.-Colonel Richard Armstrong, of Lincoln), entered the army as an Ensign in 1796, served in the Peninsula from 1808 to 1814, and received a medal and two clasps for his gallantry in command of the 18th Portuguese and the 10th Cacadores at Busaco, Vittoria, and the Pyrenees. In the last-named conflict he was severely wounded. The other principal actions in which Sir Richard Armstrong participated were the capture of Oporto, the affairs of Pombal and Redinha, the defence of Alba de Tormes, and the battle of Toulouse. After this gallant course, Sir Richard entered the Portuguese army; and from the Portuguese Government he received a medal for having served six campaigns with their troops, as well as the insignia of a Knight Commander



of the Tower and Sword, and of St. Bento d'Avis. In later years the gallant officer acted in India, as Brigadier during the first Burmese war; and as Major-General on the staff in Canada. By his own sovereign he was knighted in 1831, and made a Knight Commander of the Bath in 1832. In 1851 he became Lieutenant-General, and in the same year was appointed Commander-in-Chief at Madras: this command he resigned in consequence of impaired health but not by the effects of climate. Sir Richard married, in 1808, Elizabeth, daughter of John Champion, Esq., of Bristol, and was left a widower in 1833.

SIR THOMAS SWINNERTON DYER, BART., CAPTAIN R.N.

SIR THOMAS died on the 27th ult., at Dartmouth. He was the eldest son of the late Thomas Dyer, Esq., and succeeded to the baronetcy at the decease of his cousin, Sir Thomas Richard Swinnerton Dyer, seventh Baronet, in 1838. He entered the Navy in 1782, and was present, in that year, at the relief of Gibraltar. In 1793, he served at the occupation of Toulon; in 1794, at the reduction of Corsica; in 1795, in Hochara's action; and, in 1805, in the attack on the enemy's flotilla in Boulogne roads. Sir Thomas was born on the 4th of November, 1771, and married Mary, daughter of John Davis, Esq. The sole descendant, we believe, to the son of his brother (the late gallant Sir John Dyer, K.C.B., killed in 1810), the present Sir Thomas Dyer, the ninth Baronet.



EDWARD PRYCE, LORD MOSTYN.

HIS Lordship died at his seat, Pengwern, Flintshire, on the 3rd instant. He was born 17th September, 1768, the eldest son of Bell Lloyd, Esq., of Pontrifflith, by Anne, his wife, daughter and heir of Edward Pryce, Esq., of Bodfach: he succeeded to the estates and baronetcy at the decease of his grand-uncle, Sir Edward Lloyd, Bart., in 1795, and was created a Peer of the United Kingdom, as Baron Mostyn, in 1831. He married, 11th February, 1794, Elizabeth, sister and co-heir of Sir Thomas Mostyn, Bart., of Mostyn, and had by her (who died in 1842), two sons, and two daughters. Of the former, the elder, the Hon. Edward Mostyn Lloyd Mostyn, M.P. for Flintshire, succeeds as second Lord Mostyn.

The Lloyds of Pontrifflith were, in common with the Griffiths of Barton Agnes, the Williamses of Penrhyn, the Morgans of Golden Grove, the Lloyds of Plymog, and other Welsh families, descended from Marchudd ap Cynan, Lord of Abergelen, Carnarvonshire, founder of the eighth noble tribe of North Wales and Powys.

The late Lord Mostyn, previously to his elevation to the peerage, sat in the House of Commons as member for the Flint boroughs.

THE LATE DUKE OF PARMA.

(From a Correspondent.)

Charles, third Duke of Parma, just deceased, was the son of Charles, second Duke of Parma, by Maria Theresa, second daughter of Victor Emanuel, I., late King of Sardinia. The Duke was cousin to Francis, fifth Duke of Modena, and Francis, heir-apparent to the throne of Naples: the Duke of Modena's mother being the eldest daughter of Victor Emanuel, and Francis of Naples' mother being Christina, the fourth daughter of Victor Emanuel: the third daughter is the Empress Dowager of Austria. The deceased Duke was therefore closely related to the Courts of Austria, Modena, and Naples, besides being related to the Bourbons of France by his marriage (in 1845) to Maria Louisa, only sister of Henri V. (Comte de Chambord). He was also lineally descended from William the Conqueror, through his mother, Maria Theresa, second lineal representative of the Royal Family of Stuart; thus Charles I.'s youngest daughter, Henrietta, married to Philip, first Duke of Orleans, had issue Ann Maria, married to Victor Amadeus II., King of Sardinia. She left issue Charles Emanuel III.; who left issue Victor Amadeus III.; who left issue Victor Emanuel I.; who, dying in 1824, left four daughters as above mentioned: the second of whom, Maria Theresa, was mother of the late Duke (she is still living). The Duke was, therefore, second lineal representative of the Royal houses of Plantagenet, York, and Stuart. Perhaps it is not generally known that the Comtesse de Chambord (on the death of her brother Francis, Duke Modena, who has no issue) is the lineal representative of Charles I. Consequently, had not the Starts of England and the Bourbons of France been superseded, we should have had the two countries united under one Sovereign—a curious circumstance, and interesting to the historian. W. T. J.

[It is an additional curious fact, in relation to the late unfortunate Duke of Parma, that his consort, the daughter of the Duke of Berry, lost both her father and her husband by the hand of an assassin.—ED.

The will of Sir Thomas Noon Talfourd, late one of the Judges of her Majesty's Court of Common Pleas, at Westminster, was made in 1849, when he was Serjeant-at-Law, bequeathing the whole of his property, real and personal, to his wife, appointing her sole executrix. Her Ladyship has administered thereto, the personalty being sworn under £16,000.

The late Captain Aaron Tozer, R.N., who recently died at Plymouth, has bequeathed to his only son, the Rev. Henry Fanshawe Tozer, Fellow of Exeter College, Oxford, the flag, flag-staff, and sash which was worn by the officer who bore the flag in the army of King William III. when he landed at Torbay, in 1688; also, the flag which the French frigate, *Didon*, struck, when she surrendered to his Majesty's frigate, *Phœnix*, in 1805.

The will of Sir Ralph Lopes, Bart., of Maristow, Devon, has been proved under £180,000 personalty. He has left several bequests to charitable institutions in the parish and county.

THE WELLINGTON MEMORIAL AT BRIGHTON.

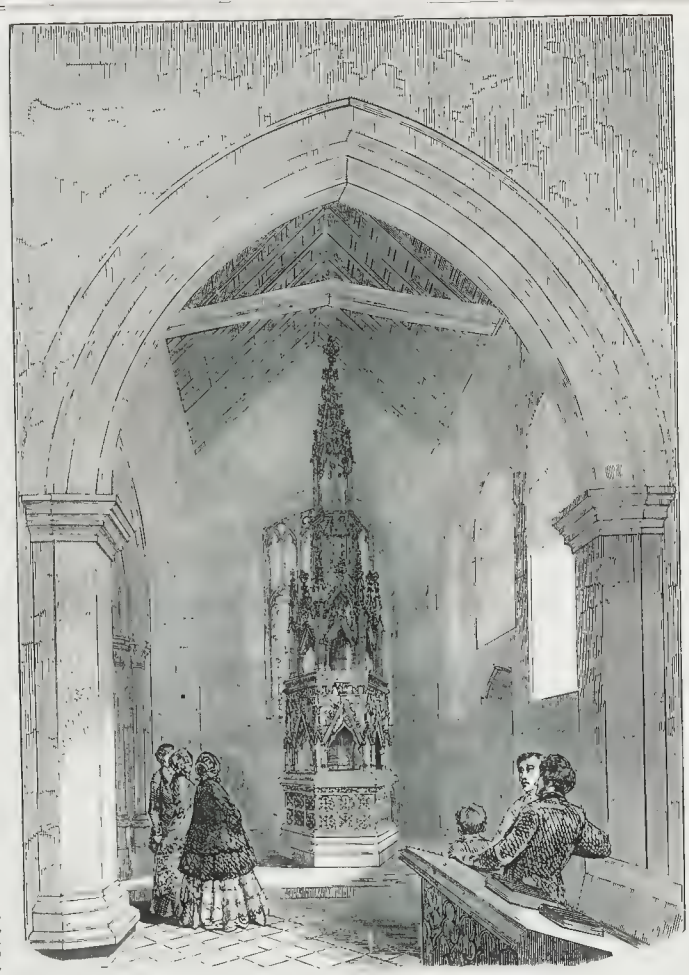
THE restoration and enlargement of the ancient Parish Church of St. Nicholas, at Brighton, commenced a year since, have just been completed by Mr. R. C. Carpenter. As a record of the circumstances, which especially led to this renovation, a cenotaph of tabernacle work to the memory of Field Marshal the Duke of Wellington has been erected in the eastern part of the chantry. The design is elaborate, hexagonal in form, and rising with a spire-like outline, from the pavement to the extreme height of the roof. On an engraved plate of brass surrounding the lower division, is inscribed the following legend: "In memoriam Maximi Ducis Wellington, hoc domus sacrosancta, quâ ipse adolescens Deum colebat, rescidificatur." The windows are all filled with stained glass, chiefly of that simple kind known as "grisaille," a kind of glass much in use at the date of this building, viz., the time of Edward III. The east window, however, is enriched with medallions, in allusion to the occupation of the original inhabitants of Brighton, and their descendants, and contains the following subjects:—In the centre of the three lights a representation of the miracle of our Lord walking on the sea, and on either side, the calling of S. S. Andrew and Peter, and the miraculous draught of fishes.

The contributors to the Wellington Memorial, residing not only in Brighton, but also in the county of Sussex, and in London, it was proposed, as a matter of justice, to open the contract to four eminent builders at Brighton, two eminent builders in the county of Sussex, and two eminent builders in London.

The lowest tender was that of Mr. Bushby, of Littlehampton, who has given general satisfaction to the Committee.

These tenders did not include a provision for the Wellington Memorial, painted windows, extra work to the tower, and improvements, and fencing of the churchyard, &c.

It is a gratification to record the universal feeling, that Mr. R. C. Carpenter, has displayed the utmost architectural accuracy in the restoration of the church, a work always more difficult and responsible than that of an original structure.



"THE WELLINGTON MEMORIAL," JUST ERECTED IN ST. NICHOLAS CHURCH, BRIGHTON.

TYNEMOUTH ELECTION.

THE contest for the representation of the borough of Tynemouth, which ended in the return of Mr. Lindsay, as we were enabled to state in a portion of last week's impression, was carried on with great animation. The nomination, which took place on Wednesday, was not quite so enthusiastic an affair as has been witnessed in the borough on former occasions of a similar nature; but the polling made up for this. The hustings were erected in front of the Town-hall, at North Shields; and Mr. Dickson and his friends occupied that portion of them to the right of the Mayor; while Mr. Lindsay and his friends and supporters took up their position on the opposite side. Mr. Dickson, the Conservative candidate, was proposed by Mr. T. Barker, and seconded by Mr. John Dryden. Mr. Lindsay was proposed by Mr. Joseph Straker, and seconded by Mr. John Rennison. Both candidates having addressed the electors at some length, a show of hands was taken, when a large majority were held up in favour of Mr Lindsay. Mr. Barker demanded a poll on behalf of Mr. Dickson, which the Mayor fixed to take place next morning, at eight o'clock.

The poll opened with great vigour at eight o'clock on Thursday morning, and throughout the day considerable excitement, yet combined with good order and temper, prevailed. Mr. Lindsay went off with the lead, with Mr. Dickson nearing him every hour, and at two o'clock reducing his majority to twelve; but between two and three o'clock Mr. Lindsay gained three upon his opponent, and finally came in a winner of one of the hardest-fought contests ever witnessed in that borough by a majority of seventeen. The annexed figures give a view of the progress of this well-contested battle:—

	Nine	Eleven	One	Two	Three	Four-
Lindsay	143	254	323	358	360	357
Dickson	115	274	311	335	335	340
Majority	28	20	12	23	25	17

The declaration of the result of the poll was made by the Mayor from the hustings shortly after five o'clock to an immense concourse, and Mr. Lindsay, on being declared duly elected, returned thanks for the honour that his return had conferred upon him. Amidst other observations, he adverted to the circumstance of the distinction being enhanced by the fact that on the Tyne, about twenty years before, he was but a sailor-boy; he might almost say he had commenced his career on that river, as he had first obtained the command of a vessel here; and now, after the lapse of twenty years, he had been elevated by them to the responsible and honourable position of being their representative in the Legislature. Renewing his assurances of faithfulness to their interests, he retired amidst loud applause.

Mr. Dickson, who was accompanied by a number of his friends, presented himself amidst much cheering, and also briefly addressed the electors. He said that, though he had certainly been disappointed by the result, he might well be proud of the position which he occupied on the poll, and congratulated himself and his friends on having received an amount of support which all but gave him the election

A vote of thanks to the Mayor—on the motion of Mr. Lindsay, seconded by Mr. Dickson—terminated the proceedings at the hustings; and the election closed with the "chairing" of the new member round the streets of Tynemouth and Shields.

THE BOROUGH OF TYNEMOUTH ELECTION.

DESTRUCTION OF HUNGERFORD-HALL BY FIRE.

This fine building—one of the speculative structures of the Exhibition year—was totally destroyed by a fire, which broke out on Friday (last week), about half-past seven o'clock. It appears the misfortune was occasioned by two boys who were engaged on the premises. The money-taker of the establishment had arrived at the building at his usual time (a quarter past seven o'clock), soon after which it was the custom to light the gas preparatory to admitting the public at eight o'clock. The two boys were noticed by the money-taker lighting the different gas jets by means of ignited pieces of paper; but, seeing that they threw the remaining portion of paper on the floor, he cautioned them that if they did not desist, in all probability they would set the theatre in flames. At that moment he heard some one ascending the stairs, and thinking it was a person who was going to pay to see the evening performance, he hurried to the money-taker's place, and was then, to his astonishment, informed that the panorama was on fire.

The property destroyed or seriously damaged by the calamitous event has been found to be far greater than it was at first anticipated, scarcely a single shop on either side of the grand hall escaped from receiving damage to a more or less extent; and the whole of the roof of the market in the immediate vicinity of the fire is very seriously damaged—the glass windows being demolished, and much of the roof burned away or broken.

The part of the property in which the misfortune commenced was at least 140 feet long, and two floors high, whilst under the same was a floor about 10 or 12 feet shorter, flush with the pavement of the square from whence the omnibuses start. This place was empty, but had been taken by Messrs Thorne and Sons, the brewers, of Westminster, for an ale store; and, had the conflagration taken place two or three days later, Messrs. Thorne would have lost about 4000 or 5000 barrels of ale, which were ready to be removed to the stores. The firm had, in fact, just finished painting and repairing the place for the reception of the ale.

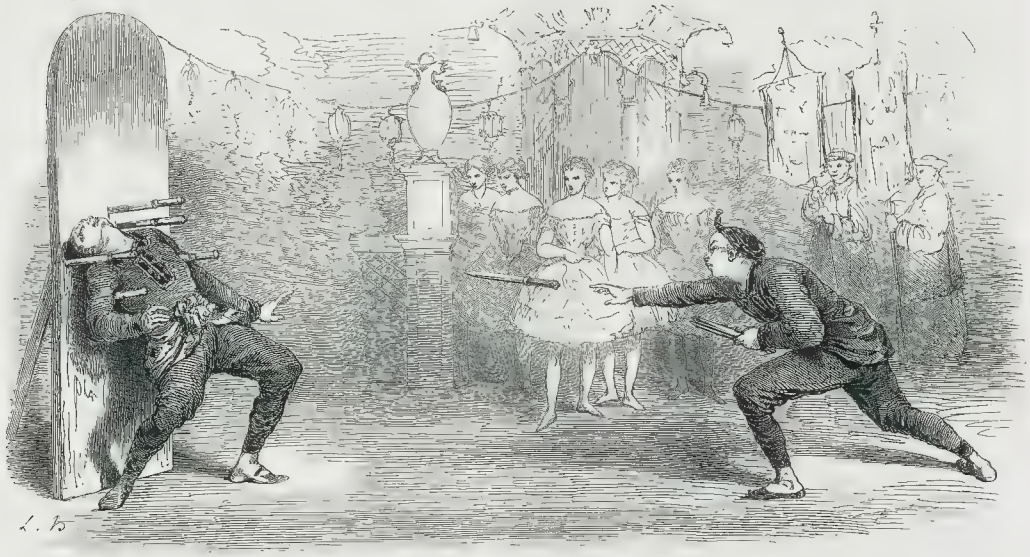
FIRE AT HUNGERFORD HALL, STRAND.

The Panorama was the property of a private gentleman, named Nelson, who had spent between £2000 and £3000 in having the picture of the Great Duke's funeral properly and effectively painted. Not a vestige of the painting or even of the canvas now remains.

The only part of the property belonging to the great or grand hall that has been saved was the shrubbery leading to the galleries. It is exceedingly fortunate that the conflagration did not take place an hour later, when the audience would have been seated; if it had it is impossible to tell how many lives might have been sacrificed when the general rush upon a sudden alarm of fire took place, more especially as the means of egress were uncommonly narrow and dark.

The official report of Mr. Superintendent Braidwood states, *inter alia*—

That he was called to a fire in the great hall of Hungerford-market at half past seven p.m., on Friday last. The hall was used as an exhibition of a Panorama of the Duke of Wellington's Funeral, and was rented by Mr. J. Nelson. The building belonged to the Hungerford-market Company, and was insured in the Sun and the Westminster Fire-offices. Mr. Nelson was uninsured. Cause of fire—lighting the gas. The fire was extinguished by firemen, and one engine of A, five of B, three of C, one of D, and that of the West of England Insurance-office. The steam-float also attended; 140 hired auxiliaries assisted the firemen in working the engines.



THE CHINESE "IMPALEMENT" FEAT, AT DRURY-LANE THEATRE.

The centre grand hall is burned out, and roof of shops round the same damaged. Contents not insured; buildings in the Sun and Westminster Fire-offices.

No. 26, Hungerford-market. Mr. A. B. Watson, grocer.—Stock in trade and furniture damaged by water and removal; insured in the Union Fire-office.

Hungerford-market. The skylight broken, and roof much damaged by fire and breakage; insured in the Sun and Westminster Offices.

No. 21, Hungerford-market, Messrs. Gatti, confectioners.—Great damage to stock in trade, by water, &c.; insured in the Union Fire-office.

No. 20, ditto, Mr. E. Harrison, print-seller.—Similar damage; insured in the Union Fire office.

No. 67, ditto, Mr. Martin, fruiterer.—Stock in trade, &c., damaged by water and removal; insured in the Sun Fire-office.

On Sunday many thousand persons who landed at Hungerford-pier, flocked to the ruins; but Scott, the head engineer, left in charge of the place, knowing the dangerous condition of the iron columns still standing above, very properly refused to allow any one to enter the gates of the building.

METEOR SEEN AT WESTMINSTER.

(*To the Editor of the* Illustrated London News.)

April 1, 1854.

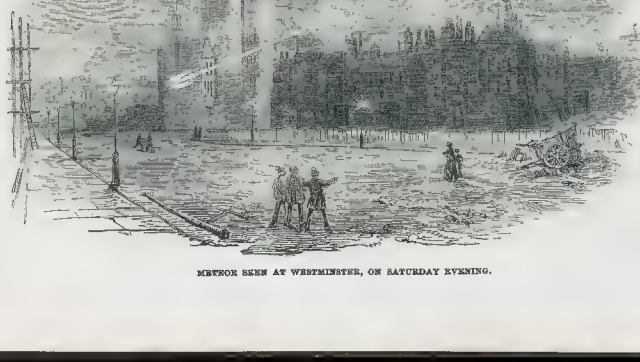
This evening, while returning home, about ten o'clock, along Victoria-street, Westminster, with my back to Westminster Abbey, I was startled by a sudden and vivid light; when, on hastily turning, I saw a meteoric appearance horizontally crossing the street, slightly above the ground—perhaps at a distance of thirty feet. A rapid but faint explosion followed, with a coruscation like a blue mist; and then, after shooting a few yards, the phenomenon disappeared in three jets—pale green, red, and orange.

The sight was seen by several spectators round me. The evening was still and starlight, and the whole transit of the meteor occupied but a few seconds. I send you a Sketch of the phenomenon.

I remain, &c.,

Mackenzie Walcott.

Coleshill-street, Belgravia.



METEOR SEEN AT WESTMINSTER, ON SATURDAY EVENING.

DRURY LANE THEATRE.

In our Journal of last week we noticed the performances of the group of Chinese jugglers at this theatre. Their approach to Europe was heralded by certain paragraphic despatches in Transatlantic journals, which, in their peculiar style, prepared us for the reception of the strange and new. Mr. Smith announced their appearance on the boards of Old Drury as that of "the greatest magicians, necromancers, and acrobats now living." Our Chelsea philosopher, Mr. Thomas Carlyle, would probably object to this, and inform the enterprising lessee that the "greatest and least of things never yet entered into any man's experience; or, at least, that no man was logically able to assert that they had done so." But, disregarding all such transcendental and other dogmas, the present authorities of the theatres, corroborated by abundant examples in the past, erase from the managerial lexicon the word "impossibility" in all its senses with more than Napoleonic determination. The "greatest" in their way are, therefore, recognisable for a British public on the national stage in these natives of the Celestial Empire. Last week we

described some of their feats. We now Engrave the most startling performance, which is termed "the impalement." One of the jugglers stands against a board, while another darts at him sharp knives, which penetrate the wood close to his ears, his throat, his head, his hands, and between his fingers. The throws were made with ease and readiness, and with an appearance of certainty, as to the aim, that excited the utmost astonishment. To this feat our Illustration relates, which will give a better notion than it is possible to convey by any description of the extraordinary achievement.

THE THEATRES.

HAYMARKET.

The theatrical topic of the week is Miss Cushman's performance of "Queen Katherine." The general qualities of Miss Cushman's style make her without a rival in parts of great force; such as "Meg Merrilies" and "Bianca," requiring strong physical demonstration and distinct realising traits perfectly in harmony with their original conception. In all Shakspeare's characters, however, there are ideal refinements which unite with their poetic elements, and require from the histrionic artist rather subtlety than strength. "There's a divinity doth hedge a" poet, of which his productions partake; and none but the privileged dare enter the sacred limits. Miss Cushman's performance of "Queen Katherine" is remarkable for the skill and ability with which the refractory character of the book of our ordinary sympathies; but by so much as she succeeds in this, she, of course, removes it from its poetical elevations; and, granting that she makes it more popular, she renders it less classical. The public is by this means frequently furnished; but the beauty, which is the poetic translates pain into pleasure, is exchanged for the mere physical truth, in some cases repulsive. This might be well-enough exampled by the dying scene of the discarded Queen, which, by Shakspeare, has been invested with spiritual dignity as pregratively interpreted, that, while we sympathise with the sufferings of her majestic soul, we scarcely think of the sickness of her body. Of this Miss Cushman, in her performance, makes much account, and is careful to elaborate such minute traits of weakness and decay as may bring before us the expiring woman. This style alluded to tells with better effect at the opening of the action, where the anxious wife, zealous for her husband's honour, puts him on his guard against *Wolsey*, and interests herself in *Anne Boleyn's* fortunes. The dramatic action should undoubtedly start with the real; but, if it remain there, it is evident that a climax is unattainable. Not so was Shakspeare accustomed to work: boundless was the play of fancy and imagination by which he lavishly enriched every argument that he selected for their exercise. Accordingly, one of the greatest scenes for pictorial effect in our drama is the trial of *Queen Katherine*, and Miss Cushman did perfectly right in adopting Mrs. Siddons' manner of addressing the innocuous *Cardinal* on that occasion. The full meaning of the text was, indeed, in all instances, brought out; and Miss Cushman's distinct elocution may be recommended as an example to all rising performers. Within her own magic circle her power is indisputable; and her *Queen Katherine*, though not ranking among poetic delineations will hold a high place, as her crowning effort, in the gallery of dramatic illustration. We find that she has repeated the character this week; and, her engagement terminating on Friday with her benefit, it must be regretted that the third *rôle* of her season's appearance, "The Actor's" parts which she has acted during its continuance includes *Bianca*, *Mrs. Haller*, *Meg Merrilies*, *Duchess Eleanour*, *Juliana*, and the subject of our present article. In all has Miss Cushman justified her claim to the attributes of a great actress, and played with undiminished energy.

MARYLEBONE.

The tragedy of "Othello" was performed on Monday, and gave us another opportunity of estimating the merits of Miss Cleveland, who performed the part of *Desdemona*. In many respects this young lady was well suited to the character; her voice and figure were admirably in harmony with its gentleness and beauty. What she has principally to learn, is a slower elocution, by which the full development of expression is ensured in the delivery of the text. However, *Desdemona* has for some time ceased to be considered the principal female part; *Emilia* now commands the attention of the most accomplished actress. Mrs. Wallack's performance of *Emilia* is full of intelligence, energy, and beauty. By expressive by-play she supplies those points of action which the poet has left to be imagined; and while *Othello* is contending in the foreground with *Desdemona*, touching the fatal handkerchief, *Emilia* struggles, in dumb show, with and, for that the bank, for permission to reveal the secret of her having found it, but in vain. The power of her last scenes is very great. Mr. Wallack's *Othello*, for tenderness, picturesqueness, and poetic feeling, has obtained general recognition, and he still continues to perform it with great success. His power of elaborating it is indeed extraordinary, and we never find him guilty of the least negligence.

MUSIC.

THE ROYAL ITALIAN OPERA opened on Saturday evening last. Mr. Gye again has the season before him without a competitor. The old house in the Haymarket remains closed; that once famed temple of the muses, for so many generations the centre of all the life and animation of the London fashionable season, stands deserted, desolate, and dreary. Its glory is departed, and all present appearance augurs not its return. One thing, indeed, may be held as certain, we shall never again have two great rival houses like Her Majesty's Theatre and the Royal Italian Opera. No city in the world not even London, the greatest city in the world—is able to support two such enormous establishments. When the struggle between them began, it was evidently for life and death; the total extinction of the one or the other was merely a question of time. The old house had in its favour (and, indeed, retained it in some measure to the last) the prestige of fashion; but this was more than counterbalanced by the greater resources of the new theatre and the superior energy of its management. So it conquered and destroyed its adversary. But at what a price was victory purchased! Whole fortunes were sacrificed and lost in the struggle. Lamb the place of those who fell; and they who now reap the fruits of victory are not those by whom the strife was maintained when it was most deadly. Now that the battle is over, the public is certainly the gainer. The Italian musical stage has been made to assume a new aspect by the introduction of many masterpieces, not originally belonging to it; while not only those, but the most sterling works of the real Italian school, have been presented with an excellence of dramatic and vocal power, a completeness, and splendour, unparalleled in any theatre in the world. Mr. Gye has now no one to contend with him in the race; but we trust he will not not be tempted to "walk over the course;" an error which in his case would be fatal. The Royal Italian Opera, as at present maintained in its present high and palmy state by the means whereby this height has been reached; active and vigorous management, guided by judgment and taste, and liberal expenditure equally free from profusion and parsimony. We are far from having any reason to doubt that this will be the case. Last season there was no falling off, nor is there any indication of it in the season now begun. The opening night presented to us the unrivalled orchestra, in all its strength, under its able chief Costa; a numerous and powerful chorus; and Rossini's *chef-d'œuvre*, "Guglielmo Tell," admirably cast, and performed as magnificently as ever. On an opera so justly celebrated, and so well known to the musical public, it would be quite superfluous to make any remarks. Everybody knows that, though one of the grandest and most beautiful musical works ever written, yet its popularity has been much impaired by the feebleness and insipidity of the drama. Hence, in theatrical phrase, it does not "draw;" it delights the amateurs, but does not attract the public, only from her grace and beauty as an actress, Lucchesi, on Saturday, being the opening night, the house was crowded; but on the following Tuesday it was half empty. The superb performance of the first night did not bring an audience the second. The cast of the parts was nearly the same as on the first year. Last year Lucchesi's debut was the character of *Matilda*, in which Mdlle. Marai was substituted for Madame Castellan, whose absence this season there is much reason to regret. She has long and deservedly been a great favourite of the public, not only from her grace and beauty as an actress, but as a singer, but from her unpretending modesty and conscientious fulfilment of her duties. Mdlle. Marai is very young, and so weak a part as that of *Matilda* has not afforded room to judge of her powers; but she has a sweet and flexible, though rather thin voice, and her style indicates a good school. Tamberlik, in his great part of *Arnold*, was as great as ever, and electrified the audience by his vocal power, the energy of his declamation, and those bursts of passion in which he surpasses every other performer. Roncoui, as formerly, was *Tell*, performing the part with his usual intelligence and force; and Mdlle. Didiée gave interest to the little part of the boy *Jemmy*. As we have already said, the execution of the choruses, and the ensemble of the representation, left nothing to be desired. On Thursday the opera was *Ernani*, in which Mdlle. Angiolina Bosio sustained the character of *Elvira*—a part well fitted for this charming singer and graceful actress. In other respects the performance was similar to that of last season.

THE PHILHARMONIC SOCIETY'S third concert took place on Monday evening. Its chief feature was the descriptive symphony, "Die Weihe der Töne;" or, "the Power of Sound"—an attempt to paint the effects and influence of sound upon the human mind. With this view the composer introduces in succession the sounds of inanimate nature—the murmuring of the breezes, the gushing of the brook, the roaring of the storm; passing on to the nursery song, the lover's serenade, the march to battle, the sounds of conflict, the return in triumph, the dirge for the fallen, and the hymn of thanksgiving. All these are formed into a piece constructed with consummate art, and full of grand and beautiful effects, with no other fault than that of being too long, occupying a whole hour in performance. The other principal pieces were Beethoven's Symphony in F: the same composer's Pianoforte Concerto in G, performed by Halle; and Mendelssohn's descriptive overture, "The Calm Sea and Happy Voyage." The vocal pieces were not remarkable in themselves, but very well sung by Miss Birch and Herr Formes.

THE Concert of the NEW PHILHARMONIC SOCIETY, on Wednesday evening, was very good, but not at all distinguished for novelty. The principal piece was the same as the previous concert of the Old Society—viz., Beethoven's Symphony in F. Mendelssohn's Violin Concerto (*his only one*, by the instrument) was played by Ernst in a manner which beggars description, with the marvellous power of expression, the speaking tones, and intensity of feeling, which gave such an inexpressible charm to the playing of Paganini, and, save by Ernst alone, have not been approached since his day. A young singer just arrived in England, Mdlle. Sedlatzek, made a very favourable debut in Mozart's fine air, "Parto, ma tu, ben mio," from "La Clemenza di Tito;" Madame Caradori sang Beethoven's great aria, "Ah, perfido," with considerable taste and expression; and Mdlle. Graever performed Mendelssohn's Serenade for the piano and orchestra, with much, and well-deserved, applause. A long scene from the "Huguenots," though very well sung by Madame Caradori and Formès, produced no effect, being one of those things written for the stage which cannot be transplanted into the concert-room.

MRS PLUMMER'S CONCERTS.—Last evening Mrs Plummer gave her second *soirée musicale* at the new Beethoven-rooms, in Queen Anne-street. It was a very elegant entertainment, consisting chiefly of vocal music, executed with taste and exceedingly well performed. Mrs. Plummer is an accomplished singer, and possesses no small versatility of talent. Last evening she sang in a variety of styles—a brilliant opera air of Donizetti, a lively Scotch duet with one of her pupils, a tender Irish ballad, a burlesque duet of John Parry's, and a part in Bishop's fine glee, "Blow, gentle gales;" in all of which she acquitted herself admirably, and was warmly applauded. The other vocal performers were Signor Nappi, Mr. Wrighton, Mlle. Caterina Monti, Mr. Reed, Miss Thirlwall, and Mr. Walter Bolton. Beethoven's fine sonata in F, for the piano and violin, was extremely well played by Mr. Charles Horsley and Mr. Thirlwall; and Mr. Colson performed a solo on the harp. The room was crowded with fashionable company.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The favourable returns of the Revenue of the country have exercised considerable influence upon the Consol Market this week. The demand for gold, for shipment to the Continent, having fallen off, and the imports being on an extensive scale, the Bulls have operated to some extent. The consequence has been, that prices have advanced fully ¼ per cent, with every reasonable prospect of even higher rates, notwithstanding our hostile proceedings towards Russia. The immense drain upon the Exchequer to pay the expenses already incurred in forwarding troops, &c., to Turkey, has greatly reduced the Government balance in the Bank of England; and it is evident that large sum units will certainly exceeding £5,000,000 have been issued from the Directors to pay off the South Sea annuitants, as well as to assist in meeting the dividend payments upon the Three per Cents Reduced, and the New Three-and-a-Quarter per Cents. It is considered that the new issue of Exchequer Bills will be made on very easy terms.

On Monday the Three per Cents were steady, at 86¾ 85/8 to 86⅞ and 86. At these quotations the Government Broker purchased £500,000 for money and time. The New Five per Cents were quoted at 111¾. India Bonds are sold at par to 5s. dis.; South Sea Stock was 115; Exchequer Bill marked 2s. dis. to 2s. prem. The market was firm on Tuesday, in consequence of the preceding day; and the Three per Cents, after being done at 86⅞, advanced to 86¾ ⅞. The Five per Cent Annuities were 113¾. Exchequer Bills were firmer, 2s. to 1s. prem. The Bonds, India Bonds sold at 11s. to 6s. dis.; Exchequer Bills, par, to 3s. premium. The business doing, on Thursday, was on the increase, and prices were on the advance. The Three per Cent Consols marked 86⅞, closing at 86¾ rather buyers. The Unfunded Debt was firm, at par to 3s. premium.

There has been an improving market for nearly all Foreign Securities, and prices, almost generally, have been in advance. Brazilian Five per Cents have marked 92 ex div.; Ditto, Small, 92; Peruvian Three per Cents, 83 ex div.; Russian Five per Cents, 90; Ditto, Four-and-a-Half per Cents, 79; Sardinian Five per Cents, 90; Ditto, Four per Cents New Deferred, 17; Dutch Two-and-a-Half per Cents, 64⅜; Dutch Four per Cent Certificates, 82⅜ ex div.; Chilian Six per Cents, 98 ex div.; Equador Bonds, 28; Grenada Six per Cents, 17; Ditto, Deferred, 5⅝; Mexican Three per Cents, 23⅜; and Venezuela Three-and-a-Half per Cents, 22¾ ex div.

The last packet brought £110,000 dollars from Mexico, on account of the dividends

On the whole, about an average business has been doing in Miscellaneous Securities, the value of which has been fairly supported. Australasia Bank Shares have marked 72 ex div.; British North American, 60; London Chartered of Australia, 15; London and Westminster, 4⅛; Oriental, 44; Union of Australia, 52; Australian Agricultural have been done at 38; Canada Six per Cent Bonds, 107; Crystal Palace Shares, 6⅛; General Screw Steam, 1⅝; North British Australasian, 3; Peel River Land, 2⅛; Scrip for Ditto, 2⅛; Peninsular and Oriental Steam, 52⅝ Berlin Waterworks have sold at 2½; East London, 131; Grand Junction, 73⅛; Ditto, New, 16⅛; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 91; West Middlesex, 104; Ditto, New, 17¼. Albion Insurance have been done at 92; Atlas, 20; Argus, 23; City of London, 24; County, 125; European, 20; Globe, 138; Guardian, 57; Imperial Fire, 210; Ditto, Life, 10; London, 99; Pelican, 3; Rock, 45; Rock, 73; Sun Fire, 260; Ditto Life, 65. Hungerford Bridge, 12; Waterloo, 6½; Vauxhall, 21. East and West India Dock, 103; St. Katharine, 86. Peninsular Steam, 52⅝.

There has been more doing in railway shares than for some time past. Prices almost generally have been on the advance. The following are the closing quotations:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 89; Caledonian, 62 ex div.; Eastern Counties, 11⅝; East Lancashire, 86⅜; Edinburgh, Perth, and Dundee, 87; Ditto A Stock, 76; Ditto B Stock, 76; Ditto C Stock, 121; Great Southern and Western (Ireland), 91; Great Western, 74⅛; Lancaster and Carlisle, New Thirds, 14; Lancashire and Yorkshire, 85⅜; Leeds Northern, 12; London and Blackwall, 8; London and Brighton, 90¾; London and North-Western, 98½; London and South-Western, 77½; Manchester, Sheffield, and Lincolnshire, 19⅜; Midland, 87½; North British, 30⅜ ex div.; Shrewsbury and Chester, 24; Ditto, A, B, C, and D, 37 per cent, ex div.; Vale of Neath, 13⅜; York, Newcastle, and Berwick, 65; Ditto, Extension, 11; and York and North Midland, 46½.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 94; Hull and Selby, 109½; Northern and Eastern, 64⅜; Ditto Six per Cent, 65; Wear Valley, 29.

PREFERENCE SHARES.—Caledonian, 84 ex div.; Eastern Counties New Six per Cent Stock, 12; Great Northern Five per Cents, 109½; Ditto, Redeemable at 10 per cent, 109½; Great Western Convertible and Redeemable 4½ per cent., 94; London and Brighton Six per Cent, 135; Consolidated Bristol and Birmingham Six per Cent, 126; Oxford, Worcester, and Wolverhampton, 50½; York and North Midland B. and S. Purchase, 8⅞

FOREIGN.—East Indian, 91⅛; Ditto, Extension, 1; Great Indian Peninsula, 8⅝; Great Western of Canada Shares, 37½; Ditto Bonds, 5½; Luxembourg, 4⅜; Ditto, Constituted Shares, 2⅜; Lyons and Geneva, 4⅜; Northern of France, 25⅝; Paris and Lyons, 21½; Paris and Strasbourg, 22½; Rouen and Havre, 10⅝; Royal Dutch, 11; Western Canadian, 3.

Mining Shares have been somewhat firmer. On Thursday, Anglo-Californian were 4; Australian, 1⅝; Bicaneavon Iron and Coal, 10½; British Australian Gold, 3; Cobbold Gold, 1 ex div.; New Granada, 4; Nouveau Monde, 1; Pontgibaud Silver Lead Mining and Smelting, 18; and Quarts Rock, 1¼.

Friday Evening.

A full average business has been doing in the Consol-market to-day, and prices have steadily improved. The Three per Cents have advanced to 87⅛ for Money, and 87⅜ for the Account. The Three per Cents Reduced have been done at 86⅝ ex div., and the New Three per Cents, 87¼ ex div. Exchequer Bills have been par to 4s. prem.; India Bonds, 4s. dis.; Bank Stock, 212½, ex div. All Foreign Bonds and Railway Shares have ruled very firm.

THE MARKETS.

CORN EXCHANGE (Friday).—Notwithstanding that our market to-day was very moderately supplied with all kinds of English wheat, the demand for that grain, owing to the comparatively thin attendance of buyers, and the large quantity of foreign wheat on offer, was a very inactive sale, and to the extent of the imports, which were much in excess of last week, prices were barely supported. The arrivals of foreign barley, oats, and beans were moderate, but the demand for each of the above articles was very limited. Peas progressed slowly, and on Monday's terms. The trade was moderate as to flour, and prices were fully supported. Indian corn was offered on rather easier terms, but we have to quote it nearly as follows:—

English Wheat.—Essex, Kent, and Suffolk, white, 70s. to 74s.; mail, 67s. to 70s.; red, 67s. to 70s. Foreign: Dantzic, 74s. to 76s.; Konigsberg, 74s. to 76s.; Pomeranian and Prussian, 72s. to 74s.; Danish and Holstein, 70s. to 72s.; Mecklenburgh, 70s. to 72s.; Petersburg, 70s. to 72s.; Archangel, 70s. to 72s.; Marianopoli, 70s. to 72s.; Egyptian, 70s. to 72s.; Salonica, 70s. to 72s.; Smyrna, 70s. to 72s.; Taganrog, 70s. to 72s.; Ghirka, 70s. to 72s.; Polish Odessa, 70s. to 72s.; Azimo, 70s. to 72s.; Berdianska, 70s. to 72s.; Galatz, 70s. to 72s.; Fine, 72s. to 74s.; Chevalier, 72s. to 74s.; Yorkshire and Lincolnshire Red cake, 68s. to 70s.; Ditto white, 70s. to 72s.; Scotch and Irish, 68s. to 70s.; Ditto, white, 70s. to 72s.; Rye, 44s. to 46s.; Grinding barley, 28s. to 29s.; Distilling ditto, 30s. to 32s.; malting ditto, 40s. to 42s.; Lincoln and Norfolk malt, 64s. to 67s.; Brown ditto, 58s. to 62s.; Kingston and Ware, 67s. to 72s.; Chevalier, 72s. to 74s.; Yorkshire and Lincolnshire feed oats, 22s. to 23s.; potato ditto, 21s. to 24s.; Youghal and Cork, black, 20s. to 21s.; Ditto, white, 20s. to 22s.; Sligo, Limerick, new, 21s. to 23s.; Ditto, old, 23s. to 24s.; Galway, new, 21s. to 22s.; maple, 27s. to 28s.; white, 27s. to 29s.; Ditto, old, 28s. to 30s.; Tick beans, 34s. to 36s.; Harrow ditto, 36s. to 38s.; Pigeon ditto, 38s. to 40s.; Egyptian ditto, 32s. to 34s.; Grey peas, 34s. to 36s.; Maple, 36s. to 38s.; White, 36s. to 38s.; Boilers, 36s. to 38s. per quarter. *Foreign:* French, — to — per 280 lbs.; American flour, 24s. to 24s. per barrel.

Seeds.—Linseed has been in good request, on higher terms. Most other seeds move off steadily, at full prices.

Linseed, English, sowing, 64s. to 66s.; Baltic crushing, 60s. to 64s.; Mediterranean and Odessa, 60s. to 64s.; hempseed, 40s. to 44s. per quarter. Coriander, 17s. to 18s. per cwt. Brown mustard, fine (new), 12s. to 14s.; white ditto, 10s. to 12s.; tares, 7s. to 8s. per bushel. English rapeseed, £21 to £22 per last of ten quarters. Linseed cakes, English, £10 5s. to £10 10s.; Baltic ditto, £9 10s.; foreign, £9 5s. to £9 10s. Rapeseed cakes, £6 10s. to £7 5s. per ton. Canary, 50s. to 54s. per quarter. English clover-seed, white, 54s. to 84s.; ditto, red, 36s. to 54s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11d.; of household ditto, 9½d. to 10d.; and of rye, 9d.

Imperial Weekly Average.—Wheat, 70s. 0d.; barley, 37s. 8d.; oats, 26s. 10d.; rye, 50s. 1d.; beans, 40s.; peas, 41s. 7d.

The Six Weeks' Average.—Wheat, 73s. 1d.; barley, 38s. 5d.; oats, 27s. 2d.; rye, 50s. 6d.; beans, 41s.; peas, 41s. 7d.

Foreign Markets.—Wheat, 36,111; barley, 29,891; oats, 15,238; rye, 36; beans, 4,031; peas, 715 quarters.

Teas.—There is rather more doing in our market. Prices generally are steady, yet common sound congou may be purchased at 11d. per lb

Sugar.—The public supplies of the week have been by no means extensive; the demand, however, has been very inactive; and prices have had a downward tendency. Fine yellow Barbadoes, 44s. to 45s.; fine ditto, 46s. to 46s.; fine Mauritius, 46s. to 46s.; yellow Bengals, 44s. to 45s.; fine ditto, 46s. to 47s. 6d.; grainy, 48s. to 49s. 6d.; good to fine moist grocery Madras, 47s. to 48s.; fine ditto, 49s. 6d. to 50s. per cwt. Refined goods are in limited request. Brown lumps, 45s. to 48s. 6d.; and low to fine grocery, 49s. 6d. to 47s. per cwt.

Coffee.—There is rather more doing in our market, at fully late rates. Good ordinary native Ceylon has changed hands at 43s. per cwt.

Rice.—Prices have undergone little variation, to move off steadily, at very full prices. State parcels are dull. In English and Foreign, but very little business is doing, on former terms. There is more doing in bacon and lard, the value of which has an upward tendency. Other kinds of provisions as last advised.

Spirits.—The market for rum is inactive, but we have no change to notice in prices. In brandy and geneva little is doing, on nominal terms. Proof Leeward Islands rum, 1s. 1d.

Hay and Straw.—Meadow hay, £2 15s. to £5 5s.; clover ditto, £3 1s. to £5 5s., and straw, £1 5s. to £2 2s. per load.

Hops (Friday).—Selected hops are in good request, and last week's prices are well supported, but other kinds are a slow sale. The imports are 70 bags from Ostend, 63 from Hamburg, and 7 from Rotterdam. Mid and East Kent pockets, £6 15s. to £12 5s.; Weald of Kent ditto, £5 5s. to £7 5s.; Sussex, £5 15s. to £6 15s. per cwt.

Coals (Friday).—Holywell, 30s.; West Hartley, 20s. 3d.; Hetton, 22s. 6d.; Hetton Lyons, 21s.; Lambton, 21s.; Hough Hall, 19s. 6d.; Tees, 19s.; Wylam, 19s.; Walbottle, 19s.; Tanfield Moor, 19s.; Russell's Hetton, 19s.; Eden Main

AMUSEMENTS, &c.

ROYAL PRINCESS'S THEATRE, Oxford-street.—On EASTER MONDAY, RICHARD III. and THE LANCERS; Tuesday, "Married Unmarried" and "The Cornical Brothers;" Wednesday, "Married Unmarried" and "first time) "Faust and Marguerit;" Thursday (under approval), Friday, and Saturday, "Married Unmarried" and "Faust and Margaret."

THEATRE ROYAL ADELPHI.—C. H. ADAMS'S ORRERY DURING PASSION WEEK (26th year in London.—On MONDAY next, April 10th, and during the week (Good Friday excepted), Mr. Adams will deliver his ANNUAL LECTURE on ASTRONOMY. Begin at 8, end about 10. Stalls, 3s.; Boxes, 2s.; Pit, 1s.; Gallery, 6d. Children, Half price to boxes and pit. Private Boxes, 10s. 6d. and 21s., at the Box-office daily; or at the principal Libraries

SACRED HARMONIC SOCIETY, Exeter-hall.—Conductor, Mr. COSTA.—On WEDNESDAY next, APRIL 12th, the customary annual performance of Handel's MESSIAH. Vocalists—Madame Clara Novello, Miss Dolby, Mr. Lawler, and Herr Formes; with Orchestra of nearly 700 performers. Tickets 3s., 5s., and 10s. 6d. each, at the Society's Office, No. 6, Exeter-hall

THE NATIONAL INSTITUTION of FINE ARTS, Portland Gallery, 218, Regent-street, opposite the Royal Polytechnic Institution

THE SEVENTH ANNUAL EXHIBITION of this SOCIETY is NOW OPEN, from 9 till dusk. Admission, 1s.; Catalogue, 6d.

BELL SMITH, Secretary.

GALLERY of ILLUSTRATION, 14, Regent-street, will RE-OPEN on MONDAY, APRIL 10th, with the ROUTE of the BRITISH ARMY to the SEAT of WAR, combined with the Subterranean SWITZERLAND NIGHT. Including the Descent of an Avalanche at Southampton, Passing Gibraltar, Arrival at Malta, &c.; with Constantinople, St. Petersburgh, Schastopol, and the Bombardine, from a Sketch by Lieut. MONTAGU O'REILLY, of H.M.S. "Retribution." Afternoon at Three; Evening at Eight. Admission, 1s., 2s., and 3s

NOTICE—CONSTANTINOPLE.—The LECTURE accompanying the Grand Moving DIORAMA of CONSTANTINOPLE is now delivered Every Morning and Saturdays. With the extensive Gardens, Lawn, and Scene of Land belonging, containing upwards of 20 acres, all contiguous, and now in the possession of the Hon. Mrs. Hare, the owner. This very eligible property (set up by lot) for the reading of an absolute term of 99 years, commencing at Lady-Day, 1815, at a small ground-rent, comprises a tract of land close to the town of Torquay, and bounded on its west by the sea. The house is situated in a most sheltered position, commanding from the windows beautiful views of Torbay and the surrounding country, and is in very convenient, and tolerably complete, repair, containing a drawing-room about 27 feet by 17 feet, a dining-room about 27 feet by 18 feet, a library, three of a bay window, a study 18 feet by 12 feet, with capacious kitchen, housekeeper's room, and other appropriate offices on the ground floor, and seven bed-rooms, and two dressing rooms, with servants' bed-rooms over. The out offices comprise stables, lofts, coach-house, cow-house, and other conveniences, and the whole is in complete repair, and fit-d in every respect for the occupation of a family of distinction. The house is approached through a handsome entrance, by a good carriage road winding through a lawn of 19 or 20 acres, from which the most extensive views of both land and sea are obtained. The pasturage is excellent, and the ground well supplied with water, which renders it very suitable for a dairy farm, and there are also about four or five acres of land kept in it.-age of a very superior quality. The hot-house is stocked with vines now in the prime, and the gardens are in the highest state of cultivation. The ground behind the house extends to and is bounded by the wellknown Daddy Hole Plain; and there is a stone-built tower and summer house on a prominent site which command extensive marine and land views of Torbay and the Bristol Channel. Other conveniences are laid out with sea and other walks of considerable extent, and from the property the most extensive views of both land and sea are obtained. The pasturage is excellent, and the ground well supplied with water, which renders it very suitable for a dairy farm, and there are also about four or five acres of land kept in it.-age of a very superior quality. The hot-house is stocked with vines now in the prime, and the gardens are in the highest state of cultivation. The ground behind the house extends to and is bounded by the well-known

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

(SECOND NOTICE.)

AMONGST the landscapes, which we rather hastily noticed in our last article, are several which are entitled to individual mention; and we, accordingly, give them precedence on the present occasion.

10. "Ebenberg, from the Rheingrafenstein, on the Nahe." By G. Cole. A fine old baronial ruin, in a wild mountainous region; very ably painted. The eye almost climbs step by step the abrupt acclivity upon which the castle stands, the higher points of which are partly fringed with mist. Below is a straggling and shallow stream, in the shady recesses of which cattle are seen. The only particular in which we find fault with Mr. Cole, in the composition of this picture, is in the introduction of the waggon with its contents in the foreground, the local colour of which spoils the general artistic effect, whilst it also detracts from the historic interest of the scene.

25. "Chiswick, the last resting-place of Hogarth." By A. F. Rolfe. A nice quiet landscape, so far as the principal point of interest which occupies the middle ground and the distant sky effects concerned; but here, as in the last case, the general beauty of the picture is marred by the vulgar figures in the foreground.

77. "Entrance of Boulogne Harbour." By J. Wilson, junior. A clever sea piece. A brisk gale is blowing across the mouth of the harbour; and on the right, on a lee-shore, and enveloped in a dark cloud, is a vessel in distress. The agitation of the water is admirably represented, as also are the quaint details of the two wooden jetties.

92. "Scarborough." By A. Clint. We spoke of this fine picture in our last, as one of the best works in the Exhibition. When we saw it under the influence of an atmosphere somewhat overcast—as was the case on the day of the private view—we, with others, were struck with the gloom and coldness of the prevailing tone, which we deprecated accordingly. Upon subsequent inspection, under a brighter sky, this effect has appeared considerably modified; the lights of the picture, subdued though they be, have come out with greater effect than previously, more particularly in the rocky hollow in which the town is situated. The massive body of sea which occupies so large a portion of the canvas is grand in aspect, and has been executed with a masterly hand. Of this fine work we have great pleasure in giving an Engraving, to which medium, by the way, it is, in composition, and tone, well adapted.

"LA PENSÉE."—PAINTED BY C. BAXTER.

105. "The Reekie Lynn Waterfall," near Linthratin, Forfar, Scotland. By G. Beetholme. This is a carefully painted scene of rock and water torrent; rather minute and hard in detail, after the model of the modern German school, some specimens of which have recently been exhibited in this country. It is hung too high, however, for us to judge accurately of its merit in many respects.

215. "On the Trent, near Castle Donington, Leicestershire," by J. C. Ward. A curiously constructed landscape, and one not favourable to effective result, the whole expanse of foreground being occupied by water, and the background by trees of monotonous character, and thickly planted; the middle distance being defined by the introduction of a weir, which also stretches across the picture. There are no breaks in the contour of the scenery—no accidental recesses—no extreme distance to seduce the eye to explore various portions of the canvas in succession. And yet, with all these disadvantages in respect of material, Mr. Ward has produced a good and effective picture; a rich yet cool verdant tint pervading the whole, either local or reflected in the water; which is by no means displeasing.

286. "A Calm near the Entrance to Port Maddoc, North Wales." By A. Clint. A striking contrast to the stormy effects off the "Scarborough," already spoken of; but a very speaking and satisfactory picture. Here again, the ocean surface usurps the lion's share of the canvas, the bit of coast scenery occupying but a comparatively small portion; and yet sufficient to give warmth and life.

260. "Sheep on the Downs;" and 443. "Landscape and Figures, near Caldecott Castle." By W. W. Gosling. We have already spoken of this young artist's improving talent, as displayed in the present Exhibition; but we cannot pass over, without noticing by name the two pictures, which display his resources and his fancy in other departments than that of mere landscape. In the first-named the sheep, and the shepherd-boy reclining on a bank, are full of life and truth, and the mild light in the distant horizon is charmingly suggestive of rural calm. In the second picture the artist is more ambitious, both in respect of the number and variety of objects introduced, and in the colouring allotted to them; but truth obliges us to add that, as the result, there is a little spottiness and want of keeping observable—an error, by the way, which, as we observed, slightly detracted from the merit of his fine tree-study in the Great Room.

Amongst the figure subjects we select for engraving (48) "La Pensée," by C. Baxter. This beautiful picture was mentioned in terms of admiration in our last. In now engraving it we need hardly point attention to the charming sentiment infused into the expression; and the natural and ladylike deportment of the figure. The drapery is also very gracefully studied, and in the original is very delicate in colour. The miniature which the fair subject clasps in her hand explains at once the import of the title—"La Pensée."

"SCARBOROUGH."—PAINTED BY A. CLINT.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, APRIL 8, 1854. [GRATIS.

JAPAN AND THE RUSSIAN WAR.

THE world against the Russian Empire is a fearful odds, even physically speaking; but it is still more appalling when the universal sense of mankind proclaims the undeniable truth, that every principle of honour and justice is equally against it. At the same time, it is a wise axiom not to underrate an enemy, however strong the odds are in our favour; for human affairs are full of strange chances, and the power which is hazarding all this risk is quite alive to the necessity for straining every nerve of its vast force in every quarter of the globe. And great wars are not now confined to small fields, like games of chess; their influence spreads and is felt from pole to pole. Thus we observe in the present shaking and loosening of the chords of peace, the interests of all Europe and Asia, the two mighty ancient quarters of the earth, are extensively affected; northern Africa is moved by the pressure of circumstances; and the New World, America, must keep a wary eye upon events as they occur. Amid the complication, as we a few weeks ago laid before our readers certain intelligence regarding China, we are disposed, partly from the same source, to submit a few remarks on the subject of the adjoining Empire of Japan. cruising in whose seas we find Russian ships of war; and observe that the American squadron is on its way for a second visit to the guarded coast. Japan must follow in the wake of China, though Russia has been trying in vain for half a century to get the edge of the wedge in, though the Jesuits and Portuguese were detested and expelled; though the Dutch are only permitted to have a marvellously cramped commercial intercourse with the single port of Nangasaki, and though the Chinese are very little more tolerated, and held in the odour of rogues and thieves. Yet *ubi mel ibi apes*—where there is honey, there will be bees clustering about; and where there are abundance of articles for profitable trade, perseverance will in the end effect an entrance into the sanctum; and such appears to be the condition of the crisis, which, through other changes in the Eastern Seas, is now approaching the long closely-sealed empire of Japan.

The matters which, at this moment, co-operate towards a revolution in the irrevocable system of Japan, are, as we have referred to them, the contemporaneously renewed efforts of Russia from her Kamschatkan border; the new intrusion of America, and the contagion of the Chinese convulsion; and, not the least of all, the enterprising spirit of English commerce, striving at every point not to be left behind hand in the "Open sesame" spell, and possessing many advantages to give it the best in the race.

The power of Japan to resist this influx consists chiefly in the geographical nature of the islands of which the Empire is composed, and the climate of prevalent tenebrian fogs which envelopes them. Not contented with the degree of safety secured by these elements, the Government of the country has, from time immemorial, resorted to the politic precautions which have kept them out of danger ever since the religious insurrection which was drowned in torrents of Christian blood. Acting upon this policy, as is well known, all vessels reaching Japanese ports are arrested and their crews closely imprisoned; no ships of war are permitted to touch the shore; a single port and particular seasons of the year are appointed for the limited intercourse of trade; no person is allowed to penetrate into the interior under pain of not being suffered to return; and no religious rite or worship of any kind is tolerated either in strangers or natives, except the maimed rights belonging to the semi Buddhist belief and ceremonies prescribed by a profligate priesthood under a Lama-like spiritual head, held to be superior to the reigning Emperor, and almost idolized as a God, but quite destitute of temporal authority. This authority is shared with the actual ruler very much after the manner of our feudal Barons of old; and, though slaves to custom, there is said to be among these Princes opinions not altogether in unison with the existing forms and ancient institutions. The people are of a diminutive and feeble race, though they keep and use the stout hairy Kuriles in bondage as beasts of burden; are, like all weak creatures, jealous, cautious, timid, cunning, and cowardly. Their fortifications and strong places are (as their dwellings) mostly of wood, as the frequent earthquakes forbid stone buildings; and an idea of their character may be suggested by their practice of covering the walls with cloth hangings, in order to disguise them and conceal the nature of their defences. Armed with matchlocks, some muskets, bows and arrows, pikes, spears, and sabres; with few cannon and inferior gunpowder, the army raised from such a population, though numerous (and it is reckoned at 150,000, capable of being more than doubled in the event of war), could not be very formidable, even when commanded by chiefs in complete and splendid suits of armour.

But our informant calculates yet more strongly upon an element which we were not aware continued to exist in such force in Japan. There is, however, a considerable proportion of what must, for want of a more correct term, be called Christians among the natives, secretly maintaining, like the Chinese Triad and other societies, a barbarized faith, and ready to rise, if opportunity were offered, against their persecutors. The proof of this fact, and of

PREPARATIONS FOR WAR.—A MIDNIGHT SCENE ON BOARD H.M.S. "DAUNTLESS," IN WINGO SOUND.—(SEE NEXT PAGE.)

[illegible] of their own religion, the [illegible] – care for the most heinous crimes—is the doom of [illegible] unfortunate wretch even suspected of this enormous guilt—[illegible] is the extreme political jealousy with which it is viewed. [illegible] to this day, the oldest story of the Dutch traders being compelled to trample on the cross, is annually enforced upon numbers of the inhabitants of Nangasaki itself (and probably throughout the Empire), who are marched to the temples, and ordered to tread under foot every sacred emblem of the Christian faith. In the event of invasion, there is no doubt but that a great diversion would arise in favour of the invaders; and at an epoch when we see so many causes tending to the same issue, it is a warning of wisdom to teach the community to keep a good look-out on what is so likely to happen, and so soon, not only in China and Japan, but in all the adjacent territories in the Indian Archipelago. The ice is everywhere breaking up, and the first to avail themselves of the clear water will reap the richest returns.

PREPARATIONS FOR WAR.

The episodal illustration upon the previous page is from a Sketch of a [illegible] scene on board H.M.S. *Dauntless*, in Wingo Sound. The [illegible] [illegible] [illegible]

CHESS.

TO CORRESPONDENTS.

MARMADUKE, New York.—They shall receive attention.
H. B. R.—Is not at all either curious or useful.
B. W. S., Ashborne.—All the subscription for Country Members to the St. George's Chess-Club is only 2 guineas per annum, and that entitles the member to free admission to the club in every part of London and Westminster.
Wellington Chess-player.—Your Problems shall be examined.
F. R., of B.—It shall have attention.
A NEW MARKET SUBSCRIBER.—Our Solution of No. 526 is perfectly correct. The error is in supposing that Black can play with R taken Q R P, the only Pawn he could take the Rook on without losing a piece.
BETTY, R. R., of Manchester.—We believe you are right. The author has overlooked the second Solution.
WALPOLE.—Quite wrong. 2 No difference. 3 Sometimes. Address your letters simply to the Editor, and ask no more questions than are necessary, for we have no space to spare.
G. W., Banbury.—The solution required is as follows:—

WHITE.	BLACK.
1. K to Kt 3rd	Q takes B (ch)
2. B interposes (dis ch)	Q takes R, or K moves
3. Q to K 5th Mate.	

Black has a choice of moves at this point, but none that can prolong the game.)
J. A. P. P.—A player may have two or more Queens on the board at the same time.
ALPHA.—Too much space is given to small Openings in that Work. Apply again six months hence.
CLERICUS.—The best Play on Evans's Gambit is that by Mr. Lewis.
KING PEPIN.—It is a subject to be regretted that throughout all the States is not a single periodical which dedicates a portion of its columns to Chess. What are the proprietors of the French Illustrated Newspaper about?
RICARDO.—The shortest way is to send another diagram. We really do not know, among so many hundred Problems on hand to which you refer. It may have been destroyed, or been turned, or pulled about elsewhere.
W. M., Witney.—Problems found to be wrong are destroyed. So you must be good enough to send a new diagram.
YELLAT.—It can be solved in five moves, and is of very indifferent construction besides.
T. R. P., Jaker, is evidently unacquainted with the principle of composing and solving problems. The position he submits has nothing problematical about it.
H. W., Wakefield.—The last is pretty good.
BIRMINGHAM.—A second Queen may be claimed for the Pawn.
L. G., Honiton.—The author of "The Handbook" is not responsible for the rules of the game given.
Several others.—As to the particular one you cite, the best players of the last and the present age concur in its approval.
W. G. H., Ferryhill.—They shall be duly examined and reported.
JOHN OF H.—Your solutions are correct. Your name is inserted in the list of British HONORARY MEMBERS.—Such compliments are not particularly coveted.
HONORARY MEMBERSHIP.—Such compliment is given every month on the wrapper of the *Chess-Players Chronicle*, which is given every month as a convenience to every player in the habit of reading that serial. The semi-list is as great a convenience to every player in the habit of reading it, as the Court Guide is to every person in the habit of visiting Court. This semi-list is so great a convenience to every player in the habit of reading about the country that it should be a point of duty with the officials of Chess Societies to render it as perfect as possible.
SOLUTIONS OF PROBLEM No. 526, by Omicron, J. P., Tau, J. T. S., Hyde, are correct. All others are wrong.
SOLUTIONS OF PROBLEM No. 527, by C. Allwen, A. Day, Ilkerton, Marmaduke, C. S., P. J. Fitz-a-Clinse, J. P., M. P. of Kew, C. G. of York, W. W., J. H. Wood, Newark, Percy, H. of St. [illegible] C. A. W., Birkenhead, Tasso, E. M. J., H. T., J. W. of H. Bank, Frederick, C. R., Mowbray Stevens, W. Lloyd, Rufus, Wyvern, H., Hebrews, Chess-Fiend, Alpha, C. R., Mowbray Stevens, W. Lloyd, Rufus, Wyvern, H., Hebrews, Chess-Fiend, Alpha, W. Wakefield, Jerwein, Liverpool, F. F., Devonshire, Lover of Chess, J. H., Hepworth, H. de, A. H. J. H., Tau, Omicron, Solathern, Hyde, Pare-Mesquin, J. H. F., M. P., J. F. C., Hyde, W. P., Jaker, all three are correct. All others are wrong.

SOLUTION OF PROBLEM No. 527.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to K B 3rd	P to K Kt 5th	3. K to his 3rd	P moves
2. B to K R 3rd	P takes B	4 P mates.	

PROBLEM No. 529.

By Mr. HEALEY.

(A masterpiece of strategy.)

BLACK.

WHITE.

White to play, and mate in five moves.

Smart Game played between Mr. G. B. FRASER, of the Dundee Club, and an AMATEUR.

(Evans' Gambit.)

WHITE (Mr. F.)	BLACK (Amat.)	WHITE. (Mr. F.)	BLACK (Amat.)

And White resigns.			

(a) This opening was a great favourite of the lamented M'Donnell, and, in his hands, was invincible against all opponents until he tried it against the unparalleled La Bourdonnais (b) It would have been better, probably, for White to have played P to K 5th, with the object of preventing his adversary from Castling for some time. The move made, however, leads to some ambiguous combinations.
(c) His only move, perhaps, considering he has a look more than the enemy
(d) White replaces his ad, so gained, too highly to sacrifice his for a Rook.
(e) As to Kt to Kt 5th would have made the position intricate and still more interesting.
(f) To win the Q Pawn, if it were advanced, by Kt to K 5 4th, &c.
(g) Black's adversary are almost irresistible now, but his antagonist determines to fight on hopefully to the end.
(h) To enable him to play his Rook to K sq, when [illegible] with skill.
(i) Mr. Newman plays this end game with [illegible] and in the other to pre-
(k) The struggle is now on the one side to advance [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Board of Ordnance has advertised for contracts to erect twenty-six batteries on the Dublin and Wicklow seaboard.

The Pacha of Egypt paid £180,000 last week to the Peninsular and Oriental Steam Navigation Company—being the last instalment of the loan contracted eighteen months since, to anticipate the tribute to the Sultan.

The famous car of Juggernaut of Muhes, near Serampore, has been destroyed by ure.

Cardiff benefits by the war. Coal is in great demand, both for the English and French services. Freights to Malta, recently at 25s. per ton, are now 50s., with a return of freight at the same rate.

A patent has just been taken out in France for making sugar from pumpkins. The quantity produced will be at least as great as could be obtained from an equal quantity of beet-root.

Upwards of 150 lives were lost on the American rivers, in one week of last month, from explosions, fires, and sinking of steam-boats.

A gentleman's rifle corps for Middlesex has been formed. It is to consist of 500 men and is commanded by the Duke of Wellington as Lieutenant-Colonel Commandant.

At a recent meeting of the American Geographical and Statistical Society, at New York, Captain Gibson delivered a lecture on the Indian Archipelago, and spoke of a race living in the South Seas, called Ourang-Kubs, covered with hair, wild and barbarous, and inferior to the human race generally.

"The most pious" Emperor of Russia has prohibited the circulation in Poland of the portrait of Sir Moses Montefiore.

Lord Palmerston has addressed an order to the authorities at Norwich, forbidding any further interments in the churches of that city.

It is in contemplation to strike out the Government and other Prisons in Dublin from the list of Garrison Guards, the number of troops doing duty being unusually small.

Government have determined to establish in Edinburgh an Industrial Museum for Scotland, similar to those already existing in London and Dublin. Dr. Lyon Playfair has been in Edinburgh for several days making arrangements as to a site.

A petition is in circulation in New York for signatures, praying the Legislature to make three years' desertion a legal cause for a divorce, *a vinculo matrimonii*, on the ground that it will tend to the promotion of morality.

At the opening of the Roman Catholic Oratory last week, the following priests officiated, all of them having been formerly clergymen of the Church of England:—The Rev. Messrs. Faber, Bittlestone, Caswall, Newman, Bolston, Gordon, Badard, Knox, Hutchison, Wells, and Bowden.

The Executive Government of Australia has advanced £3000 to defray the expense of sending specimens of Australian productions to the Paris Exhibition of 1855.

Lieut. Bodisco, nephew of the late Russian Minister at Washington, has been ordered home by his Government.

Madame Goldschmidt (Jenny Lind) gave her first concert at Vienna last week. It was most numerously attended, and went off with great *éclat*.

The warehouses of the Great West, says the *Boston Journal*, are overflowing with immense quantities of grain and flour.

A Galway journal asserts that a delusion has spread amongst the peasantry that "there will be a conscription to recruit the army of England in the East" and this is assigned as a cause for the great increase of the Irish Exodus.

Among the passengers from Hull by the *Ripon* were Prince Chokan Mahomed and son, the son and grandson of the renowned Tippoo Saib. The Prince, who has never before been out of Calcutta, is come to England to endeavour to get his pension settled on his grandson

Accounts from Portugal state that the disease in the vines is likely to be very destructive, and more general than it was last year. Brandy is quoted at £45 per pipe, quadruple the average price.

On Friday (yesterday week) the *Gazette* notice took effect to remove the names of the officers from the "Navy List" connected with the ships *Breadalbane* and *Terror* on the missing Arctic Expedition

The value of the imports of specie last week exceeded £800,000, of which £550,124 was gold from Australia.

The Queen and King-Consort of Spain intend passing the holy week in Madrid, and will attend in person at the usual ceremonies which take place in the palace on Holy Thursday, viz., the washing of the feet, and the feeding a number of the poor.

The Government, through the Lord-Lieutenant, has given £1000 to the Society for the Encouragement of the Growth of Flax in Ireland.

The Viceroy of Egypt has, by decree dated the 9th ult., suppressed all the recent sanitary restrictions in the port of that country.

The members attending the Museum of Ornamental Art at Marlborough-house during the month of March were as follows: 6,666 persons on the public days, and admitted free; 1478 persons on the students' days, and admitted as students on the payment of 6d. each, besides the registered students of the classes and schools.

The consequences of the prohibition of gold from Russia are very serious indeed to foreigners residing there. The case of a French actress is mentioned, who lately remitted 60,000f. to Paris, and, being compelled to send it in Russian paper, received only 45,000f. Assignats had the good luck to leave the city before the ukase was issued, and he brought away with him a handsome sum in gold.

In the two months ended the 5th March, the declared value of beer and ale exported was £102,452. Last year, during the same period, it was £198,291.

Cardinal Wiseman was to leave Rome on Monday, the 27th ult., on his route to England. He intended to make a short stay, on his way home, with his sister, who has married an Italian nobleman, and resides in the north of Italy.

The accounts of the Tithe Commissioners for England and Wales up to the 1st of January, show that the rent charge awarded or agreed upon in lieu of tithes, amounts to £4,011,246. About three-eighths of the commutation was by awards, about five-eighths by agreement confirmed by the Commissioners.

The Prince and Princess de Joinville applied lately to the Queen of Spain for leave to reside at Grenada. The Queen did not think proper to accede to their demand, but assigned to them the city of Seville as a residence.

The gold-mining in North Wales is now fairly begun. Four machines have been put up, two of which are at work, and are alleged to be crushing quartz at the rate of a quarter of a ton per hour, the yield of gold from each ton averaging more than an ounce.

The Royal sanction has been given to a line of railway on each side of the Rhine provinces, with a permanent bridge at Cologne.

At a recent meeting of the City of London Ragged Schools, Sheriff Wire said, he could tell them, from his experience of the City prisons, that, since the establishment of ragged schools, juvenile crime had diminished fifty per cent.

A colossal marble statue of Mr. George Stephenson has been placed in the waiting-hall of the Euston-square station.

The bridge across the Tennessee river at Florence, Alabama, a magnificent structure, which cost 135,000 dollars, has been destroyed by a tornado.

The screw-steamer *Charity*, on its voyage from Liverpool to the United States, last month, was detained nine days in the ice.

The marriage of the Emperor of Austria will take place on the evening of the 24th inst. The nuptial benediction will be given to the august couple in the Chapel of the Palace, by the Archbishop of Vienna, assisted by other prelates and Archbishops of the empire.

A few days ago a seaman belonging to the Russian ship-of-the-line *Asia*, lately disarmed at Flushing, on their way through Prussia, were received, by order of the King, at the railway station at Potsdam, and each sub-officer had paid to him one ducat, and each junior a thaler.

Mr. Clementson, who has for half a century been Deputy-Serjeant-at-Arms attending the House of Commons, retired from that place on Friday last, and was succeeded by Mr. Gossett, who entered on his duties for the first time on Monday night.

The Court of Turin has gone into mourning for 20 days on account of the death of the Duke of Genoa. The Court of Parma for six months.

A proposition is now under discussion for sending five hundred Scripture-readers into the diocese of Exeter.

A letter from the Queen to the Marchioness of Westminster, condoling with her ladyship and her family on their late melancholy bereavement, was written on Wednesday week, and despatched from Buckingham Palace on that day. It reached Eaton Hall on Saturday, having been "mis-sent" to Flint.

An official report of the Synod of the Greek Church in Russia shows that in the last year 200 Greek priests were found guilty of infamous crimes, and 1850 of crimes of a minor kind. From 1836 to 1839 the number of Greek priests in Russia convicted of crimes was 15,443.

The *Flavio Gioja*, from Antwerp, bound for Montreal (or at least professedly so), with arms and ammunition on board, which are said to be intended for the Greek insurgents, was arrested in the Downs on Tuesday, under Admiralty warrant.

TESTIMONIAL TO MR. WATKIN.

On Tuesday evening an elegant service of plate was presented to Mr. Edward J. Watkin, late of the London and North Western Railway, at a dinner given to that gentleman at the London Tavern, by a large party of his private friends, subscribers also to the Testimonial Fund. The chair was ably filled by Sir Cusack P. Roney; supported by Mr. Peto, M.P.; Mr. Geach, M.P.; the Hon. Captain Fitzmaurice, &c. After the usual loyal toasts had been drunk, the Chairman, in an eloquent address, proposed the health of Mr. Watkin, and presented him with the gift, in testimony of the high esteem in which he is held by the subscribers; and the plate, which was placed upon a table in the centre of the dining-hall, was at the same moment uncovered. Mr. Watkin, in an address, characterised by its modest feeling, thanked the company for the splendid present. A variety of other toasts were drunk—including the House of Commons, and the Members, Mr. Peto and Mr. Geach; Mr. Watkin, sen., the father, and the Rev. Mr. Watkin, the brother, of

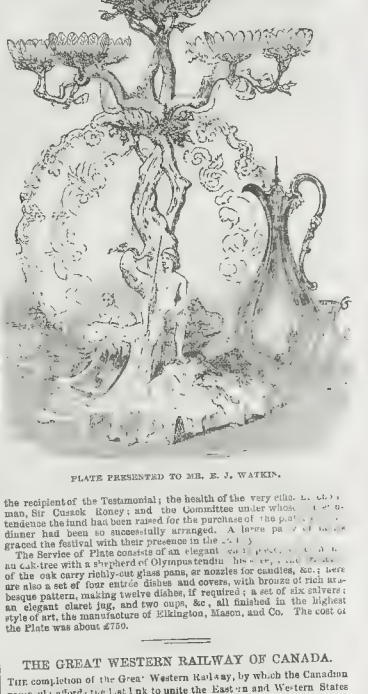

PLATE PRESENTED TO MR. E. J. WATKIN.

the recipient of the Testimonial; the health of the very efficient Chairman, Sir Cusack Roney; and the Committee under whose superintendence the fund had been raised for the purchase of the plate. The dinner had been successfully arranged. A large party of ladies graced the festival with their presence in the gallery.

The Service of Plate consists of an elegant centre piece, with an oak-tree with a shepherd of Olympus tending his flock, and Pandean pipes of the oak carry richly-cut glass pans, or nozzles for candles, &c.; here are also a set of four entrée dishes and covers, with bronze of rich arabesque pattern, making twelve dishes, if required; a set of six salvers; an elegant claret jug, and two cups, &c., all finished in the highest style of art, the manufacture of Elkington, Mason, and Co. The cost of the Plate was about £750.

THE GREAT WESTERN RAILWAY OF CANADA.

THE completion of the Great Western Railway, by which the Canadian peninsula affords the last link to unite the Eastern and Western States of the Union—the Atlantic Ocean and the Mississippi—has been celebrated with a splendid opening fête. The neighbours of the States of New York, Michigan, and Illinois, are fully as much interested in this great work as the Canadians are, on this they have fully testified. The completion of the Eastern division, having been celebrated at Niagara Falls, and of the Central at London, the people of Detroit and Hamilton assisted in the general rejoicing on the completion of the line throughout.

The Detroit jubilee took place on Jan. 17. The guests from the State of New York, to the number of four hundred, had arrived from the Falls, and so numerous had been the invitations in Hamilton and Toronto, that a second train was found necessary. Shortly before seven o'clock the entire party, mustering nearly seven hundred, were on their way. Accessions were made at Dundas, Paris, Woodstock, and London, and on leaving the last-named place twelve cars were densely packed. The day was rather cold, but clear, and the track in excellent order. The first train reached Windsor a little before five, and was greeted with an artillery salute from the Detroit shore. A committee from the Detroit City Council, in waiting at Windsor, and shortly afterwards the entire party had crossed the ferry into the dominions of Brother Jonathan. The reception was most cordial and enthusiastic. Thousands of people greeted their guests on landing with hearty cheers—volunteer militia companies, both cavalry and foot, in splendid uniforms, formed a guard of honour—and the fire companies, with their engines and equipments, had assembled in large numbers. Unfortunately, it was quite dark ere the party had disembarked, and the effect of the brilliant reception was in some measure marred. Several of the hotels were, however, illuminated, as well as the immense freight house of the Michigan Central Railway Company, in which the dinner was to be served. In the immense room, intended to seat upwards of 2000 people, was decorated with drapery and evergreens—the flags of Great Britain and the United States being side by side, and many emblems and mottoes were arranged along the walls.

The dinner was prepared by Colonel Dibble, of the Baldwin House, and the 2000 half-famished guests did justice to the repast.

A number of similar demonstrations took place, in celebration of the opening of the entire line of railway.

A meeting of the English shareholders in the above railway was held on Wednesday last, at the London Tavern, when the Chairman, Mr. Laing, M.P., stated that the traffic on the line within the first month of its opening had produced £5000 a week; and it was expected that in the first year a sufficient sum would be raised to pay a dividend of eight or ten per cent upon the present capital.

We have engraved three views of the most interesting works on the Great Western Line, from Sketches taken by Captain Caudy, late of the Royal Artillery.

First, a view of the City of Hamilton and Burlington Bay, showing the Station and Workshops of the Company.

Next, a view of the Suspension Bridge at Burlington Heights, with

THE GREAT WESTERN RAILWAY OF CANADA.

THE CITY OF HAMILTON, FROM NEAR THE SUSPENSION-BRIDGE, AND DEPOT OF THE GREAT WESTERN RAILWAY.

the Drawbridge over the Desjardins Canal. The works here are extremely heavy; and the Suspension-bridge spans an opening made through the Heights, to allow of a new channel for the canal, found necessary in order to complete the Railway. The span of the bridge is 350 feet. These Heights are of an exceedingly hard material and in cutting through them the bones of some mammoth animals were discovered.

The third Illustration is a view of the Town of London, from the Railway-bridge over the River Thames: this bridge is a handsome wooden structure, of 160 feet span. London is an exceedingly thriving town, containing about 10,000 inhabitants; the houses are mostly built of white brick; and, the streets being broad and straight, the town has a very substantial and handsome appearance. The district round London is exceedingly thriving and well cultivated.

A very handsome bridge has also been constructed to carry the Railway

SUSPENSION AND SPRING BRIDGES, BURLINGTON HEIGHTS.

across the Grand River, near Paris. The piers are of solid masonry, the bridge itself being of the very finest Canadian oak. The banks of the Grand River are considered to be the finest section of country in Canada. The quantity of wheat raised in this part is very great indeed, and at the present time the Railway is conveying from that neighbourhood many thousand barrels of flour to New York, owing to the existing high prices. The city of Hamilton is rising rapidly; it contains about 20,000 inhabitants; and its beautiful bay, seated at the head of Lake Ontario, transacts an immense amount of freighting business during the season of navigation. The Customs duties paid here in the year 1853 amounted to the large sum of £120,000. The traffic upon this line, which is 228 miles in length, is already very large, amounting now to about £5000 a week in the depth of winter.

The suspension-bridge at Niagara Falls, which is proposed to be used for the passage of trains, is stated to be one of the wonders of the age.

TOWN OF LONDON, WITH THE GREAT WESTERN RAILWAY BRIDGE ACROSS THE THAMES

PROCLAMATION OF WAR AGAINST RUSSIA, AT THE ROYAL EXCHANGE.

PROCLAMATION OF WAR AGAINST RUSSIA, AT THE ROYAL EXCHANGE.

The ceremony of Proclaiming War—of which, as enacted in olden times, we gave some account in our Journal of last week—was performed in the City on Friday last; although it must be acknowledged that the scene was unattended by any of those heraldic or other official accompaniments which invest the form with attraction.

About noon, Mr. Beddome, the mace-bearer, accompanied only by Mr. Hill, the gate-porter at the Mansion-house, proceeded from thence to the Royal Exchange, wearing their black robes of office, but without the mace or any other insignia. These officers were soon recognised, and followed to the steps in front of the Exchange, and were speedily surrounded by between 200 and 300 persons. The news spread in all directions, and a rush was made to the point of interest; but before many reached the spot, the brief ceremony was finished amidst loud cheers.

On the same day, war was also formally declared at Southampton At twelve o'clock, the Royal standard was hoisted from the Audit House window; and immediately afterwards, the Mayor, in his official robes, attended by several members of the Town Council, and the Town Clerk, read the Queen's proclamation declaring war against the Emperor of Russia. As soon as he had finished, the sword of state belonging to the Corporation was unsheathed, symbolical of a state of war. The unsheathing of the sword was cheered by the crowd.

CONVICTS BREAKING UP "THE YORK" HULK, BY TORCHLIGHT, IN PORTSMOUTH HARBOUR.—(SEE NEXT PAGE.)

CONVICTS BREAKING UP THE "YORK" HULK, IN PORTSMOUTH HARBOUR, BY TORCHLIGHT.

TRANSPORTATION being no longer a sentence of punishment, convict labour now engages the attention of Government, not only as regards the disposal of it, but as a system by which national works may be constructed, with advantage to public finance. The most arduous work is accomplished by these unfortunate men, in all weather, and at all times, by night as well as by day, and, during the preparations for war at Portsmouth Dockyard, these convicts have been employed breaking up the *York* Hulk, by torch-light. We have engraved the strange scene from a Sketch made on the spot by Mr. Crew, of Hasar.

It is worthy of remark that frequently these men are employed upon various works, and often of that nature from which free labour would shrink; and volunteers can always be obtained for any service where hard labour is essential.

Such conduct on the part of men who are looked upon as the most abandoned and reckless characters, seems certainly to offer great hopes that the reformatory system, under which they are now so happily placed, will be attended with most beneficial results; and that, if any care and interest is taken in them after their discharge from prison, many of them will become useful and respectable members of society.

LITERATURE.

CHATIMENT. Political Poems. By VICTOR HUGO. London: Librairie Universelle. St. Hellier, Jersey: Imprimerie Universelle.

The resistance which the Revolution of 1848—when it had attained to the mastery and direction of the affairs of the country—encountered in the spirit, character, and manners of France, would form a curious and instructive history; as placing in bold relief the antagonism which the principles it inculcated provoked at its commencement; and the prudence, energy, hopefulness, and distaste for the theories and promises of reformers, its sequel has revealed in the ideas and conviction of modern France.

We are fully aware of the paradoxical air with which we appear, at first sight, to have invested this sentiment; and we are also convinced that the surest road to the hearts of those whose dreams are of a universal Republic would be by declaiming against the majority of the French people of 1850 and 1852; but the true value and originality of a history of 1848 would consist precisely in the care with which it laboured to place France in a true point of view, and the accuracy it observed in explaining how and for what reasons a great people has offered so determined a resistance to the most seductive offers of its would-be reformers. Much has been said of the "battle of June," the result of which France has never appeared to repent, and has certainly never forgotten.

As regards the Constitution of 1850, which ensued, those at whose inspiration it had arisen received it with mistrust; those who had experienced its working defended it without predilection and without faith. Men are prone to measure the importance of events by their durability. From the moment the French nation felt that a greater amount of vitality existed in itself than in the Constitution, that Constitution naturally declined in the balance; and France, out of the provisional shelter under which it had sought a temporary refuge, created on the 10th of December, the presidency of a Prince, and the consecration of a species of hereditary monarchy, and ultimately achieved a majority the most energetically opposed to Republican principles, and the most openly Monarchical in its sentiments, that ever sat in parliament, conclave

The [illegible] out of the [illegible] legislative and executive [illegible] freedom of the press, [illegible] universal [illegible] the [illegible] of resistance to a Republic which [illegible] himself.

We do not believe that there exists among the records of revolutions another example of a state of affairs at once so complex and so entangled, or one which required a more determined will to unravel, or a greater "ensemble" of decision and method to discard.

There is no reason why we should involve ourselves in political details, and attempt to show why France has rejected the proffered reforms, and cast out the reformers from her bosom, and why this has hitherto, and does still, rebel against the "chastisement" which Victor Hugo asserts it is his mission to administer. We may, at all events, assume it as a fact sufficiently established, that, since the great political reform of 1789, no serious desire for amendment in the political organization of the country had arisen. So true is this, that when the reformers of 1848 applied themselves to the task, they were quietly left alone in the hope that their labours would open out a new horizon, and bring to light some new marvel in the shape of liberty, fraternity, and equality. They, certainly, did their best, and struggled manfully to find some privilege to destroy, some second "Bastile" to raise, and for the opportunity of blazoning their triumphant banner with the inscription of some till then undiscovered right, in order that the new Republic might have its "declaration of the rights of man," and its "night of the 4th of August." Unhappily, the search was vain, nothing of the sort was to be found. And the sole exploit of these staunch lovers of equality appeared to be to break their own heads against that stern immovable object, that "right of property." Society in France, in short, had but to oppose its own *vis inertiæ* to the attack of the minority to ensure its safety —"mole sufficit."

Such being the state of the majority after the revolution of 1789, it became a matter of necessity either to let France quietly pursue its course of progressive amelioration along the paths then opened to it, or to resort, in December, to a second "battle of June."

As far as the result is concerned, it is not our province to pronounce upon the form of government our neighbours may choose to adopt—monarchical, autocratic, republican, or a combination of all; for, as no form of government can make an ignorant people free, so no despotism can enslave a properly educated people; and it was the manful appreciation of this fact that the authors of the Constitution of 1852, foreseeing the control which the progress of civilisation and enlightenment would exercise over the passions of mankind, thought fit to make a marked allusion to it in their *préambule*.

We would now ask whether it is not well deserving of all enlightened members of society to consider in what way they can best direct their energies and influence to promote among the community at large those essential constituents of progress in civilisation and enlightenment?

Very different notions, it is true, prevail among the persons out of whose mouths the word education finds utterance. But if, instead of composing the "Orientales," "Lights and Shades," "Leaves of Autumn," and other poems of the same class—admirable though they undoubtedly are—Victor Hugo had devoted the prime of his life to elucidate, illustrate, and promote among there "*Critère*," "*Sept*s *grises par le crime*," "*Frères du Dien boutique*," "*Bons*[illegible] *people*," as he calls the people of Paris—the laws of that wonderful machine, by which changes are effected and revolutions carried out; if his transcendant genius had inspired him with the ambition of being the best expounder of social duties, instead of the greatest poet of his country; if he had knowingly laboured to point out the essentials of good government, even should his ideas on the subject have proved too profound or advanced for the requirements of the present day; if, in short, exalting himself of the legacies bequeathed to man in the pages of the past, he had made himself an eternal labourer in the great educational harvest-field, and gleaned therefrom such a system of training as would have enabled those who came after him in the cause of reform to avoid error and render "chastisement" unnecessary, the great poet would not have had to wait for the eleventh hour, to candle over and bewail the sufferings of "Pauline Roulland," to denounce the tortures of the "Bagnes d'Afrique," to relieve his unfortunate fellow-sufferers by his bounty, to "chastise" his triumphant adversaries by his pen?

So much for the political portion of the book of "Châtiment." The more pleasant part of our duty is now to be performed.

It is well known that the whole of Victor Hugo's splendid and busy life was dedicated to literature, and that his poetical labours have not ceased in the land of exile. Besides his well-known "Napoleon le Petit," he has published his own parliamentary speeches in two volumes, and he has in the press, "Histoire Contemporaine," two volumes; "Les Contemplations," poems, two volumes; "Les Petites Epopées," poems, one volume; and "Les Miserables," a novel, six volumes.

Of these different works, only one, "Histoire Contemporaine," is of a political nature. The others belong to purely literary pursuits and social philosophy—especially "Les Miserables," which he commenced previous to the outbreak of February 1848. The progress of the work was interrupted by that event, but its completion has been achieved in a foreign land. It is entirely free from political tendency, and has no relation to the stirring events of our time. It may be said to be a novel and drama combined, a kind of social epic, on a new and large scale.

In addition to all these, he originally published, at Brussels in volume of poems, divided into different heads, the completion of which is the book now before us. Passing over the curses and bitter sarcasms abounding in this book, and which prove that Victor Hugo is the very antipodes of Shakspeare—who found "Sermons in stones, books in the running brooks, and good in everything"—we may safely say that "Châtiment" is a volume which will not detract from the poetical fame of its author. Faculty of graphic description, powerful imagination, fervid and masculine diction, analytic skill—all are apparent in these poems. The beauties of nature, its ocean, storms, and rock which round the island of Jersey. Bourdon de Notre Dame, Battlefields, Waterloo, Retraite de Moscou, Pauline Rolland, les Soldats de l'An II., la Caravane, le Lion dans le Désert, Ultima Verba, acquire, in the unparalleled action of the great poet, a degree of life and more irresistible grasp of reality. To great poet, a degree of life and more irresistible grasp of reality. such an extent do they captivate the reader, as to render him quite unconscious of the political frame in which these poems are embodied.

It is quite impossible to give quotations and extracts from this remarkable volume, which contains more than 300 poems. We can only recommend our readers (and we dare say the number will be great) to peruse the volume themselves. They will find, we are sure, that "Châtiment," despite its connection with politics, is a work of great power and vividness of its sketches, is not surpassed by any of the more celebrated poetical productions of the illustrious author of "Les Orientales" and "Notre Dame de Paris."

ATHERTON, AND OTHER TALES. By MARY RUSSELL MITFORD, Author of "Our Village." 3 vols. Hurst and Blackett.

What lover of truth and nature can have forgotten the possessive Our of "Our Village"? Was it not Ours, English, every inch of it, every person in it, every action; yea—every thought, that pertained not to its similitude but to its identity? The author has been compared to admirable Dutch and Flemish painters—to Hobbima, and Ruysdael, and Berghem; and so she deserves to be from her charming landscape pieces; but none of them could people their rural scenes like her, which required the talent of another hand class of their artists, such as Teniers and Ostade; only that what was vulgar in them she transmuted into pleasing and yet real rustic portraiture, without violating the verity and making her clowns (as a pseudo-Cockney though said that Virgil's husbandmen and dame) spread the manners like gentlemen.

It is a long while since the four popular volumes to which we refer saw the light; so long, that we might almost have supposed the mature powers of that date must be, by this time, enfeebled or exhausted. But though we regret to say that the great strength of the amiable writer has felt the effect of increasing years, there is consolation in seeing that her mental endowments are as fresh and vigorous as ever. A severe accident had so crippled her that she informs us, ten months after: "I gained no strength. The autumn found me again confined to my bed; wheeled with difficulty from the bed to the fireside; unable to rise from my seat to stand for a moment, to put one foot before another; and when lifted into bed, incapable of turning or moving in the slightest degree whatever. Even in writing, I was often obliged to have the ink-glass held for me, because I could not raise my hand to dip the pen in the ink."

Amid such pain and suffering it is truly wonderful that "Atherton" could have been produced; but literature, with its griefs, is not without its gratifications. "So far (continues Miss Mitford) am I from murmuring against that Will which alone knows what is best for us all, that I cannot be sufficiently thankful to the merciful Providence which, shattering the frame, left such poor faculties as were originally vouchsafed to me, undimmed and unclouded; enabling me still to live by the mind, and not only to enjoy the never-wearying delight of reading the thoughts of others, but even to light up a dull sick chamber, and brighten a gloomy sky, by recalling the sweet and sunny valley, which formed one of the most cherished haunts of my happier years."

Here we behold in a fine disposition an example of that curious rebound of mind, the effect of an inscrutable reaction, which, without a wish or a will, seeks, or rather experiences, in an opposite direction, a counterpoise to any pervading influence. The deepest affection often explodes in most unseemly mirth; and merriment itself is sometimes drowned in tears. So, in this instance, in a minor degree, the [illegible] bodily suffering was tried and vanquished by the strong resolve which found in the sweet creations of the ideal a refuge from the bitter actualities of the real. To offer a simile from the realm of flowers (the author's favourite haunt)—a delicate plant was forced to yield to the delightful blossoms, the deformed sky-plant to throw out sparkling gems of many tinted hues. The sick couch gave us "Atherton."

The story itself is of a dramatic kind, and rather distinguished by the skilful drawing of the *dramatis personæ* than by the complication of the plot. The condition of a noble family, father and son, about to lose the splendid inheritance of illustrious centuries, is finely described, and may be applied to a crisis which did not end so fortunately, though borne with equal firmness of heart, in a family, not far remote from the author's humbler home, "beneath the shadow of her own beautiful Swallowfield."

But the most original character of the whole is the boy, Jacob Stokes, a village Caleb Quotem of infinite perspicuity, humour, and usefulness. He plays his part admirably, and fairly competes with the best in the circle above him, though they are touched with life-like traits, and exhibit natural and unexaggerated groupings of human beings—men and women, as they are, involved in a variety of social relations and consequent conflicts.

Yet the spell which binds the reader to the volume (for "Atherton" occupies only the first) does not belong to the histrionic or the striking. Only one villain has the slightest connection with the melodramatic order (and even he exactly such folks as we may meet with school, and all the year round, every day. Even the miser, though not common, is a genuine type of wandering life, and the account of his death is exceedingly graphic, and might be instructive, if miserly wretches ever took lessons from earth or heaven. The great and unique charms of Miss Mitford's productions are the most perfect simplicity in every respect, and a freshness of description which cannot be surpassed. Events succeed each other as if invention and arrangement had nothing to do with them; and the actors, if we could so designate them, do exactly what ordinary people would most probably do under similar circumstances. And they are placed amid scenery which the country presents to the observant eye on every side, in which "cot and hall," —quiet nook, picturesque combinations of copse and wood, dells tinkling with slumber-imposing rills, leafy haunts of feathered songsters filling the air with sweet sounds, broad expanses, and mountain-barriers, are blended—in these they perform their allotted parts; and while hemmed views—in these they perform their allotted parts; and while hemmed views—in these they perform their allotted parts; and while hemmed views

NEW MUSIC, &c.

Supplied by London News-agents on the evening of publication, at 1s. 6d. per week.

NEW BOOKS, &c.

In crown 8vo, price 7s., in antique binding,
LEAVES from the JOURNAL of MARIAN DRAYTON, A.D. 1585 1585.
"A book which, when we began it, we will not permanently lay aside till we has finished it. The sentiments and feelings, expressed with so much naturalness of manner, are invariably those of the Christian gentlewoman; and the incidents are such as might easily be supposed to have occurred, and yet are sufficiently uncommon to give them a special interest. Some passages are exquisitely beautiful, and the entire book is the production of a highly cultivated and poetic mind, under the influence of sincere and enlightened piety."—Evangelical Christendom.
SEELEYS, Fleet-street and Hanover-street.

Crown 8vo, many Engravings, 6s., cloth,
ISRAEL in EGYPT: being Illustrations of the Books of Genesis and Exodus, from existing Monuments.
"It is refreshing to turn from the perusal of the so-called philosophical, but, in reality, baleful, commentaries of the sacred story, to the pages of a writer, whose philosophy is not neglected, but whose piety prevails, as in the case of . . . this really learned and instructive volume."—Ecclesiastic
"The book is one of the most remarkable publications of our time, and can hardly fail to excite the attention of the Christian world."—Christian Witness
SEELEYS, Fleet-street and Hanover-street.

In One Volume post 8vo, price 10s. 6d., cloth,
HORÆ EVANGELICÆ; or, the Internal Evidence of the Gospel History. By the Rev. T. R. BIRKS, M.A., Rector of Kelshall
"We often do we acknowledge the appearance of a book with so much pleasure and thankfulness as we have felt in passing at the head of our present Notice, which we have not yet written, for it is the title of a work which is not only in itself worthy of all praise, but which arrives at the right moment, was demanded by present circumstances, and will, we are persuaded, contribute timely help to many anxious and inquiring minds."—Christian Observer
SEELEYS, Fleet-street and Hanover-street.

Sixth Edition, in 18mo, cloth, price 1s. 6d.,
PASSION WEEK: a Passage of Scripture, with Reflections, and a Prayer, for each Day. By the late Professor BLUNT.

ROYAL FREE HOSPITAL, Gray's-inn-road.
Patroness—The QUEEN
President—The Duke of Buccleuch, K.G.
Treasurer—Sir MORTON PETO, Bart., M.P.
Founded 1828.
PRINCIPLES ON WHICH THIS CHARITY IS REGULATED
IN-DOOR PATIENTS OUT DOOR PATIENTS
Foreigners strangers, and others, All sick and diseased persons, in whose cases the delay of admission would be attended with danger, or the absence of friends nor homes, are admitted into the wards of the Hospital every day, without application, so far as the means of the Charity will allow.
Cases of the Incurable class are not received.
During the past month of March 593 applicants were relieved on their personal application alone.
The Governors of this Charity earnestly request the aid of the benevolent to enable them to meet the numerous applications made at the Hospital, as they regret to state that, from want of funds, they are daily compelled to refuse admission in many most urgent and distressing cases.
The [illegible] are respectfully informed that [illegible] will be thankfully received by the Treasurer, Sir Morton Peto, Bart., M.P., Messrs. Reid, Bankers, Cornhill; Messrs. Hoare, Bankers, Fleet-street; Messrs. Ransom, Bankers, Pall-Mall; Messrs. Hankey, Bankers, Fleet-street; Messrs. Barnett, Hoare, and Co., Bankers, Lombard-street; Messrs. Masterman and Co., Bankers, Lombard-street; and at the Hospital.
Cast clothing, and [illegible] will be gratefully acknowledged.

BALTIC FLEET, DENMARK, TURKEY, &c.—The PENINSULAR and EUROPEAN TELEGRAPH COMPANIES (London Offices, 32, Cornhill; and 41, Regent Circus, Piccadilly) have established DIRECT SERVICES, which very much facilitate Telegraphic Communication with Denmark, the North of Germany, and South of Europe.
30, Cornhill, March 20th, 1854. G. L. PARROTT, Sec.

FREQUENT TRAVELLERS can INSURE against RAILWAY ACCIDENTS by the YEAR, for terms of YEARS, or for the whole of LIFE, on application to the Booking Clerks at the Principal Railway Stations, and at the Offices of the RAILWAY PASSENGERS ASSURANCE COMPANY, 3, Old Broad-street, London. WILLIAM J. VIAN, Secretary

OFFICERS in the NAVAL and MILITARY SERVICES may ASSURE their LIVES in the UNITED MUTUAL LIFE OFFICE, 34, Charing-cross, on payment for one risk, of a small addition to the usual rate of Premium. Such addition to cease on the termination of actual service.
THOMAS PRITCHARD, Resident Director.

ALLIANCE ASSURANCE COMPANY.—The BONUS on DIVIDEND on the Stock of the Alliance British and Foreign Fire and Life Assurance Company, declared at the quarterly General Meeting of the Court of Proprietors held this day, will be payable after the 15th day of APRIL next, and every succeeding day (Saturdays excepted), at the Office of the Company, Barbican, London, from Ten to Three o'Clock.
By Order of the Board,
F. A. ENGELBACH, Actuary and Secretary.
Alliance Office, 5th April, 1854.

COUNTY FIRE OFFICE, 50, Regent-street, and 9, Royal Exchange-buildings, London. Established in 1806. The Rates of Premium charged by this Old-Country Fire Office are upon the lowest scale consistent with security to the Insured.
When a Policy has existed for a period of Seven Years, a return of 25 per cent, or one-fourth of the amount of Premiums paid during that period, is allowed to the assured.
The Returns paid to the present time amount to nearly £200,000.
All Losses are settled with promptitude and liberality.
It is respectfully notified to parties holding Policies in this Office, the renewals of which fall due at Lady-day, that the same should be paid on or before the 9th of April. The receipts are lying at the Offices in London, and in the hands of the several Agents.
CHARLES STEVENS, Secretary.

PARTICIPATION OF PROFITS.
WEST of ENGLAND FIRE and LIFE OFFICE. Instituted 1807.
Persons Insuring against Fire have, every fifth year, a return of fifty per cent of the surplus profits.
LIFE INSURANCES.—Fifty per cent of the surplus profits are returned.
Prospectuses and required information may be had upon application to any of the Agents: or to Charles Lewis, Esq., the Secretary, at the Chief Office, No. 29, Bristol; or at the Office, No. 8, New Bridge-street, of the Manager and Agents for London,
JAMES ANDERTON

CITY of LONDON LIFE ASSURANCE SOCIETY, 26, Old Broad-street, and Self-protecting Assurances. Head offices, 3, Royal Exchange-buildings, London. Subscribed Capital a Quarter of a Million
This Society, guaranteed by a capital fully adequate to every contingency, and not injuriously large, offers all the advantages of the mutual system.
Premiums Rates calculated expressly for this Society, based upon the most recent experience, and carefully graduated
Policies granted on any life contingency, and indisputable.
Claims Promptitude and liberality in the settlement
Bonus Announced 1853, equivalent to a cash bonus of 20 per cent.
Rights No charge for stamps, except in case of loss
Income Payments for life assurance are free from title tax and the new Succession Duty.
E. P. LEEKS, Secretary.

PALL-MALL.—The remaining part of the JAPANESE EXHIBITION.—Messrs FORBES and SON are directed to SELL by AUCTION, at the GALLERY, 54, Pall-Mall, on MONDAY, TUESDAY, and WEDNESDAY next, precisely, the UNSOLD PORTION of the JAPANESE EXHIBITION. Those beautiful Works were consigned to England by a Merchant of Holland, whilst country Japan has the privilege of trading direct with the Island of Japan. The numerous visitors to the Rooms in Pall-Mall East during the Exhibition will remember the very beautiful description of this ancient and interesting Sale almost unnecessary. There are many beautiful examples of the history, and the improvement of a people but little known to European nations; and the Bronzes, Porcelain, Basketwork, Lacquer, Ivory carvings, &c., by all, the Red, Gold, and Green Lacquerwork will not only evince the clever manipulatory powers of the Inhabitants of that country, but will throw much light on the habits and customs of the exclusive race. On view two days prior, and Catalogues had at Messrs. Foster's Offices, 54, Pall-Mall

MAYALL'S PORTRAIT GALLERIES, 271, Regent-street, and 153, West Strand.—DAGUERREOTYPE MINIATURES, in the highest style of Art, taken daily. Mr. Mayall's rare gala requirements the high art of Daguerreotype. they are as superior to the generality of such pictures as a delicately-painted miniature is to a coarse woodcut."—Art Journal, Nov., 1853.

THE DRAWING ACADEMY, 114, New Bond-street.—Messrs DICKINSON have the honour to announce to their friends and connection, that the CLASSES for LADIES have been RESUMED. The Rooms for GENTLEMEN Cards will be duly forwarded to the Members and their Friends on application to the Secretary. The Rooms may be reached either by the Brompton Omnibus to Richmond, or by the South-Western Railway Omnibus to Richmond, or by the South-Western Railway.
CHARLES LEWIS GOLDING, Secretary.
Offices, 33, Norfolk-street, Strand, April 1st, 1854

SMART'S WRITING INSTITUTION, 5, Piccadilly, between the Haymarket and Regent-circus. Open from 9 till 9 daily. Persons of all ages receive private and separate instruction, under the own eye of Mr. Smart. Lessons one hour each. No classes, no extras. Improvements guaranteed in eight or twelve lessons. Terms, one guinea per quarter. Private lessons at residence (if preferred) Mrs. Smart will attend. For terms, &c., apply to Mr. Smart, as above.

PAPER HANGINGS and PANELLED DECORATIONS.—Great Change in London at GOSS'S Wholesale Warehouse, 23, Great Portland-street, Oxford-street, where the Public and the Trade can select from the largest and most Extensive Assortment in the Kingdom. Thirty per Cent Cheaper than any other House.

PAPERHANGINGS and PANEL DECORATIONS, in Elegant New Designs. White and gold panel drawing-room patterns, 10d. per yard; ditto, with gilt and green flock, plain tints, 10d. per yard, ditto with ormulu flock and gold, 1s. per yard; Gothic and rich flock drawing-room papers, 9d., 10d., 1s. per yard Patterns sent to all parts of the kingdom for approval — W. REDGRAVE, 128, Edgware-road, corner of Lisson-grove, and 4, Panton-street, Haymarket.

TO the NOBILITY, GENTRY, and PUBLIC. ROYAL PAPIER MACHE DEPOT, 295, New Oxford-street. T. LANE is relinquishing his London Retail Establishment, to facilitate the sale of his large and well-known Stock in Trade, Tables, Tea Trays, Fe-a Screens, Trays, Waiters, Desks, Boxes, Folio Blotting Pads, &c. &c., at much greatly reduced prices, affording purchasers unusual advantages of no ordinary occurrence. Articles suited for Wedding and other Presents, in great variety

ENDLESS AMUSEMENTS.—By purchasing MERRY'S GAME of the RACE, or STEEPLE-CHASE, from 1s. to £10 10s., you will always be able to dispel weariness, or any other annoyance during Christmas, Carnival, Lent, Easter, or Holidays. Merry's Game of Cricket, utterly impossible to end, and being almost daily received from all parts of the world. Suitable for presents. Other insanely attended to, containing a remittance, at MERRY'S, 360, Oxford-street. Sample Race Game, for Seven Stamps; Rules, for One Stamp

GRACEFUL HOUSEHOLD DRAPERY.—The Cheapest House in London, to buy, sell, or exchange, for new, is 31, Basinghall-street, where Furniture Lace, for bed hangings, to the depth of 10 yards, lace drawing-room curtains, 7s. per pair; lace bed-room ditto, 2s. per pair; lace quilts, muslins, &c. A. HISCOCK, 34, Quadrant, Regent-street.

CARPETS, CURTAINS, CABINET and UPHOLSTERY FURNITURE, Purified Bedding, &c., may be obtained in profuse variety, and for prices defying competition, at HOWARD and SON'S Galleries and Warerooms, 256, 257, 258, 259, 260, High Holborn

CABINET and UPHOLSTERY FURNITURE, Bedsteads, Bedding, Easy Chairs, &c.—JAS. HULBERT has always on SALE a very extensive manufactured Stock, one of the largest, cheapest, and best-assorted STOCKS in London, at 161, Strand, near Somerset House.—N.B. No charge for packing country orders.

CARPETS, FURNITURE.—WELLS and CO. have a genuine Stock of Carpets, Curtains, Furniture and Upholstery Goods, unsurpassed anywhere for Style, Economy, and Durability. The prices of all articles are marked in plain figures, and warranted. J. WELLS and CO., 210, Regent-street, opposite Conduit-street

UPHOLSTERY and CABINET FURNITURE, at WILLIAM WATKINSON'S, 827, Temple-bar, Strand, of superior manufacture and design, at prices lower than those usually charged for inferior articles All classes of houses completely furnished, in a style which, for durability and economy, will defy comparison with any house in London Every article in the spacious range of show-rooms is marked in plain figures. Note the address, WILLIAM WATKINSON, 827, Temple-bar, Strand.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid. SATURDAY, APRIL 8, 1854.

THE ILLUSTRATED LONDON NEWS

No. 678.—VOL. XXIV.] SATURDAY, APRIL 15, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE POSTPONEMENT OF THE REFORM BILL.

It will excite no surprise that Lord John Russell has declined to proceed with the Reform Bill during the present Session. His Lordship—whose character and career are, as Mr. Disraeli truly states, "precious possessions of the House of Commons"—betrayed some natural emotion in sacrificing, at the shrine of public necessity, the great measure, so studiously arranged, so nicely balanced, and so honourably associated with his historical name. The regret which he expressed at the postponement of a project which, in happier times, would have monopolised the attention of the country, and based upon firmer foundations the expansive constitution of Great Britain will be felt among all classes of the people. But even those who regret the sacrifice will concur in the necessity which rendered it imperative, and approve of the determination of the Government. This is no time for prudent statesmen to incur the risk of Parliamentary defeats. The displacement of the present Ministry by any other would be a public calamity; not for the influence which such an occurrence would exercise among ourselves, but for its effect among the nations of the Continent, where our domestic politics and party combinations are so imperfectly understood. Had rival factions in the House of Commons not been quite so evenly balanced, and had there been a preponderating majority in favour of the measure which Lord John Russell introduced at the commencement of the Session, it would have been a duty incumbent upon the Ministry to have proceeded with it. As a nation, we are great and powerful enough to carry on a war and reform our Constitution at the same time. War is in itself no reason why we should cease to devote attention to our domestic affairs. It would have been a grand spectacle to have offered to the world, if we could calmly and dispassionately have disfranchised our rotten boroughs, and extended the suffrage, at a time when our armies were driving the Russians across the Pruth, and when our fleets were battering Cronstadt and Sebastopol, and depriving the great European enemy of his ships of war, of his fortresses, and of his *prestige* in the world's opinion. Unfortunately, so great an opportunity has not been afforded to us. In addition to the party which opposes all Reform as a matter of principle—though not forming in itself a majority in the Legislature—were the members of the House of Commons whose seats would have been lost by the proposed disfranchisement of so many small, and almost obsolete, boroughs. It was scarcely to have been expected of human virtue that even one half of these gentlemen should have consented, on public principle, to a measure involving their political annihilation. If there had been a great public agitation, or a pressure of State necessity, to compel them to do so, they would, no doubt, have yielded, as others in similar circumstances had done before them. But this pressure was wanting, and the Government was wise in yielding to the general sentiment—falsely described as one of apathy, but in reality one of pre-occupation. The Anglo-Saxon mind likes to do one thing at a time, in order that the one thing may be done effectually. The heart of the people is in the War. They are desirous of devoting their whole energies to it. They are willing to pay for, and are ready to fight in it. They are determined, if conviction and courage can accomplish great ends, to make it "short and sharp." Their thoughts are in the Baltic, with Sir Charles Napier and his gallant blue-jackets, and not in Sudbury, St. Albans, or "Eatanswill," with pettifogging lawyers and venal potwallopers. The people know that the Constitution is not perfect. They see defects, anomalies, and inconsistencies in it. Many honest, industrious, and thriving men in scores of important towns,

THE ROAD TO CONSTANTINOPLE.—A TRAVELLING PARTY CROSSING THE BALKANS.—(SEE NEXT PAGE.)

think it a hardship that a privilege should be denied to them which is possessed by thousands of disreputable persons who openly sell their votes to the highest bidder. But this class of people are aware that, notwithstanding all such apparent blots on the fair page of British liberty, the House of Commons is the guardian of their individual freedom, and that it jealously watches the public interests. They know that, whatever may be the case in other nations, Englishmen can think, and speak, and act, without the interference of arbitrary power; that they are responsible to the law, and to the law only, and that in this respect the highest personage in the realm stands upon the same equality. The subjects of the British Crown, feeling and prizing their present liberty, are contented to wait until more tranquil times for a larger instalment of the privileges which they deserve; and look forward, without impatience, for the day when such men as Lord John Russell shall be enabled to complete nobly a work which has been well begun.

Lord John Russell, deeply moved as he was by the virtual abandonment of a measure which had cost him so much care, and with the introduction of which his personal honour was so closely identified, cannot but have felt proud of the universal testimony borne to his character and consistency. Even the leader of the Opposition caught the contagion of enthusiasm, and paid well-merited homage to his Lordship's character, though inveterate habit, if not inclination, caused him to forget the evanescent praises which he had uttered, and to descend again into the ranks of the captious and the carping. The hon. member for Manchester formed no exception to the general unanimity. Though he deprecated the war, and appeared to think it of no consequence if England, by refusing to take part in it, should confess herself to be a second or third-rate power, he was satisfied at the postponement, and with the arguments on which it was founded. Mr. Bright drew consolation for his temporary disappointment in the hope that the longer the War continued, the better chance there would be for a still larger Reform Bill. In this, however, he may chance to find himself mistaken. Though a member of the Peace Party, the honourable member is like a war-horse, which snorts and pricks up its ears at the sound of the battle. He longs for a fight like that of Free-trade, which he so nobly and so valiantly helped to win, and burns with martial enthusiasm when he thinks of the rotten boroughs that are hereafter to be captured and scheduled, and the venal voters that are to be put to the rout. What the quarter-deck is to Admiral Napier the platform is to Mr. Bright. The orator is as warlike in his words as the sailor is in his deeds. But in this respect Lord John Russell and the House of Commons are not so military as Mr. Bright. They, also, in another way, are members of a Peace-Party. Unlike Reformers *à tout prix*, they deprecate a warfare of public agitation such as that of 1832, and do not consider it essential to the success of a Reform Bill, whensoever and by whomsoever introduced. There is every probability, if we may judge of the present temper of the public mind, that Mr. Bright's anticipations will not be realised. The next Reform Bill will, doubtless, excite some opposition; but there is small reason to fear that it will raise bitter controversies and protracted agitations like those which pre ceded the first Reform Bill and the repeal of the Corn-laws. The question has made too much progress in the popular mind, and impressed itself too deeply on the judgment of statesmen, to be lost altogether. It may be retarded, but it will ultimately triumph. "When the time is ripe," says Mr. Disraeli, "a measure, demanded by necessity, will be brought forward, whatever Minister may be in possession of power." Such is the confidence entertained by the country; to which is added the fervent hope that Lord John Russell, and not Mr. Disraeli, may be the man to introduce it.

THE BALKANS.

We have received from our Special Correspondent, in Bulgaria, a series of Sketches illustrative of that interesting country; and the view engraved upon the preceding page, of a Pass in the Balkan, the celebrated mountain range, through which Darius, Alexander the Great, and General Diebitsch passed with their vast armies; and which may hereafter become of kindred importance in the present war. The Balkan has recently been minutely described by Lieut.-General Jochmus, in a paper communicated to the Royal Geographical Society by Sir Roderick I. Murchison; and the portion of the route represented by our Artist (with a party of travellers in a snow storm), is that between Osman Bazar and Schumla, and is thus described by General Jochmus:—

Osman Bazar, a considerable and thriving borough, with several mosques and baths, and a Turkish fountain of ancient materials, lies in a sheltered position, and is surrounded by fine vineyards and fruit-gardens. It is a post station on the main road from Rasschuk to Kazgan, Selimé, and Adrianople. Parts of an old Roman causeway are still visible. From Osman Bazar the ground ascends for two hours to the first Dervend guard-house at Jenikioi. Between Cestak and Dervend there are again two Dervend guard-houses. Between these Dervend houses is a first-rate military position, on detached, rather steep, barren heights, extending in a crescent of one mile and a quarter facing the north. The main road winds from E.N.E. to W.S.W. along the foot of the position, then right through it, over open ground. A brick descent for half an hour brings you to Kasan. No wood right or left. The immediate neighbourhood of Kasan is also bare, with the exception of Kizipé (already described), and the western mountain range. The valley of Kasan is rich in pasture, but too cold for vines.

The road now lies from Kasan by Papas Koï, through the valley of the Delih Kamelik, as far as Sudowah. From Malanitch downwards, towards Kamehik-Mahalessi, the bed of the river runs through a very narrow, steep defile, mostly between abrupt rocks and crags. It is everywhere fordable. The road to Rubsha leads over the high mountain range, which here hems in the river. Turning off nearly due north, towards Czali Kavak, the village of Rubsha appears on the left, forming, with Muraddére, part of a strong military position of 1000 to 1200 yards extent, facing east towards the Dobrul main road, and eventually of strategical importance, as it forms the junction of various roads. One hour and a half's march from the above-mentioned point of intersection takes us through a great wooded defile, and half an hour more, over an undulating plain, brings us, after dark, to Czali Kavak. This great mountain defile is generally from 40 to 100 yards broad, the military road being nowhere encased more narrowly than ten yards, and made practicable for heavy baggage trains. The mountain slopes, between 300 and 400 feet high, are not very steep, but of difficult ascent, on account of the large trees and the thick under wood Czali Kavak is a post station of eighty Kuses; but before and at which terminated in 1774 it contained 700 families, many of whom emigrated subsequently into Russia. From Czali Kavak, a direct mountain pass to Kasan (a horse) is very rough and precipitous. From Czali Kavak to Schumla by the main road, viz., Smiadova, is eight hours.

Immediately north of Chenga is a fine military position of about 900 yards extent, and facing north. It covers the roads to Czali Kavak and to Sudshiller, but it can be turned by its left, through the gorge, by which passes a direct road from Jenikoi to Mrege. Cara Ahmed also offers a fine military position, in a semicircle of 1200 to 1500 yards, facing N.N.E., and covering the Kamshik and the position of Chenga. Near this important strategical spot the forest is crossed by several roads from Chenga across the Buyuk Kamshik river.

At Kopnikoy, a narrow wooden bridge crosses the river, and near it is a ford two or three feet deep. The village itself is newly built. It was burnt in 1823, by order of Ali Pacha, before the arrival of General Rüdiger with the first Russian column that forced the passage of the Balkan. The various military lines crossing that celebrated mountain ridge—hitherto considered as an efficient protective barrier to Constantinople—having been duly reconnoitred by Russian staff officers in 1829, it is probable that the Russian armies will operate on a plan very different from that of the campaign of 1828-29, when the Balkan was nearly unexplored. The positions of Schumla and Varna alone, as hitherto occupied by the Turks in their defensive operations against a northern enemy, are very far from covering the Balkan passages, as now known and examined. The position taken up by Ali Pacha in 1828, near Koprikoy, or west, at the first serious onset of General Rüdiger obliged the Turks to abandon it. From Farawadi a good cart-road leads across our morning's line of march to Kumarovas, and thence by Jenikoi directly to Mrege, by a ford of the Akylly Kamshik. From Markovsha to Kulevdja we rode over high undulating land, partly covered with brush and underwood. A moderate descent from the heights above Kulevdja leads into the plains of Schumla. At twenty minutes from Kulevdja the road to Schumla leads over the Bashbunar by a Roman arch, and immediately afterwards we reach an ancient fountain. About three dozen Tepés, or tumuli, are scattered over the plains between Kulevdja and Schumla.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

On Sunday morning the Prince Napoleon took his departure for Marseilles and Toulon. The journey is to occupy six days, and the Prince is to receive at each station of his route, the honours due to the heir presumptive of the Imperial Crown. At Marseilles a grand fête—which his Imperial Highness at first declined, as tending to retard his course, but which, in accordance with the desire of the Emperor, he has since decided on accepting—is to take place. Much attention is excited by the circumstance of the Prince being accompanied on his journey by M. Emile de Girardin, the boldest and most constant opposer of the present Government, and whose journal, *La Presse*, has already received two *avertissemens*, leaving now no further preliminary measure to its suspension in case of further offence. It is a remarkable and most creditable fact, that the Prince has always, under all changes of circumstances, remained faithful to his personal friends, not only in private, but in public. The unflinching courage, the straightforwardness in support of his principles, the ardent love of justice and right in the face of oppression, that distinguish the character of M. de Girardin, have, from the first, awakened and maintained a strong hold on the sympathies and esteem of the Prince; and these sentiments he has now taken the most public occasion of proclaiming.

M. Durand Brager, an artist of considerable talent, has been appointed by the Admiral Hamelin to accompany the squadron. M. Durand has already formed one of the party on board the *Cacique*, sent on the excursion to the Black Sea, where his services in sketching the coast, and making plans of all the forts on the shores, have led to the present nomination.

The arrival of the English troops is anxiously expected. They are to be lodged in the Barracks of the Guides and Chasseurs who, to display hospitality to their new comrades, are to bivouac in the Champ de Mars and Champs Elysées.

The formation of the Imperial Guard is being actively pursued. Two regiments of cavalry—one of the Guides, and one of Gendarmerie Mobile—are to form this *corps d'élite*. The organisation of the Cent Gardes—of which we spoke in our last letter—is found to present considerable difficulties, though the number is only that indicated by the title (100 men), independent, however, of officers, of whom there are 26. The conditions are, it is true, somewhat difficult. The men are to be selected exclusively from the non-commissioned officers of the army; they are not to expect any promotion; and the standard height is 5 ft. 8 in. French, which is, as our readers are aware, higher than English measurement. The pay is to be 1200 francs (£48) yearly. They are to take it in turn to accompany the Emperor when he goes out; to attend him at all times and on all occasions, even to keeping watch at the door of his apartment during the night.

Their Majesties are about to pass some time at the Palace of St. Cloud.

On Saturday took place a most imposing ceremony, the inauguration of the embellishment of the Bois de Boulogne, of which we spoke in our last. On the border of one of the lakes, and opposite the cascade established at the upper one, a magnificent tribune, richly decorated with green velvet and Moorish stuffs, and flanked at each side by trophies, in which were mingled the flags of England, France, and Turkey, were placed two state chairs in carved wood, for the Emperor and Empress, who occupied them, surrounded by the Prince Jerome, the Grand Duchess of Baden, the Préfect of the Seine, &c., &c. On the top of the rocks, from which fell the cascade, was formed a niche in carved and gilt wood, in which was placed a colossal statue holding in right arm garlands, and in the left hand the arms of the city of Paris. Above was placed the escutcheon of the Emperor, surmounted by a crown; on each side granite pedestals, with the busts of their Majesties, and among the rocks enflammes, with various fancy colours. The Empress having turned the cock which lets the water flow from the cascade, and from thence into the lakes, which it takes about two days to fill. At the conclusion of the ceremony he decorated M. Baudart, the architect of the waters. The first plan of embellishment being now accomplished, it is proposed to add to the improvements a broad avenue, leading straight from the Arc de Triomphe to the centre of the Bois, bordered on each side by handsome villas with gardens. Winding alleys are also to be formed for pedestrians and equestrians, with groves and openings through different parts of the grounds.

The third and last steeplechase of the season, at La Marche, took place on Sunday. A horse, Andante, was killed in attempting one of the leaps, and a jockey thrown in another and severely bruised. On the two former occasions of these races, the complexions of the gentlemen who attended them suffered so much from the sun and dust, that at the one in question, they adopted the fashion of green and blue veils, to the immense edification of the *flâneurs* and *badauds* who were grouped about the *barrières* and in the Champs Elysées, watching their return.

A little private fête took place, a few days since, at St. Cloud, in honour of the Duke and Duchess of Hamilton. Unfortunately, a slight indisposition prevented the attendance of her Grace. The party drove for some hours in the park, the Empress driving herself in a little carriage drawn by four ponies, in which she used to make her appearance at Madrid.

A most interesting work, by M. Empis, member of the Académie Française, has just made its appearance. It is entitled "Les Six Femmes de Henri VIII." Both in an historical and a literary point of view the book is full of merit, charm, and instruction, and is a most valuable acquisition to the library of modern French authors.

The Opéra Comique is about to bring out a new production, entitled, we believe, "La Maîtresse du Diable." The famous piece at the Vaudeville, "La Vie en Rose," which caused the very first curious correspondence between Mdmes. Doche and Page (cited in our last), has little remarkable beyond the fact of its being intensely disagreeable, though sparkling with wit, scattered through the piece like spangles. The Ambigu has a tremendously complicated, though certainly interesting and exciting, melodrama, with the lugubrious title of "Le Pendu."

UNITED STATES.

By the steam-ship *Arabia*, which arrived at Liverpool last Saturday, we have New York papers to the 29th ult. The Cuban authorities had surrendered the steam-ship *Black Warrior*, whose detention had caused much excitement in the United States, upon the payment, under protest, of a fine of 6000 dollars; and was to leave Havannah on the 24th for New York. The excitement in the Union had almost died away respecting the seizure. The naval expedition to Japan has been recalled, the fleet being wanted for home service. The Filibustering expeditions to Mexico have failed. The Irish residents of New York are blustering about a projected invasion of Canada, with a view to assist Russia.

INDIA AND CHINA.

The news by the Overland Mail, which arrived on Wednesday, is not very important. From Burmah we have rumours of disturbances and conspiracies, showing that affairs are not yet in a very satisfactory condition there.

The rebellion in China makes no progress. Shanghae remains in the hands of the patriots, and the Imperialists still retain Amoy, although it is confidently expected that the latter place will soon be taken, as large reinforcements are said to be on their way from the Straits of Malacca.

THE WAR.

THE BALTIC FLEET IN THE GULF OF FINLAND.

A telegraphic despatch from Copenhagen, of April 12, states that the *Dauntless* had returned from a cruise up the Gulf of Finland; and that she had chased a Russian corvette into Sveaborg, where eighteen ships-of-the-line were then lying. On receiving this intelligence the English fleet, which had received a reinforcement of three more vessels, suddenly left Kioge Bay, and steered eastwards in the direction of Sveaborg. Some news of importance may be looked for daily.

During the ten or twelve days in which the fleet was lying at Kioge Bay, the people of Copenhagen paid frequent visits to it. Among other vessels the Danish steamer *Dimbria*, with 400 passengers on board, went down there on the anniversary of Nelson's bloodiest battle, fifty-three years ago—the battle of Copenhagen. The weather was fine, nearly summer-like, with a breeze from the north-west. The steamer left the harbour of Copenhagen at half-past eleven o'clock, and arrived at the station of the fleet, about one. It was anchored two miles off Stevns, in the very bight of Kioge Bay, moored in a semicircle, upon a square of 1½ English miles: the *Duke of Wellington* in the centre, with Sir Charles Napier's blue flag at the fore; and next to him, on one side, the *St Jean d'Acre* (the only one of the ships which has its name written on the stern), then the *Royal George*, then the *Edinburgh*, and then, next to the land, the *Neptune*. Nineteen vessels were there in all, in two lines, the smaller paddle-wheel steamers ahead, and the larger ships in the second line. The *Cimbria* sailed round the fleet, and the Danes cheered each ship, especially the *Duke*, with repeated hurrahs; which were answered from the fleet with louder cheers, and from two of them—the *St. Jean d'Acre* and the *Neptune*—with music. The visitors would, no doubt, have been hospitably received on board the fleet; but the passengers of the *Cimbria* being so numerous, the Danes gave a proof of good taste in voluntarily withstanding their desire to see the interior of the ships, which would have been a great trouble to the crews, and especially the officers of the fleet. The Danes, therefore, contented themselves with sailing round the fleet, singing the British National Anthem, and giving vent to their delight and sympathy by repeated cheers and hurrahs to every ship. "It was a delightful day," says one of the passengers on board the *Cimbria*, "and one of the grandest sights I have ever seen, as we lay to by the side of the last ship in the fleet—the *Neptune*—and looked down along the majestic line, and saw the tremendous set of white teeth from 1000 cannon mouths, smiling at us as friendly this time as they bit us hard fifty-three years ago. When we stopped at the *Duke*, Sir Charles was most cordially observed, and the gallant Admiral appeared himself on the starboard quarter, his hat in one hand, a book in the other, and bowed very civilly to us. We returned to Copenhagen at six o'clock in the afternoon, and I am convinced that, if the fleet stays here some days longer, these pilgrimages to Kioge Bay will frequently be repeated, in spite of the remembrance of 1801 and 1807, which some people here try to refresh and strengthen. Besides the nineteen vessels at Kioge, five vessels have lain in the roads of Copenhagen since yesterday, (April 1st) viz., *Tribune*, 30 guns; *Dauntless*, 40 guns; *Vulture*, 16 guns; *Valorous*, 16 guns; and *Bulldog*, 4 guns, which this evening took the British Minister, Mr. Buchanan, to the fleet."

A letter from one of the men on board the *Duke of Wellington* states that when the news of the Declaration of War was made known to the fleet, "the news was received with loud cheers. Three times three were given for our noble Queen, and three times three for our noble Commander-in-Chief, Old Charley."

THE FLEETS IN THE BLACK SEA.

On the afternoon of March 24, the whole of the combined British and French squadron left their anchorage at Beicos in the Bosphorus, and entered the Black Sea. The large line-of-battle ships were successively towed out, and by three o'clock there only remained in the Bosphorus her Majesty's steam-frigate *Retribution*, and the French ships *Charlemagne* and *Heron*.

A great number of hand dark-lanterns have been purchased for the use of the fleet, and a great number of grappling-irons had been forging for a few weeks previously at a smithy that had been established at Buyukderd.

Admiral Dundas addressed the officers of his ships before starting, and so did the French Admiral. Sebastopol, the coast of Circassia, and Odessa were spoken of as likely to receive a visit.

It was a fine day when the fleet set sail, and a finer sight could not be witnessed than an immense fleet of British and French three-deckers in movement towards the mouth of the Black Sea. The first ships started at about eleven o'clock in the forenoon, the rest slowly following—the large sailing vessels in tow of the steamers, on account of the utter want of a breeze. The Turkish fleet has remained behind, and is at anchor at Buyukdere. The Turkish Admirals expressed the wish and demanded the permission to accompany the combined fleets. The British and French Admirals, however, refused, knowing well the difficulty of managing large sailing vessels in the Euxine at this season, and foreseeing that the Turkish ships would only embarrass their operations, as the Ottoman crews all get sick in rough weather, and British and French seamen could not be spared to steer their vessels. The Turkish Admirals and officers were greatly hurt at the refusal.

The day before the departure of the combined fleets, the *Mogador* and *Inflexible*, French and English steam-frigates, left for Varna with 1000 Ottoman troops armed with Minié rifles to reinforce the garrison. The object of the combined fleets was, it is stated, to support the operations of the Turks, and to attack, if necessary, the Russian fleet, which had been seen by several ships near Varna, for the purpose of supporting the movements of Prince Gortschakoff

The *Sampson* and *Cacique* steamers, during their last cruise in the Black Sea, saw the Russians burn and blow up a certain number of fortresses on the coast of Asia; they also saw the Circassians enter and pillage Soudchuk after it had been set fire to and abandoned by the Russians. Sotchs met with a similar fate. They visited, in succession, Bombary, Pelzouapi, Galindzik, and Loujak-Bay. The fort of Pshad was on fire and had been also pillaged. The Circassians, with whom the frigates communicated, stated that Schamyl was in the south with 40,000 men, and only waited for instructions to act. The Russians were making great preparations at Anapa, and repairing all the fortifications. The Russians on all the coast were in a state of extraordinary panic. At the sight of the steamers they fired guns to warn the neighbouring forts to put themselves on the defensive. Soukoum Kalé appears to be the place which the Russians intended to make the centre of their operations.

THE NEW PROTOCOL.—THE PRUSSIAN POLICY.

On Saturday last M. Manteuffel informed the Prussian Chambers that the Government had joined England and France in a further protocol adopted and signed at Vienna. The object of this protocol, he said, was to attest that the Four Powers still regarded the Eastern question as they did when the last common protocol was signed, notwithstanding the events (i. e. the declaration of war by France and England) which have subsequently taken place.

The Austrian Government also announces in the *Oest. Correspondenz* that the Four Powers find it necessary to declare that the state of war which has arisen between the Porte and France and England, and Russia, has not changed the unalterable agreement between those Powers, the object of that agreement being the integral preservation of the Turkish empire, the evacuation of its Danubian provinces, and the amelioration of the Christian population.

The foreign policy of the Prussian Government was thoroughly discussed on Saturday, in the Second Chamber, at Berlin. M. Holweg, leader of the old Prussian party, spoke strongly in favour of taking a decided course. Prussia had but one part to take. "She must join the Western Powers, or rather Europe, to sustain the right." M. Vincke followed on the same side, reminding the Chamber of Frederick the Great's memorable words, "If ever the Russians get to Constantinople, they will not be two days from Königsberg." After showing how little trust they could place in the word of Nicholas, he went on to say, "The true policy of Prussia is to throw off the tutelage of Russia. Protocols do not meet the case. A great Power ought to have its hand in the execution of that which it puts on the basis of European right. France and England will not long recognise the neutrality of Prussia. That neutrality may bring you into hostilities with those two countries, and at best it will not bring you the full favour of Russia, which wishes for your sympathetic support." The session concluded by declaring that he would not vote the sum required until Prussia should be bound by a private treaty with France and England

The result of the debate was the defeat of the popular party. By a union of the Right with the extreme Left, qualifying clauses were rejected, and the loan of 30,000 000 thalers was granted without conditions.

A despatch was forwarded from Berlin to St. Petersburg on the 8th inst., announcing that the King has used every exertion to induce the Continental Powers to enter into new negotiations, but that he has failed, and can obtain nothing till the Russians have evacuated the Principalities.

DEFEAT OF THE RUSSIANS.

A very severe battle appears to have been fought at Skripes, near Kalafat, about the 30th ult The Turks advanced from their entrenched position with 10,000 infantry, 2000 cavalry, and 60 cannon, against the Russians, who were posted in very superior force at Skripes. A struggle of four hours' duration ensued between the rival forces, but in the issue the Turks were completely victorious, driving their adversaries from every point, with immense loss, and pursuing them to Goraja. The loss of the Turks is estimated at 200 men; that of the Russians is said to have been treble or quadruple. The struggle commenced at Kalafrasch and Chetatea, and this was still going on on the 2nd of April. At Semnitza, the Russians are said to have been completely beaten; and Giergevo they have already cleared out of—not a Russian there. The loss of the Russians at Semnitza is said to have been 1000 killed alone.

A letter from the Lower Danube, of April 2nd, says that "since the 29th ult. the Russians have made no movement in advance from Babadagh."

Other letters state that, whilst Russian troops continue to advance upon Kalarasch, their reserve from Hirsova was advancing, on the 1st of April, towards Czernavoda; and that, upon March 30, the *tête de pont* of Trchernawoda was cannonaded by Russian gunboats. Later accounts say that it has been abandoned by the Turks.

The Allied fleets reached Kavarna Bay on the 26th ult. Eight line-of-battle ships (French) were at anchor in line to the east of Varna, flanked by six steamers. Further east were ten line-of-battle ships (English), with six steamers on their flank. It was said that the marines were to be landed to protect Varna.

Reports from Bucharest, of the 21st, state that the Russian columns, four in number, were before Trajan's Wall in full force on the 20th. Mustapha Pacha was taking all requisite measures for the defence of that wall. He has his head quarters at Karasesa. It was supposed that about the 4th or 6th of April a regular battle would be fought at Trajan's Wall, and that, simultaneously therewith, the Generals Schilder and Shrulef would commence their operations at or from Kalarasch. Bucharest letters state that Omer Pacha had hastened on the 26th to Rassova, to conduct the military operations in person which were going forward at Silistria and Trajan's Wall.

A letter in the *Wanderer* of the 29th, gives the following statement regarding the Russian forces:—

Up to the 27th, 45,000 men had crossed the river from Moldavia and Wallachia, and 15,000 from Bessarabia. At present there are 150,000 men in the two Principalities, which are thus posted:—45,000 in Lesser Wallachia; 80,000 in Great Wallachia—that is, from the Aluta up to Braila, and 25,000 from the foot of the Carpathians across Fokschan to Braila and Galatz. Of the 80 000 men in the Dobrudscha, 15,000 remain as reserves at Matschin, Isaktscha, and Tultscha; 18,000 men, of whom 3000 will remain in garrison at Hirsova, form the right wing of the army before Trajan's Wall; 19,000 or 20,000 are at Kustendje, and some 3000 or 4000 men are marching to the south from Babadagh.

DEPARTURE OF PRINCE NAPOLEON.

Prince Napoleon Bonaparte left Paris on Sunday morning, at half-past nine, by the Lyons railroad, for Toulon. The Prince was accompanied by his father Jerome, who remained with him in the carriage till the last moment. The Prince, who was in undress uniform, was accompanied by his aides-de-camp and orderly officers. Marshal Magnan, one or two of the Ministers, the Prefect of the Seine, and several other high functionaries, escorted him to the railroad, and also remained till the train left. Among the private friends of his Imperial Highness was remarked M. Emile Girardin. General Prim, in the full uniform of a Lieutenant-General of the Spanish army, accompanied by the officers who compose the commission of which he is the head, also left with the Prince, on his return to the Turkish Embassador. Vely Pacha, accompanies Prince Napoleon to Toulon, and left in the same carriage, accompanied by his private (Turkish) secretary, Fak Effendi, and one of the attachés of the Embassy, who proceeds to Turkey. A considerable number of persons, private friends of the distinguished travellers, remained to the last, and several lingered at the railway station even after the train had departed. The Turkish Ambassador will remain in Toulon till the embarkation of Prince Napoleon, when he returns to Paris.

A CIRCASSIAN VICTORY.

The Vienna telegraph states that Schamyl has gained another victory over the Russians. The prophet-warrior of the Caucasus thus sustains his old reputation, and it seems clear that very little help from without would enable him to do much more. The Circassians are precisely the people likely to be most grateful for any countenance or support they might receive. The temper in which such sympathy would be recognised, may be understood from the statement of facts just made public, in reference to the rumour that the *Arethusa* and *Samson* steamers in the Black Sea had been fired upon by a Circassian garrison, mistaking them for Russians. "The fort of Pshad, abandoned and set fire to by the Russians, was taken by the Circassians. The French and English frigates being off the place, each sent a party on shore to make inquiries, and the boats were at first received with a volley of musketry, the Circassians in the fort not knowing either the French or English flags, and supposing them to be Russian. But a Circassian pilot on board the *Cocyne* succeeded in making himself known, and then the boats made the land without opposition. The *Imparticl*, of Smyrna, says the Circassian chiefs threw themselves at the feet of the French and English officers to supplicate for pardon for the mistake they had made in firing upon their deliverers. The Circassians crowded around the Anglo-French party, kissing their hands and the skirts of their coats, and rent the air with acclamations. They took particular notice of the flags of the two nations, in order to transmit a description of them along the coast, and promised that on the first cannon-shot from the fleets not a Montagnard would hesitate to attack the Russians." People like this would welcome with enthusiasm any aid that could be offered them.

COWARDLY ASSAULT ON ENGLISH MERCHANTMEN.

Recent letters from Constantinople state that the Russians had committed "a most dastardly, cowardly, and base act, that loudly calls for vengeance." It appears that, on the 22nd inst., the British three-masted iron-built barque *Bellington*, with a complete cargo of grain and salt meat, was sunk by the Russian batteries in front of Sulina, while sailing down the Danube. The barque received seventeen shots, and went down in eight minutes. The captain and crew were in time to shove off and reach the Turkish territory. On the same day the British ship *Annie*, being in tow of the *Crescent*, British steam-tug, was fired at by the same batteries. The former received three shots; the latter seven, and was completely disabled, having had her funnel carried away, and one shot in her machinery. In this condition they were boarded, and the captains and crews taken prisoners, and conveyed, handcuffed, to the Russian commanding officer. On the following day they were released, and the *Annie* succeeded in reaching Constantinople; but the tug was abandoned, and drifted and stranded in front of a Cossack guard-house, some three miles from the batteries. The English in Constantinople are greatly excited. They say, "It is high time that our blue jackets should be left at large to take vengeance."

THE ALLIED TROOPS AT MALTA.

Every day, almost, brings intelligence from Malta of the departure of troops for Gallipoli. On the 31st inst., the 44th, and three companies of the 50th, were sent off in the *Vulcan*. On the 6th, the 93rd Highlanders, with several officers of the Commissariat and Medical Staff, left in the *Kangaroo*. On the following day the *Ardent* and *Georgina* sailed for the same destination, with the women of all the regiments, and a number of horses and mules. The *Cyclops* and the *Vesuvius* sailed the same day, with 884 rank and file, and 33 officers of the 23rd, and two companies of the 50th. The *Indus* and the *Cambria* were to leave on the 9th, and the *Himalaya* on the 10th, with as many troops as they could carry.

Various French transports have touched at Malta on their way to the East; and exciting scenes occasionally take place when the men in the French and English vessels find that they are destined for the same service. Veteran soldiers from Algiers, with war stamped on their bronzed visages, harmonise with our troops, singing their own national songs, and pledging each other, in their peculiar manner, that Russia shall pay dearly for having disturbed the peace of the world.

By the old inhabitants of Malta, who can recollect the siege of 1800 the spectacle of the English and French troops walking together, as if belonging to the same corps, will not be soon forgotten, especially when they bear in mind that the latter were treading the ground, and within the very fortifications, which their forefathers struggled to defend against our superior force, when they were compelled to capitulate after a possession of only two years.

When the French Generals Canrobert, Bosquet, and De Martiupré, touched at Malta, a review of the Guards, of the 33rd, the 93rd Highlanders, and the Rifle Brigade, took place, at the express request of our gallant allies. The Guards were formed on the right, the 33rd, 93rd, and Rifles on their left respectively. The two brigades marched past in open order and in column, and were afterwards formed up in contiguous columns, and inspected. The Generals were much pleased with the appearance of the English Guards, for it was them they particularly wished to see. The Maltese almost worship both the Guards and the Highlanders, and the ladies protest, *naively*, that they never saw so many fine men in Malta before. French and English soldiers, too, fairly "fraternise." You might see four or five French soldiers (for many were permitted to land) with as many or more English Guards—neither understanding the other's conversation, but still drinking and singing as Englishmen do when they meet. They understood each other so far as to know that their destination was the same, and their cause common to both.

PRESENTATION OF THE CITY ADDRESS.

The Queen held a Court at three o'clock on Tuesday afternoon, at Buckingham Palace, for the reception on the throne of an Address from the Corporation of the city of London, expressive of loyalty and earnest support in the war declared against the Emperor of Russia. The Lord Mayor arrived from Guildhall at the Palace at five minutes past three o'clock. His Lordship was in his state coach, preceded by the City Marshals on horseback, and was attended by the sword-bearer and mace-bearer. The Aldermen, Sheriffs, Common-councilmen, and officers of the Corporation, numbering about 130, followed in procession. The Lord Mayor wore his state robes and gold collar, and the other members of the Court all appeared in their municipal costume

The deputation was ushered into the Library, and immediately after its arrival was conducted by the Gentlemen Ushers in Waiting to the Green Drawing-room. Her Majesty received the Address on the throne, his Royal Highness Prince Albert being by her side; the Duchess of Sutherland and the Viscountess Canning standing on her Majesty's right, and the Marquis of Breadalbane, K.T., stood on the right of the throne. The Lord Chamberlain stood on the left. The Ministers of State in attendance—viz., the Earl of Aberdeen, K.T.; Viscount Palmerston, G.C.B.—the Duke of Newcastle, and Sir James Graham, occupied the usual stations near the Sovereign.

The Lord Mayor, Aldermen, and Common Council having been introduced to the Royal presence, the Recorder read the following Address:—

Most Gracious Sovereign,—

We, your Majesty's faithful subjects, the Lord Mayor, Aldermen, and Commons of the city of London, in Common Council assembled, feel it our duty to approach the Throne at this momentous period with the expression of our sincere devotion to your Majesty's person and family, and the tender of our most loyal and earnest support in the war which your Majesty has declared against the Emperor of All the Russias. For many years we have enjoyed the blessings of peace, which have carried in their train national prosperity, and developed in all countries the arts and science, commerce, and civilisation. Our prayers are offered in confidence, though with deep humility, to the Supreme Disposer of Events, for the success of the allied forces in restoring and maintaining the peace of the world.

To which Address her Majesty was pleased to return the following answer:—

I thank you for the renewed expressions of your attachment to my person and family, and I receive with great satisfaction the assurance of your cordial support in the course which I have felt it right to pursue in order to re-establish the peace of Europe on permanent foundations.

The Lord Mayor had the honour of kissing hands. The mover of the Address, Mr. Under-Sheriff Anderton, and the seconder Mr. Sheriff Wire, were presented, and had also the honour to kiss the Queen's hand. The deputation then retired.

THE FRENCH, ENGLISH, AND TURKISH TREATY.

The *National Gazette* of Berlin gives the following as the text of the convention concluded between France, England, and Turkey:—

Her Majesty the Queen of Great Britain and the Emperor of the French having been invited by the Sultan to repel the aggressions which the Emperor of Russia has directed against the territory of the Ottoman Porte, and the aggressions which puts in peril the integrity of the Ottoman Empire and the independence of the throne of the Sultan; and their Majesties being firmly convinced that the existence of the Ottoman Empire in the present limits is essential to the balance of power in European and having, in consequence, consented to give to the Sultan the assistance which he demanded for that object, their Majesties and the Sultan have thought proper to conclude a treaty in order to fix their views according to what is above stated, and to determine the mode and the manner in which they shall furnish the Sultan with the assistance in question.

For that purpose their Majesties have named their plenipotentiaries (the Ambassadors of France and England), and the Sultan his Minister of Foreign Affairs, who, after having communicated their respective powers, have agreed as follows:—

Art. 1. Her Majesty the Queen of Great Britain and the Emperor of the French having given orders, at the desire of the Sultan, for strong divisions of their fleets to be employed conjointly to secure to the territory and to the flag of the Sultan the protection which may be required by circumstances, their Majesties engage themselves by the present treaty to co-operate hereafter to a larger extent with his Majesty the Sultan for the protection of the Ottoman territory in Europe and Asia, against the aggression of Russia, by furnishing, for this object, to his Majesty the Sultan, a sufficient number of troops. The troops to be landed shall be sent by their Majesties to those points of the Ottoman territory that may be judged proper. The Sultan engages that the French and English troops that may be landed shall meet with all kind of protection, and be treated with the same respect, as the French and English naval forces which have already been for some time in the waters of Turkey.

Art. 2. The contracting parties engage themselves reciprocally to communicate to each other, without loss of time, any proposition which either of them may receive, either directly or indirectly, for the cessation of hostilities, for an armistice, or for peace. His Majesty the Sultan, moreover, engages to conclude no armistice, entertain no negotiation for peace, and conclude no preliminaries for peace with Russia without the knowledge and consent of the high contracting parties.

Art. 3. As soon as the object of the present treaty shall have been attained by the conclusion of a treaty of peace, their Majesties the Queen of England and the Emperor of the French will adopt immediate measures to withdraw their land and sea forces which have been employed to obtain the object of the present treaty, and all the fortresses and positions on the Ottoman territory which shall have been occupied temporarily by the forces of England and France shall be given up to the authorities of the Sublime Porte within the space of —— days, calculated from the date of the exchange of the notifications of the treaty which shall have put an end to the war.

Art. 4. The present treaty shall be ratified, and the ratifications exchanged, as soon as possible within the space of —— weeks, reckoning from the day of signature.

(Here follow the signatures.) The above treaty remains open for the signature of the other European powers.

CRUISING FOR RUSSIANS IN THE CHANNEL.

On Sunday morning, about nine o'clock, a report of gun-firing in the offing was heard at Deal, and shortly afterwards her Majesty's steam-vessels *James* and *Cuckoo* in company were observed about a mile outside the Goodwin Sands, close to a large merchant ship and two barges, which the former had caused to shorten sail and heave to. Boats from the *James* were observed to board them, and after having detained them a short time for the purpose of examining their papers, the merchant ships bore up, and proceeded on their voyage.

The *James* and *Cuckoo* subsequently steamed for the Downs, where they arrived about noon.

The *James* has been ordered to cruise in the North Sea and coasts adjacent, for the express object of detaining any ship laden with munitions of war that may be fallen in with; as there have been reports made of a vessel laden therewith being in or about that neighbourhood.

ATTEMPTED INSURRECTION IN SARDINIA.

On the 6th inst. the Duke de Valentinois, Prince of Monaco, presented himself in the town of Menton, the capital of Mouaco, "tempting to re-establish himself as Sovereign. About twenty persons joined him, but the body of the population gathered round him and cried, "Down with the Prince! long live the King" (of Sardinia). The carabineers of the King of Sardinia, who have occupied the town since its incorporation with Piedmont, here made their appearance and took the Duke into their care, when the popular feeling subsided. The principality of Monaco was long under the control of the King of Sardinia before 1848, when it was annexed to Piedmont. The Prince spent nearly all his time in Paris, and was chiefly known to the world by the heavy tax he levied upon travellers passing through his petty state.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Turkish Loan announced by Messrs. Rothschild is for the present withdrawn, arrangements having been made by that house to meet the temporary wants of the Ottoman Porte.

On the 25th ult. the American ship *Grape Shot* sailed from New York for Constantinople with 20,000 muskets

The President of the Board of Control has nominated the following gentlemen to be the first Government directors of the East India Company, viz., General Sir George Pollock, Sir Frederick Currie, and John Pollard Willoughby, Esq.

The family mansion of Dr. Wolf, Regent's-park, was entirely destroyed by fire on Sunday morning.

Government have now decided to take the manufacture of small arms into their own hands, and intend having establishments erected for that purpose at Woolwich, Enfield, and Weedon.

Dr. Achilli has joined the Swedenborgians, and is an admired and ardent preacher of the doctrines of that sect in the United States.

There are now fitting out at Liverpool no less than fifteen packet ships, which have been chartered by Government to convey troops to the seat of war.

An electric telegraph is immediately to be established between Helsingfors and St. Petersburg, a distance of nearly sixty Swedish miles.

The departure of the *Great Britain* steamer from Liverpool for Australia has been deferred from the 12th to the 22th inst.

There has not been an execution in Quebec in eighteen years.

There are two women for every man engaged in field labour, in the neighbourhoods of Athenry, Loughrea, and Dunsandle, in the county of Galway.

John Mitchel has issued an harangue to the Irish inhabitants of New York, calling upon them to take advantage of England's being involved in war to annex Canada; and the *New York Herald* says, there is a conspiracy for that purpose, hatched in New York, in which Mr. Seward is involved.

A suitable monument is to be erected to the memory of Andrew Jackson in New Orleans

The amount of duty paid upon tea since the 5th instant, in London, Liverpool, Bristol, &c., exceeds half a million sterling.

The Legislature of Virginia has passed an act appropriating ten thousand dollars for the erection of the statute to Jefferson, to be placed in the University of Virginia.

Lord Campbell has established an industrial school on his property at Barra, in the county of Galway.

The King of Prussia has given an order for the erection of a monument at Erfurth, to the memory of General de Radowitz.

Lord Clarendon has intimated that the privileges to be obtained for the Christians in Turkey, will be extended to the Jewish subjects of the Porte.

Next June the Society of Arts propose to open a special Exhibition of Educational machinery.

An extraordinary number of passengers are travelling to and from Southampton, India, China, and particularly in the homeward-bound ships.

A fog-bell, of very large dimensions, is now being put up on South Stack Island, Holyhead, which will be tolled by means of machinery, to be constructed for that purpose, as a warning to mariners in dark and foggy weather.

An investigator of hieroglyphics announces that he has found a passage in a papyrus which looks very like "a lampoon against Moses," by the Egyptian priests.

William Thompson, who was convicted at the recent Norwich assizes of the murder of Lorenzo Reha, a travelling jeweller, was executed at Norwich, on Saturday last.

A plot, got up by some convicts to set fire to the pitch and other stores, in the arsenal at Genoa, and escape during the confusion, was discovered in time to prevent any damage.

The Stockport millowners have given notice of their intention to reduce the wages of the operatives ten per cent in consequence of the fall in the price of goods. The operatives threaten to strike

The Marquis Lorenzo Latta, Count Antonio and Count Francis Belgiojoso, and Marquis Trotti, have been deprived of the title of Chamberlain by the Emperor of Austria because they did not compliment him when he visited Lombardy two years ago.

Of the total quota of 80,000 militia men for the year 1853, the number who attended training and exercise, including the permanent staff, was 78,280. The total number of volunteers enrolled on January 1, 1854 (exclusive of staff), was 66,280.

Indiarubber sleepers have been laid down on part of the New Jersey Central Railroad, and the result is that the carriages pass along with a springy elastic motion, and without noise or jolting.

The agriculturists in the north of France are uneasy at the manifestation of symptoms of a disease in the beetroot plant.

The Japanese have conceded to the Russians to open Japan to trade with the rest of the world within a year.

It is said that 500 political prisoners of the Roman States have succeeded in escaping from the Castle of Paliano.

The day of prayer and humiliation, fixed for Wednesday week, the 26th inst., will be observed by the closing of the courts and offices connected with the law.

The cost of the American ocean steam-ship lines is about £400,000 a year; and the revenue derived from them, about £180,000 a year.

High winds and dry weather have rendered the Rhone so shallow at Valence, that steam navigation is almost entirely stopped.

Sir Alexander Cockburn was for the sixth time elected one of the representatives of Southampton, on Wednesday. His opposition was three to one.

Within the past few days three Russian ships which had arrived in Cork have been sold to Liverpool firms, the owners being apprehensive of losing their property, in consequence of the war between this country and Russia.

Arrangements for the building of a German Protestant Church, in Manchester, are nearly completed.

Great preparations are being made for the French Industrial Exhibition of 1855. Not only in Paris, but in the departments, the manufacturers are busily engaged in producing works of art that shall reflect credit on the country.

On Tuesday 1209 German emigrants—men, women, and children—left Paris for Havre, to embark for America.

Great purchases of hemp have lately been effected at Trieste, chiefly for British account.

An immense depot of stolen property was seized by the metropolitan police, on Wednesday, in Monmouth-street; the proceeds, it is said, of "nearly every burglary which has taken place in the metropolis during the last two years."

A company recently formed at Geneva has purchased extensive grounds in the Sétif, in the province of Algiers, and founded as many as five villages, according to engagement.

Lord Harris, the recently-appointed Governor of Madras, arrived at Alexandria, from Trieste, on the 31st ult., and went on to Cairo.

The Overland Mail is said to have brought large orders for Manchester goods adapted to the Japan markets.

The warmth of the weather in Paris is such, that the *al fresco* concerts in the Champs Elysées have already commenced their performances, though considerably before the usual time

By the expenditure of a million and a half sterling in forming embankments, building quays, and carrying out other improvements, the Clyde has become one of the most wonderful rivers in Britain.

The trial of the assassins of Count Rossi has terminated. Four of them have been condemned to death, including Colonel Grandoni.

A meeting is to be held in London on Saturday, the 29th inst., for the purpose of considering what will be the best method of carrying into effect a desire universally entertained by the friends of Sir Thomas Noon Talfourd, that a suitable memorial shall be erected in honour of the late learned judge.

At Vienna, the newly-discovered comet, visible in the constellation Aries, is said to exceed in brilliancy a star of the first magnitude, whilst its extension is greater than that of Venus at her mean brilliancy.

The Town-council of Bristol proposes to reduce the salary of the Recorder of that city from £700 to £300 per annum.

A new party, called the "Know Nothings," has sprung into great power in New York and other large towns in America. Their ch ef object is to oppose the dangerous designs of the Irish party, which has excited a great deal of jealousy lately.

Madame Goldschmidt (Jenny Lind) gave her third concert last Saturday morning, at the Grand Redoubten Saloon, Vienna. Upwards of 2000 persons were present.

The funeral of the late Professor Wilson took place at Edinburgh, on Friday, the 7th inst., in the presence of a large number of members. The funeral was of a public character, the leading public officials and gentlemen of the city and neighbourhood taking part in the procession to the Dean Cemetery, as a tribute of respect for the memory of the departed.

MARSHAL DE SAINT ARNAUD, COMMANDER-IN-CHIEF OF THE FRENCH EXPEDITION TO THE EAST.

THE military success of Marshal de Saint Arnaud, is one of the most striking examples of rapid advancement which has been achieved in the French army of occupation in Algeria. Thanks to the energetic resistance given to French domination by the people of Northern Africa, that vast country, almost unknown before France converted it into a theatre of war, has become a most valuable training school for those who wish to acquire military knowledge. In that school all the most distinguished French officers of the present day have been trained, and, without reference to the other benefits which have resulted from the possession of Algeria, it has been of much advantage to France, by strengthening and sustaining the military spirit of its army. For nearly twenty years continual warfare was carried on against the numerous tribes which refused to submit to France, and it was in the midst of that long-protracted war that Mashal de Saint Arnaud achieved the high position which he now occupies.

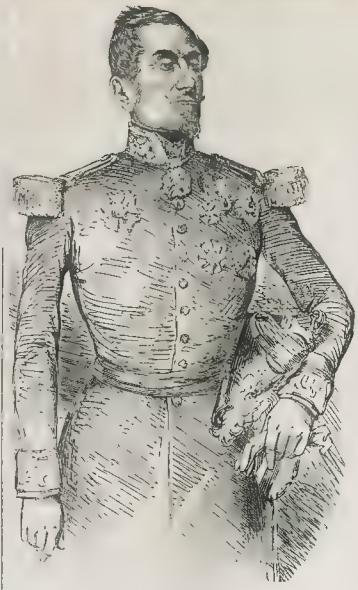
M. de Saint Arnaud was born at Paris, in 1801, of a family not distinguished by fortune. He was young when he entered the army, and, like most of those youths who embraced the military profession during the tranquil reign of Louis XVIII., he gave full play to the love of pleasure and dissipation. During the reign of Charles X. he was for a short time in the body-guard of that Monarch; but he shortly after resigned his situation, and came to England, where he resided some time. Soon after the Revolution of 1830 he returned to France, and once more entered the army. It was at this time, while the regiment to which he belonged was on duty at Fort de Blaze, where the Duchesse de Berri was imprisoned, that he obtained the favourable notice of Marshal Bugeaud, Commandant of the Citadel, by his intelligence and activity.

In 1837, as Captain, he went to Algiers in the Foreign Legion, which was chiefly composed of political refugees who had sought employment in the armies of France. In that corps M. de Saint Arnaud, distinguished alike by his intrepidity and his military skill, contributed powerfully to the success of many important enterprises. In less than ten years he rose through the various grades from that of chief of the battalion to the dignity of Marshal of France. Among the exploits in which he distinguished himself, the most important were the expedition he directed, in 1842, against the unsubdued tribe of Beni-Bondonan, in the west of Miliana; the attack of the Beni-Ferrah tribe in the following year; the defeat of the Flizza-el-Bahr; and the submission of the Cherif Bou Maza, who had provoked an insurrection in the Dahra.

Having been appointed to the command of the province of Constantine in 1849, he rapidly overran that immense territory, which had been disorganised by the revolt of the numerous tribes inhabiting it, re-established peace, and gained the good will and attachment of many chiefs whom no one had previously been able to subdue. The expedition which M. de Saint Arnaud undertook in 1851 against the Kabyles was one of the most glorious campaigns ever gained by the French army in Algeria. At the head of an army of little more than 6000 men he overran the whole of that savage and mountainous region, in spite of the resistance made by its warlike tribes.

In 1851 M. de Saint Arnaud returned to France, with the rank of Lieutenant-General. His energetic and determined character recommended him to the notice of Louis Napoleon, then President of the Republic, as one of the firmest supporters of his views; and, in the month of October, 1851, the future Emperor confided to him the confidential post of Minister of War. In 1852 he was raised to the dignity of Marshal of France, and soon after to that of Senator, which was followed by his appointment to the post of Grand Ecuyer to the Emperor. Unfortunately, in the midst of so many marks of distinction, M. de Saint Arnaud's health is such as to make his friends fear that he will not be able to continue at the head of that important expedition to which he has been recently appointed.

M. de Saint Arnaud has been twice married. By his first marriage he had one daughter (married to M. de Preyalgar) and a son, who became a soldier, and was killed in one of those campaigns in Algeria, where his father won so much renown.



MARSHAL DE ST ARNAUD, COMMANDER-IN-CHIEF OF THE FRENCH EXPEDITION TO THE EAST.

THE DECLARATION OF WAR IN THE FRENCH SENATE.

THE memorable scene in the French Senate, of which the annexed is a representation, took place on the 27th of March, the same day on which a similar important announcement was made in the English Parliament. The French Minister of State read the following Message in the name of the Emperor, announcing that the final resolve of the Cabinet of St. Petersburg had placed Russia in a state of war as regards France:—

The Government of the Emperor and that of her Britannic Majesty had declared to the Cabinet of St. Petersburg that, if the difference with the Sublime Porte was not replaced in a purely diplomatic position, and if the evacuation of the Principalities of Moldavia and Wallachia was not commenced immediately and terminated by a given day, they would see themselves forced to consider a negative reply, or silence, as a declaration of war. The Cabinet of St. Petersburg having decided not to reply to the communication thus made, the Emperor charges me to inform you of that determination, which places Russia, with respect to us, in a state of war, the whole responsibility of which rests with that Power.

The moment the hon Minister concluded, loud acclamations arose from every member of the Senate. The President then said:

The Senate gives a formal acknowledgment to the Minister of State of the communication which he has just made in the name of the Government, and which it has listened to with a profound sentiment of the most entire and most devoted co-operation. I think I express the unanimous feeling of the Senate in adding, that it confides fully in the Emperor, who will know how to conduct the war with the ability and energy which have so eminently distinguished the negotiations. The communication of his Excellency the Minister of State shall be inserted in the minutes of our proceedings, and the original shall be deposited in the archives.

The Senate hailed the remarks of the President with unanimous cries of "Vive l'Empereur!"

DEPARTURE OF LORD RAGLAN AND THE DUKE OF CAMBRIDGE.

GENERAL LORD RAGLAN, Commander-in-Chief of the Anglo-French expedition, and Major-General his Royal Highness the Duke of Cambridge, Commander of Division, left the London terminus of the South-Eastern line by the mail train at half-past eight on Monday evening, for Dover, *en route* for the East.

Lord Raglan arrived at the station in his private carriage at twenty minutes past eight o'clock, accompanied by Lady Raglan, his two daughters, the Hon. Misses Somerset and the Hon. Richard Somerset. Colonel Steele and Colonel Somerset, his aides-de-camp, were in attendance. His Royal Highness the Duke of Cambridge arrived soon afterwards, in company with his aides-de-camp, Major the Hon. J. Macdonald and Colonel Tyrwhitt. The Royal carriage was prepared for the accomodation of the gallant party by Superintendent Weatherhead of the line.

Although the announcement of the departure had not been made public, upwards of 300 persons, including many ladies, had assembled to catch a glimpse of the warriors. At about half-past eight, Lord de Ros and Colonel Clermont joined; and, most affectionate farewells having been exchanged, the Staff entered the Royal carriage amidst the most enthusiastic cheers and waving of handkerchiefs. Lady Raglan and her daughters, on leaving the station, were cheered most warmly. The Hon. R. Somerset and Mr. Hubert de Burgh accompanied the Staff as far as Paris.

Lord Adolphus Fitzclarence was at the station, and appeared most deeply affected upon taking leave of his gallant friends.

Lord Raglan, the Duke of Cambridge, and staff, arrived at Dover at twenty minutes past eleven o'clock, and went on board her Majesty's ship *Vivid*, lying at the Cross-wall, and left for Calais at 11.40. The Royal party were met at the station by Colonel Stratfield, commandant; Colonel Grant, R.A.; Lord A. Russell, Rifle Brigade; Captain Herrick, R.N.; Captain Smithett; and Mr. Way, Superintendent of the Station; and about five hundred of the principal inhabitants of Dover. The party was most enthusiastically cheered on leaving, amidst cries of "Give it to the Russians," &c.

The *Vivid* arrived at Calais about one o'clock on Tuesday morning, and were received by Count de Toulongeon and one of the *attachés* of the English Embassy, who had come express from Paris for that purpose. A special train had been ordered by the Emperor, and Lord Raglan and the Duke of Cambridge, accompanied by a numerous suite, arrived in Paris at half-past nine o'clock. The Minister-at-War and the English Ambassador were in waiting to receive them. A guard of honour of the Gendarmerie d'Elite was stationed at the terminus, and the Court carriages were in attendance. The Duke and the officers who accompanied him proceeded to the British Embassy. About half-past twelve o'clock three Imperial carriages conveyed them to the Palace of the Tuileries, with an escort from the regiment of the Guides. The Duke left the Embassy at one o'clock. In the carriage he occupied were Lord Raglan, the English Ambassador, and an officer of the staff. In the second, Lord de Ros and other staff officers; and in the third, Grand Master of the Ceremonies and officers of the Imperial Household. A detachment of Guides preceded, and another followed, the carriages. The party was cheered on its way by the crowd which had assembled in front of the Embassy, and followed to the Palace, and cries of "Vive les Anglais" were frequent. On leaving the Tuileries, the Duke, Lord Raglan, and suite visited Prince Jerome at the Palais Royal. The Duke, it was said, was the bearer of an autograph letter from Queen Victoria to the Emperor Napoleon.

A grand military review was given in the Champs de Mars, by the French Emperor, on Wednesday, in honour of the Duke of Cambridge and Lord Raglan. The spectacle was one of the most splendid which has been witnessed in Paris for a long time. The infantry consisted of twenty-four battalions; the cavalry, of four brigades and forty-five squadrons. Of artillery there were seven batteries, consisting of forty-two guns. The whole number of troops was about 26,000. The Empress of the French arrived shortly before one o'clock, in an open carriage, followed by a number of Court carriages, containing her Ladies of Honour and the officers of her household. The Ambassadors, Ministers, and other Government dignitaries were all present. The Emperor and the English visitors were loudly cheered by the immense crowd. As the carabineers passed the English officers, the band struck up "God save the Queen," which drew forth enthusiastic cries of "Vive l'Angleterre" from the spectators.

THE EAST INDIA CIVIL SERVICE.—The Commissioners for the affairs of India have appointed the Right Hon. T. B Macaulay, M.P., the Right Hon. Lord Ashburton, John Shaw Lefevre, Esq., C.B., the Rev. Henry Melvill, B.D., principal of Haileybury College, and the Rev. Benjamin Jowett, fellow and tutor of Balliol College, Oxford, to be a committee, for the purpose of considering the best means of carrying out the clauses of the Government of India Act of last session, under which admission to the College of Haileybury will hereafter be open to competition

DECLARATION OF WAR IN THE FRENCH SENATE.

DEPARTURE OF LORD RAGLAN AND H.R.H. THE DUKE OF CAMBRIDGE FOR THE EAST.—(SEE PRECEDING PAGE.)

MRS. CHISHOLM'S DEPARTURE FOR AUSTRALIA.

The last scene of the second act of a drama of real life more strange than any fiction has closed: Caroline Chisholm has concluded seven years of hard, of unthankful, of successful work in England, and sailed to renew her labour of love in Australia—where, fourteen years ago, she began what has ever since been the business of her life: fourteen years ago, on the wharves of Sydney harbour, she saw and pitied the droves of ignorant, outcast, wretched emigrants who, collected without conscience by the crimps of bounty emigration, were cast out at the close of their voyage to shift for themselves, without a friend or a shelter, to starve or to labour, or to steal. No matter: no one cared. How she collected those destitute, helpless wretches; how she encouraged the men to honest work, and gathered together and protected the women, and led whole armies from the misery of Australian towns to the plenty of the far interior, where food was a drug, labour most deeply needed, and wives welcome to servants, if not to masters, is now well known and justly appreciated. Seven years of active practical colonisation in Australia have been succeeded by seven not less active years in England, where the Government has been taught its duty, the shipowners their true interest, and the labouring classes the inestimable lesson of self-dependence and mutual co-operation in the matter of colonisation. These good, useful practical works we have had the satisfaction of illustrating and recording more than once. We can turn to pictures of those group-meetings where, without parade, without extravagant advertising or placarding, hundreds, nay thousands, assembled to listen to Caroline Chisholm, explaining, with earnest, simple, unadorned eloquence, the common sense view of colonization; and also of those exciting scenes when at the docks, and on shipboard, a band of emigrants, whom her system had enabled to seek in Australia a better reward for their labour than this country could afford, listened with affectionate reverence to her parting words of comfort and advice. But a change has come over the prospects of England and her colonies. It is no longer necessary to stimulate emigration here—the working classes can help themselves without gifts or loans. In Australia the great want is not the raw material of labour, but the re-union of wives and families in comparative poverty here with their successful husbands in that colony. To help in this good work—to lay the prime foundation of a civilised state, by giving gold diggers wives and little children—this is the next work of Caroline Chisholm. War, which has disturbed the plans of bankers, merchants, shipowners, and politicians, has not spared her. The ships promised to be fitted out on Mrs. Chisholm's improved plans of space and ventilation, have been tendered to, and accepted by, Government to carry soldiers and cavalry horses; and Mrs. Chisholm and her numerous wards have been handed over to the *Ballarat*, a fine fast ship, but with little room, and that room purchased at a very high rate

On Monday evening a few friends from London, among whom were Mr. Douglas Jerrold and Mr S. Sidney, with a great crowd of the relatives of the emigrants, assembled on board the *Ballarat*, where Mrs Chisholm delivered a farewell address. She told them that on the other side she would put in force the right sort of stimulus to emigration. There she would be speaking to the gold diggers, who had money enough to support their poorer relatives, and who would do everything that was possible so as to secure that their families might be sent out to them in a respectable and decent manner. Emigration was soon to assume an important character. In its present full it was like a child asleep—a healthy and vigorous child; but would soon become a man, and redeem the working classes of this country; so that if any one desired to keep himself and his family in misery, the fault would be his own. They knew that God had ordered the earth to be peopled; but if they were to listen to the manufacturers of this country who forgot that in order to keep a brisk demand for their wares there should be a brisk supply of people—they would see very few ships filled with emigrants. She exhorted them to mutual forbearance, self improvement, and the cultivation of feelings which would make them land like the children of one family. She ended by attempting to comfort the weeping crowd by her own position. She said, "I have an aged mother"——here emotion choked her voice, and she ceased.

The artist has chosen the moment when Mrs. Chisholm, with her two elder sons one on each hand, commenced speaking her parting words.

DEPARTURE OF MRS CHISHOLM, IN "THE BALLARAT," FOR AUSTRALIA.

CALENDAR FOR THE WEEK.

SUNDAY, April 16.—Easter Sunday. Buffon died, 1788.
MONDAY, 17.—Easter Monday. Abernethy died, 1831.
TUESDAY, 18.—Judge Jeffries died, 1689. American Revolution, 1775.
WEDNESDAY, 19.—St. Alphage. Lord Byron died, 1824.
THURSDAY, 20.—Spanish Fleet destroyed by Admiral Blake, 1657.
FRIDAY, 21.—Bishop Heber born, 1783
SATURDAY, 22.—Duke of Sussex died, 1843. Fielding born, 1707.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 22.

TO CORRESPONDENTS.

AN OLD SCRIBBLER, Falmouth.—A Pacha in the Ottoman Empire is the title of the Governor of a Province, and holds the rank of Prince; those with three tails having the power of life and death. In the army, and public service generally, it is a title attached to the highest grades. A Bey or Beg is the possessor of a Beg-lig, or great fief of the Empire. In the army the title is equivalent to that of a Colonel with us.

H. S. M. is so far correct in stating, in our Journal for March 26, that Barbadoes was colonised and not conquered; but, by reference to Montgomery Martin's "Statistics of the Colonies of the British Empire," it appears the island was appropriated as a settlement by the English in 1625, as formerly mentioned, instead of 1605, as H. S. M. has been led to believe.

IGNORAMUS is informed that the population of London, which includes Islington on the north, Paddington on the north-west, Kensington on the west, Bow on the east, Woolwich on the south-east, and Lewisham on the south—a space of which the diameter is as large as he mentions—contains 2,362,236 persons, according to the Census of 1851.

J. S. W. S.—A private soldier may rise to be a commissioned officer in the British army.

J. H. B., Coventry; H. B.; X. Y. Z.; J. W. H., Marylebone; J. M., Ayrshire.—Declined.

THE CENSUS OF 1851.

On SATURDAY next, APRIL 22, will be published

THE CENSUS OF THE UNITED KINGDOM,

PREPARED FOR THE

ILLUSTRATED LONDON NEWS,

COMPRISING

A COMPARATIVE VIEW OF THE POPULATION

(DISTINGUISHING THE SEXES)

OF EVERY PARISH AND TOWN IN THE EMPIRE IN 1841 AND 1851:

With a Detailed View of the Population of the Metropolis; a Comparison of the Population in Counties and Towns, and of the whole Empire, at Different Periods; and a Variety of Interesting Information concerning the Movement of the Population—the groundwork of all Political Science;

WITH A LARGE ILLUSTRATIVE MAP.

These sheets will not be sent without orders from Subscribers.

TWO SHEETS, in a WRAPPER, ONE SHILLING; or STAMPED, so as to go FREE BY POST (without Wrapper), ONE SHILLING. Orders received by all Booksellers and Newsagents.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 15, 1854.

VAGUE and contradictory rumours of the progress of the War continue to reach us through Vienna, which are sometimes either partially confirmed, or shown to be unfounded, by despatches from other quarters. There appears to have been some skirmishing favourable to the Turks in the neighborhood of Kalafat, and a battle of more importance at Rassova, in the Dobrudja. The details of the conflict are wanting, but there is little reason to doubt that the result was favourable to the Turkish arms. A despatch from Constantinople, viâ Marseilles, states that that capital was illuminated on the 4th inst., for a victory over the enemy; but whether it was for that which is believed to have been gained at Rassova, or at some other place, is not very apparent. The Allied forces are yet at a long distance from the scene of action, and detachments only have landed at Gallipoli, so that the struggle in the East is confined to the original belligerents. The Fleet in the Black Sea is inactive, and appears to await at Kavarna the passage of the Russians to Omer Pacha's headquarters at Schumla. People have ceased to take any interest in the proceedings of Admiral Dundas. They have been accustomed to so much inaction in that quarter, that Sir Charles Napier is the only hero of the day. They look to him for actions and decisive ones. The ice is beginning to disappear from the Gulf of Finland and the Baltic, the Admiral means mischief, and the Russians are leaving undefended, all the forts and stations to the West of Revel and Sveaborg, as if to invite the final struggle at Cronstadt itself, and to concentrate all their strength upon that citadel.

In the meantime the Sultan, while showing a bold front against the enemy, and proving himself, in many respects, an equal match for his opponent, is courageously revolutionising the whole internal policy of his empire, and rendering it more and more worthy to rank among the Powers of Europe. The confiscation to the State of the territorial possessions of the mosques, is an event of the highest importance, and is the greatest step that has yet been taken towards the regeneration and civilisation of Turkey. The deposition of the Sheik-ul-Islam, or "Head of the Faith," for resistance to this measure, shows that the Sultan and his advisers have made up their minds to persevere; and that they are not to be deterred from the prosecution of the great reforms which they consider essential to the salvation of the country, by the opposition of any personage, however important may be his position or sacred his functions. Such proofs of vitality in the Ottoman State must be more galling to the ambitious mind of the Czar, than any indignities which the Christians ever suffered, or are supposed to have suffered, at the hands of the Moslems. The Christians of Moldavia, Wallachia, and other portions of Turkey, know by this time that the Emperor cares nothing about their interests or their prosperity, and that he would rather have them remain miserable and oppressed if they could thereby be made a source of weakness to the Ottoman Empire, than have them free and happy, if, by that means, they added to its strength. What with internal and external difficulties, the Sultan has a task before him which might tax the mightiest energies; but, with the determination to act justly towards all his subjects, and with the support of Great Britain and France, there is reason to believe that the attack made upon his independence will ultimately conduce to the stability of his throne, as well as to the discomfiture and humiliation of his unscrupulous adversary.

Austria and Prussia have not yet finally declared themselves. It is true that they have signed, in conjunction with Great Britain and France, a new Protocol, declaring their determination to maintain the integrity of the Ottoman territory, and that they insist upon the evacuation of Moldavia, Wallachia, and Bulgaria. But something more than this is expected of them. The Czar himself has declared that he does not desire to retain permanent possession of the provinces he has invaded; and, until the German Courts declare that his refusal of an immediate evacuation will be followed by a declaration of war against him on their parts, they will rest under the suspicion of aiding his interests by seeking to gain time. The Germans are proverbially phlegmatic, and family and personal reasons have contributed to increase the constitutional slow-mindedness of the King of Prussia, and, perhaps, of the Emperor of Austria. But there is little reason to fear that either of them will ultimately go wrong. The alleged occupation of Servia by a large Austrian force looks, at first sight, suspicious; and the recall of the Chevalier Bunsen from London, because his sympathies are notoriously and avowedly in favour of the Anglo-French alliance would seem as if the King of Prussia had made up his weak mind to side with his Imperial brother-in-law. But neither of these circumstances is in itself sufficient to justify the belief that Russia may count upon the alliance or the neutrality of Germany. Lord Clarendon stated in the House of Lords on Tuesday night that the Government had received no intimation of any Austrian troops having entered Servia, but that some time since a communication had been received from the Austrian Government that the *corps d'armée* on the frontier would defend Servia against the Russians, and would interfere to put down any insurrection that might be attempted against the authority of the Sultan. With respect to the rumour "that Prussia had gone over altogether to Russia," Lord Clarendon declared it to be utterly destitute of truth; and stated, moreover, that there was not the slightest ground for anticipating such an event. The recall of Chevalier Bunsen has yet to be explained; but we have little doubt that it has not the importance which people at first seemed inclined to attribute to it. The King of Prussia is as variable as the wind, and the loudly-expressed and almost unanimous feeling of his people against Russia will either keep him right, or force him to abdicate if he be determined to go wrong. The eloquent speech of M. de Vincke in the Second Chamber of Prussia in the discussion of the Loan Bill, is a welcome sound from Germany. It was an able and powerful expression of the opinions entertained by the great majority of the German people. It is intensely anti-Russian, and created such a sensation, that the Chamber suspended its sitting for several minutes, to allow the auditory to give vent to their approbation, and to recover from the emotion which it caused. Not even the British Parliament has produced a better speech, or one which more effectually unveiled the pretensions of Russia, exposed her hypocrisy, or denounced the danger of her policy to every independent State in Europe. The King of Prussia is an impressionable man, and he will learn, from this and other circumstances passing under his half-shut eyes, what the interests of Prussia are in this great struggle. If he do not learn them he will cease to reign, and leave the throne to an abler and honester successor. Germany will not submit to be Russianised, and remembers, as M. de Vincke says, the warning of the Great Frederick, "that if the Russians possessed Constantinople, it would not be long before they possessed Konigsberg." The German people know their duty and their interests, and sooner or later they will force their vacillating or reluctant Sovereigns to follow their leadership.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonry Residentiary:* The Rev. Robert Bickersteth has been appointed to Salisbury Cathedral. *Rectories:* Rev. W. Alford, to Folke, Dorsetshire; Rev. E. S. Bankes, to Corfe Castle, Dorsetshire; Rev. H. Beckwith, to St. Mary Bishophall, York; Rev. W. Elliott, to All Saints' Church, Worcester; Rev. J. Geldart, to Podington, or Puddington, Bedfordshire; Rev. R. Henderson, to Brompton-Ralph; Rev. Dr. Higgs, to Handborough, Oxon; Rev. W. S. M'Douall, to Sudden, near Newmarket; Rev. H. Morgan, to St. Athan, Glamorganshire; Rev. F. A. Saville, to North Huish, Devonshire; Rev. J. Sperling, to Eccleston, Lancashire; Rev. S. W. Steedman, to Fyfield, Andover; Rev. H. G. Williams, to Pres-on, Suffolk; Rev. A. D. Wilton, to Orlingbury, Northamptonshire; Rev. H. Wright, to Hambleton, near Godalming; Rev Dr. Wynter, to South Warnborough, Hampshire. *Precentorships:* The Rev. W. H. Beever, to St. Hilary; Rev. S. Edwardes, to Wolverculi, Oxfordshire; Rev. J. Fox, to Hinton, together with the Vicarage of Preston; Rev. S. J. Jerram, to Chobham, Surrey; Rev. A. H. Leech, to Emily; Rev. J. D. Palmour, to Jedfreyton, near Narberth; Rev. T. Sikes, to Chevening, near Sevenoaks; Rev. W. H. White, to Kenton Suffolk. *Incumbencies:* The Rev. J. Colborne, to Holy Trinity Church, Painswick, near Stroud; Rev. R. Crowfoot, to Southwold, Suffolk; Rev. C. Eckersall, to Lower Beeding, near Horsham, Sussex; Rev. J. R. Pilling, to Grimsargh, Lancashire; Rev. G. S. Robertson, to Pigleathorne (or Pistone), near Ivinghoe, Buckinghamshire; Rev. W. J. Sharpe, to St. Paul's Church, Whippingham, Isle of Wight; Rev. A. Tatham, to Balam, Nottinghamshire; Rev. G. D. Thomson, to Queenborough, near Sheerness.

A DEPUTATION of five of the principal inhabitants of Etton, near Beverley, Yorkshire, have presented the Rev. Robert Machell with a silver salver, value £53, as "a testimonial of their affectionate regard, after his residence among them for twenty years."

PARIAN STATUE OF ŒNONE.—Messrs. Rose and Co., of Coalport, have just published a very pretty statuette of Mr. Tennyson's heroine, Œnone, after the incident thus described by the poet:—

> Hither came at noon
> Mournful Œnone, wandering forlorn
> Of Paris, once her playmate on the hills.
> Her cheek had lost the rose, and round her neck
> Floated her hair, or seemed to float, in rest.
> She, leaning on a fragment, thus began
> To chant the stillness. * * *

The design has been modelled by Mr. Shenston, and does great credit to his talent. The attitude is graceful and natural, and the expression of the face—youthful and beautiful in itself—well accords with the sentiment.

DR. M. THOMSON'S NIGHT SIGNALS.—The Lords Commissioners of the Admiralty, from the favourable reports of the several officers in command of the Channel squadrons, have ordered an increased supply of these lamps from a house in Birmingham, to be issued for the use of the Baltic and Black Sea squadrons. A new signal-book has also been printed by order of their Lordships to accompany these lights by which all ships will be able to communicate as freely by night as by day.

A METEOR WAS SEEN AT TUNBRIDGE WELLS by a Correspondent, on Saturday evening, the 1st inst., at 9 seconds past 10, the moment at which the meteor was witnessed by the Rev. Mr. Mackenzie Walcott, as described and illustrated in our Journal of last week. It was seen from Tunbridge Wells Common, passing in a straight line from S.E. to N.W., at about the height that a good rocket will attain. It was somewhat different in appearance from the above, which may, possibly, be accounted for by the absence of gas-light at Tunbridge Wells Common.

LATEST INTELLIGENCE.

THE WAR ON THE DANUBE.

The Russians do not seem to have made any attempt on Silistria yet, but they are said to be preparing to attack it. The garrison is 10,000 strong. A despatch from Bucharest, of April 9, says that no battle has been fought either at Silistria or Rassova. The rumour of an affair at Rassova originated with Turkish agents, and seems to be devoid of all foundation. Omer Pacha is said to be digging attacking the Russian troops under General Lüders. The Turkish forces at Trajan's Wall were reported at 80,000 strong.

THE AUSTRIANS IN SERVIA.

A despatch from Vienna, of April 13, says: "It is believed that the Austrians have this day entered Servia." None of the letters from Vienna throw any light upon the matter. A despatch from Vienna of the same date, however, seems to indicate that the occupation of Servia is not with a view to aid Russia. That despatch says: "An Austrian Note has been forwarded to Athens with strong remonstrances upon the conduct of the Greek Government, which is held responsible for whatever evil consequences may ensue."

RUSSIAN REJOICINGS

Letters from St. Petersburg, of April 4, state that the city has been illuminated in celebration of the passage of the Danube. A Te Deum has also been sung in the church of the Winter Palace in the presence of the Czar, the Imperial Family, and all the civil and military functionaries.

A Berlin letter says:—"The Emperor of Russia is to reside, during the war, alternately at Revel and at St Petersburg. The Grand Duke, heir presumptive to the Throne, is to proceed to Helsingfors; and the Grand Duke Constantine will assume the command of a division of the Russian fleet, which, protected by 800 pieces of cannon, will cast anchor within the fortifications of the seven islands at Sveaborg. It is thought that the English fleet will first proceed to Libau, on the western coast of Courland, towards the Bay of Riga, to invest the three islands in front of that port, and that it will endeavour to destroy the fortifications of Revel.

Advices from St. Petersburg of the 6th state that a ukase declares that, as danger threatens the Empire, it is ordered that the four reserve battalions become effective, and that two new ones be organised for each corps.

UNITED STATES.

The *Pacific* steamer, Captain Nye, arrived at Liverpool yesterday (Friday), with dates from New York of the 1st instant. War with Spain was predicted. Business was somewhat depressed. Breadstuffs had declined. Cotton was also lower. Stocks had a downward tendency. Money Market tight. Exchange on London, 10$\frac{1}{2}$.

SINGULAR ACCIDENT TO THE "VICTORY."

A well-known Correspondent at Portsmouth has sent us a communication, from which we extract the following:—

Thursday Evening, April 13, 1854.

I write in haste to apprize you of a strange accident which has just occurred in our harbour—the foundering of H.M.S. *Victory*, which went down at her moorings this afternoon about 5 o'clock. She had been lying the last fortnight alongside of a hulk, whilst her moorings were being examined and sundry repairs executed. These being finished, warping her back to her old moorings commenced this afternoon about three o'clock, and by five she was in her old position. Numbers of spectators were looking on, and admiring the old ship, when, to the surprise of all, she heeled over and went down bows foremost. Fortunately no lives were lost, as all on board were upon deck at the time. The immediate cause of the accident is not known, but it is conjectured she must have started a "butt," during the warping down, which escaped observation, as all hands were engaged carrying cables, &c. I will endeavour to forward you a Sketch of the occurrence in time for your next impression.

[Our Correspondent's letter has not been corroborated by any of the London newspapers of Friday.]

THE COURT.

On Sunday the Queen and Prince Albert, with the Prince of Wales, the Princess Royal, the Princess Alice, and the Duchess of Kent, attended divine service in the private chapel at Buckingham Palace. The Hon. and Rev Gerald Wellesley read the prayers, and the Bishop of Lincoln preached the sermon.

On Monday Lord Raglan had an audience of the Queen. His Royal Highness the Duke of Cambridge also visited her Majesty, and took leave, on proceeding to join the expedition to Turkey.

On Tuesday the Queen held a Court for the reception of the Address from the Corporation of the City of London.

On Wednesday her Majesty and his Royal Highness Prince Albert left Buckingham Palace at twenty minutes before four o'clock, for Windsor Castle. The Queen and Prince were accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, Princess Alice, Prince Alfred, the Princesses Helena and Louisa, Prince Arthur, and Prince Leopold. The Royal party quitted the Palace in seven of the Queen's carriages, escorted by a detachment of Carabineers, for the terminus of the Great Western Railway, at Paddington, and travelled by a special train to Windsor, where her Majesty arrived at half past four o'clock.

The Royal dinner party at the Castle, on Wednesday night, included her Royal Highness the Duchess of Kent, Lady Anna Maria Dawson, and Colonel Locker, commanding the 97th Regiment.

It is understood that the Levee to be held on Wednesday, the 3rd of May next, will be the last this season.

APPROACHING VISIT OF THE QUEEN TO THE FRENCH EMBASSY.

Her Majesty has signified her gracious intention to honour with her presence a grand *fête nocturne* which is to be given, on the 12th of May, by the Ambassador of France and the Countess Walewski, at the French Embassy. We believe this will be the first time, since the accession of the Queen, that her Majesty has paid such a compliment to any member of the *corps diplomatique* accredited at her Court, and the departure from the general rule will naturally suggest itself as having its origin in a desire on the part of her Majesty to mark in an especial manner the high sense she entertains of the chivalrous and effectual co-operation of the Emperor Napoleon III. in the war in which France and England are about to engage.

Her Royal Highness the Duchess of Cambridge, the Princess Mary of Cambridge, the Count Kielmansegge, Lord George Paulet, Lord Stanley of Alderley, Baron Knesebeck, and a select party, dined at St. James's Palace, on Sunday last, by invitation of Lord Adolphus Fitzclarence, to meet his Royal Highness the Duke of Cambridge on his departure for the East.

Her Royal Highness the Duchess of Kent arrived, on Wednesday, at her residence, Frogmore, from London.

On Thursday the usual Royal charities, known as Maundy gifts, were distributed at the Royal Chapel, Whitehall, to thirty-five aged men, and thirty-five aged women.

NEW MILITARY TRAINING GROUND.—The authorities of the War-office having obtained a grant from Parliament of £100,000, for the purpose of purchasing land for occupation by the army, have bought upwards of 1000 acres of land at Aldershot, Farnham, and Ash, in the counties of Hampshire and Surrey, about 35 miles from London. From the bold elevations, and undulating character of the land, it is admirably adapted for that purpose. The Basingstoke Canal, with some contributory lakes at Ash, affords opportunities of display in crossing rivers, and in various other military exercises. The nearest railway stations from London will be the South-Eastern and the South-Western, both at Ash, and within a mile of the ground. It is intended to encamp the militia on the ground in the ensuing month. Parties are already building and speculating on the improved value of land in that locality.

ROYAL MAIL STEAM-PACKET COMPANY.—On Thursday, the half-yearly meeting was held at the Freemasons' Tavern, when the report was presented, and showed a balance of £71,318 2s. 6d., from which it was proposed to set aside £39,680 for the dividend at the rate of four per cent per annum, the balance being carried forward towards meeting a debt upon the company for new vessels, repairs, and to meet the customary calls of the forthcoming half-year.

SEASONABLE REWARD.—Lieut. Bonie, of the French navy, who was on board the *Retribution*, Capt. Hon. J. R. Drummond, when she entered Sebastopol, has received promotion for furnishing information to the Minister of Marine about the batteries in that harbour. This is practical wisdom.

SEAMEN'S HOSPITAL SOCIETY.—On Thursday a quarterly meeting of this most important charity was held, and a report presented. The receipts of the quarter amounted to £2183 18s. 11d., whilst the expenditure was £2697 17s 3d, showing a deficiency of £533 18s. 4d. The total number of patients since the opening had been 70,928. The report was adopted.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

We mentioned incidentally last week that the May Exhibition at the Royal Academy is one of more than ordinary promise. Those who have gone the tour of the artists' studios speak most favourably of the produce of the last year. Maclise will be seen to immense advantage in a large gallery picture, representing the "Marriage of Strongbow, Earl of Pembroke, to the daughter of the King of Ireland." There are at least—what shall we say—one hundred and fifty figures, some the size of life, and others very little less, brought together with admirable skill upon one canvas. The story is told simply and nobly, and the colouring is spoken of by all his admirers as richer and warmer than he has before thought it worth his while to attain. Some said that the Academy would not hang it. "I do not want them," is said to have been Mr. Maclise's reply; "I only hope they'll *stand* it." To be seen to any advantage, it must be seen as far as is possible nearly on a level with the eye.

If Mr Maclise will command attention by the chivalry, noble grouping, and skill of his large historical picture, Mr. Frith will arrest every spectator by a picture entitled "Life at the Sea-side," in which he has succeeded in depicting that immense variety of English life to be found on Ramsgate sands in the height of the sea-bathing season. He was never so great before; nor is it too much to say that this work will place him on a level with Leslie and with Wilkie. He is said to have received a thousand guineas for it—and not too much, considering the long and happy pains bestowed upon such a work. Roberts sends two choice Venetian views, painted in successful rivalry of Canaletti, but without any slavish and unnecessary marks of imitation. Creswick is said to have surpassed even the highest hopes of his many admirers. Leslie contributes a scene from the "Rape of the Lock" in his happiest manner. Sir Edwin Landseer is working at the Palace, and has not, it is said, sent even a single picture to the Exhibition. Ross and Thorburn will be seen in honest emulation for superiority. Webster has sent something worthy of his well-earned reputation; and Mulready has chosen to show, by a small example, that his skill and taste are still unimpaired. In portraiture Grant will be found to excel in female loveliness, and Gordon in manly vigour of mind. Nor will Stanfield be found wanting in rendering the sea and sea-coast scenes, or E. W. Cooke in catching what Vandervelde loved to paint, and Turner loved to transfer to canvas. E. M. Ward has a Parliament picture, "Argyll Asleep in Prison," painted with a rich deep Venetian effect—the figures the size of life. Elmore will be missed—to be found next year, we trust, in renewed vigour. Egg (already reckoned by some long before his time as one of the old masters) has been unable to finish the two pictures on which he is engaged, and of which artists and amateurs speak alike favourably. We shall, therefore, miss a particular favourite. Hook is commended by those competent to judge; but we have not seen his picture; and we forget the subject. Boxall has a fine head of Lady Eastlake, painted in Titian's manner, with a full juicy brush. Frank Stone has a well-painted pair of lovers, looking unutterable things, and entitled "The Old, Old Story."

The Pre-Raphaelites will be represented by Hunt and Collins. Millais reserves his strength for another year. It is not unlikely, however, that he has sent in a small picture—a scene in the Highlands—that will do no injury to his name. One of Hunt's (it has no name, but is distinguished by a motto from the Psalms) will divide the critics. It is painted in the rich detailed manner of Van Eyck, and represents a Magdalen-looking girl, struck with remorse at the words of a song, sung to her by a young man, in a very modern costume, at a very modern piano. The landscape reflected in the mirror is marvellously painted.

Without the pale of the Academy, and away from the school of the Pre-Raphaelites, the visitor will find much to admire. Hannah has painted a picture which will be mistaken by many for a fine E. M. Ward. The subject is "The Countess of Nithsdale presenting the petition to King George I., that her husband's life may be spared." The King, it is well known, ran away in a full drawing room from her earnest supplications for the Earl's life. In his anxiety to escape, he is said to have dragged her on the floor—an incident of which the artist has availed himself with equal tact and skill. The locality and dresses are all scrupulously correct. There are touches, too, of humour in it that will not escape attention—such as the wide-spread never-run-away legs of Henry VIII., to be seen on the canvas of Holbein, suspended over the fire-place, anxious, apparently, to kick his successor, for his fear of women. Lance excels in fruit, and gold, and ivory cups. Solomons has made an important stride in his art. He has two pictures—one representing the interior of a first-class carriage; the other two compartments of a second-class carriage. They might be called (we know not their names) Gretna and Greenwich. In the first-class compartment are an old gentleman (the father or uncle) asleep, and a very pretty girl with flowers and fine eyes, addressed by a very nice-looking young man. All is sunshine. In the second class carriage is seen a boy, on his way to join his ship for the first time—his mother (a widow) sits by his side and his sister (some years older than himself) looks into her brother's eyes as if her heart was like to break. Never was half-subdued sorrow more beautifully expressed. Ansdel has two large pictures: one a snow scene, representing a horse and horseman attacked by wolves; the other (intended for a panel) is a scene in the Isle of Skye, young rams startled at the sudden appearance of a strange dog. In the large picture the wolves are painted with admirable finish—life is all but seen receding from the last that is shot. On the whole, we can promise a fine Exhibition.

Mr. Duncombe has been asking in the House about the equestrian statue of King George II., once a central ornament of Leicester-square, in London. The question has led to inquiry, and the result is that the statue is not forthcoming. Mr. Wyld buried it at first beneath his Great Globe—no one missed it—it belonged to any one. The workmen employed on the Great Globe discovered that it was a clay body covered with lead, that the lead was valuable; and so the statue, both man and horse, was stolen piecemeal away. Not a vestige remains of him—our modern Augustus has been converted into waterspouts and pig-lead. He is as nothing, as the Palace of Canons from whence he came. We are not sorry for his departure; but, surely the odd manner in which he was spirited away, his leaden covering melted into nothing, and his clay interior returned to its native earth, suggests that we should be careful of our statues. Her Majesty has a "Keeper of the Pictures," why should not the public have a keeper of the statues. Within the memory of thousands, the sword was stolen from the statue of Charles I. at Charing-cross. A contractor for the repairs of the arch at Hyde-park-corner might cover in the statue of the Duke, and reconvert Wyatt's Wellington into heavy pieces of ordnance, before even Mr. Duncombe could be aware of its removal and metamorphosis.

Our contemporaries have been acquiring Burlington House, Piccadilly, for the public, at an unnecessary expenditure of ten thousand pounds. Government, they say, has purchased this—one of the best-known houses in West-end London—for one hundred and *fifty* thousand pounds. No such thing. The price was one hundred and *forty* thousand pounds; and the mansion, and its appurtenances (the furniture excepted), with the ground belonging to it, will be transferred to the public at Michaelmas next. Government—so well-founded rumour runs—intend converting it into rooms of assembly for scientific bodies, and for certain small public offices now very indifferently lodged. The Societies that will enjoy the privilege of holding their assemblies in Burlington-house, will not be permitted to form museums within its walls. Museums require more room than Government will be able to give away. The requirements of the Civil Service are such that Government contemplates the removal from Somerset-house of the Royal Society and the Society of Antiquaries. Both Societies would be glad to go on the terms tendered to the Royal Academy, and accepted by that body.

The Beauchamp Tower, in the Tower of London—so exquisitely restored by Mr. Salvin, in the true mediæval spirit—will, we are told, be open to the public for the first time in the first week in May. After the White Tower, this is decidedly the most interesting portion of the towers of Julius.

The large family picture, by Sir Joshua Reynolds, of the "Penn Children," was sold at Christie's, on the 7th inst., for 840 guineas. It is by no means a favourable specimen of Sir Joshua: if it had been a choice example, it would have sold for six times that sum. There is an engraving of it—a private plate—by Charles Turner.

MUSIC.

Though the regular dramatic entertainments are suspended during Passion Week, yet the theatres are not closed on that account. Most of them are engaged for various kinds of popular amusements, chiefly of a musical character. During the past week Mr. Smith has been giving Promenade Concerts at Drury-lane, after the fashion of Monsieur Jullien, but on a much smaller scale, and much less brilliant. They have been, however, pretty well attended. Mr. Allcroft, of Concert-monstre celebrity, had a performance at the Lyceum on Monday evening, superior in quality to the ordinary run of such entertainments. A large portion of the programme was selected from the works of Mendelssohn, the orchestra was complete and powerful, and the celebrated violinist, Ernst, was among the solo performers. On the same evening a Concert of monstrous dimensions was given by Mr. Howard Glover, at St. Martin's Hall. It consisted of about fifty pieces of music, many of them long ones; and the vocal and instrumental host included almost every performer of note now in London. The selection—as must always be the case on such occasions—was of the most common and familiar kind, the performers singing or playing the things which cost them the smallest amount of trouble or preparation. There have been several minor concerts during the week—none of them at all remarkable.

Drury-Lane is to open for Italian Opera on Easter Monday; for German Opera, the beginning of May. There are also, we understand, to be English Operas. Though, however, there will be different companies—different, at least, in their principal members—yet they will all form parts of one general establishment. The details are not yet made public; but we have heard the names of some of the most eminent singers now in London, as having been engaged. The chorus and orchestra are to be large and powerful, and all the requisite means are provided for performing the greatest masterpieces of the musical stage, not only with completeness, but with splendour.

Henry Russell.—This celebrated composer has been singing, during the week, to crowded houses at the Standard Theatre.

THE THEATRES.

MARYLEBONE.

On Saturday "The Hunchback" was performed for the first time at this theatre during the present management; the parts of *Master Wrilter* and *Julia* being supported by Mr. and Mrs. Wallack. The former was remarkably elaborated by his representative, who threw into it so much of picturesque effect, and such distinctive detail, with such minuteness and variety in the distribution of the histrionic lights and shades, that the picture grew into unwonted life under the artist's hand, and the admiring audience were so strongly excited as to summon the performer before the curtain at the end of the second act. This is indeed an extraordinary honour in such a part, which is rather of a subdued and mechanical character, and generally played according to routine with respectable perseverance. Here, for once, however, we had originality, where it was least expected. Mrs. Wallack's *Julia* is a delicately-conceived and artistically-executed portrait, most carefully adhering to the poet's ideal, and ambitiously making its most delicate point. The famous scene with *Sir Thomas Clifford* received quite a novel interpretation under the direction of this gifted artist: more thought, more passion, were never pressed into its service—all being controlled and subdued by the spirit of beauty, and submitting gracefully to its influence. At once one of the most vigorous and judicious of our actresses, Mrs. Wallack never suffers herself to be misled by a sense of power, but chastens the vehemence of her natural style by the ever-ruling authority of a taste which has evidently been cultivated in the best schools of poetry. An address, by Mr. Monier, was delivered by her with remarkable propriety. It recorded what had already been done under the new management—promised still more—and announced their intention to procure in future "some new, original, unacted plays." Mr. Wallack, too, on being recalled, stated that they had hitherto had difficulty in removing old and systematic abuses, but, nevertheless, had succeeded to a great extent in introducing a better method, and should continue fearlessly in their endeavours to "provide for the neighbourhood an intellectual entertainment." The announcement was received with great applause; and we are led to expect much good from the intelligent efforts of the directors of this theatre.

NON-THEATRICAL EXHIBITIONS AT THEATRES.

Among the amusements of Passion Week, we have to record the twenty fourth annual exhibition of Mr. C. H. Adams's Orrery, at the Adelphi; the very able lecture on Astronomy being delivered by that gentleman, as usual. At the Surrey theatre on Monday, Mr. Love, the polyphonist, was remarkably successful with his new entertainment, "The London Season." Without supernumeraries or confederates, the dramatic ventriloquist went through a variety of scenes and characters, descriptive and representative, changing his garb and gesture with marvellous rapidity. The extravagant *Narcissus Verigreen*, the fashionable *Moses Mordecai*, the nautical *Mr. Benjamin Billows*, the experienced *Mrs. Oldstyle*, the wonderful *London Calman* with the everlasting and universal memory, the too-susceptible *Mr. Calm*, and the voluble *Miss Tattletack*, all appeared on the stage, in their proper persons, to the amusement of a numerous audience. The entertainment is in two parts; at the end of which Mr. Love exhibited his ventriloquial sketches, which, when in good voice, are the most astonishing of his performances. Since M. Alexandre, Mr. Love has had no rival in these; and, indeed, the gift is one so peculiar, that long intervals of time have elapsed between the existences of its different professors. In the present instance, the remarkable and most attractive point, is the precision and refinement with which the vocal utterances are managed, both in regard to relative distance and number. To the natural faculty is, in this, added an art which, in the language of an old dramatist, may be said, "to better nature."

GALLERY OF ILLUSTRATION.

A Diorama, illustrating the Route of the British Army to the Seat of War, has been added by Messrs. Grieve and Telbin to that of the Overland Mail, which they have renovated for the occasion—the former being in accordance with the national sentiment to which they desire to appeal, and from which, doubtless, the appropriate response will be given on the part of the holiday visitors to this place of blended amusement and instruction. Accordingly, the new pictures consist of St. Petersburg, Constantinople, and Sebastopol—and particularly one of the Dardanelles, from a sketch by Lieut. O'Reilly, of the *Retribution*. All are capitally painted. Nearer home, the Embarkation of Troops at Southampton, the Isle of Wight, Osborne, the Needles, and the Bay of Biscay, are peculiarly interesting. Justice is done to the various subjects. The Berlings, Cintra, and Lisbon, with the British Fleet at anchor, together with the Tagus, and Admiral Corry's Squadron passing Cape Trafalgar, are all very cleverly painted. The view of Algiers is accompanied with Embarking Troops by the French Ships of War. One of the grandest paintings, however, is that of Malta, with the arrival of the Guards. We need not recapitulate the series illustrative of the Overland Mail, all having become familiar to the public. It ends, as usual, with the celebrated mausoleum called Taj Mehal. As the war proceeds, it was announced by the lecturer, that the proprietors intended to add to the Diorama such scenes as would serve to illustrate its progress and results. Such a design is as laudable as it must be popular, and will bring before the eye the localities of celebrated events, yet concealed in the future. In harmony with the enthusiasm of the present, the series will embody a history of the times, and perpetuate that heroism which, in opposition to unprincipled ambition, has been excited in the national bosom, and identified itself with the "grandeur" of its "throbbings."

Easter Pieces.—The season's extravaganza at the Haymarket is written by Mr. Planché, and entitled "Mr. Buckstone's Voyage Round the Globe in Leicester-square." At the Adelphi, the spectacle will be of an Oriental character, and called "The Overland Journey to Constantinople, as undertaken by Lord Bateman, with interesting particulars of the Fair Sophia." A new piece, also, is announced at the Princess's, under the title of "Faust and Marguerite." Astley's will re-open with a new grand Nautical Equestrian Spectacle, by Mr. Nelson Lee. The Lyceum is also advertised to re open on Easter Monday, as usual; and at the Marylebone the new season, it is stated, will commence with a burlesque.

NATIONAL SPORTS.

HARROW SECOND SPRING MEETING.—Tuesday.

Trial Stakes.—Criterion, 1. Edward of York, 2.
Metropolitan Handicap Steeplechase.—Nonne de Guerre, 1. Gayla'd, 2
Stewards' Plate.—Cotton Lady, 1. Prevarication, 2.
Selling Steeplechase.—Janus, 1. Widow Machree, 2.
Selling Hurdle Race.—Unico Jack, 1. Sweetheart, 2.

WEDNESDAY.

Harrow Selling Stakes Flat-race.—Lioness, 1. Gulle, 2.
Innkeepers' Plate.—Janus, 1. Quiffe, 2.
Grand Open Steeplechase for a Gold Cup.—Ploughboy, 1. Despised, 2; Scurry Stakes.—Prevarication, 1. Sophistry, 2.

LATEST BETTING AT MANCHESTER.

Chester Cup.—11 to 1 agst Beadsboy (5); 11 to 1 agst Mark Antony (off); 23 to 1 agst D. of Lorraine colt (5); 40 to 1 agst Indian Warrior (5); 40 to 1 agst Joe Miller (5).
Derby.—6 to 1 agst Dervish (5); 30 to 1 agst New Warrior (5), and 40 to 1 taken to a large amount.

The Emperor's Vase at Ascot.—For some time past it has been a matter of speculation and inquiry in the sporting world whether, under existing circumstances, the piece of plate, value 200 sovereigns, which the Emperor of all the Russias has, for the last nine years, presented to the British public, to be run for over Ascot-heath, and which has formed the great race of the meeting, will this year be included in the Thursday's programme. The plate has been ordered, and might, had the Stewards of the Jockey Club felt so inclined, have been contended for as usual; but on Saturday last it was announced that the Stewards, in conjunction with the noble Master of the Buckhounds (the Earl of Beaborough), who is one of the stewards of the Ascot meeting *virtute officii*, have, on due consideration, determined to decline the proffered gift. The race will this year re-assume the shape of the old Ascot Cup, being for a piece of plate of 100 sovereigns value, made up by the grant of 200 sovereigns from the race fund, added to a sweepstakes of 20 sovereigns each.

The Oxford and Cambridge Boat-race.—This annual trial of skill took place on Saturday last, at the usual spot—Putney to Mortlake—and was won by the Oxford by eighteen lengths. The distance was done in twenty five minutes twenty-nine seconds. This is the sixth successive victory of the Oxonians.

Thames National Rowing Regatta.—It is said that the Lord Mayor has become President of the Thames National Rowing Regatta, which is being got up by a committee of leading gentlemen.

Next Week's Racing.—Newmarket First Spring Meeting commences on Monday, and ends on Friday; on Wednesday and Thursday the Caterlick Bridge Meeting takes place; and on the latter day the Abergavenny Races also are held. Owing to the Fast-day taking place on the 26th, the appointments for that day at the York Spring Meeting will come off on the Thursday; and the Malton Races will begin on the 28th, instead of the 27th.

EASTER IN RUSSIA.

Religion, whose avowed object is to improve and elevate mankind, is employed in Russia as a means of depression and an instrument of servitude. The Russian religion is nothing more than a sort of idolatry or fetichism, which glorifies the person of the Czar, and makes him a demigod on earth, whose attributes form part of the popular creed. The sublime moral end of Christianity has never, in any clime or any age, been so monstrously perverted and interlarded with error and superstition as in Russia at the present day. It is most lamentable to behold how, by a strange confusion of ideas, the interests of politics have been promiscuously mingled with matters of purely spiritual import. Indeed, so indissoluble have these two elements of the Russian religion become, that the Greek Church is but a tool in the hands of the Czar and its votaries—the minister to his worldly desires. This religious organisation, efficiently supported by the fanaticism which the priests inspire, and the ignorance which they take no pains to uproot, is the touchstone to the excessive power wielded by the Czars. A glance at the past history of the country will show us how Russian policy has profited by this unnatural alliance. Ever since the days of Peter the Great, the Church has been a tenure of the Crown; and the Emperors have obtained so absolute an authority over it, that they have had no difficulty in modifying the ritual whenever it pleased them to do so, and in instituting new fêtes to glorify themselves or their families: Catherine II. instituted twenty-five annual festivals for the exclusive worship of the Czarine and her family; and Paul I. instituted two for each of his nine children.

There is not a country in the world which has a greater number of religious fêtes than Russia; but the most solemn, and perhaps the most popular of these, take place at Easter. These fêtes, however, which are avowedly instituted for the purpose of elevating and strengthening the souls of the people, do, in reality, weaken and abase both body and soul. They are preceded by four Lents, or periods of rigorous abstinence, during which time the nourishment of the population is confined to unsubstantial food, such as onions, garlic, and mushrooms, seasoned with fish-oil or oil of hempseed. This debilitating diet, besides producing emaciation and languor, often weakens the digestive organs, and disorders the organisation of the body to such an extent as to engender grave diseases which decimate the country as effectually as plague or war. It is, of course, natural that the people should welcome the cessation of these disastrous fast-days with demonstrations of joy. But, unhappily, this abstinence is followed by an excess almost equally pernicious, as that after Starvation has done its deadly work, Voracity invariably comes in for its share of victims

The festival of Easter is, as in other countries, the termination of Lent, and inaugurates an epoch of general feasting. The trade in provisions assumes a prodigious activity; the markets are literally "glutted" with articles of consumption. These stores display to the hungry eye of the Muscovite oxen from the Ukraine, calves from Archangel, sheep from Astrakan, sterlet from the Volga, pheasants from Lungary and Bohemia, and the national Ikra, or Caviare. It is a curious sight to see these animals placed in rows along the markets, stiffened by the cold, and standing like petrifactions in the museum of a geologist. What vegetables there are at these stores are grown and provided by the German colonists. During the winter the markets are supplied with cherries, peaches, apricots, and grapes, which, however, are for the most part absolutely tasteless. These luxuries are destined only for the sumptuous tables of the rich, being excessively dear. It is not considered exorbitant to demand two roubles for a single cherry. During Easter the Russian merchant displays all his native astuteness. Hat in hand, and with great deference and respect, he stops the simple peasant on his way, and flatters him into his shop, or entices him in by means of such familiar appellations as "Little Father!" "Little Uncle!" "Little Brother!" according as circumstances may require. One of the most *récherché* of all the Easter messes is a sort of cheese, known by the name of Khazan, from the place where it is made, with an outside of delicious paste, formed in the shape of certain fruits. This is as indispensable to the Fêtes of Easter, as "Maids of Honour" are supposed to be to a complete dinner at Richmond.

Easter in Russia is peculiarly a season of feasting, and all classes, from the richest down to the poorest, participate in this licensed intemperance. At the commencement of the festivities the people may be seen rushing out of their houses into the streets, and embracing each other promiscuously without distinction of rank or sex. This *accolade* or embrace is accompanied by the presentation of a red egg, a ceremony which at first sight would appear to be an expensive one; but it is not in reality a *presentation* of eggs, but merely a *circulation* of them, the same

EASTER IN RUSSIA.

PALM SUNDAY IN ST. PETERSBURG.

eggs having to pass through a variety of hands during the season. In the course of the ceremony, each one pronounces aloud the sacramental words—"Christ has risen from the dead!" and to this formula each one replies, in answer to his neighbour's exclamation—"Yes, indeed, the Christ has arisen from the dead!" It is usual, at this season of the year, to purchase cage-birds for the sake of giving them their liberty, a custom which is considered as emblematic of that liberty which is consecrated by the solemnities of Easter. At St. Petersburg and Moscow the priests, escorted by choristers, enter the houses of the wealthy, and sing psalms in front of the image of the patron saint, which is certain to be found in one of the rooms: they will not leave the house, however, before they have received the customary fee and the sip of brandy which is the price of their prayers.

Palm-Sunday is set apart for children. On that day the streets and squares are filled with toys and playthings of all kinds. The fine lady in her brilliant equipage, and the simple bourgeoise in her elegant *droŝki*, repair together to this exhibition of wonders. The salesmen at the commencement of the fête mix with the crowd, and slipping about from group to group, and from carriage to carriage, distribute palm leaves, as emblems of the fête.

Easter is peculiarly the National Festival of Russia. For the aristocracy it is the signal to display an amount of luxury and magnificent profusion which has not been equalled by the most lavish civilisation of ancient or modern times. For the serf it is a short truce from slavery—a bright day passed in the sun of liberty. It is, in fact, a remnant of those heathen fêtes which accorded to the bondsman a moment of respite.

EASTER FESTIVAL IN ST. PETERSBURG.—PRESENTATION OF THE EGG.

THE LIGHTHOUSE OF HANGÖ-UDD.

This point of Finland may become of interest in the present war.

On a lonely rock, lashed by the roaring breakers, its revolving lantern gleaming athwart the night, rises the Lighthouse of Hängö-udd.

The road from Fojo to this, the most southern and exposed point of the Finnish coast, is wild and sandy: dark pine forests, with scarcely a hut, stretch out to the stormy sea; but, as the traveller journeys onwards towards the land's end, the ground grows harder, until at length the granite sounds beneath his tread. There is the little military post of Drottinsberg: two small forts are built on the neighbouring rocks, Gustafswärd and Gustaf. Adolf's Fort; while, three and a half versts from the shore, stands the Lighthouse, on a lonely rock, inhabited by four watchmen, four pilots, and two apprentices. The lantern revolves once every minute, being for forty seconds dark, and for twenty light. It is lighted as soon as the ice breaks up in the spring, until the 27th of May, and again from the 19th of July until the sea is frozen over. The waves have worn the rocks into huge chasms and caves, which, in their naked barrenness, contrast strangely with the smiling islands scattered around. Dates cut in the granite show the sea-line for centuries past. Hängö-udd is frequently mentioned in the modern annals of the Swedish navy. Its rocks are the dread of the sailor, who, during the stormy nights of autumn, looks anxiously out for its bright revolving beacon. It was here that the brave Nils Ehrenskiold, in August, 1714, fought like a lion for three hours against Apraxin's 210 ships, with 20,000 men, until the Admiral's ship, the *Elephant*, was boarded by the Czar Peter in person; in consequence of which victory, the Czar was made Vice-Admiral by his Senate.

THE LIGHTHOUSE OF HANGÖ-UDD, ON THE SOUTHERNMOST POINT OF FINLAND.

THE RUSSO-GREEK INSURRECTION

The accounts from Greece continue to be of a very confused and unsatisfactory nature; but, so far as may be gleaned from the mass of correspondence in German and English papers, and electric despatches from Vienna, the insurrection has hitherto been a very paltry affair. One of the most recent correspondents, writing from Athens on the 30th ult., denies that there has been any popular outbreak either in Epirus or Thessaly; in spite of all the alarming accounts we have heard from that quarter. The whole movement, it is affirmed, originates with, and is carried on by, the Greeks in Greece Proper. In Epirus, out of forty-four different places which were summoned to take up arms against the Turks, only one little village responded to the appeal. This does not say much for the enthusiasm of the people. All the Suliotes under Turkish rule are described as perfectly tranquil: those which appear under that name among the Greek insurrectionary force are Suliotes who have come from Greece. In Thessaly the insurrection is only in those places where the Greek adventurers appear; and with their disappearance the disturbance ceases also, for nowhere has the population shown itself in the least degree favourable to the movement. On the contrary, the Greek patriots who come to deliver them, do all in their power to disgust them from joining them. They rob and plunder, indiscriminately, Turks and Greeks; drive away all the stock they can get hold of, and sell it in Greece. It is, in fact, brigandage on a large scale, under the pretext of liberty and patriotism. This explains why the movement has not spread at all. In Epirus they are still in the mountains near Arta, and in Thessaly, near Domoko (Thaumakos), Platana, and Armyro. As for the stories about the siege and storming of Arta, which have been repeated so frequently, they have not the slightest foundation. It is true, indeed, that the insurrectionary forces were once before Arta, but that was only for a short time. And yet Arta is not a very large place. Military authorities say that the Castle (of which our Artist has given a Sketch in to day's publication), could be taken in a very short time by a strong force. The town is not fortified, but as it now contains a garrison of 4000 men, and is said to be well supplied with provisions and military stores, it is not likely to surrender to any force that the Greek bands can muster. As for Prevesa, which rumour had also given to the Greeks, the taking of that place is still more improbable. Prevesa is a strongly-fortified town, with a castle and a citadel, which, even with the command of the sea, it would require some time to reduce. General Church, during the War of Independence, attempted in vain to get hold of it. So, unless the insurgents can get regular troops and a considerable park of artillery, Prevesa is quite safe.

The exaggerated accounts which have appeared of the wide extent of the insurrection, are explained by the mountainous nature of the country, which is uncommonly favourable to guerilla warfare. They come, and disappear again; but all these movements lead to nothing, so long as they cannot possess themselves of a stronghold as the basis of their operations; and there is not much chance of that, because the whole Greek force in Epirus is in a state of disorder occasioned by the disunion of chiefs. If it had not been for that, they could have made much more progress, since the Turkish forces in the beginning were very weak. The whole force in Epirus, as well as Thessaly, does not amount to more than 7000 or 8000 men, of which about one half is in each of these two provinces. Of these, about 1200 went from Athens, 1500 from the Peloponnesus, 1000 or 1500 from Missolonghi and its environs, 3000 from Salona, Lamia (Zeituni), Chalcis, Negroponte, and other Greek districts adjoining Thessaly. To these you must add, perhaps, 1000 Greeks from the Turkish territory, under various petty chiefs.

Arta was a large and populous town at one period; but, having been stormed by the Greeks in 1828, under Marco Botzaris, it was reduced to a ruinous state. It is situated on the left bank of the river, about seven miles from the Gulf of Arta, which forms the boundary between Albania and Greece. Hellenic remains of considerable extent, part of the ancient Ambracia, may still be seen, forming the walls of the Castle, which is situated near the river. Arta is about thirty-six miles from Janina, and sixteen from Prevesa.

TOWN AND FORTRESS OF ARTA, IN ALBANIA.

THE GREEK INSURRECTION.

(From our Special Correspondent.)

THE PIRÆUS, April 1st.

At last I could not resist the temptation of going to Greece. There is little or nothing to do at Constantinople; and the Greek revolution becoming every day of more interest, I decided to go to Athens. I expect to be back again in Constantinople, before the arrival of the Franco-Anglo expedition, which, by-the-by, runs great risk of coming only in pudding-time, or rather, as the French say, "comme la moutarde après dîner."

Is this delay intentionally made? Really, judging from the past, it looks very much like a premeditated repetition of the Sinope business—a very disgraceful one for the combined fleets and Governments. Everybody at Constantinople was indignant when I left. I was just embarking when there came the confirmation of the rumour spread the previous day of the crossing of the Danube by the Russian army. In that blessed place, Pera, people never learn anything of Turkish affairs but from London and Paris papers; so that you will learn all the particulars of these events a week before me.

I left the Pointe du Serail at six on Wednesday, March 30, on board the first direct-going boat. I availed myself of this because it is the only one that goes to Athens direct; and we reached it this morning. I am obliged to submit to a quarantine of twenty-four hours in the lazaret; and the boat leaving this afternoon for Marseilles, you will not wonder at my sending nothing to-day.

We stopped at Gallipoli for a few hours; met there a French steam-frigate, with six hundred Chasseurs de Vincennes and a staff of Officers du Guide, going to fix and set out the *emplacement*, &c., of the camp to be formed near that town.

Out of the Dardanelles we saw, at a considerable distance, a three-decker, which is said to be the *Napoléon*, that had been sent to repair to Toulon. Here, in the Piræus, lies at anchor a French frigate, that has been sent with despatches by the French Ambassador at Constantinople. No intelligence from France.

I will hear, perhaps, something of the expedition when I go to Athens after performing quarantine. If there is any probability of anything of interest occurring near Constantinople to require an immediate return, I will go back by the next Lloyd.

There is no truth in the report of an intended expulsion of all the Hellenes (not the Greeks) from Constantinople. (By Hellenes they mean only the subjects of his Majesty King Otho.) The Turks are not so foolish as to give such an excuse to some 30,000 Greeks to take arms and join their enemies at this moment.

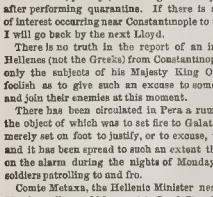
There has been circulated in Pera a rumour of a Greek conspiracy, the object of which was to set fire to Galata, &c.; but this calumny was merely set on foot to justify, or to excuse, the above intended measure, and it has been spread to such an extent that the Embassies were kept on the alarm during the nights of Monday and Tuesday, with Turkish soldiers patrolling to and fro.

Comte Metaxa, the Hellenic Minister near the Porte, is to leave next Monday. I am told he went to Lord Stratford last night, and asked for the protection of the English Ambassador for his countrymen. This demand was refused. His Lordship went so far (I am told) as to threaten the Hellenic Government with a military occupation.

OBITUARY OF EMINENT PERSONS.

LIEUT.-GENERAL SIR CHARLES WADE THORNTON, G.C.H. THIS gallant officer died on the 6th inst., at St James's Palace, aged ninety. So far back as 1782, he received his commission as First Lieutenant Royal Artillery. In 1793 he served in Flanders, where he lost an arm; in 1816 was appointed Lieutenant-Governor of the garrison at Hull; and in 1846 attained the rank of Lieutenant-General. For some time General Thornton was Assistant Barrack-Master General at the office in Spring-gardens, London. He was knighted in 1831, and made G.C.H. in 1837.

VISCOUNTESS GORT.

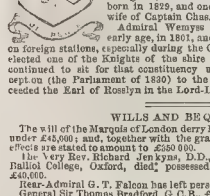


MARIA, VISCOUNTESS GORT, who died, aged 57, on the 4th inst., was wife of John Prendergast, present and third Viscount, to whom she was married Dec. 15, 1814, and by whom she leaves a large family to deplore her loss. On her father's side she was of ancient Celtic descent, being the eldest daughter of Standish, first Viscount Guillamore, Lord Chief Baron of the Exchequer in Ireland: whose ancestor, Hugh O'Grada, Chief of Pongaile, in Thomond, 3rd Captain of his nation, acquired, in 1309, by his marriage with the heiress of O'Kerwick, the lands of Kilballyowen, and other estates in the county Limerick, to which a considerable addition was made in 1633, by the union of Barby O'Grady, of Kilballyowen, with Faith, daughter and co-heir of Sir T. Standish, Knt., of Sandon, Chevne, in Lancashire, and Bruff, county Limerick, M.P.

Of Lady Gort's mother, a member of the historical family of Waller, a notice appeared in our Journal of Oct. 15 last.

Extensively connected by her birth or marriage with the landed aristocracy of the west of Ireland, the disastrous results which have accrued to most of that body, from the effects of the famine of 1847, were frequent subjects of painful anxiety to the estimable lady whose death is recorded; and her health had suffered materially of late years. But she bore all her trials with Christian resignation, and her last short illness was free from pain. She has only survived her mother for six months; and her body has been laid next to hers, in the crypt of Monkstown Church, near Dublin.

JAMES WEMYSS, ESQ., OF WEMYSS CASTLE AND TORRIE-HOUSE, REAR-ADMIRAL, R.N.



THE death of this well-known and esteemed gentleman occurred at his seat, Wemyss Castle, on the 3rd instant. Rear-Admiral Wemyss was son and heir of the late Lieut.-General William Wemyss, of Wemyss, and grandson of the Hon. James Wemyss, M.P. for county Sutherland, third son of James, fourth Earl of Wemyss. He was born in 1789, and married, in 1826, Lady Emma Hay, daughter of William, sixteenth Earl of Erroll, by whom (who died 17th July, 1841) he leaves a surviving son, James Hay Wemyss, Esq., of Wemyss, born in 1829, and one daughter, Frances Harriet, wife of Captain Chas. Balfour, R.N.

Admiral Wemyss entered the navy at a very early age, in 1801, and saw a good deal of service on foreign stations, especially during the Chinese war. In 1830 he was elected one of the Knights of the Shire for the county of Fife, and continued to sit for that constituency uninterruptedly, with one exception (the Parliament of 1830) to the year 1847. In 1837 he succeeded the Earl of Rosslyn in the Lord-Lieutenancy of Fifeshire.

WILLS AND BEQUESTS.

The will of the Marquis of London derry has just been proved in London under £45,000; and, together with the grants in the other will courts, the effects are stated to amount to £550 000.

The Very Rev. Richard Jenkyns, D.D., Dean of Wells and Master of Balliol College, Oxford, died, possessed of personalty amounting to £40,000.

Rear-Admiral G. T. Falcon has left personalty valued at £16,000.

General Sir Thomas Bradford, G.C.B., £7000.

Mrs. A. C. C. Blagrove, late of Welbeck-street, has bequeathed to public charities £3000, namely:—To the Home Missionary Society, £1000; Colonial Missionary Society, £1000; London Missionary Society, £500; and £400 to the Theological Seminary for Missions to China; £2000 to the Societies and Schools in connection with John-street Chapel, Bedford-row; and £200 to those at Tottenham-court-road Chapel, Schools, and Society-tee.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

BRITISH EMBASSY AT ST. PETERSBURG.

Lord LYNDHURST: I wish to call the attention of her Majesty's Government to a report which has been in circulation for the last few days, to the effect that the Russian Government or authorities have seized the property of our late able and most excellent Minister at St. Petersburg. I hope there is no foundation whatever for that report. If it should turn out to be true, that act is such a gross violation of the admitted law of nations, that Russia must be excluded from the class of civilised States (Hear, hear). I hope her Majesty's Government will be able to afford some explanation on the subject.

The Marquis of LANSDOWNE: In the absence of my noble friend the Secretary for Foreign Affairs, I can only say that, while I entirely concur in the expressions of the noble Lord with respect to the character of the proceedings he has alluded to, if any such have taken place, my noble friend at the head of Foreign Affairs has no information on the subject, and therefore her Majesty's Government at present can give no explanation. It is possible, however, that Sir Hamilton Seymour may have received intimation that his property has been seized by the Emperor Nicholas.

PARLIAMENTARY PAPERS.

A discussion took place as to the enormous expense attending the printing and publication of the papers of the House, in the course of which Earl GRANVILLE intimated his intention of submitting a proposition on the subject to the House after the Easter recess.

HOUSE OF COMMONS.—MONDAY.

BRIBERY, &c., BILL.

The House having resolved itself into a committee upon the remaining clauses of the Bribery, &c. Bill,

Lord J. RUSSELL said, he was ready to accede to the proposition to refer this bill, the Controverted Elections, &c., Bill, and the Bribery Prevention Bill to a select committee; which was accordingly done.

THE REFORM BILL.

Sir E. DERING rose, pursuant to the notice he had given, to ask the noble Lord the member for the city of London whether it was his intention to move the second reading of the Reform Bill on the 27th April (Hear, hear)

Lord J. RUSSELL: I greatly regret—particularly as I desired the hon. Baronet to postpone his notice until this day—that I am still this day unable to answer the question which is put to me. I propose, however, to make a statement to-morrow, on moving the adjournment of the House, when I will satisfy the hon. member with respect to his question (Hear).

COLONIAL CLERGY DISABILITIES BILL.

The House went into committee upon this bill, which grants an indemnity to the Metropolitan of any province, or the Bishop of any diocese in the colonies, with his clergy and the lay members of the Church of England, attending meetings for regulating ecclesiastical affairs.

Mr. DUNLOP moved to substitute for "Metropolitan of any province, or Bishop of any diocese," the words "Bishops and clergy," being one of a series of amendments the object of which was to guard against giving indirectly a legislative sanction to a preference to the Church of England in the colonies over any other religious denomination there.

The debate upon this amendment extended, not only to the whole scope and principle of the bill, but to the essential character and *status* of the Church of England in the colonies.

The SOLICITOR-GENERAL, who had charge of the bill, offered to modify the terms of the clause so as to obviate the objection of Mr. Dunlop; but the opponents of the amendment called for a division, and the amendment was carried by 51 to 34.

The next amendment proposed by Mr. DUNLOP was negatived; and certain amendments moved by the SOLICITOR-GENERAL were agreed to.

The Chairman was then ordered to report progress, the remainder of the clauses (after five hours' debate) being reserved for further discussion.

VENTILATION OF THE HOUSE.

On the motion of Mr. SPOONER, the report of the Committee on the Ventilation of the House, recommending various alterations was agreed to.

HOUSE OF LORDS.—TUESDAY.

THE EASTERN QUESTION.—THE GERMAN POWERS.

The Earl of CLARENDON stated, in reply to Lord Beaumont, that a protocol had been signed at Vienna on Sunday last, the tenor of which was as satisfactory as he could have anticipated. The assent of Prussia had not yet been announced; but it was certain that that country had not gone over to Russia. Rumours had reached England of the recall of the Prussian Ambassador, of which the Chevalier Bunsen had also heard; but he believed the only foundation for that report to be, that the despatch of a special mission to the Court of St. James was contemplated by the King of Prussia—something of the same nature as the one sent over three weeks ago, and which would probably be attended with the same result. He could give no official information touching the terms of the treaty between Austria and Prussia, but had reason to believe they were dictated by the former Power. According to the last accounts the fleets were at Varna. On receiving news that the Russians had crossed the Danube, the Admirals had despatched a squadron of observation to the vicinity of the scene of operations. The Austrian troops, he added, had not yet entered Servia; but the step, if accomplished, would be taken mainly for the purpose of protecting the territory.

The Bankruptcy and Insolvency (Scotland) Bill was read a second time.

POSTPONEMENT OF THE REFORM BILL.

The Earl of HARDWICKE having alluded to the postponement of the Reform Bill, as announced in another place,

The Earl of ABERDEEN entered into a detail of the motives which had actuated the Government when introducing the measure early in the session, and in withdrawing it then. He hoped to reproduce that, or some similar bill, at the earliest period that the state of public affairs would permit.

Lord CAMPBELL, as a Reformer, rejoiced to hear that the bill was postponed.

HOUSE OF COMMONS.—TUESDAY.

ADJOURNMENT OF THE HOUSE.—THE REFORM BILL.

Lord J. RUSSELL availed himself of the opportunity of moving the adjournment of the House for the Easter holidays, to state the course he proposed to take in reference to the Reform Bill. He reminded the House of the principles upon which Lord Aberdeen's Ministry was founded. That noble Lord, as well as himself, were pledged to bring forward a measure of Reform, and, therefore, it was not his personal honour alone that was involved, but the honour of the Government also. In conformity with that pledge, he had brought forward a motion such as he thought suitable. At the time of introducing the measure there was a prospect of war, and while that question was pending he proposed to adjourn the second reading to the 27th inst. Abstractedly speaking, he did not consider a state of war a sufficient reason for not proceeding [with a measure of Parliamentary Reform; but under the existing circumstances, when war was declared, the Government had to consider whether or not the House should proceed to the second reading on the day fixed. The Government had to consider whether they would be able to carry the measure in the present state of parties in both Houses. He thought it would be generally admitted that there was an indisposition on the part of the House to undertake the consideration of the question; and, as to the country, there had not certainly been disapprobation, but there had been no anxiety as to the bill being immediately proceeded with. This had been shown in several ways. First, from the absorbing interest with which the war is regarded; and, secondly, in the absence of demonstration in favour of the measure in the shape of petitions. The conclusion come to by the Government was, that it would be unwise, whether the general interests of the country or the interest of Reform itself were concerned, to press the second reading of the bill. He felt, and everyone must feel, that there was great force in a remark which fell from Mr. Disraeli in a former discussion, that it was inconvenient that there should be a bill on the table, containing provisions for disfranchising seats, the occupants of which were still members of the House, and that there should be no decision upon that proposal. He thought it also a great disadvantage that her Majesty should be advised to propose to Parliament that a measure of Parliamentary Reform should be submitted, and yet that the measure should not be seriously taken into consideration. He did not consider that the pledge given by the Government would be redeemed by merely placing the measure on the table. The pledge involved that they should do their utmost to carry it to a successful issue. But great as was the inconvenience of not pursuing that course, he thought greater inconveniences would arise from adopting it. The Government would hardly propose the second reading without declaring that, if defeated, they must resign their offices, or make an appeal to the country by dissolving Parliament. He thought either course would be attended with great danger. A message had been sent down from the Crown announcing the commencement of war, and Ministers could not shrink from the responsibility of their position. Such being the case as regards the Reform Bill, and the position of the Government, if he was asked how the question of Reform itself stood, he was quite ready to give an answer. The Ministry of Lord Aberdeen is as much pledged to Reform as it was on the first day that it entered upon office; and with regard to specific details, the Government saw no reason to change their opinion with respect to the general scope and object of the measure. He should only say that when a suitable opportunity offered, he would again bring forward a Bill of Reform. When Parliament can properly attend to the subject, Ministers will be ready to bring forward a measure, and grapple with it with all the weight of a Government. The Government was as much as ever a Government based upon Reform. As to his own position, as the organ of the Government in that House, Lord John Russell had to say a few words. The course he had taken would expose him to the taunts and sarcasms of the member for Buckinghamshire, who knew well how to apply his shafts. They were weapons of opposition to which Lord John had long been accustomed, and he would not shrink from the encounter, although employed with greater force than they are likely to be now. It was a different thing as regarded those who supported the Government. The statements he had made might be open to suspicion; and that suspicion could not be entertained without weakening—

[At this point the noble speaker's feelings overcame him; and, as he used the word "suspicion" in reference to his motives, his utterance was checked, and the sentences which he struggled to pronounce were evidently given through tears. As soon as this was perceived, loud and cordial cheers, renewed and repeated, broke out from nearly all points.]

His Lordship proceeded to say, that if he had done any good to the cause of Reform, he deserved some confidence; and, if he had not that confidence, he could be of no use to the country, and could not retain office. He had, however, taken the course which he had thought the right one, and he expressed a hope that he should be supported. Lord J. Russell, speaking to the last under strong emotion, resumed his seat amid renewed cheering.

Sir E. DERING said that the House was under the deepest obligation to the noble Lord for having extricated them from a position of difficulty. The House and the country would do full justice to his Lordship's motives in introducing the bill, and not less to the sacrifice he had made and the moral courage he had shown in withdrawing it.

Mr. HUME expressed sympathy with the feelings of Lord J. Russell, and perfect conviction of his sincerity. He was perfectly satisfied with the assurance Lord J. Russell had given as to the re-introduction of the measure

Mr. BRIGHT repudiated the war policy which had necessitated this course, but the House was precluded from making any objections to it. He warned the Opposition against supposing that the people did not demand Reform, for war taxation would make their demand still more urgent, and he counselled Lord J. Russell to give them a simple and a generous measure.

Mr. LABOUCHERE warmly complimented Lord J. Russell and the Government on the course they had taken.

Lord JOCELYN and Lord H. VANE expressed their approbation of the course taken by Government.

Mr. DISRAELI thought the Government had arrived at a sound and satisfactory conclusion, and that the country was to be congratulated upon it. He was not disposed to take up in a indulge in those sarcasms which the noble Lord anticipated; and if other measures to which he (Mr. Disraeli) had objections were disposed of in the same way, he promised an opposition equally mitigated. With regard to the noble Lord personally, although it had been his fortune to sit opposite to him, no man entertained a more hearty respect for his character than he did. The speech he had delivered, painful as it was in many respects, was in every part worthy of him. Still, all he had said failed to justify the introduction of the bill. In this opinion he was much fortified by the declaration of Lord J. Russell himself, and Mr. Disraeli strongly objected to the noble Lord's supporters pressing him for further pledges on the subject.

Sir G. GREY and Mr. S. HERBERT declined the consistency of Lord John Russell in taking the course he had done.

Sir J. PARINGTON said there was no man on any side of the House who was disposed to question the honour of Lord John Russell: and if any person could possibly have entertained such a feeling, it must have been removed by his speech of that night. But nothing that Lord John Russell had said had impaired his (Sir J. Pakington's) opinion, that, if the Reform Bill were not to be proceeded with, it ought not to have been introduced.

Mr. J. MACGREGOR concurred in the propriety of deferring the bill.

Lord J. RUSSELL begged to express his grateful sense of the manner in which his statement had been received.

The motion for adjournment was then agreed to.

THE PUBLIC BALANCE SHEET.

The CHANCELLOR of the EXCHEQUER laid upon the table a statement of the income and expenditure of the country for the year ending the 5th of April; and made a lengthened statement respecting the finances of the country, the balances in the Exchequer, Exchequer bills, &c. The actual surplus, he said, was £2,000,000; and he did not believe that he could have occasion to use even the amount of Exchequer Bills which had been already voted. He explained the reduction of the balances in the Exchequer, and said that the alarm excited upon the subject in the public mind arose altogether from misapprehension, mis-statement, and the improper manner of keeping the public accounts. The amount of accommodation required from the Bank during the last quarter was only £2,129,000, but still even that small sum should be reduced, and reduced it would be.

Mr. DISRAELI endeavoured to vindicate his former statement as regarded the balances in the Exchequer, but declined to discuss the financial position of the country until he should have an opportunity of reading the papers which the right hon. gentleman had just laid upon the table, and of which he could only have a general notion from the remarks which had fallen from him

Mr. T. BARING protested against the principle which appeared to be the keystone of the Chancellor of the Exchequer's policy, that of depositing upon the Bank of England to raise money on deficiency bills instead of relying upon balances in the Exchequer.

Mr. LAING agreed in most of the observations of the Chancellor of the Exchequer, but he thought there was a dangerous principle to rely upon deficiency bills instead of on balances in the Exchequer, and that any saving made by the reduction of those balances was by no means an equivalent for the risk to which it exposed the public credit.

After some observations from Sir H. WILLOUGHBY,

The CHANCELLOR of the EXCHEQUER replied, and the balance-sheet was ordered to be printed.

THE RUSSIANS IN PARIS.—Before M. de Kisseleff left Paris, he sent a circular to such of the subjects of the Czar resident in Paris as were known to him, signifying that it was the desire of his Imperial Master that they should leave with the greatest possible rapidity. Many of these persons pleaded illness or other causes, and they were informed that they might remain until further notice. This notice has just been given, and it is said that the niece of M. de Kisseleff is included in it. Some of the Russians thus ordered away will obey the injunction, for their incomes are derived from property in Russia, which will be confiscated if they do not comply with the order. Not one, probably, of the Russians who derive their incomes from other sources will comply with the Imperial mandate.

DISCOVERY OF GOLD IN CEYLON.—By the Colombo papers, just received, we learn that gold has been discovered at Rusnwelle, *anglice* Gold sand, by two sailors lately arrived from Australia. Starting from near Kandy, they followed the course of a river for several miles, and, having commenced washing the sand, they were at once rewarded by a quantity of gold dust. The sailors returned to their ship, obtained their discharge, and, having persuaded four of their mates to accompany them to the lucky spot, they soon came to a block sand abounding in small nuggets; which, on being tested by the Colonial Secretary, the metal proved to be the veritable ore.

IMPERIAL RAPACITY.—The statement in the House of Lords, on Monday evening, that the Czar had seized the furniture and other effects of our late Ambassador at St. Petersburg, has called forth a letter from Sir G. H. Seymour, in which he says:—"The question affecting my interests appears to be not whether certain cases which I left at St Petersburg—and which contain pictures, ornamental furniture, books, linen, and other articles of value—are to be seized and confiscated, but whether their shipment on board the *Anne M'Alister*, the only English vessel remaining at Cronstadt, is to be permitted. According to the last advices, the question was determined against me."

CHESS.

TO CORRESPONDENTS.

J. E. B., of Shuttgardt.—We are sorry to say your Problem still requires amendment, as there is an easy mate by—1 Q to Q 3rd (ch), 2 B to R 4th (ch), 3. Q takes P (ch), & so takes B, &c

ALUMNUS.—Try Kling's Chess Rooms, in New Oxford-street.

MARS. No. It would not be repudiant, the public mind is too much absorbed by the prospect of a long war

W. M Widrey, M. F. of Kew. Q. B. G.—Your Solution will do

W. S. Yes

A. E. W., York.—Stalemate is a drawn game

NOTHERHITE.—Your opponent is in error; he cannot take the piece under such circumstances

J. P.—Your last is somewhat better than the former, but still below our mark.

Mr. J. B is thanked for the games

CICONIENSIS.—The problem was inserted without the sanction, or even the knowledge of Mr Braham. Mr. R. has written to us, disclaiming all connect on with the matter in question.

SIGMUND G., of Genoa.—Received safely, and acknowledged by letter. The other communications are looked forward to with much interest.

E. W. F., Ashborne.—No. 1, will do. The second admits of two solutions.

F. S., of H Moderately good.

MARSALOV.—They are not nearly up to the required standard

W. G. H., Ferry-hill.—Neat, but much too easy.

SOLUTIONS OF PROBLEM No. 527, by J. F., J. M., of Sherborne, are correct.

SOLUTIONS OF PROBLEM No. 528, by J. F., G. T. W., Ernest, J. J., Mandrith, F. R. of B. Newmarket-Subscriber, are correct.

SOLUTIONS BY ENIGMAS by Alexander, Submarine, Cliapod, CRAY, Miss Peter, M. R., J. P. Derevon, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 528.

WHITE.

White, moving first, to checkmate in four moves.

MR. STAUNTON'S CHALLENGE.

As most people anticipated, Mr. Harrwitz has stricked even this challenge After accepting the former, and it has become apparent to him that, even when called on to play, it was quite evident that nothing short of an Act of Parliament would ever bring him to face Mr. S. again. He has too lively a remembrance of the drubbing he got before, when, in a long match, he could not win a single game.

Now the affair is at an end, we must be permitted to say we think Mr. Staunton very much to blame in having taken any steps whatever of this person's vapouring; and we sincerely trust that he will treat any further proposals from Mr. Harrwitz with the contempt they merit. He has already placed him where giving large odds. What possible honour could accrue, then, from winning another match upon even terms? There is no kind of proportion in the relative risk of the two parties. Mr. Staunton backs himself against a man who does not risk a penny (for all the cash is found for him), and who, if beaten, is no worse off in Chess standing than he was before. Merely for Mr. S. to engage in such a contest at all, is injudicious; to do so, and wager £300 to £200, is the height of Quixotism. If he must needs subject himself to the fatigue and loss of time of a long Chess match, let it be with an opponent worthy of his powers, and not with a mere second-rate performer, against whom he has every thing to lose and nothing to gain.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

All public security has been subject to numerous and, we may add, extensive fluctuations during the past week; but the whole of the week, nevertheless, the payment of the dividends having rendered money more abundant, and the purchases of Stock on public account having been large, prices have kept up remarkably well, notwithstanding a strike in favour of our position. Exchequer Bills have been firmer than for some time past —owing to the declaration of the Chancellor of the Exchequer, that any funding process will not be necessary, and that the bills at present in circulation are nearly £2,000,000 less than he is allowed to issue

In the Stock Exchange, as well as in Lombard-street, money has been abundant. The Three per Cents have been steady, at former rates of discount. First-class Bills, short dated, have been done at 4½ to 4¾ per cent.

The imports of bullion have been compara.ively small, arising from the unfavourable nature of the exchanges; but we learn that nearly £1,000,000 sterling is on passage from Australia; and that the next packet from Mexico will bring home a large supply of silver. There has been a steady drain of gold from the coast, for shipment to the Continent. It is calculated that about £100,000 has been forwarded to France, Holland, and Belgium.

There is considerable firmness in the Consol Market on Monday, and prices advanced to some extent, compared with Saturday. The Three per Cents were done at 85¾; the Three per Cents Reduced, 85¾ ex div.; and the New Three-and-a-Quarter per Cents, 94¾. Bank Stock, at 208. Long Annuities were 4¼ ex div.; India Bonds, 2s. premium to 3s. dis.; Exchequer Bills, 3s. to 6s. premium South-Sea Stock was 115. On Thursday the Three per Cents varied from 85 to 87¾; the Three per Cents Reduced, 85¾ to 87; and the New Three and-a-Quarter per Cents, 87¾ to 87¾. A transaction took place in the New Two-and-a-half per Cents at 71¾. Long Annuities sold at 4 11-16. The Unfunded Debt was steady. The transactions on Wednesday were less extensive. The Three per Cents Reduced sold at 87¾; the Three per Cents Consols, 85¾; the New Three-and-a-Quarter per Cents, 88¾; and the New Five per Cents, 115. Exchequer Bills were 3s. to 6s. prem. On Thursday the business doing was by no means extensive; yet the Three per Cents were fairly firm, at 85¾ to 86, with the same figures for the Account. Exchequer Bills sold at 1s. to 4s. premium. There was no business transacted in the Stock-Exchange on Friday.

All Foreign Bonds have been in good request, and some extensive speculative purchases have been made in them at higher prices. Brazilian Five per Cents have touched 93 ex div.; Ditto, Small, 94; Buenos Ayres Six per Cents, 84; Ditto, Six per Cents, 1868, 82 ex div.; Ditto, Three per Cents, 74 ex div.; Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 61; Portuguese Four per Cents, 36; Russian Five per Cents, 93; Ditto Four-and-a-Half per Cents at 77¾. Long Annuities sold at 4 11-16. The Unfunded Debt was steady. The transactions on Wednesday were less extensive. The Three per Cents Reduced sold at 87¾; the Three per Cents Consols, 85¾; the New Three-and-a-Quarter per Cents, 88¾; and the New Five per Cents, 115. Exchequer Bills were 3s. to 6s. prem. On Thursday the business doing was by no means extensive; yet the Three per Cents were fairly firm, at 85¾ to 86, with the same figures for the Account. Exchequer Bills sold at 1s. to 4s. premium. There was no business transacted in the Stock-Exchange on Friday.

All Foreign Bonds have been in good request, and some extensive speculative purchases have been made in them at higher prices. Brazilian Five per Cents have touched 93 ex div.; Ditto, Small, 94; Buenos Ayres Six per Cents, 84; Ditto, Six per Cents, 1868, 82 ex div.; Ditto, Three per Cents, 74 ex div.; Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 61; Portuguese Four per Cents, 36; Russian Five per Cents, 93; Ditto Four-and-a-Half per Cents at 77¾. Long Annuities sold at 4 11-16. On Thursday the

MALLEE (AUSTRALIAN) BIRDS, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.—(SEE PRECEDING PAGE.)

worst of all, is the taste shown in embellishing earthenware—our plates, dishes, cups and saucers, which are figured and coloured with most unmeaning and vulgar devices, and requires to be completely reformed One specimen of this, remarkable for its absurdity, is the well-known plate—the "willow pattern"—and the strange jumble of unnatural objects imprinted upon it seems to be in much favour, being reproduced in varieties of shape and size, of the same material. A picture representing trees without leaves, their roots above ground, one species growing cannon-balls; gigantic birds, or rather fish, flying in the air with their wings put on the wrong way, and an idea of perspective quite as clever as the examples in Hogarth's famous plate, are not worthy of the age, and should be amended.

The holiday visitor to the British Museum may combine amusement with instruction upon this subject, by stepping into the British Mediæval-room, and there inspecting the art of this class, of some 300 years or more since: here is a porcelain plate made in 1525, the age in which Italian art had arrived at such perfection, through Raphael and Michael Angelo. This, it is almost needless to state, is not the work of either of those great men, but some inferior hand; and, though incorrect in drawing, and hard in outline, and done in only two colours (purple and yellow), yet there is grace and beauty in its simple pattern.

The second is also of the same period, and more faulty in outline than the foregoing; but, aided by a greater variety of colours, there is much beauty in its appearance. Both these specimens form part of the small mediæval collection, where great variety of shape, and originality of design may be observed in all the articles there exhibited.

May it not be expected, then, in this, the nineteenth century, when

MEDIÆVAL PLATES, IN THE BRITISH MUSEUM

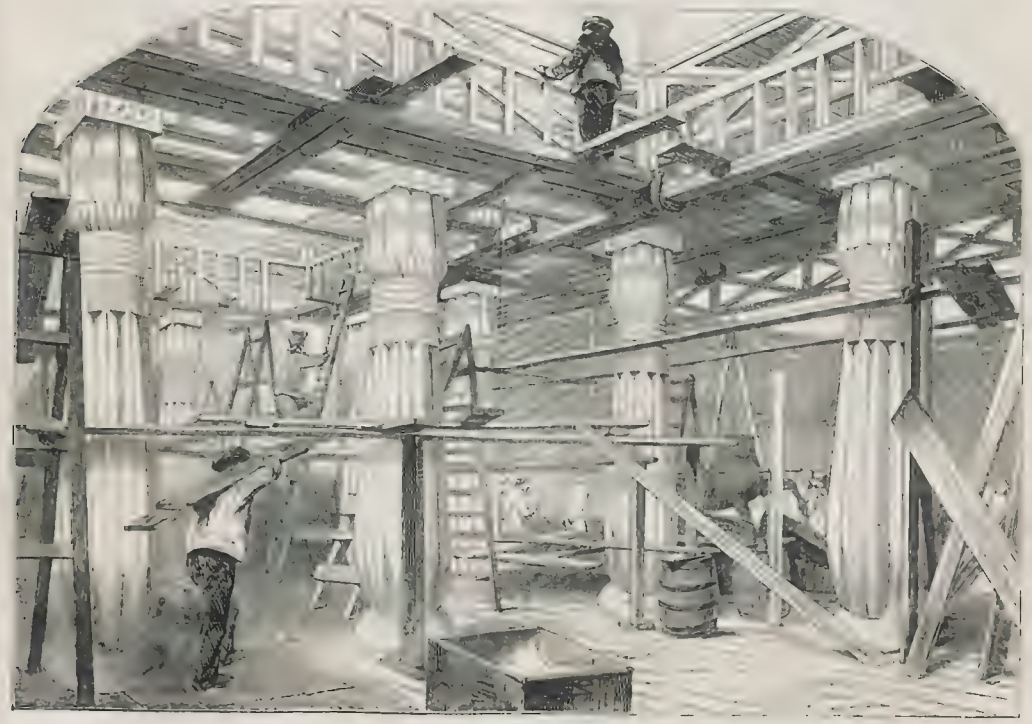
the most eminent artistic skill can easily be obtained, that our manufactories will supply us with a more elegant and tastefully-decorated set of dishes for our tables, and at prices similar to what are now paid? The "blue willow" has had its full time: it has now been in use for more than thirty years; and, as changes are continually going on, we beg of some one to "change this plate."

THE GREAT EGYPTIAN GALLERY, IN THE BRITISH MUSEUM.—(SEE PRECEDING PAGE.)

PROGRESS OF THE CRYSTAL PALACE.

COMMENCEMENT OF THE CRYSTAL PALACE, AT SYDENHAM.

On August 1st, 1853, the first column of the Crystal Palace was set up at Sydenham; in May, 1854, the building, if not completed in full detail, will, at any rate, be fit to receive, instruct, amuse, and interest a thronging multitude. The opening at the end of May is now a settled fact. The preliminaries are arranged; the price of admission and subscription tickets decided; and the railway from London-bridge is complete



THE EGYPTIAN COURT IN PROGRESS.

The time, therefore, is, in every respect, appropriate for presenting a few Illustrations, and describing in general terms the objects of its founders, and the plan of the works and gardens.

In a few days the last vestiges of scaffolding will disappear from the garden-front of the Central Transept of the Crystal Palace. The work of the contractors for the glass and iron will be finished, and they will be able to remove their staff and their plant to Paris, or wherever else one of their numerous contracts requires additional strength.

In the Garden—planting shrubs and flowers, laying turf work at the stone basins of future fountains, excavating the great bed of the lake building (first with sticks and stones, then with fine gravel), the devious walks, levelling terraces, and watering the grass and freshly-planted clumps of rhododendrons, raising the iron walls of the rosery, toiling at the water-temple, and tunnelling for the great water-pipes—a vast army of workmen, skilled and unskilled, are humming industriously. Trucks roll along the temporary rails, stolid labourers drive heavily-laden barrows along the lines of single planks. Others, perspiring, dig and slice the London clay, as tough and smooth as a bad imitation of Stilton. Half hidden in the trees, on the north-east boundary, is the building where one set of steam-engines is to pump the water from an artesian well—which has been sunk 500 feet, through clay and gravel to chalk—into the lake, where antediluvian monsters, half covered, disport themselves, or from islands grimly threaten us with their open jaws and scaly bulk, and more than satisfy the curiosity, and cause the fears, of the rising generation

Under the hands of the swarm of workmen—they look like pismires from the top gallery of the Central Transept—the Garden almost grows before one's eyes

The South Wing, planned to connect the railway with the Palace, by a covered way, is completed. The North Wing, destined for machinery and agricultural implements, is in rapid progress.

Behind, the Great Reservoir, which finally receives the waters of the lake, before it is pumped into the water towers, is alive with men, railway trucks, and a steam engine.

A few figures may be considered a useful addition to the outlines, in drawing a comparison between the Palace of Sydenham and the Palace of Hyde-park. The length is 1608 feet; or, less by 240 feet than the building of 1851, broken by three transepts instead of one, of which two are 136 feet in height, from the garden, with a span of seventy-two feet, and the third 200 feet, with a span of 120 feet. The extreme breadth of the building is 334 feet at the transepts, or seventy two feet less than the Hyde park wonder, and this breadth is apparently further diminished by the arched roof which now runs the full length of the whole building.

The diminution of the length and breadth is in part compensated by the capacity of the two wings which stretch on either extremity 376 feet, into and so far enclose the Italian terrace Garden; and also, by a basement-story, commonly called Sir Joseph Paxton's Tunnel. Entering from the railway station just finished for the exclusive use of Crystal Palace visitors, and passing the entrance to the South Wing, we see the view from which our picture of 1854 is taken. Climbing to the first gallery, if we walk on to the southern extremity of the Palace, we shall be in a position to take a bird's-eye view of the interior arrangements.

The basement story, or tunnel, by which the Gardens are reached—which will also be devoted to warming the building, by the aid of a row of furnaces and boilers, and fifty miles of steam-pipes—is at present still in the rough. The Nave, or Central Avenue, on the ground floor, is to be kept clear of anything more opaque than the jets of a fountain: statues, monuments, architectural gems—all are to be cleared away.

The Great Transept—in which four gigantic equestrian statues are to be placed (two antique, two modern), as it were on guard—divides the Nave into two equal parts: the northern division dedicated to art, the southern to commerce; both adorned with fountains, flowering shrubs, and rare trees. The northern half—which will afford a school or harmonious museum of models in architecture and art, from the time of Nimroud, the Mighty Hunter, to Michael Angelo and his patrons, with presents all with exact copies of the man-headed bulls and lions of Nineveh, and (to take a long leap) the bronze gates of Ghiberti, the gates of Paradise—is on both sides sufficiently complete to afford an idea of the final result; although it has been delayed by the strike of a considerable body of painters, plasterers, and masons. In Egypt the artists are at work colouring the columns. In Greece and Rome, the gods, the demigods, the heroes, poets, and philosophers, require a little arrangement. The Courts are at present crowded with casts from divine antiques. A few weeks will see the Courts of Lions, from the Alhambra, as fanciful in pierced work and embossed work, and as glowing in colours—crimson, gold, blue—as the original; while the Royal Chamber of the Assyrian Kings—which, by an unavoidable chronological anachronism, stands at the northern extremity of the building, after the Moorish, and before the Byzantine periods—will be almost complete by the time these lines are printed. The portals guarded by the man-headed bulls and lions; the ceilings and external pillars of perpetual sun—blue, yellow, pink, and white; the walls covered with plaster copies of the "Illustrated News" of Nineveh, and chronicles in the arrowheaded character, unravelled by the industrious ingenuity of Champollion, Rawlinson, and Hincksee, and their pupils.

We this week engrave the commencement of the construction of the Crystal Palace; and the Egyptian Court in progress. Next week we shall engrave the building in its present approach to completion, and detail the several Courts, &c

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 13.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average.

The reading of the barometer decreased from 30.42 inches at the beginning of the week, to 30.1 inches by the afternoon of the 8th; increased to 30.24 inches by the morning of the 10th; and decreased to 30.15 inches by the afternoon of the 11th; increased to 30.39 inches by the morning of the 12th, and decreased to 30.36 inches by the afternoon of the same day; increased to 30.41 inches by the morning of the 13th; and decreased to 30.35 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30 198 inches. This reading has now been above 30 inches from the 27th of March, and (with four exceptions) from the 21st of February.

The mean daily temperatures have now been above their average values on every day from the 20th of March, ranging from 1·2° above, on the 10th, to 10·5° on the 8th; the mean daily excess for the period being 5·8°. The mean daily temperature of the 8th is the highest mean daily temperature recorded on that day since the year 1821, when it was 56·2°.

The mean temperature of the week was 50·9°, being 5·9° above the average of the corresponding week during 38 years.

The range of temperature during the week was 37°.

The mean daily range of temperature during the week was 23·2°.

Rain fell during the night common to the 12th and 13th to the depth of six hundredths of an inch.

The weather throughout the week has been fine, and the sky cloudless, with the exceptions of the mornings of the 10th and 11th, and the morning and evening of the 12th; the sky, during the middle part of that day, being almost free from clouds.

Lewisham, April 14th, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending April 8th, the births of 1742 children were registered in the metropolitan districts: of these 863 were boys, being 117 above the average of the corresponding week during the nine preceding years, and 277 were girls, being 139 above the average of the same weeks. The number of deaths registered in the same week was 1149, and shows an improvement in the path of health, the average number of deaths weekly in March having been 1305. In the ten corresponding weeks of the ten preceding years, the average number of deaths, corrected for increase of population, was 1238. The deaths registered are, therefore, 79 less than the estimated amount.

NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—The annual general meeting of the subscribers and friends of this institution was held on Tuesday, at the Admiralty, John-street, Adelphi; Captain Shepherd, H.C.S., Deputy-Master of the Trinity House, in the chair. From the annual report, it appeared that the lifeboats of the society, during the year, had saved the crews and passengers of twelve ships, consisting of 100 persons. The destruction of human life from shipwrecks, on the coasts of the United Kingdom, had been very large in the past year—800 shipwrecks, with the loss of 870 lives, having occurred; which, however, was considerably less than those of 1852. In addition to one gold medal, fourteen silver medals, and ten other honorary rewards, nearly £300 had been voted by the institution during the past year for saving 678 lives. The receipts of the year had been £1885, including a donation of £100 from her Majesty the Queen, and £210 from the Corporation of London; whilst its expenditure on legitimate objects was £1485, besides liabilities for life boats amounting to £570. The report was adopted unanimously, and various resolutions pledging the meeting to support the institution were carried.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—A quarterly meeting of the Governors of this Charity was held on Thursday last; Lewis Powell, Esq., in the chair. From the surgeons' reports, it appeared that eighteen operations for cataract had been performed with perfect success, four of whom were children born blind. The total number of indigent persons who received the benefits dispensed by this excellent charity, for the quarter ending 31st March, was 1492. This hospital is especially devoted to diseases of the eye, and from its door no deserving person is ever turned away; it fully merits the liberal support of those who consider the wants of the afflicted poor.

NEWLY-INVENTED SPURIOUS COIN.—Within the last few days Mr. Webster, the numismatist, and inspector-general of coins to her Majesty's Mint, has had transmitted to him some counterfeit shillings, bearing date of those issued in 1852, and which more perfectly represent the genuine coin than anything ever yet put in circulation. The difference from the ordinary bad money is that they are struck with a beautifully-executed die, from a hard white metal, which is subsequently strongly electro-plated. Being struck from dies they are to all appearance perfect in this respect, that the rim and milling are quite sharp and complete, whereas in the Britannia metal base coin hitherto circulated, from being cast in moulds and the metal poured in from the edge of the mould, the outer rim of the coin is always faulty, and a very cursory inspection of that part would suffice to detect it; and again, being struck from a die, the impression in every other respect has that sharp, full, and perfect appearance appertaining to good coin, and wholly impossible to be obtained when cast in moulds. The component parts of the metal from which they are struck are copper, nickel, and zinc, in the following proportions:—Copper, 64.26 per cent.; nickel, 15.71; and the rest zinc, which is in reality German silver. The shillings weigh five grains light of a genuine one of the same year, and three grains heavy of a George IV. of 1822. The metal being so hard the coin does not wear out nor expose the fraud; but they may be known by the ring, which is most signally bad.

THE CONSERVATIVE LAND SOCIETY.—The seventeenth public drawing, for seventy rights of choice on the society's estates, took place on Saturday, in the presence of a large number of shareholders. The numbers drawn be-nged to members in various counties. The rev. chairman announced that the allotment of the St. Margaret's estate, being fixed for the 7th of June, the Executive Committee had resolved to open the mansion and park to public view for a few weeks, and that cards might be obtained from the secretary. In answer to a question as to the mode of allotment, it was stated that the surveyor's plan would not interfere with the beauty of the grounds, as ornamental garden would be laid out with the villas. This announcement gave great satisfaction to the meeting

A NARROW ESCAPE.—Last Saturday a soldier, while on a visit to a menagerie at Carlow, thrust his arm through the bars of the cage, when the lion made a sudden spring, fixed his teeth in the fleshy part of the intruded arm, and held it fast without motion. The soldier, with great firmness and presence of mind, made no alarm—no attempt to withdraw his arm, although the blood flowed copiously. The spectators called loudly for the keeper, who cast a bullock's head into the den. The lion immediately relaxed his hold, sprung upon the bullock's head, and the soldier withdrew his arm. The wounds, which were not severe, were subsequently dressed, and he was enabled to resume his march on Monday.

MACHINERY FOR RUSSIA.—A seizure was effected at Glasgow, on Tuesday evening, on the premises of Messrs. Napier, of two pairs of marine steam-engines, of 400 and 454-horse power, adapted for screw line-of-battle ships or heavy frigates, manufactured under contract for the Russian Government. It appears that, as in the case of other recent seizures, some attempt has been made to set up a sub-contract for transferring these engines to a Hamburg house (Merck and Co.), in order to evade their confiscation as Russian property.

LAUNCH OF THE "PHŒBE," 50-GUN FRIGATE.—This fine vessel was launched, at Plymouth, on Wednesday at half-past four o'clock. She went off in fine style. Thousands of persons were congregated; and just before the launch took place the *Nile* 90-gun, passed at the stern, and the men on board gave the *Phœbe* three good English cheers. (We shall illustrate this interesting scene next week.)

"THE MIRANDA" IN THE ICE OFF NARGEN ISLAND, GULF OF FINLAND

H.M.S. "MIRANDA," OFF REVEL

H.M.S. *Miranda*, having left England on the 9th ult., on a mission to reconnoitre the ports of Revel and Port Baltic, and ascertain whether any portions of the Russian fleet remained at either place, as well as to report on the state of the ice, entered the Gulf of Finland on the 19th, where she encountered heavy fields of ice. With the greatest difficulty she was forced through a distance of about fifty miles to Revel, passing and looking into Port Baltic on the way, in which was nothing but a few merchant vessels.

On rounding the north end of Nargen Island, the ice in the bay was so thick that it was impossible to proceed farther; but, from her position, she commanded a view of the town, batteries, mole, and roadstead, and ascertained that there was no vessel of any description there.

The accompanying Sketch represents the *Miranda* off the northern end of Nargen Island; and shows the lighthouse, Domberg, and the Church of St Olaie.

In performing this service the *Miranda* was much impeded by the thickness of the ice, as well as the intricate and difficult navigation of the Baltic. She was blocked up in it for two nights, the thermometer varying from ten to twelve degrees below freezing-point; and on one occasion she was so firmly fixed that it was necessary to fire shot from the guns at extreme depression to break the ice all round, before she could start. She is now in dock at Sheerness, repairing the defects occasioned by her cruise.

On Tuesday morning, the *Miranda* came out of the graving dock, at Sheerness, having completed her repairs. She next proceeded to get everything in order for immediate service in the Baltic

THE BALTIC FLEET.

THE accompanying Sketch, by Mr. Frierly, represents the Baltic Fleet off Reef Ness Light, on the 24th March.

The *Dauntless*, which is already at anchor, marks the position of a shoal, where there is less water than would suffice for ships of heavier draught than herself.

The Fleet, consisting of seventeen sail, have formed, on account of the intricacy and narrowness of the channel, in single line. A signal to prepare to anchor is seen at the mast-head of the flag-ship, which the *Leopard*, in her capacity of "repeating ship," is telegraphing to the fleet. Reef Ness Lighthouse, seen on the right of the picture, is situated on the north-east point of the Island of Zealand, on the opposite side of which lies the city of Copenhagen.

We left Winga (says our Correspondent) on the 23rd, and anchored near the entrance of the Great Belt, about eight o'clock the same evening. During the night numerous small vessels had crowded us, bearing up for the entrance of the Sound the nearest way to Copenhagen, but impassable for ships drawing, as some of our line-of-battle ships do, six or seven-and-twenty feet of water.

We have on board the *St. Jean d'Acre* a Norwegian pilot. He has light hair and blue eyes, as becomes the descendant of the Norseman: he wears huge fur boots and cap, a seal-skin waistcoat, with a huge pipe sticking out of the pocket; spits through his teeth, like a Yankee; and is very tenacious of his title, "Captain" (he is skipper of some Norwegian merchant vessel). One of his fraternity is on board each of the ships in the fleet; for the most part they are so like each other that they might be taken for twin brothers.

We have hardly been out of sight of land since leaving Winga. The coast has been uniformly sterile and rocky; but, with the exception of the 24th, when it blew hard from the S.W., the weather, though cold, has been beautiful.

Great-gun exercise, musketry exercise, and drill, in all its moods and tenses, goes on unceasingly; and it is the universal opinion that, if no fleet ever left the shores of England on a juster quarrel, none was ever more thoroughly versed in the art that ensure success.

H.M.S. *St. Jean d'Acre*, Kioge Bay, April 4, 1854.

This morning, intelligence of war being declared was formally communicated to the fleet by Admiral Napier. The scene was a very grand and exciting one. The flag-ship, covered in every part with signals, forming the sentences—"Lads, war is declared, with a bold and numerous enemy to meet. Should they offer us battle, you know how to dispose of them; should they remain in port, we must try and get at them. Success depends on the precision and quickness of your firing. Lads, sharpen your cutlasses, and the day is our own!" Then the rigging manned in the different vessels, the heart-felt cheering that burst from every ship! I sat down to make a sketch of it for you the moment I came down from deck, in hopes to send it by this post, but I find this will be impossible, as to-day is the day for letters from the fleet. I will not, however, lose a moment in getting it done, and will send it off by the next post, which leaves here on Thursday—it will be, "The Announcement of the Declaration of War with Russia to the Baltic Fleet, by Admiral Sir Charles Napier, April 4th."

O. W. BRIERLY.

AMUSEMENTS, &c.

THE ROYAL OPERA, DRURY-LANE.—The Season will commence on MONDAY NEXT, APRIL 17th (Easter Monday) when will be performed Bellini's Opera, NORMA: Norma, Madame Carsdori. After which, God Save the Queen, by the entire Company. To conclude with a Ballet Divertissement.—Prices: Gallery, 1s., pit, 2s.; boxes, 3s.; dress circle, 3s.; stalls, 5s. Private boxes, 21s., 42s., and 63s.; may be had of the principal Musicsellers, and at the Box-office. The Subscription will include 100 nights, and will commence on Monday, 24th April.

THEATRE ROYAL HAYMARKET.—EASTER MONDAY, and during the week, SWEET THE FLOUSH, Mr. Buckstone's Voyage Round the Globe (in Leicester-square), and Wildfire and Bye Dumb.

ROYAL PRINCESS'S THEATRE, Oxford-street.—On EASTER MONDAY, RICHARD III. and THE LANCERS, Tuesday, "Married Unmarried" and "The Corsican Brothers;" Wednesday, "Married Unmarried" and (first time) "Faust and Margaret" Thursday (under approval), Friday, and Saturday, "Married Unmarried" and "Faust and Margaret."

GREAT NATIONAL STANDARD THEATRE, SHOREDITCH. Mr. JOHN DOUGLASS.—Wonderful Attraction for the EASTER HOLIDAYS. Mdlle. Louise, Mdlle. Schmidt, and J. W. Collier. New Spectacle, the SPLIT of LIGHT; or, the Imp of the Water Vulkius and his Band. The Fat of the Public and Ruby Rattler. Two Day Performances on Easter Monday and Tuesday. Prices as usual.

PRINCESS' CONCERT ROOM.—GRAND CARNIVAL BALL, à la Castanee, TUESDAY, APRIL 18th. Gentleman's ticket, half-a-guinea; Lady's, 7s. 6d. N.B. Wuatcamara Quadrille Band.

STEAM to SWEDEN from HULL ONCE a WEEK.—The North of Europe Steam Navigation Company's First-class Steam-ships SCANDINAVIAN and OSCAR, are intended to leave Hull for Gothenburg regularly every FRIDAY EVENING, after the arrival of the last train in Hull. The "Oscar" goes direct, but the "Scandinavian" calls at Christiansand and Christiania (on the outward passage only). The "Scandinavian" leaves for Christiansand, Christiania, and Gothenburg, on the 21st April, and every alternate Friday during the season. The "Oscar" leaves for Gothenburg direct on the 28th April, and every alternate Friday

STEAM to GOTHENBURG direct from LONDON.—The new and safe old first-class Steam-ship GOTHENBURG will be despatched from London to Gothenburg direct, on Friday, the 21st instant, and every alternate Friday during the Season.

Fares: Chief Cabin, £5 5s.; Fore Cabin, £3 13s., including Steward's fees. For further particulars apply to the Company's Offices, 84, King William-street; or to C. MOLLER, 2, Mincovy-court, Tower-hill.

N.B.—From unavoidable delay, the "Gothenburg" will not be despatched from London to Gothenburg on Friday, the 14th inst., but on Friday, the 21st inst.

STEAM COMMUNICATION with the BRAZILS and RIVER PLATE.—ROYAL MAIL STEAM PACKET COMPANY.—One of this Company's Steamers will leave Southampton on the 8th of every Month with Mails, Passengers, &c., for MADEIRA, Teneriffe, St. Vincent, (Cape de Verds), Pernambuco, Bahia, Rio de Janeiro, and from thence by branch steamer to Monte Video and Buenos Ayres, returning by the same route to Southampton.

Particulars as to rates of Fares, Freights &c., may be had on application to the Company's Agents in London, or at Southampton; from Robert Hesketh, Esq., the Company's Superintendent of the Cargo Department, to whom packages and parcels for or from the Ship are received for Madeira (Teneriffe St. Vincent (Cape de Verds), Pernambuco, Bahia, and Rio de Janeiro freight being prepaid

Goods taken on moderate freights outward to Bahia and Rio de Janeiro, on transhipment from Monte Video, Bahia, Pernambuco, St. Vincent, (Cape de Verds), Teneriffe and Madeira.

Passengers are recommended to make early application for securing proper berths.

Return tickets issued, available for twelve months, with an abatement of fifty per cent on the passage-money

55, Moorgate-street. E. CHAPPELL, Secretary.

EASTERN COUNTIES RAILWAY.—First, Second, and Third class RETURN TICKETS will be issued from London every Saturday night by the Mail Trains, to the Stations at which they call at the price of a single fare for the double journey, available for return by any train on Sunday, or by the first train on the Monday morning By order, GEORGE RICHARDSON.
Bishopsgate April 11, 1854.

GREAT NORTHERN RAILWAY.—EASTER HOLIDAYS.—Express and Ordinary Day Tickets to and on all parts of the Great Northern Railway on the 13th, 14th, 17th, 18th, & 20th instant will be available for Return on any day (Sunday excepted) to the 21st inst. By order of the Board
SEYMOUR CLARKE,
King's Cross Station, 8th April, 1854. General Manager.

THE GREAT NORTHERN RAILWAY.—The Directors have, from this date, changed the rates of conveyance on marriages, and which are at present four shillings per mile for first-class carriages, and four-and-a-quarter pence per mile for second-class. The interest will be paid half yearly in January and July, by the Bankers at Messrs Smith, Payne, and Smiths, bank of London Applications for loans to be addressed to J. E. MOWATT, Secretary
Secretary's Office, King's Cross Station, London, April 7, 1854.

THE GREAT NORTHERN RAILWAY.—The prices of Coals brought to London by this Railway have been reduced, and are at present as under—

	Loaded into Cars or Barges at the Station, at per ton.	Delivered within five miles of the Station at per ton.
From the County of Durham.		
House Coals, best quality—	s. d.	s. d.
Lambton Wallsend, screened	22 0	25 0
Primdon Hartlepool Wallsend, screened	21 6	24 6
Adelaide Tees Wallsend, screened	21 0	24 6
From the South Yorkshire Coal Field.		
Hemsworth Silkstone, screened	19 6	22 6
Hemsworth Silkstone, second quality	18 0	21 0
Hemsworth Silkstone, screened	19 6	22 6
Hemsworth Silkstone, second quality	18 0	21 0
Kitchen Coals—		
Lambton, best, screened	23 0	26 0
Primdon Hartlepool, screened	22 0	25 0
Adelaide Tees, screened	22 0	25 0
Hemsworth Silkstone, screened	21 0	24 0
Steam or Furnace Coals—		
Lambton, best	19 0	22 0
Primdon Hartlepool	18 0	21 0

Beyond five miles from the King's cross Station, 1s. per ton per extra mile for carriage Dues to be paid on giving the order, or on delivery. The only Coke for Coals brought to London by the Great Northern at Jersey is within this station, and are should be taken to Messrs. Robert Charles, Sole Agent for the Sale of Coals consigned to the King's-cross Station by the Company.
By order, J. E. MOWATT, Secretary.
King's-cross Station, London, 8th April, 1854.

THE NATIONAL PROVIDENT FREEHOLD LAND SOCIETY. New Offices—London Shares, £50 Entrance, 1s. 6d. Country Shares, £50 Entrance, 2s. 6d. Monthly Subscription, 10s. per Share. Members may pay up the whole or part of their Subscriptions at once, or by monthly instalments. Interest at the rate of 5 per Cent per annum upon all sums of money paid up thereon, and after the rate of 5 per cent upon all deposits of money, paid up thereon, and after the rate of 5 per cent upon all deposits of money, paid up thereon, and after the rate of 5 per cent upon all deposits of money,

THE BALTIC FLEET PREPARING TO ANCHOR AT THE ENTRANCE OF THE GREAT BELT—FROM A SKETCH BY O. W. BRIERLY.—(SEE PAGE 346.)

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, APRIL 15, 1854. [GRATIS.

SLAVERY IN AMERICA.

THE public attention of Europe is, naturally, so engrossed by the Black Sea and the Baltic, and the momentous issues imminently connected with these localities, that most important affairs may, and do, occupy other quarters of the globe, without attracting more than slight passing notices. Yet there are mighty concerns agitated at this moment, and interests at stake, probably involving as great moral and political consequences as even the war in the East and the thunder-fraught clouds which threaten equal bloodshed and destruction in the North. Under the appalling circumstances of the times, in Europe, America seems to be forgotten; though, since the date of the Declaration of Independence, the United States have not been thrown upon so momentous a crisis as they are at this moment. The great question of pro and anti-slavery is agitated between the entire powers of the North and the South, and the Senate has for weeks been balanced in the sharpest debates and closest array of force on the one side and the other. On the decision depends the fate of millions of our fellow-creatures, and whether, by the extension of slavery to the newly-annexed States, an immense territory (larger than the original thirteen States*) and increase of weight shall be added to the southern moiety of the Union, so as to swamp the northern Abolitionists, or, on the contrary, the latter shall prevail and save mankind from the perpetration of this projected scandal and outrage. The struggle is vehemently contested, and by the result must be determined much of the future destinies of the New World.

In order that our readers may understand the nature of the case, we must, however, relate the antecedent particulars which have led to this national conflict. Upon the inconsistency of slavery at all in the free States of America we need not enlarge. The Republic was founded on the original policy and solemn compact of those who achieved its independence, that, in effect Congress would abstain from intervention with slavery in the States, over which half a million of slaves were then scattered; but it was prohibited in all the national domains, the importation of negroes forbidden, and the expectation held out that even the permitted domestic and sectional institution would gradually die out, and leave the country unstained by this foul blot.

The illustrious Washington avowed that "It was among the first of his wishes to see some plan adopted by which slavery might be abolished by law, and that to this end his suffrage would not be wanting;" but the selfish interests and thirst for gain in slave-masters defeated these views, and the abomination grew with the growth, and spread far and wide with the increase and development of the country till it arrived at the horrid pitch at which we see it in the present day.

In 1787 freedom was the proclaimed will of America, and the interdict of slavery covered the entire soil belonging to the national Government. In 1820 the vast region of Louisiana, beyond the bounds of the original States, was acquired, and the violent contest for settling its political position was concluded by a victory so far on the side of slavery that a partition of the territory was agreed to, and that portion which was purchased from France was delivered over to the infamous traffic in human beings. The words of the Act of Congress were:—

SEC. 8. *It is further enacted*. That in all that Territory *ceded by France to the United States, under the name of Louisiana*, which lies north of thirty-six degrees and thirty minutes of north latitude, not included within the limits of the State contemplated by this act, SLAVERY AND INVOLUNTARY SERVITUDE, otherwise than as the punishment of crimes SHALL BE, AND IS HEREBY, FOR EVER PROHIBITED.

For thirty years, that is to 1850, the slave question was rather disputative than actually progressive on either hand; but at that period it again came to a head, and, after much vehement debating, was again patched up by a hollow agreement, by which, however, the slavery advocates obtained an advantage, affecting Utah and New Mexico (Arkansas had already been accommodated with the slavery system), Texas, and other territories in prospect of annexation; all which were enacted by Congress to be received "with or without slavery."

But now the dispute has assumed a more aggressive form on the part

* Nearly as extensive as France, Spain, and Italy combined.

RUSSIAN PRISONERS ON THEIR WAY TO SIBERIA.—PAINTED BY J. WYNS. (SEE NEXT PAGE.)

of the slave states and slave owners, of whom there are from 250,000 to 300,000 in the Union. The effort making is to violate the prohibition of slavery in the Missouri Compromise, and advance a step beyond the measures of 1850, and, on the plea of non-intervention and the right of self-government, to spread the curse of slavery over the States north of the line of 36 deg. 30 min., and give a preponderance to the slave interests, at which all the Beecher Stowes and various Abolitionists on the face of the earth may rail and lament in vain. One Senator, the Hon. Charles Sumner, in speaking against the proposed repeal, denounces its abettors as Abolitionists of Freedom; who now aim at overthrowing the prohibition, we have quoted from the Act of Congress, against the introducion of slavery into the vast and admirably fertile territory, a large portion of which is called Nebraska, and joining powerful new States to the Union, whose internal organisation and ambitious interests must be congenial to their own. The opposition to this grand move of the Southern slave States, by the northern and western non-slavery States, is of the most ardent character; and the debates have been carried on with great vehemence and passion. How they will terminate it is difficult to foretell, though the pro-slavery party appears to have a small majority in numbers, and among the more moderate of them we observe the name of Mr. Everett. Still, the other side is so strong, that it is quite possible that the present, like the past, contention on this fierce battle-field may be temporarily healed by another hollow truce and stave-off compromise. But the mischief must remain and rankle in the constitution of the whole body politic, pregnant as Pandora's box with evils which will, at some nearer or later epoch, rend the American Confederation in twain. As it is, the Runaway Slave Act is a source of perpetual collision and irritation; and, much as the people are attached to the government of the entire conglomerate of independent provinces, the following succession of hostile humours cannot fail to weaken that [illegible] and pave the way for more direct and irreconcilable differences, threatening convulsion and change. In glancing into futurity no human eye can penetrate far; and, as we have remarked, the crisis may arrive sooner than we anticipate, or later than the event would seem to promise. But that it will come in the course of time is certain; and that it is now hastening onward is no less obvious. The wonderfully rapid increase of the population in this quarter of the globe—illimitable as are the lands which it offers for settlement and provision—adding millions to millions of men under very extraordinary, and not always cohesive, circumstances, already predisposes the elder and more densely-occupied States to a rupture on this question of slavery. Why might there not be two Republics here, even in our own time—independent Governments, with amity between them? And, as the never-resting wheel rolls on, nations will fill the space of the one existing nation; and boundless regions witness numerous empires, kingdoms, or republics, where, as yet, pathless forests and measureless prairies serve only to harbour the roaming emigrant, the Red Indian, and the *fera natura* of unreclaimed nature. Meanwhile, presuming that the slave States will increase their area, and augment their power, if successful in the present instance, it is easy to perceive that new dangers, as well as new ills, will arise out of their triumph. The perils of Helot insurrection will not be diminished by the extension of territory and multiplication of slaves; nor will the contrast between the [illegible] and enterprise of the non-slavery States and the immobility and vices of those where slavery prevails be rendered less instructive as a lesson for the benefit and progress of human kind. Well does the Senator we have already mentioned denounce the condition of the latter, and the prospect now before them, when he says:—

> Slavery is the forcible subjection of one human being, in person, labour, or property, to the will of another. In this simple statement is involved at the outset no offence against religion, against morals, against humanity, which may not stalk, in the license of this institution, "unbhit of justice." For the husband and wife there is no marriage; for the mother there is no sentiment that her infant child will not be ravished from her breast; for all who bear the name of slave there is nothing that they can call their own. Without a father, without a mother, almost without a God, the slave has nothing but a master. It would be contrary to that rule of right, which is ordained by God, if such a system, though mitigated often by a patriarchal kindness, and by a plausible physical condition, could be otherwise than pernicious in its influences. It is confessed that the master suffers not less than the slave. And this is not all. The whole social fabric is disorganised; labour loses its dignity; industry stands still in the whole country, and all the kind of slavery is impoverished. And now, sir, when the conscience of mankind is at last aroused to these things—when, throughout the civilised world, a slaveholder is a by-word and reproach—we, as a nation, are about to open a new market to the traffickers in flesh that haunt the shambles of the South. Such an act, at this time, is removed from all reach of that palliation often vouchsafed to slavery. The Congress of the United States, the people of the United States, at this day, in this vaunted period of light, will be responsible for it, so that it shall be said hereafter, so long as the dismal history of slavery is read, that, in the year of Christ 1854, a new and deliberate act was passed, by which a vast territory was opened to its inroads.

We have thus endeavoured to lay before our readers the nature of what has been styled, for its pre-eminence, the "Question of Questions," which has been for so long, and now, such an increase of interest, agitating the Legislature and people of the United States. The results cannot be foreknown, but they must be of the utmost importance. If the slave system is, by a breach of existing law, to be carried into the vast domain of Nebraska, and the boundary line of 36 deg. 30 min. crossed with manacles and cow-hides, and the power of life and death in every owner of a fellow-creature, the enquiry will bring its punishment along with it, and "it cannot, and it will not come to good!"

RUSSIAN PRISONERS ON THEIR WAY TO SIBERIA.

The Illustration upon the preceding page is from a beautifully-executed water-colour picture, by A. Vons, a Russian artist now resident in Paris. The scene represented is a party of Russian prisoners on their way to Siberia. They are receiving refreshments from some peasants on the road. A series of drawings, by the same artist, was exhibited to the Graphic Society in Wellington-street, Strand, and excited considerable interest. [illegible], it will be remembered, is the general receptacle for political prisoners from Russia; and, in connection with this subject, we find the following in a letter from a Correspondent in the *Daily News* of Monday last:—

> If true Liberals could have their way they would fain empty Siberia of all its political exiles that are not purely Russian. With native Russians I have nothing to do. We cannot interfere between them and their own [illegible] but who does not know that there are multitudes there besides [illegible]. We know that there are (or lately were) even in the Kremlin dungeons, and exiled convents, Poles of the highest rank, [illegible] by himself, and conversed on the Danube with one who had been in charge of having isolated the Cz[illegible] [illegible] [illegible] [

Beneath this article is another, dated Vienna, August 19. It is as follows:—

"We have accounts from Constantinople that there is great confusion among the Turkish Ministry. The same accounts add, that everything seems to presage *an approaching rupture with Russia, the Divan will not listen to the representations of the Russian Minister.*"

THE COMET.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

NOTWITHSTANDING the excitement which now prevails in the political arena, consequent on announcements such as those which during the last few days have been made to the world, a few particulars concerning the new Comet, which has made its appearance—to terrify or encourage the superstitious, as the case may be, and to confirm, it may be, to future races of men, the chronological records of this probably eventful year—may not be altogether uninteresting.

I first saw the Comet on Tuesday, March 28, at 7.30 p.m., or possibly five to ten minutes earlier, *for my certainly* extends only to the fact that it was not *after* that time. It was then a very distinct object against a bright sky, and near the horizon; and it would have escaped my notice, but for the fact that I happened to be searching for a star in that particular spot at the time—having just mounted a celestial globe after a new mode, and being desirous of putting my arrangement to the test, as soon as the twilight would allow. I had no instruments which would permit me to make an accurate observation of its place. This I regret, for had I been provided with a good equatorial, I should have been able to announce its precise position on *that* evening, which would have been twenty-four hours earlier than the record in the *Times* of the 30th. However, without further trespassing on your space by way of prelude, I proceed to say, that on the evening of the 28th (Tuesday), the Comet's position was very fairly defined, to the eye, by its forming the lowest angle of an equilateral triangle, of which the stars α Arietis and β Andromedæ (Mirach) formed the other angles.

The Comet, which was inclined upwards from the horizon, at an angle of about sixty degrees, on the northern side of the Comet, was, visibly, from half a degree to a degree in length—its extreme tenuity towards the termination forbidding accurate measurement. As the twilight became fainter, the Comet, of course, became brighter; but before it reached the horizon a haze rendered it invisible.

Although very faint when first discovered, it became pretty bright for a few minutes before it reached the haze. Its degree of visibility when first seen may, I think, be compared to that of Venus, when she is just visible to the unassisted eye in the daytime.

For the information of any who may not be conversant with the heavens, I may remark that the position in the horizon where the Comet set, is nearly W.N.W.; and that if a right line be imagined to be drawn from the Pleiades through α Arietis, this line will, be no produced, nearly cut the Comet's place on the evening of the 28th. On that evening, as occasionally since, the nucleus, when viewed through a telescope of moderate power, appeared like a fitfully blazing fire.

On the morning of the 29th I telegraphed the discovery of the Comet to the Astronomer Royal, Greenwich, who honoured me by a communication informing me that immediately on receiving it he sent a copy of it to Mr. Hind, as being the person the most likely in the neighbourhood of London to observe it at once; the smoke and glare of London rendering an object like a Comet almost a hopeless one to seek for at that observatory, when near the horizon, and about a W.N.W. azimuth.

On the evening of March 29 the Comet was visible only at intervals. It had evidently advanced several degrees in R. A., but no material change had taken place in N. D. The Comet now approached an isosceles triangle, instead of an equilateral, when taken in connection with the stars before alluded to. As to visibility, it had undergone a wonderful alteration. Instead of being somewhat difficult at first to find, it was difficult to avoid seeing it when the eye was turned anywhere towards the proper direction. The tail, too—instead of, say, a degree—extended to the length of three or four degrees; *some* of the additional length being due, no doubt, to the circumstance of its being further removed from the twilight.

On the evening of March 30 the clouds cleared off just in time to allow a fine view of the Comet. Although I have made some observations of its place—which may not be altogether useless, supposing cloudy weather to limit materially the number of opportunities for noting its position, as observations on the night in question—it would be absurd on my part to attempt any calculations founded on such data only as I possess. I confine myself, therefore, to a description of such a nature as may be interesting to amateur astronomers like myself.

On the evening (March 29th) of Arietis, β Andromedæ, and the Comet formed a fair right-angled triangle, the comet being at the right angle. The tail on this night, as since, showed some concavity towards the north.

There did not appear to be so great a difference between the brightness of the Comet on the 29th and 30th, as between the 28th and 29th, but this may have been owing to a different atmospheric condition. The inclination of the tail had materially altered—namely, from an angle of about 60 deg. to one of 30 deg. from the horizon.

On March 31 I first saw the Comet for a few minutes together. There was a small star, of the seventh magnitude, in the field of the telescope at the same time with the Comet. The haze did not allow any comparison to be drawn between the two and any other.

April 1.—The comet was again visible for some minutes, but I did not perceive any material change in its appearance. The state of the sky was unfavourable for observation.

April 2.—A very good view was obtained, and by taking a *mean* of some rough observations of *differences* between R. A. and N. D. of the Comet and α Arietis, an approximate position was obtained at eight p.m., as follows:—Right ascension, 2h 6m.; north declination, 17 deg. 30 min.

April 3.—The sky being clear, another good view was obtained. No further change was observed in the inclination of the tail, which was now 23° to 30° to the *left* of the vertical.

April 4.—This evening the atmosphere was remarkably favourable, and the Comet was well seen. An interesting phenomenon was observed, namely, the appearance of a small star (about the eighth magnitude) through the centre of the tail. The distance of the star from the nucleus was about twelve minutes of arc, as near as I could judge on the opposite side of the Comet, at a distance of about twenty minutes, was another star of similar magnitude; the three objects forming a right line. A few minutes sufficed to show a change in the position of the star in the tail; and by about half-past eight p.m. it had passed from the centre to the northern side of the tail.

In point of brilliancy no great change appears to have occurred during the last few days, the increasing moonlight compensating for the more favourable position of the Comet in the heavens.

It will be seen from the above account that I have been fortunate enough to obtain a view of this interesting object on every evening since I first observed it. I am, &c.,

W. C. BURDER.

Clifton, April 4, 1854.

[NOTE OF THE EDITOR.—We were reluctantly compelled, in consequence of a great pressure upon our space, to omit the preceding letter last week.]

ARTISTS' GENERAL BENEVOLENT INSTITUTION.—This institution, established for the purpose of extending relief to distressed meritorious artists and their widows and orphans, celebrated its thirty-ninth anniversary by a sumptuous dinner, on Saturday evening, at the Freemasons' Tavern. The Right Hon. B. Disraeli M.P., presided; supported by Lord Dufferin, the Hon. Mr. Hardinge, Sir Charles Eastlake, Sir W. Ross, &c. The Chairman, in proposing the toast of the evening, "Prosperity to the Artists' General Benevolent Institution," observed that much might be said of artists that could not be said of many other classes. The time had been when the greatest works were produced by authors who were starving in their streets, and it was not until the close of the French war that this society received its foundation. It might be difficult to account for the remissness of sympathy. There had always been an impression that it was vain to hope that a general feeling in favour of the fine arts could in England be supported? Now, he found that the best supporters of the fine arts at present were the most busy classes (Cheers). And if a taste for the fine arts had become extended from the aristocracy to the middle classes, why should it not be expanded so as to include the people? (Hear, hear). To diffuse a taste for the fine arts was unnecessary—they were well known. And although there had been during the past year had been on y about £1100, it had been the means of doing much good and alleviating much suffering. Many deserving cases of distress had been received, every one of which was a case that, if known must have reached the heart of every individual. The great majority had been those of the widows and daughters of artists. Their society would be valuable, even if it were only the nucleus of bringing them together, but when with this was combined a manifestation of their sympathies, its claims were irresistible. For himself, personally, he could say that the greatest reward he ever looked forward to in life was the sympathy of the artists and authors of his country ("Hear," and cheers). Other toasts followed, and the result of the festival was announced to be £2252 8s., including a legacy of £1200 bequeathed by Mr. John Rowland Durant.

REGIMENTAL STAFF.

(From a Military Correspondent.)

WHILE excitement pervades all classes throughout England, anticipating the approach of hostilities, there are points to which those most ardent in the cause have, peradventure, never had attention directed. Troops marching with flying colours, bayonets glistening, and martial music thrilling the spectators with its harmony, cannot fail in stimulating a patriotic enthusiasm. But while the columns moving through the streets loudly respond to the acclamations of their country men, *few of* the lookers-on care to analyze the real position of the gallant fellows quitting home in support of the national honour. During the Peninsular War, the Duke of Wellington asserted that the British soldier was badly paid; a truism, which, although remaining unquestioned, has nevertheless failed in procuring advocacy in favour of amendment. It does not require much argument to prove that a numerical increase to a regiment must add to the labours and responsibilities of those entrusted with the discipline and interior economy of a corps; more particularly as regards the additional work thus heaped on the Regimental Staff. Instead of increasing the number of battalions, the establishment of each company has been augmented. As a measure of economy it is good; yet, by so doing, the masses become comparatively unwieldy, and consequently a less active force is maintained, to compass an insignificant saving. The addition recently made to regiments, entails onefifth more duty in the orderly room, pay, and quarter-master's offices, than heretofore. Active service will increase the obligations on these departments. The pay of the regimental staff officers, and their subordinates, is not commensurate with the constant exercise of intelligence and assiduity expected from them. It would not be possible, in these columns, to find space for detailing the routine exacted from the different branches quoted; but the following affords a brief summary of what the orderly-room clerk must attend to.

The mental abilities of this non commissioned officer are taxed in no trifling degree. He is answerable for the correctness of all entries in the numerous books pertaining to the office, and likewise for the preparation of the periodical returns. These are all more or less intricate, and demand much care and attention. He fills up the records of the corps, embracing the antecedents of each man's service. The court-martial and defaulters' books are committed to his charge; the correctness of which materially affects the pay and pension of each individual, and, consequently, an equitable distribution of the public money. He keeps the general order book and is supposed to retain in his memory, if not exactly the date, at least the purport of every general and circular issued. He fills up all entries in the permanent order book, and is responsible for the record of officers' services, and the history of the regiment. He writes the official letters, and must retain copies; and is accountable for the safe keeping of every document received by the commanding officer on her Majesty's service. The register of furloughs, records of deserters, and the births, deaths, and marriages, must be chronicled by the orderly-room clerk.

A conscientious discharge of these duties might be supposed to afford the sergeant ample employment; but other responsibilities are attached to his position, involving a degree of labour never contemplated by those unacquainted with the service. Forthightly, monthly, quarterly, half-yearly, and annual returns must be transmitted to the heads of departments, and also to the district and garrison offices. These papers must be stringently correct before being submitted for the commanding officer's signature. In order to complete his work, the orderly room clerk frequently employed for hours after tattoo. It falls to his lot to prepare papers for courts-martial, leave of absence for officers, and discharges for the men. He makes out the furloughs, ranges the books, and papers the regimental boards, completes the muster-roll, and prepares the necessary documents for transfers. He furnishes returns of deserters, checks the companies' morning states, and must prepare a regimental one for the Adjutant. There are various minor details which keep the orderly-room clerk, and one or two assistants, constantly employed. Then a commissioned officer who performs these multifarious details cannot be supposed to call much time his own. From eight a.m. until nine p.m. he must always be alert, never knowing at what moment his services may be required.

The qualifications for a paymaster-sergeant must be of a yet higher grade. Yet, for all this the men only receive the pay of a company sergeant. Were they entitled to rank and emoluments accordants, they might rise to the rank of colour-sergeants, and receive additional emolument

In the district pay offices, the generality of clerks are inferior in intelligence to the regimental ones. Yet the former receive from £150 to £200 a year, and never are expected to make their appearance before ten o'clock in the morning. They invariably depart about three or four in the afternoon. Why should such a difference be sanctioned? Would any junior clerk in an inferior mercantile establishment encounter the fatigue and responsibilities enumerated for *one shilling and ten pence* per diem? Nevertheless these sergeants fulfil the trust reposed in them with praiseworthy accuracy, and an error can seldom be detected in their books. If attention to their avocations when at home demands their best energies, what must be required at their hands when in the field?

Although the responsibilities of the orderly-room clerk have alone been pointed out, it is clear that a large augmentation of privates, without increase of officers, must occasion additional supervision and extra occupation, for the higher grades. When can a more fitting period be found for taking their claims into consideration than at the present time?

The Lieut.-Colonel of an infantry regiment should

receive, exclusive of his command money	..	..	..	£1 0 0	per diem.
The Adjutant	..	..	..	0 12 0	"
Paymaster	..	..	..	0 9 0	"
Quartermaster	..	..	..	0 10 0	"
Surgeon	..	..	..	0 15 0	"
Sergeant-Major	..	..	..	0 4 0	"
Paymaster-Sergeant	..	..	..	0 2 6	"
Quartermaster-Sergeant	..	..	..	0 2 6	"
An Assistant to each, with rank of Corporal			..	0 1 6	"
Orderly-room Clerk	..	..	..	0 2 6	"
Assistant, with rank of Corporal	..	..	..	0 1 5	"

The pay and pension of the private soldier has already been remarked upon in the ILLUSTRATED LONDON NEWS, and the cause now advocated merits equal attention.

Should any reader be sceptical touching the correctness of the foregoing statements regarding the onerous labours of a Regimental Staff, he has but to request permission of any commanding officer to visit his orderly-room, and he will quit it under the conviction that those who work so well should, indisputably, be better paid.

5th April, 1854.

A RUSSIAN INDIAMAN IN THE THAMES.—On Saturday the Russian ship *Vesta*, Captain Sundman, laden with a valuable cargo of East Indian produce from Birnlpatam, came up the river into the West India Docks, being the first ship of the enemy's country that had arrived in the Thames since her Majesty's declaration of war against the Czar. The appearance of the ship in the Channel, with the Russian flag flying freely, excited some attention at Portsmouth, as the character of the vessel was not known. A cutter was forthwith sent out by the Admiral, with orders to look out for something "moving near Dungeness." By the time the Russian had reached the Downs, where her Majesty's line-of-battle ships, the *Prince Regent* and the *Royal George* were at anchor. The merchantman was hailed to bring to, and an officer and a boat's crew were sent off to board her and examine her papers. The examination satisfactorily showed the *bond fide* character of trade, and her right to the liberty prescribed in the declaration. She accordingly wended her way to the Thames, the Customs received her, and she is now discharging her cargo with all despatch. It is said that attempts are being made to sell her to a neutral power.

BROCOLI AND EARLY POTATOES.

FEW or none of our metropolitan readers can have failed to notice the number of itinerant greengrocers, or costermongers, who just at this season bring round to every suburban house great baskets of what they in general call cauliflower. Still fewer, we believe, but must at this season have partaken of the vegetable, and regarded it as amongst the most agreeable that can now be obtained. How many of those who have noticed the sale of the article, or enjoyed it at table, have inquired into its birthplace, or asked by what means the usual produce of summer or autumn is brought to their doors in the very beginning of spring, would be a very curious inquiry for minute statisticians; but we know of one person who, struck with the abundant supply, pronounced, from an examination of the flower, that it was brought from a great distance, and was certainly of foreign growth. Amongst the peculiar productions of England—such as hops, in Kent and Sussex; peas, at Dartford and Gravesend; cabbages at Battersea; asparagus, at Deptford, &c., which we find noticed in books we find no mention of Brocoli; and we, therefore, were inclined to coincide in the opinion that it certainly all came from abroad. Facts, however, will not vanish at the command of theories; and, on inquiring of those intelligent Coventgarden salesmen, Messrs. Godwin and Foord, who distribute great quantities of this flower through the metropolis, we were assured that the bulk of the Brocoli consumed in London is the product of our own country. The long tongue of land stretching far into the Western Ocean, terminating in the Land's End, which constitutes the county of Cornwall, having the ocean, with its warm air, and warmer currents, not yet entirely deprived of heat imbibed in the Tropics, all around it, except at its eastern part, is renowned for the mildness of its climate. At Penzance, 280 miles from London, and its neighbourhood, in the extreme west, frost rarely occurs, and is never lasting; snow seldom falls, nor ever lies long, and the climate in winter is as mild and not so variable, as in the southern parts of Italy. For consumptive patients it is almost as much recommended as the island of Madeira. This warm, but not very sunny spot, is as favourable to tender vegetable as to tender animal life, and the caterers for this great metropolis, ever on the look-out for the best and cheapest means of providing for all its wants, have not overlooked the advantages of the mild region in the west for producing vegetables at an early period of the year. There, without the help of even hand-glasses or any other artificial stimulus to vegetation, except careful cultivation and a little manure, is grown nearly all the Brocoli consumed in the metropolis. In the beginning of February the first plants are ready to be cut, and the cutting continues till towards the middle of April. The harvest, therefore, lasts from eight to ten weeks, and during that period there is brought to London alone from eighty to one hundred tons of Brocoli in the week. In the height of the season, as in the middle of March, in the last two or three weeks, as much as 150 tons has been brought into London weekly. This is, however, only a part of the produce of Penzance and its neighbourhood. Bristol, Liverpool, Gloucester, Cheltenham, Manchester, and other opulent towns within a day's ride from Bristol, share in the general and wholesome product. From Penzance and the neighbourhood it is carried by railway to Hayle, a port on the Irish Channel, now almost unknown to the general public—to be removed, perhaps, as much hereafter for the skilful seamen it may rear for the transport of Brocoli, as Newcastle is for the seamen it has long reared for the transport of coal. It is there shipped on board steamers which run between Hayle and Bristol; and from Bristol it is brought to London by the rail. It is distributed throughout the metropolis at a price varying between twopence and sixpence per head; and that sum suffices to pay all the cost of carrying it to each man's door, of bringing it 280 miles; of advertising it, paying all the landlords' rent, and keeping the industrious and enterprising gardeners and salesmen a fair profit; and of replacing all the wear and tear of all the ships and engines, and tools employed in the elaborate industry.

Although, at present, Brocoli is the chief early vegetable reared in the mild west for the London market, it is not the only one. The earliest Potatoes come from that quarter, and without frames or heating processes many have been sent to London from Penzance in the very first days of April. Some months ago, too, a Brighton very season, at an early period, from the same place. The islands further west, enjoying a similar or still milder climate, contribute their share to our luxuries; and finally, as well as Cornwall, which the islands are a part, scilly early potatoes and a-paragus to the London markets. As the wind and season are favourable they come from the islands direct up Channel to Southampton, or they are transshipped on board the steamer at Hayle, which ploughs the produce of Penzance and its neighbourhood to Bristol. For fifteen years the salesmen referred to have been in the trade, and through that period at least it has grown and flourished without attracting much attention. It seems something wonderful that those whom we call the ignorant masses should know nothing of the origin of much of the food they consume, and the clothes they wear. A piece of white crystallised sugar, or of calico, never suggests to them the tall cane, or the round bush which is its origin; the elaborate boilings and refinings or the careful cleanings, cardings, and spinnings; with the multiplied labour, whether slave or free, urged into activity to produce the sweet morsel, or the comfortable clothing. Ignorance is, however, relative; and few, perhaps, amongst those who censure the masses are aware of the origin of the vegetables they eat now daily or nearly. From the exertions of industry to supply man's wants, there are ever new creations and new wonders; and the application of the light soil of Cornwall, under a mild climate, to supply early vegetables to the London markets, is only a little branch of the great natural system of territorial division of labour which makes China the tea, and the tropical islands the sugar-producing countries of the world, and binds all the various families and races of men—more diversified even than climates—in one friendly league to produce wealth for the universal wellbeing. May we not add that the south and west of Ireland—about as warm as Cornwall, far more fertile, and not more remote from the metropolis and the great manufacturing and consuming districts of England—might, probably, with great advantage, be turned into a kitchen garden.

"THE DESCENT FROM THE CROSS."

"Lift up your heads, for your redemption draweth nigh."—*Luke* xxi., part of verse 28.

THE hour of agony is over now;
And Faith beholds, within the garden grave,
That sacred body which contained a God
The hour is over—Christ hath died to save:
"Life—immortality"—are brought to light"
The Victor sleepeth; He hath won the fight!

But ere the sun shall rise upon his tomb,
The songs of angels shall proclaim him fled.
No more a tenant of the earth He formed,
No more a mystic teacher of the dead:
A mighty conqueror—a Power supreme—
Of all. Creation the adoring theme.

And now another hour approacheth near—
Swiftly it cometh "as a snare" on all—
When Christ, descending in a veiling cloud,
Shall summon kingdoms at His trumpet's call.
A Judge Omnipotent, a gracious friend,
At whose dread presence every knee shall bend.

Ye preachers of the Word, speak boldly forth,
As if ye stood before that judgment seat;
Ye are the "watchmen" Jesus set on high;
Spirit with His finger on the wind's time,
Arouse your people from their fatal sleep—
Reclaim for Christ His lost and erring sheep!

"Distress of nations," with perplexing thoughts,
"Famine, and pestilence," and fearful "signs;"
Men's spirits "failing them for fear," who look
With searching earnestness on God's designs;
Writ with His finger on the world's time,
Behold the burden of His words sublime!

Let us "take heed," then, lest our hearts be charged
To "surfeiting," with life's engrossing cares;
Let us stand ready, with the lamp of Hope,
Nor let this day o'ertake us "unawares."
Watching and prayer be ours—calm thoughts on high—
"Lift up our head—redemption draweth nigh!"

SOPHRO.

THE DESCENT FROM THE CROSS."—BY REMBRANDT.—(SEE PRECEDING PAGE.)

WINCHESTER CATHEDRAL.—THE CHOIR.—(SEE NEXT PAGE.)

WINCHESTER CATHEDRAL.

THERE are few cathedral towns which can be compared in interest, as in pleasantness of situation, with the ancient city of Winchester. Under the name of *Venta Belgarum*, or Venta of the Belgæ (the tribe which held these parts at the time our island was invaded by the conquerors of the ancient world), it held an important position as one of the great towns of the south of Roman Britain. When the Roman empire was broken up, and Britain became Anglo-Saxon-Venta became the chief city of the kingdom of the West Saxons, who very slightly changing the name to suit the genius of their own language, called it Wintan-ceaster, or the city of Winta, which has softened itself down into the modern name. The West Saxons became eventually the dominant tribe among the Anglo-Saxons, and their capital, Winchester, became the Royal city of England, and continued, until some time after the Norman Conquest, to hold a similar position towards London in this country to that of Rheims in France with regard to Paris.

In 684, according to the statement of the chroniclers, the West Saxons were converted to Christianity; and between 642 and 643, their King, Cenwalch, built a church in Winchester, dedicated to St. Peter, which was known by the name of the Old Church, or the Old Minster, after the erection of the new minster by King Alfred, who made Winchester his favourite residence. For awhile the old church of St. Peter, that which was in a manner consecrated by its connection with the infancy of the gospel among the West Saxons, and in the cemetery of which reposed the bones of St. Swithin, was eclipsed by Alfred's new building, and it appears to have been allowed to fall into ruin; but in the latter half of the tenth century, the old Church of St. Peter was rebuilt with great magnificence by Bishop Athelwold, and the remains of St. Swithun, who was looked upon as the patron saint of the city, were removed from the churchyard and deposited in the most honourable place in the interior. By the Anglo-Saxon writers, the Winchester Cathedral of Bishop Athelwold is spoken of in terms of the greatest admiration; but it is very difficult for us now to say how much of exaggeration there is in their descriptions, as we have no means of ascertaining the model on which they formed their judgment of architecture and art. We can hardly doubt, however, that this Saxon Cathedral was a fine building that when the Normans established themselves in this country, they looked upon the buildings they found here with great contempt; and, within a short period, all our Cathedrals were rebuilt. It was in 1079, or just a hundred years after Athelwold had erected his Cathedral at Winchester, that the Norman Bishop Walkelin commenced the present edifice. To this prelate we owe the crypt and transepts, which are fine examples of early Norman architecture. In the year 1100, the body of William Rufus, slain while hunting in the New Forest, was brought to Winchester, and buried under Walkelin's tower; (or for there is some doubt on the matter) under the old Saxon tower, which, perhaps, Bishop Walkelin had not taken down. The crypt, who hated William, believed that the presence of his body in this place was the cause, a short time afterwards, of the fall of the tower, involving in its ruin part of the transepts. The injury was soon repaired, but the difference between the old and new masonry in the transept may still be traced by an experienced eye. The periods of the other main parts of this noble building, which are all strongly characterised, need only be enumerated rapidly. Between the years 1185 and 1205, the Lady Chapel was built by Bishop Godfrey de Lucy, and as much of the original work as remains presents a very perfect and pure example of the Early English style. Nearly two centuries after this, in the year 1360, Bishop William de Edington commenced the rebuilding of the western part; and the great west window, with the two first windows on the north side, and the first window on the south side, and the corresponding buttresses, &c., were the work of this prelate, which was interrupted by his death, in 1365. They are early and rather rich examples of the Perpendicular style. For a few years the works appear to have been at a stand; but William de Edington's successor, the celebrated William of Wykeham, resumed them with zeal, and the new nave and aisles, good examples of Perpendicular work, were built between 1394 and 1404, when William of Wykeham, dying before his design was completed, left a large sum of money to be applied to that purpose, which was employed in completing the northern side, with the transepts, &c. The vaulting of the nave was carried on by his successor, Cardinal Beaufort. No further alterations of much importance were made till the beginning of the sixteenth century, when the Lady Chapel at the east end was rebuilt and enlarged by prior Hunton and Silkstede. About the same time considerable alterations were made in the choir by Bishop Fox, including the clerestory, gallery, and windows, the flying buttresses at the east end, the panelling of the walls of the side aisles, the timber roof of the choir, and the screen which separates it from the nave.

One of the most remarkable characteristics of this ecclesiastical architecture of the middle ages is the facility with which its widely differing styles blend together and harmonise with one another. Nowhere do we feel more the truth of this than in contemplating the noble and impressive building of which we are now speaking, and which is one of the most impressive of our cathedral churches. At our first general review, it strikes us by its simplicity and unity of design; yet, on a nearer examination, we find that is made up of parts which belong to distant periods, and to totally different styles: the solid and ponderous Norman, the rich and elegant Early English, and the light, though somewhat stiff and formal Perpendicular, all combine together, as though they were made for each other. There is, indeed, a peculiar massive simplicity in the appearance of the Cathedral of Winchester, which few other cathedrals present; and this has been accounted for on the supposition that the whole building, as it now stands, was really formed from time to time on the exact model (as to general design) of the Lady Chapel of Bishop Athelwold; and, in fact, that a great part of the church building is merely cased in the alterations of later days. That every part has been entirely designed by the architect of the present day (Mr. Cresy) with considerable ingenuity, and not without some plausibility. He believes that in some parts of the transepts, and in the crypts, the Saxon architecture of Bishop Athelwold remains unchanged. Other antiquaries have considered the crypts under the east end of the Cathedral to be Saxon.

As we have just intimated, the various styles of this building, although so different from each other, run into one another without our feeling any strong impression of the contrast. When we enter the nave, we find ourselves in presence of the finely-proportioned Perpendicular work of Langdon and Wykeham; and, as we advance to the choir, we feel a great force the solemn grandeur of the Norman work of the transepts, and to ver, as though it were intended as an introduction to the higher part of the temple. We must not pass on without giving a look at the curious early font—of dark, almost black, marble—with its angular sculptures. We proceed through Bishop Fox's screen into the choir, which presents on every side the work of the same prelate, and is rendered more pleasing, at least, by the carving of its own woodwork. Beyond this and the presbytery are a cluster of chapels of great beauty and interest, among which the Lady Chapel is particularly remarkable. In this part of the building we have some fine remains of the Early English work of De Lucy. On one side is the chapel of the Holy Sepulchre, and on the other that of the Guardian Angels, or, as it is often called, Bishop Orlton's Chapel. All these chapels have been richly painted with historical subjects, parts of which have been brought to light, and as much as possible preserved. The painting in the chapel of the Holy Sepulchre represents scenes from the history of our Saviour. Those in the Lady Chapel, which, as we learn from a portion of an inscription still remaining, were executed at the cost of Prior Silkstede, about the year 1489, are taken from the popular series of legends known as the "Miracles of the Virgin."

There are few towns in the south of England more worthy of a visit than Winchester. Its streets are remarkably clean, and, in some parts, very picturesque: and they still present some good specimens of old domestic architecture. There are, likewise, many interesting remains of other ancient buildings; and within a short and pleasant walk stands the beautiful church of the Hospital of St Cross, which has recently obtained so much notoriety by the mismanagement of its revenues.

LITERARY MISCELLANIES.—No. XI.

PLAGIARISM.

EVERY great poet has at one time or another been accused of being a great thief. The old Greek mythology, which concealed an overflowing wisdom in its poetic fables, and in the passions and adventures of its gods and goddesses—things merely fanciful or grotesque to the vulgar, but full of deep meaning for the inner circle of adepts—predisposed the idea of plagiarism by representing Hermes as the Inventor of the Lyre and the God of Thieves. It must be confessed that, in most cases, when a charge of plagiarism has been fixed upon a great author, the proof has been easy. But what does it signify? The mighty masters of song are none the less mighty for an occasional peccadillo of this kind. Perfect originality is impossible, unless it be the originality of the maniac. Every writer is of necessity indebted to his contemporaries and his predecessors. He lives in the great ocean of human thought, and could not think if these had been no thinkers before him. If Shakespeare had been left in his childhood on a desert island, and had remained there all his life, he might have been an Crusoe or a Robinson Crusoe, but he never could have written or even imagined his immortal plays. If there had been no mathematics before the days of Newton he would never have discovered the law of gravitation. It is only when an inferior author takes the thoughts and the *ipsissima verba* of great writers, and pass off the plunder as their own property, that the charge of plagiarism is worth entertaining. Sensible men attach but little importance to it in the case of those who have genius enough of their own to entitle them to stand in the first rank, and who would remain immeasurably rich without the misappropriation of other people's ideas. He who purloins a pennyworth of literary old iron, and converts it, in the furnace of his mind, to finely-tempered steel, worth a hundred thousand times the amount, is not to be condemned in a literary point of view, but to be lauded. The charge of plagiarism falls to the ground in such cases, and is of no account. It must be remembered, too, that there is a kind of plagiarism which is quite involuntary and unconscious. The echo of another man's wisdom or wit may remain in the mind long after all remembrance has been lost of the source whence it was derived. Besides, as Coleridge remarked, "There are such things as fountains in the world;" and it must not be imagined that every stream which is seen flowing "comes from a perforation made in another man's tank." Upon the subject of plagiarism, we borrow from the second volume of the "Autobiographic Sketches" of Thomas de Quincy, recently published, the following interesting anecdotes in connexion with Coleridge. We will not let the occasion pass without a word or two in commendation of this admirable book. It forms the history of a human mind, and that mind one of a high order. For humour, for learning, for pathos, and for command of language, we know of no work in modern times that could rival it. De Quincy had long been anxious to see Coleridge, and the conversation which he narrates arose out of a visit made in 1808 to a Mr. Poole, who he expected would be able to introduce him to the poet:—

"The first morning of my visit, Mr. Poole was so kind as to propose, knowing my admiration of Wordsworth, that we should ride over to Alfoxton, a place of singular interest to myself, as having been occupied in his unmarried days by that poet during the memorable summer of Aubyn, its present youthful proprietor. At this delightful spot, the ancient residence of an ancient English family, and surrounded by the fernery Quantock hills which are so beautifully glanced at in the poem of 'Ruth,' Wordsworth, accompanied by his sister, had passed a good deal of the interval between leaving the university (Cambridge), and the period of his first settlement among his native lakes of Westmoreland; some allowance, however, must be made—but how much, I do not accurately know—for a long residence in France, for a short one in North Germany, for an intermitting one in London, and for a regular domestication with his sister at Racedown, in Dorsetshire.

"Returning late from this interesting survey, we found ourselves without company at dinner; and being thus seated *tête-à-tête* Mr. Poole propounded the following question to me, which I remember, because it furnished me with the first hint of a singular infirmity besetting Coleridge's mind:—'Pray, Mr. De Quincy, what is your opinion or conjecture of ——, upon whom I am desirous to have some information about beans? You know what I mean; I don't mention the subject which he asserts that "a man might as well, for the wickedness of the thing, eat his own grandmother as meddle with beans."'

"'Yes,' I replied, 'the line is, I believe, in the Golden Verses. I remember it well.'

"'O,' true. Now our dear, excellent friend Coleridge, than whom God never made a creature more divinely endowed; yet, strange it is to say, sometimes steals from other people, just as you or I might do—I beg your pardon—just as a poor creature like myself might do. Now sometimes have one's conscientious doubts to make a figure from my own exchequer; and the other day, at a dinner party, this question, arising about Pythagoras and his beans, Coleridge gave us an interpretation which, from his manner, I suspect not to have been original. Think, therefore, if you have anywhere read a plausible solution.'

"'I have; and it was in a German author. This German, understand, is a poor stick of a man, not to be named on the same day with Coleridge; so that, if Coleridge should appear to have robbed him, be assured that he has done the scamp too much honour.'

"P.: 'Well, what says the German?'

"'Why, you know the use made in Greece of beans, in voting and balloting? Well, the German says that Pythagoras speaks symbolically; meaning that electioneering, or more generally all interference with political intrigues, is fatal to a philosopher's pursuits and their appropriate serenity. Therefore, says he, follower of mine, abstain from public affairs as you would from parricide.'

"P.—'Well, then, Coleridge *has* done the scamp too much honour; for, by Jove! that is the very explanation he gave us.'

"Here was a trait of Coleridge's mind, to be first made known to me by his best friend and first published to the world by me, the foremost of his admirers! But both of us had sufficient reasons. Mr. Poole knew that, stumbled on by accident, such a discovery would be likely to impress upon a man, as yet unacquainted with Coleridge, a sense of curious jealousy with regard to all he might write; whereas, frankly avowed by one who knew him best, the fact was disarmed of its sting; since it thus became evident that when the case had been best known and most investigated, it had not operated to his serious disadvantage. On the same argument—to forestall other discoverers who would make a more unfriendly use of the discovery; and also, as matters of literary curiosity—I shall here point out a few others of Coleridge's unacknowledged obligations, noticed by myself, in a very wide course of reading.*

"1. 'The Hymn to Chamouni' is an expansion of a short poem in stanzas upon the same subject, by Frederica Brun, a female poet of Germany, previously known to the world under her maiden name of Munter. The mere framework of the poem is exactly the same an appeal to the most impressive features of the regal mountain (Mont Blanc), adjuring them to proclaim their author: the torrent, for instance, is required to say by whom it had been arrested in its headlong raving and stiffened as by the petrific touch of Death into everlasting pillars of ice; and the answer to these impassioned apostrophes is made by the same choral burst of rapture. In mere logic, therefore, and even as to the choice of circumstance, Coleridge's poem is a translation. On the other hand, by a judicious amplification of some topics, and by its far deeper tone of lyrical enthusiasm, the dry bones of the German outline have been awakened by Coleridge into the fulness of life. It is not, therefore, a paraphrase, but a re-cast of the original. And how was this calculated, if frankly avowed, to do Coleridge any injury with the just class?

"2. A more singular case of Coleridge's infirmity is this:—In a very noble passage of 'France' a fine expression or two occur from 'Samson Agonistes.' Now, to take a phrase or an inspiriting line from the great fathers of poetry, even though no marks of quotation should be added, carries with it no charge of plagiarism. Milton is justly presumed to be as familiar to the ear as nature to the eye; and to steal from him as impossible as to appropriate or sequester to a private use some bright particular star. And there is a good reason for rejecting the typographical marks of quotation—that is, the controversy of the passion, by reminding the reader of a printed book, on which account Milton himself (to give an instance) has not marked the sublime words of "tormented all the air" as borrowed; nor has Wordsworth, in applying to an unprincipled woman of commanding beauty the memorable expression "a weed of glorious feature," thought it necessary to acknowledge it as originally belonging to Spenser. Some dozens of similar cases might be adduced from Milton. But Coleridge, when saying of Republican France that

> Inappropriately advancing,
> Her arm made mockery of the warrior's tramp,

not satisfied with omitting the marks of acknowledgment, thought it positively to deny that he was indebted to Milton. Yet who could forget the semi-chorus in the 'Samson,' when the 'bold Asculonite' is described as having fled from his 'lion-ramp?' Or who, that was not in this point liable to some hallucination of judgment, would have ventured in a public challenge (for virtually it was that) to produce from the 'Samson' words so impossible to be overlooked as those of the supportably advancing the foot'? The result was, that one of the critical journals placed the two passages in juxtaposition, and left it to the reader to his own conclusions with regard to the poet's veracity. But in this instance it was common sense rather than veracity which the poet's impeach.

"3. In the year 1810 I happened to be amusing myself by reading the earth chronological order the great classical circumnavigators of the earth: and, coming to Shelvocke, I met with a passage to this effect: that Hatley, his second captain (i. e., lieutenant) being a melancholy man, was possessed by a fancy that some long season of foul weather in the solitary sea which they were then traversing, was due to an albatross which had steadily pursued the ship; upon which he shot the bird, but without mending their condition. There at once I saw the germ of the 'Ancient Mariner;' and I put the question to Coleridge accordingly. Could it have been imagined that he would have so utterly disdown so slight an obligation to Shelvocke? Would a man of stern veracity, as he was, have denied the fact, as he did, if he had not been? I had cited the original [illegible] of the poem, though it merely [illegible] other occasions, [illegible] and [illegible] in the original work of Shelvocke, [illegible] a poem on [illegible] with [illegible] things, and connected with the [illegible].

"4. All these cases amount to nothing [illegible] for the main expositions [illegible] which seeks to decline the very [illegible] now I come to a case of real and palpable plagiarism; yet that, too, of a nature to be quite unaccountable in a man of Coleridge's attainments. I grieve very heavily that this particular case will soon be detected; but others will [illegible] not hundred or a thousand years hence, some reviewer may arise, who, [illegible] the "Biographia Literaria" of Coleridge, will [illegible] the whole work as of second-hand character, and [illegible] the [illegible] as a [illegible] in particular. [illegible] occurs a dissertation on the reciprocal relations of the *sese* and the *cognitatis*, that is of the *objective* and the *subjective*; and an attempt is made, by inverting the postulates from which the argument starts, to show how each might arise as a product by an intelligible genesis, from the other. It is the subject which, from the time of Fichte, has much occupied the German metaphysicians, and many thousands of essays have been written on it, or rather upon it; which many hundreds have been read [illegible] of which Coleridge's essay, in particular, is professedly a [illegible] of his concordance with Schelling, he carries his alliances to a knowledge himself notified to [illegible] in my own hearing. Such would allow him to do so; but in this part of the case insisting on the impossibility that he could have borrowed arguments which he had first seen some years after he had thought out the whole hypothesis for [illegible]. After this, what was my astonishment to find that the entire essay, from the first word to the last, is a *verbatim* translation from Schelling, with no attempt in a single instance to appropriate the paper by developing the argument, or by diversifying the illustrations! Some other obligations to Schelling, of a slighter kind, I have met with in the "Biographia Literaria;" but this was a barefaced plagiarism, which could in prudence have been risked only by relying too much upon the slight knowledge of German literature, at this country, and especially of that section of the German literature. Had, then, Coleridge any need to borrow from Schelling? Did he borrow *in forma pauperis*? Not at all; there lay the wonder. He spun richly, and at all hour [illegible] consciousness of his own activities, and from the loom of his own brain, theories more gorgeous by far, and supported by a pomp and luxury of images, such as Schelling, nor any German that ever breathed, nor John Paul, could have emulated in [illegible]. With the [illegible] of El Dorado lying about him, he would condescend to [illegible] gold from any man whose purse he fancied, and, in [illegible] a new form, applying itself to intellectual wealth, that [illegible] penalty which is sometimes well known to attach [illegible] and millionaires for acts of petty larceny. The last Duke of [illegible] could not abstain from exercising his furtive mania upon [illegible] as silver spoons; and it was the mightiest care of a pious [illegible] over the reputation of her father, to have his [illegible] by a confidential valet, and the chimney's of the purloined articles [illegible].

"Many cases have crossed me in life of people, otherwise not wanting in principle, who had habits, or at least, hankerings, of the same kind. And the phrenologists, I believe, are well acquainted with the case, its signs, its progress, and its history. Dismissing, however, this subject—which I have at all noticed only that I might anticipate, and so frankly [illegible] that I might prevent, the malicious interpreter of its meaning—I will assert, finally, that, after having read for thirty years in the same track as Coleridge—that track in which few of any age will ever follow us, such as German metaphysicians, Latin schoolmen, rhumnatur's Platonic religious novelists—that I have also discovered a large variety of trivial thefts, I do, nevertheless, most heartily believe him to have been as entirely original in all his capital pretensions as any one man that has ever existed—as Aristotle, or Bacon, in ancient days; or as Shakespeare, in modern. Did the reader ever see Milton's account of the rubbish contained in the Greek and Latin Fathers? or did he ever read a statement of the monstrous chaos with which an African Obeah-man stuffs his enshanted incantations? Or, to take a more common illustration, did he ever amuse himself by searching the pockets of a child—three years old, suppose—when buried in slumber after a long summer's day out of door's activity? I have done this, and, for the amusement of the child's mother, have analysed the contents, and drawn up a formal report of the whole. Philosophy is puzzled—conjecture and hypothesis are confounded in the attempts to explain the law of selection which can have presided in the child's labours. Stones, remarkable only for their weight; bullets, nails, crooked skewers (stolen from the cook had turned her back), rags, broken glass, tea-cups having the bottom knocked out, and loads of similar jewels, were the prevailing articles in this *procès verbal*. Yet, doubtless, much labour had been incurred; some sense of danger, perhaps, had been faced, and the anxieties of a conscious robber endured, in order to amass this splendid treasure. Such, in value, were the robberies of Coleridge: such their usefulness to himself or anybody else; and such the circumstances of uneasiness under which he had committed them."

* In a note at the end of the volume, Mr. De Quincy says:—"The solution of the Pythagorean dark saying about beans is concerning the appropriation of which by Coleridge such varied opinions have been pronounced; does not need to be sought in German editions of Pythagoras, nor in the tradition of academic tuition: it is to be found in Plutarch. An hour or two after I had sent off this final note to the press (distant, unfortunately, seven miles, and accessible only by a *discontinuous*, or zigzag line of communication), I remembered, from a foot-note on Jeremy Taylor's "Holy Living," the following reference to Plutarch, which the Bishop has chosen (against his usual practice) to give in Latin rather than in Greek:—*Fabis abstine*,' dixit Pythagoras, 'olim inimica istratus per suffragia fabis lata creabantur' ('*Abstain from beans*,' said Pythagoras, 'for in former times magisterial offices were created through suffrages conveyed by beans').

LETTERS FOR TURKEY AND THE BLACK SEA.—By a Treasury warrant dated the 3rd inst., the postage upon a letter, not exceeding half an ounce in weight, conveyed between the United Kingdom and Turkey or the Black Sea, by direct packet (which term includes a ship of war, or any vessel employed by or in the service of her Majesty), or via Malta, but without passing through France, has been reduced to 1d., heavier letters being charged in proportion, according to the scale applicable to inland letters. Letters for Turkey or the Black Sea, passing through France in the closed mails despatched from London to Malta on the evenings of the 8th and 24th of every month, will be liable, in addition to this rate of 1d., to a French transit rate of 5d. for each quarter ounce. The postage upon all letters sent from the United Kingdom under the foregoing regulations must be paid in advance.

LITERATURE.

The Poetical Works of John Keats, with a Memoir by Richard Monckton Milnes. Illustrated by 120 Designs, original and from the antique, drawn on wood by George Scharf, Jun., F.S.A., F.R.S.L. Edward Moxon.

It is one of the best-known facts which the experience of students has made familiar, that great prose writers and great orators are almost always indebted for the later and higher degrees of their acquired excellence to an intimacy (we mean a literary intimacy) with great poets. Noble verse is studied where there may be no intention of verse making. It enormously accelerates the mastery of every manner, species, and variety of prose. We could fully establish this interesting fact; a fact of moment in the self-education of any gifted man, who, in practical life, selects neither the abstract nor the instrumental sciences, but the moral, the political, and the belles lettres, for his career. But such an explanation would expand into a dissertation, for which we have no time, in justice to our present subject. What we wished our readers to remark is this, that if the study of poetry be useful to prose, it should of course expect to find among these, whose prose is above the average merit, a good many of the more noted poets. In the case of the very greatest poets this might not always appear very saliently, since they would be likely to have confined their principal exertions to their own more special sphere. Now, not to go out of the English language, we perceive, in fact, what we should, in theory, have anticipated. Byron's letters are some of the most spirited things in epistolary literature. Gray and Cowper are both famous in the same department, though for very different excellences. Southey's prose (we ourselves are giving no opinion) is, by a great many people, esteemed a model of taste, of purity, and of quiet vigour, in a much more serious order of composition. Coleridge must not be left out. Moore, with many blemishes, has, however, much range and energy, and an ingratiating manner. We need not speak of the varied power of Walter Scott. Campbell wrote biography, criticism, letters, with very considerable influence. To go back to Ben Jonson, we should adopt Mr. Macaulay's judicious exoneration and withal forgiveness, lest he spoiled the colour and broke the spring of his Elizabethan sentences by his latinified construction (a more fatal and pervading blight than mere latinised idioms), we may see with both what force and what beauty he wrote in prose. We had nearly omitted the greatest example of all. Dryden's prose style and Dryden is very high indeed among our prose-masters—is only not quite superior to it, or perchance quite equal to it, in the whole English language.

Having hastily pointed to the tops and pinnacles, as it were, of this extensive theme, we observe of Keats that the very little he has left us is quite altogether remote from the excellence of his inspired verse; and (to say it without using irreverently the Scriptural allusion) he is unlike many of his brother bards, who generally appear to posterity with one foot on the land and another on the sea. His empire is in but one of the literary elements.

We must restrain ourselves from quoting an examining any of the three or four good, not to say brilliant, books at the least and best memorial of him, now offered to the public. In a word (until we have examined and digested volume (containing illustrative designs, of which still more hereafter) they are very numerous), we have here the poems of John Keats, with a memoir of him, and with his personal literary character, by Mr Richard Monckton Milnes. The editor has evidently conceived and executed so as to deserve all the praise we can bestow. Mr. Milnes, himself a poet, appreciates the merit of kindred and enlightened sympathy; and while telling in ardent but rapid language, his melancholy story, does noble justice to the productions of his genius. The record is a fine example of critical narrative, which is, in that tone, the absence of which, on this subject, every equitable, not to say generous, mind, would have been first and resented. There is a sad charm about all, even from the time when little Keats, then four years old mounted guard, with a drawn sword in his hand, at the door of his sick mother's room, to the time when, broken hearted, he breathed his last, in youth, and far away.

Let us look at the poems which he has bequeathed to the world. Some men write their own epitaphs, and some raise their own monuments. Keats did both; for while his works will effectually guard his memory, they are to us (under a stone inscribed with the too modest words, "Here lies one whose name was writ in water") more powerful and proved it untrue. His name is more permanently graven, and on a very different tablet, on the minds of his countrymen. Even body knows the story of his early reception on the part of critics; and everybody has heard the statement how this reception abridged the remnant of a sickly life, which it embittered. Mr. Milnes, though not in the most positive manner, denies the truth of this representation. The incident could, of course, do no good to the health of an exceedingly sensitive, susceptible, and soft character like that of Keats, who wanted the combativeness, the masculine elasticity of unyielding and indomitable confidence, which enabled Byron to turn a similar attack into the quick means of fame and triumph. But Mr. Milnes thinks that the general impression of the injury inflicted on poor Keats' constitution, by the unmeasured disparagement and vilification of a work in which he had embarked all his youthful hopes and ambitions, is a great exaggeration. He speaking of Governor Pinkerton's statement, which already had menaced him and under which he sank at Rome, to the combined effect of pecuniary anxieties and of true love crossed. Very likely, and very sad in any way. It was the *Edinburgh Review* which had attacked Byron; and it was the *Edinburgh* which vindicated Keats. He never lived to rejoice at having found a champion for his poetry in the late able Lord Jeffrey. Byron righted himself very speedily; and the merits of Keats have proved too real to be defrauded of fame by the coarse, brutal, and unreason ng depreciations which on that occasion disfigured the pages of the *Quarterly*. If the public run mad, through the caprice of the false taste which sometimes obtains sway, after some meretricious and worthless pretender to literary honors, then politics, in powerful hands, may at once cut short what might have become the protracted career of a charlatan. But it is almost impossible to talk down or write down true genius. People may, even for a time, be made ashamed of the admiration which they feel; but they will feel it, in spite of every sophism; and, by-and-by, arrives infallibly the "restoration," when they can speak out, "for the King has come to his own again." But whatever the "back magic" of criticism, in contradistinction to its more beneficent and righteous functions, may effect—it was not for so puny a sorcerer as he who then attacked Keats, in the *Quarterly Review*, to accomplish any of these iniquitous marvels. The article is all rhad malevolence, not only without any manner of fairness, but without any tincture of wit or of ability.

"Endymion" is the first poem in this collection after which are given a "Lamia," "Isabella," "The Eve of St. Agnes," containing some of the most beautiful lines in modern English poetry, and, lastly, "Hyperion," all the miscellaneous pieces of the author.

Surely we may now be allowed to the real merits of the poetry of Keats—merits, too, which the brief destiny never suffered to expand beyond the bud. If we now call attention to the fact that, though generally master of his verse, he is sometimes the slave of it in a lamentable degree; and not only of his verse, but, to speak unpompously, of all those verbal necessities and infirmities which remind us that the soul of song is imprisoned in a body of phrase, as the human soul during life in the tenement of clay. In the "Endymion," page 10, of the present volume, these words occur:—

Nor had they waited
For many moments, ere their ears were sated
With a faint breath of music, &c.

It would be hard to find a less felicitous word than "sated" to combine with the other expressions in this passage. A "faint breath," a faint degree of anything, does not sate. The rhyme is clearly the tyrant here; and Keats sacrifices sense to sound.

At page 18, we find "many hours gone in old, &c. "Old" is not a substantive, and the phrase is as correct as "gone in old" would be; but not more correct. Keats, however, had ended the line immediately preceding with the words "aged priest," and to have instantly afterwards said "gone in old" would have produced a very inharmonious effect. Sound again; at the expense this time of grammar, as of logic the time before.

Page 32—

Hast thou stun'd in aught
Offensive to the heavenly powers?

Very feeble, since he could not have *sinned* in aught *agreeable* to the heavenly powers.

Same page—

No, I can trace
Something more high perplexing in thy face

Whether you take this as "*high perplexing*," or as "perplexing in" (in the way you would say "*working in*"), it is equally bad.

At page 28, Endymion "travels his eye," &c. We continually find this license repeated in such phrases as "I would not *fear* thy eyes" signifying, *alarm* thy eye. Now, greater poets than Keats have, of old, and will again, use words according to their meaning, and even according to the laws of the language to which those words may belong.

Mr. Milnes says, in his Memoir, p. xxxii., that (something just mentioned) "adds one more testimony to the truth that the highest poetry exhibits itself in *objective* forms, . . . and not in *subjective* representations" &c. Six pages later he remarks that "the *individuality* of the poet (*which means the subjectivity, be it remembered*)" "the individuality of the poet enters more directly into the consideration of his works, than that of a writer in any other mental field." Does this mean that the most objective and the least objective of writers is the poet? Do a description and the contrary description, at the same time, apply to the same class?

Wanderings of an Antiquary; chiefly upon the Traces of the Romans in Britain. By Thomas Wright, Esq., M.A., F.S.A., &c., &c. Nichols and Sons.

It was the President of the Royal College of Physicians who set the example of making philosophy in sport minister to instruction in earnest; and, applying a similar rule to the generally dry and often trifling subject of antiquities, Mr. Wright has followed in the same line, and, in this volume, rendered archæological knowledge to the higher degree interesting. When pursued with the true spirit, the study of ancient remains is exciting and delightful. Curiosity, one of the most lively and stirring of our instincts, is kept ever on the alert for discoveries, and when perseverance is rewarded with a prize, the careful examination required in order to ascertain its value and to register its origin and import, affords an exercise to the judgment replete with intelligence and improvements. Dry as dust as the science be, Mr. Wright has shown that it is susceptible of very lively illustration. We see before the eyes of aspiring neophytes such a set of "Wanderings" as is enough to inflame an irresistible desire to tie the knapsack on the back, and take to track in hand, and go forth exploring monuments and barrows with as much zeal as Don Quixote went in quest of enchanted castles and oppressed damsels, before the age of chivalry was gone.

The author's high classic and Anglo-Saxon attainments, and complete conversancy with mediæval literature, would guarantee his fitness for the most learned discussion of the subjects treated of in any one volume; but, in perusing it, the reader ought to bear in mind that the object of the work is not to put the accurate knowledge of these subjects in a proper form and attractive furniture for the erroneous notions which the majority of people who look into such matters at all still entertain respecting them. In no branch of inquiry is vulgar error more predominant and legendary fable has tended, to a wide extent, in permeating the strangest fictions in the place of truth, long buried in sand, but still capable of being dug up and brought to light. As the wisest men are often the pleasantest playfellows, and the best informed, the easiest of familiar teachers, so we find here that practical research and experience in the exploration of the various causes of antiquity which enrich our island, enable Mr. Wright to dispense the most useful lessons on British, Roman, Saxon, Danish, and Norman archæology in a tone of descriptive beauty and agreeable attraction. For sketches of scenery and adventure in the treasure-hunting very the narrative and enlighten the excursions till the tale of other times seem to read like an amusing modern story. Yet it tells of the great Roman iron district of Dean Forest, and its volcanic *debris*; of the Roman cities Aricomium, at Wes-on-under-Penyard, near Ross, and Magna, at Kenchester, both on the Welsh borders; of Verulamium, St. Albans; of Kits Coty House, and other relics and cromlechs, in Kent; of Rutupiæ and Richborough, near Sandwich, the village on the sands; of Pevensey, with its mixed Roman and Norman castle; of Lanuum, and other Yorkshire remains, and of Stonehenge, Egmor tessellated pavement, Old Sarum, London antiquities, &c., &c., early church architecture, et quibus aliis. Illustrative of bony harpoons, and plentifully embellished with engravings and vignettes.

A concluding chapter on the book describes a visit of a small party to the work of the Medway, near Upchurch, which tanks are literally sown with Roman coins as a field is with seed, and, for miles you may dig up pieces of Samian pottery, &c., and chambers which are erected in the roof bed, merely by thrusting sticks into it and then digging and throwing it up wherever you find any hard resisting substance.

Higher up, the Maidstone Valley of the Medway from Kits Coty House would furnish years of interesting examination to the zealous antiquary, and we are only sorry that we cannot go with the author over those portions the secrets of which he reveals.

Hungary: Past and Present, &c. With a Sketch of Hungarian Literature. By Emeric Szabad, late Secretary under the Hungarian National Government of 1848. Adam and Charles Black, Edinburgh.

The constitution of Hungary, as the reader is by this time probably aware, greatly resembles the constitution of England; only they had a free Parliament before we had, their liberties preede ours (though their religion does not), and Hungary is the elder representative of that wonderful form of Government which results from a limited monarchy, a popular legislature, and the practical equilibrium of the powers of the State. Hungary is no longer in the enjoyment of her ancient establishments, or of her national independence, so dearly loved and so long defended. We must make one observation which will, by resemblance, there is yet a difference, between the English and Hungarian systems a difference which might, had the latter continued in operation, have led to very opposite political terminations. The aristocratic element was more prevalent in the spirit and in the working of Hungarian institutions. Hungary possessed noble rights; but they were more concentrated in the engrossing hands of one class than the rights of Englishmen have been since the end of the seventeenth century.

However, such as the constitution was, it is virtually in abeyance now; and one of those great and signal breaks or epochs has occurred in the career of the nation, when history may review and collect events, up to the present point. This is the object of Emeric Szabad, in the record of his country here published. Beginning from the Magyar conquest under Arpad, about the year 880 (nearly two centuries before the Norman conquest of England), the author brings down his narrative to the year 1850. Of course, in one not very bulky octavo volume, it will be conceived that the history of nine centuries and a half (and such centuries) cannot be very minute or circumstantial. The outlines are traced, the principal epochs distinguished, and the great events mutually re-united. Some seventy years after the settlement of the Magyars in Hungary, the first important incident happened; it produced enduring and influential effects, and in it was involved the preservation more than once of the whole of Europe, from the most merciless of swords and from a brutalising bondage under the yoke of heathen barbarians. This pregnant incident was the conversion of the Magyars to Christianity. As with Clovis, so with Geisa; their wives, already Christians, were the means by which the husbands were convinced of the truth, and induced to embrace the faith. Geisa was succeeded in the supreme power by his son, St. Stephen, the first *King*; at whose death, the Crusades involved Hungary in a stormy whirlpool of events. The spirit, steadily and progressively rose, till in the thirteenth century, and was followed by that of Anjou, which continued till 1444, furnishing little that was great to the throne. Hungary, by its innate energy and spirit, steadily and progressively rose, till it was the first of European powers. John Hunyadi attained the sway of his country in 1444, and has left—as Gibbon's fine collateral account brings to mind—one of the least perishable names among the warlike statesmen of the Middle Ages.

In the early half of the sixteenth century the Hapsburgs began to make their appearance in Hungarian history; and the death of Soliman the Great, in 1566, closed an era. A short interval, and the turbulent blood of the Magyars was somewhat calmed by the acquisition of religious and political liberty in 1618, by treaty, under Mathias the Good.

About the time of our Revolution, Tekeli's great struggle was maintained in Hungary, for Christian franchises, under Turkish patronage and succour. We now come quickly to the reign of Joseph I., and the beginning of the eighteenth century.

The occurrences which succeed, are not, perhaps, familiar to the public; but they are supposed to be; and anybody who feels his memory or information deficient in the modern history of Central Europe, could not do be ter than refresh the one, or supply the other, by an attentive perusal of this lucid record, almost a manual in its broad and comprehensive and available summaries.

For the narration of the late Hungarian insurrection Emeric Szabad is peculiarly fitted, since he actually filled the post of Secretary to the National Government, during Kossuth's Titanic struggle against the Olympus of confederate despotism, aided by domestic perfidy and suborned treason. All is comprised, for the story reaches the year 1850.

Armenia; a Year at Erzeroum, and on the Frontiers of Russia, Turkey, and Persia. By the Hon. Robt. Curzon, Author of "Visits to the Monasteries of the Levant." John Murray, London.

Mr. Curzon was private secretary to our Ambassador at Constantinople, Sir Stratford de Redcliffe (now Lord Stratford de Redcliffe), when events occurred which made him intimate with the peculiarities of Armenia and of the surrounding countries. To put an end to the merciless system of reciprocal plunder and butchery practised from time immemorial by the Turkish and Persian tribes who dwell on the line of frontier, a conference between Russia, England, Turkey, and Persia, by means of Envoys to meet at Erzeroum, was proposed. Mr Curzon and Colonel Williams were appointed joint Commissioners for England. The negotiations were protracted from 1849 till 1847; and as geographical and boundary questions required to be settled, during so long a sojourn, and with the obligation and duty of studying the subject, it is easy to conceive what a vast mass of information, which, in the present posture of affairs, may become of no slight importance and interest, Mr. Curzon must have accumulated, had not his health yielded to the severities of the climate. As it is, this book contains much which would have justified its publication, even in other times; and which, under existing circumstances, renders it eminently unexceptionable in importune. Armenia, which has always been a battle-field and one of the most savage and ruthless sort of conflict—may soon see denuded upon its plains the fate of great Russian armies.

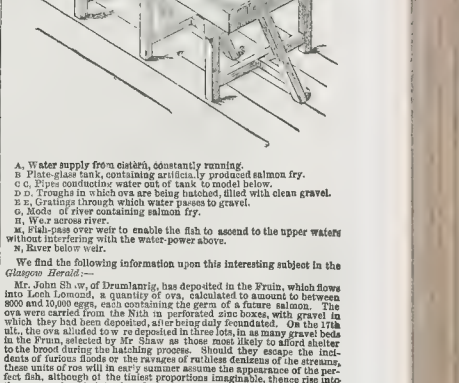
The ever-recurring sight of objects at Trebizond which bring thoughts of the [illegible] now endeavouring to press down through [illegible] toward westward, induces Mr. Curzon to interpolate [illegible] as well as of the Danubian Principalities, [illegible] self-saw in a journey some years ago. [illegible] scribes it politically, socially, [illegible] the addition of all sorts of odd [illegible] If we repeat that, besides, a [illegible] oriental information [illegible] nces, we shall certainly [illegible] book, and yet not have said [illegible] Mr Curzon [illegible] ably unaffected style, [illegible] with a quiet [illegible] than Thackeray's. Whoever reads [illegible] our notice, [illegible] ugh [illegible] ly, be thankful [illegible]

ARTIFICIAL PROPAGATION OF SALMON.

(From a Correspondent.)

Seeing in your Journal a short paper on the artificial propagation of Salmon, so successfully carried out in this country in the waters of Lough Corrib, by the Messrs. Ashworth, it may not be unacceptable to inform you that the young salmon which were artificially produced at Outerard last year, and exhibited all the summer at the Dublin Great Industrial Exhibition, are still alive and progressing most rapidly, some of them having now reached the length of five inches; they are kept in tanks in the Fishery Office Custom-house, where, under the direction and superintendance of the Commissioners of Fisheries, a series of experiments are being made, the result of which must be, if no other good follow, to set at rest all manner of information hitherto unknown in the natural history of the Salmon. The Commissioners have also deposited about 15,000 Salmon ova in boxes in their offices, and they confidently look for a proportionate return. They have carefully watched the progress of the ova with the aid of a microscope, and have succeeded in obtaining an amount of valuable information which, if published hereafter, must prove highly interesting and important to the great fishing commercial interests of not only this country but England and Scotland. The vivarium in the office of the Commissioners is very well worthy of a visit; and, as it is their intention to keep it open all the next year, for the benefit and information of those interested in the Salmon fisheries, it will amply repay the tourists during the summer the trouble to visit this place, and learn how to breed fish. The Commissioners are at all times most easy of access, and give every information in their power to the inquirer; indeed, they feel only a pleasure in seeing an interest created in an object that is of such vital importance to a country like Ireland, which has the most invaluable resources in its fisheries, both inland and sea.

In two of the models erected in the Fishery Office (*see Illustration*) may be seen Salmon in all its stages.



A, Water supply from cistern, constantly running.
B, Plate-glass tank, containing artificially produced salmon fry.
C C, Pipes conducting water out of tank to model below.
D D, Troughs in which ova are being hatched, filled with clean gravel.
E E, Gratings through which water passes to gravel.
G, Mouth of river containing salmon fry.
H, Weir across river.
I, Fish-pass over weir to enable the fish to ascend to the upper waters without interfering with the water-power above.
N, River below weir.

We find the following information upon this interesting subject in the *Glasgow Herald*:—

Mr. John Shaw, of Drumlamrig, has deposited in the Fruin, which flows into Loch Lomond, a quantity of ova, calculated to amount to between 800,000 and 10,000 eggs, each containing the germ of a future salmon. The ova were carried from the Nith in portable box-es, with gravel in which they had been deposited, after being duly fecundated. On the 17th ult., the ova alluded to were deposited in three lots, in as many gravel beds in the Fruin, selected by Mr Shaw as those most likely to afford shelter to the brood during the hatching process. Should they escape the incidents of furious floods or the ravages of ruthless denizens of the streams, these units of roe will in early summer assume the appearance of the perfect fish, although of the tiniest proportions imaginable, thence rise into the parr, and again into the salmon smolt; when, at the end of about two years from the period of their being hatched in fresh water, the instinctive desire to visit the ocean comes upon them. In the case of the salmon fry from the Fruin, this seaward trip will be rather a roundabout one; for, in the first instance, they must traverse part of Loch Lomond, then descend the Leven to the Clyde, and thence reach the sea. It is presumed that, following the laws of instinct, they will return from their salt-water sojourn to the parent loch and streamlet, sufficiently augmented in bulk to gladden the heart of the angler or professional fisherman.

---

* Apropos of this word. We have met it spelt "Snapsack," above two hundred years ago in the life of a learned divine. On referring to Webster's Dictionary, we find "knap" to mean "to bite off—to break short," the same as "snap." To snap up, or to knap up, a thing, is to seize it up hastily; and a knapsack is a sack that is constantly ready for use. The word nab, or seize, is evidently of the same origin.

1.
BOSWELL'S LIFE of DR. JOHNSON. Complete in Four Volumes, with numerous Portraits, Views, and characteristic Designs, engraved from Authentic Sources. Third Edition.

2.
The ILLUSTRATED BOOK of ENGLISH SONGS, from the Sixteenth to the Nineteenth Century. With Fifty Engravings from Original Designs. Third Edition.

3.
The MORMONS, or LATTER-DAY SAINTS. An Account of the Rise and Progress of the Sect now Religious Seat Illustrated with Forty Engravings from original sources Third Edition.

4.
The ORBS of HEAVEN; or, The Planetary and Stellar Worlds A popular Exposition of the great Discoveries and Theories of modern Astronomy. Illustrated with Nebulæ, Portraits, Views, Diagrams, &c. Fourth Edition.

5.
PICTURES of TRAVEL in the SOUTH of FRANCE. From the French of ALEXANDRE DUMAS. With 50 spirited Engravings on Wood. Second edition.

6 and 13.
HUC'S TRAVELS in TARTARY, THIBET, and CHINA, in 1844-5-6. Unabridged edition. Two vols. With numerous Engravings Principal Illustrations, and a Map of the countries, clearly illustrating the Route of MM. Huc and Gabet.

7.
A WOMAN'S JOURNEY ROUND the WORLD. Unabridged. From the German of IDA PFEIFFER. In one vol. With Engravings printed in Colours. Third Edition.

11 and 12.
MEMOIRS of EXTRAORDINARY POPULAR DELUSIONS. By CHARLES MACKAY, LL.D. Illustrated with 120 Engravings from scarce Prints and other Authentic Sources. Second Edition.

"These volumes will captivate the attention of readers who, according to their various temperaments, will either inclined to laugh at or sigh over the follies of mankind."—Times.

14.
BOSWELL'S JOURNAL of a TOUR to the HEBRIDES. Companion Volume to "Boswell's Life of Johnson," with the Index to the "Life." By R. CARRUTHERS, Esq., of Inverness. Second Edition.

15.
NARRATIVE of a RESIDENCE at the CAPITAL of the KINGDOM of SIAM. With a Description of the Manners and Customs of the Modern Siamese. By FREDERICK ARTHUR NEALE, formerly in the Siamese Service, Author of "Eight Years in Syria," &c.

16.
The ILLUSTRATED BOOK of SCOTTISH SONGS, from the Sixteenth to the Nineteenth Century. With numerous Illustrations.

17.
PICTURESQUE SKETCHES of LONDON, PAST and PRESENT. By THOMAS MILLER, Author of the "History of the Anglo-Saxons," &c., &c.

18.
Madame PFEIFFER'S VISIT to ICELAND and the SCANDINAVIAN NORTH. Companion Volume to "A Woman's Journey Round the World." Second Edition

"Shrewd, observant, with great powers of generalisation, indomitable courage and perseverance, and, above all, a firm confidence in the ever present mercies of a protecting Providence, Madame Pfeiffer has traversed the temperate, the torrid, and the frigid zones, not only to her own profit, but to the enlargement of the range of human knowledge. The translation before us has been carefully made, and the numerous notes by the Editor add much to its value. Toleration is further marked by a translation of an Essay, by M. Gaudry, on Iceland by, and a Sketch of Icelandic History. Translations of 'Volsapa,' from the Icelandic, and of Scribner's ballad, 'The Diver,' add the completeness of the volume."—Athenæum.

19.
The ISRAEL of the ALPS. A History of the Persecutions of the Waldenses. By the Rev. Dr. ALEXIS MUSTON Second Edition

20.
Madame PFEIFFER'S VISIT to the HOLY LAND, EGYPT, and ITALY. Companion Volume to "Madame Pfeiffer's Journey Round the World," and "Visit to Iceland." With Tinted Engravings. Second Edition.

21–23.
A NARRATIVE of the UNITED STATES EXPLORING EXPEDITION. Two Volumes. With numerous Drawings made from the Sketches of the Artist who accompanied the Expedition, Illustrative of the Customs, Costume, Architecture, Appearance of the Inhabitants, and Views of the Scenery of the Countries Visited.

22–24.
The ILIAD of HOMER. Translated into English Verse by ALEXANDER POPE. A New Edition, with Notes, Illustrations, and Introduction, by the Rev. THEODORE ALOIS BUCKLEY, M.A., Chaplain of Christ Church, Oxford. Two Volumes.

* * This Edition of Homer's "Iliad" contains the Classical Compendium of Pantheism, beautifully drawn by T. H. Nicholson, Esq., and engraved in the most careful manner by J. L. Williams, Esq.

24.
The ODYSSEY of HOMER. With Flaxman's Illustrations, &c. One Volume. Edited by the Rev. THEODORE ALOIS BUCKLEY

25.
The COMPLETE ANGLER of IZAAK WALTON and CHARLES COTTON. New Edition, superbly illustrated with Fifty Engravings on Steel, Portraits, Autographs, and Fac-similes of Landscapes. Edited by EPHEMERA, of "Bell's Life in London."

* * This Edition of the "Complete Angler" contains the Copper of Notes, Explanatory of the Text and adapting to modern experience and practice the obsolete instructions.

"The work must be ranked as a very valuable addition to the 'National Illustrated Library;' and must add, if that indeed be possible, to the sensitive reputation of our esteemed friend and teacher, Ephemera."—Observer.

27.
EXTRAORDINARY MEN; their Boyhood and Early Years. Illustrated with Fifty Engravings of Portraits, Birthplaces, Incidents, &c., &c

28.
The PILGRIM'S PROGRESS FROM THIS WORLD TO THAT WHICH IS TO COME. By JOHN BUNYAN A New Edition, with a Memoir by J. M. Ness. To which is also appended the Allegory in two Parts entitled "The Holy War." Illustrated by Clayton, and the Biographical Sketch, Illustrations, and Portraits, by J. Jackman and J. D. Scott.

"In order to ensure the completeness of the present Edition it has been carefully reprinted verbatim, without abridgment or interpolation, from the genuine old editions of John Bunyan.

29.
TRAVELS in SPAIN. From the French of THEOPHILE GAUTIER. With numerous authentic Original Drawings, by Macquoid, of Spanish Architecture, Scenery, and Costume.

30.
The LIFE of ALEXANDER POPE. With Extracts from his Correspondence By R. CARRUTHERS, Esq., of Inverness. Illustrated with Portraits of distinguished Contemporaries of Pope, Fac-similes connected with Pope's Life and Works, and Incidents from his Career.

31.
The LIFE, PUBLIC and DOMESTIC, of the RIGHT HON. EDMUND BURKE. By PETER BURKE, Esq., of the Inner Temple and the Northern Circuit. Profusely Illustrated with Portraits, Scenes of Events, and Landscape Views, relating to the great Statesman and Orator, and to the Localities connected with his Career.

32.

34.
The NATURAL HISTORY and ANTIQUITIES of SELBORNE. By the Rev. GILBERT WHITE, M.A. Edited, with Notes and Additions, by Sir WILLIAM JARDINE, Bart., F.R.S.E., M.W.S. Fully Illustrated

"No one at the present day seems to be said of the merits of one of the most charming books on local history in the language. The merits of this edition consist in the fact of its being accompanied by copious notes; for Sir William Jardine has illustrated by seventy engravings, comprising subjects of natural history, and views of Selborne, its vicinity, and antiquities. It is an appropriate holiday book, and certainly one of the cheapest ever produced."—Daily News.

35.

COMFORT TO THE FEET
THE LEATHER-CLOTH or PANNUS-CORIUM BOOTS and SHOES are the neatest and most comfortable ever invented for tender feet: a most valuable relief for Corns, Bunions, and Gout, having no dressing or painful stress on the wearer, and adapted for all climates — ALLEN and CO., Wellington-street, Strand, near Waterloo-bridge

TO THE LADIES.—Ease with Elegance, Durability, and Economy Ornamental with gas-enabled fit.—The celebrated CORSE IS PLASTIQUES, which have been so extensively approved of and recommended since their introduction to this country, may be had at the Sole Depôt for London, 314, Regent-street, opposite St. James's Church, and at the Agent's, 30 Bromp-on-row, Ladies can be fitted in five minutes by a saleen being set apart for the purpose. Testimonials may be seen at the Depôt. Price from 7s. 6d.

ESTABLISHED IN 1841.—By Appointment, The LONDON GENERAL MOURNING WAREHOUSE, Nos. 247, 248, and 249, Regent-street. The Proprietors of this Establishment desire most respectfully to submit that, from their having been so long connected with the extensive SALE of MOURNING ATTIRE, and from the immense business transacted in their warehouse, and the numerous commands they receive to attend in various parts of the country, they are enabled to sell their goods on more advantageous terms. Messrs JAY have ever deemed it unnecessary to quote prices, having an objection to that it only leads to mislead the purchaser; but they beg to offer the strongest assurance that whatever may be purchased at their Establishment will possess the value that is paid for it; and that, in addition to their COURT, FAMILY, and GENERAL ASSORTMENT OF MOURNING, they have every variety of quality and price, and suited to any grade or condition of the community Widows' and Family Mourning is always kept made up also, Millinery, &c., &c the London General Mourning Warehouse, 247, 248, and 249, Regent-street

T. DENT, 61, Strand, and 33 and 34, Royal Exchange, Watch and Clock-maker, by appointment, to the Queen and Prince Albert; sole successor to the late E. J. Dent in all his patent rights and business at the above shops, and the clock and chronometer factory at Somerset-wharf, maker of chronometers, watches, astronomical, turret, and other clocks. Established nearly a century ships' companies and others by her Majesty's parliament. Ladies' Gold Watches, 5 guineas; Gentlemen's, 10. Strong Silver Lever Watches, £4 15s.

WATCHES.—T. COX SAVORY and CO., 47, Cornhill, London, submit for selection a most complete stock of first-class PATENT DETACHED LEVER WATCHES, which being made only by themselves, can be strongly recommended for accuracy and durability. A written warranty is given with each.

T. COX SAVORY and CO., Watchmakers, 47, Cornhill, London, seven doors from Gracechurch street.

SARL'S ARGENTINE SILVER PLATE.—15 and 16, Cornhill.—This beautiful metal continues to stand unrivalled for its resemblance to fine Silver. Its intrinsic excellence, combined with its brilliant appearance, defies all competition, it is now used in the principal services since this manufactory was introduced by SARL and SONS to the public, and notwithstanding the many parties who have attempted to imitate the present demand exceeds the former precedents, thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing the durability and appearance of solid silver at one-sixth the cost. The magnificent stock has recently been enriched with many splendid services in the most elegant and fashionable patterns, and never obtained so many attentions as at the present time The Spoon and Fork department includes all the newest patterns that are made in solid silver A new and enlarged Pamphlet of Sketches and Prices is just published, and may be had gratis. It may be obtained gratis by applying at the manufactories.—Sarl and Sons, 17 and 18, Cornhill. Caution.—The public are hereby cautioned not to purchase article is genuine, except purchased at Sarl and Sons. No other parties are authorised to sell it.

SMORDAN and CO.'S MANUFACTURES, 23, City-road, London.
CAUTION. PATENT EVER-POINTED PENCILS. S. MORDAN and CO. are fully conscious of the complaints of the various imitations of their truly useful invention, which has now been before the public above thirty years, and S. M. and Co. caution all Purchasers to see that the Patentees' name be stamped legibly on the case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the Salesman, but will be found of no value in use.

CEDAR PENCILS made from the Cumberland Lead, purified by MR. BROCKEDON'S process, which S. Mordan and Co. have no hesitation in asserting that such excellent pencils in every respect are only to be obtained from the Black Lead from the Borrodale Mines. In consequence of the Patentees and Company having disposed of the whole of their stock of crude black lead to the patentee, S. Mordan and Co. are enabled to offer Cedar Pencils made from the only pure lead now extant, with confidence that their superiority will be readily appreciated by the Public. The highest encomiums have been pronounced on these Pencils by painters, engravers, architects, engineers, and draughtsmen, and numerous testimonials of their excellence, and those testimonials have been published in detail. The following names are a few of them:—

Charles Barry Esq., R.A.	Copley Fielding, Esq., P.W.C.S.
C. L. Eastlake, Esq., P.R.A.	W. Wyon, Esq., R.A.
E. M. Barry, Esq., R.A.	Sir Richard Roberts, Knt., F.R.A.
Clarkson Stanfield, Esq., R.A.	J. T. Willmore, Esq., A.R.A.
E. Westmacott, Esq., R.A., F.R.S.	H. C. Wilson, Esq., Engineer Geo-
T. Bosel, Esq., Sec., R.A.	verament School of Design.
Digby Hartford, Esq., A.R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London."

S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING-PRESS.

By the use of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and portable Printing and Copying Press, equally well adapted for the Counting house, Office, or Library. With this Press every person may readily become independent of his Printer.

This combined Machine is produced at a less cost than the cheapest lithographic Press in the market; and in addition to its capability of doing the work of a Lithographic Press, it is an excellent and perfect Copying Press, so that it may be said that this latter qualification is obtained for the purchaser gratis.

It may be obtained from the leading Stationers to the nobility.

THE ILLUSTRATED LONDON NEWS.

No. 679.—VOL. XXIV.] SATURDAY, APRIL 22, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE ENGLISH AND FRENCH ALLIANCE.

THE great war which is now raging on the banks of the Danube, and in the Baltic and Euxine, is a war whose present object is the independence of Turkey, but whose ulterior objects may become far wider and more important. When Society punishes a murderer, it is not merely to avenge the victim that its arm is raised, but for the vindication and maintenance of the law upon which Society itself is based. In resisting the felonious designs of the Czar against the dominions of his neighbour, the British and French nations do not simply resist the ambition of an unscrupulous despot, who sets all considerations of justice at defiance, but they take arms in defence of a sacred principle, upon the recognition of which the tranquillity and the civilisation of the world depend. These things may be truisms to those who look dispassionately around them, but they need to be repeated occasionally to meet the loud and incessant objections of the covert friends of the Czar, who insist that the evident destiny of the Turks is to be driven into Asia, and that they are not worth the powder and shot which Great Britain and France are expending in their cause. We do not admit the likelihood of such predictions, or the justice of the picture which is drawn by the pro-Russians; but—even were the Turks a thousand times more worthless than they would have us believe; were the Mahometan religion infinitely more inimical to the progress of civilisation than it is; were the stability of the Turkish dominion in Europe utterly hopeless—it would be equally the duty of this country, and of every other in this hemisphere claiming to be Christian and civilised, to resist to the utmost this nefarious aggression. It happens, in this instance, to be directed against the Ottoman Empire, but once before it was directed against Poland, and it might be directed against Germany, if no other victim were ready to the hand of the malefactor. Turkey is neither a beggar nor a reprobate among the nations; but if she were, society, which protects the life of the meanest human creature, would be bound to protect her against the malice or the cupidity of her assailant, or run the heavy risk of effacing, or allowing to be effaced, the boundaries between public right and public wrong—between justice and injustice—between legal tranquillity and lawless riot—between security of property and highway robbery—between protection to life and limb, and hideous, open, and brutal murder. The cause of Turkey is the cause of every man in Europe who does not approve of robbery and assassination. The enemies of law and order are the friends of the Emperor Nicholas. If the Prussian King side with him, it must be for the sake of territorial plunder—or it must spring from a pusillanimity and short-sightedness, that in his case are crimes almost as great as the ambition of the Czar. The same must be said of Austria, if that empire prove false to the principle of duty. Whoever allies himself with Russia in the present struggle, is the enemy, not only of Great Britain and France, but of all Europe. Whoever, having great power for good or for evil, remains neutral in so fearful an emergency, in reality takes the evil side. The verdict of posterity, and that of contemporaries, will be alike; and the backsliders will justly incur all the liabilities of avowed and open enemies.

Thus the alliance of Great Britain and France rests upon a broad basis. In undertaking the struggle, they have declared themselves—whatever the fate of the war may be as regards the Ottoman Empire—the guardians of the liberties of Europe. They represent the principle of Right against Might; and they have accepted the position with all its responsibilities, however onerous they may be, or into whatever difficulties and complications it may lead them. The timid may attempt to disguise the fact for themselves; but the war which has commenced is the long-foreseen war of constitutional freedom and the rights of man against irresponsible despotism. Were the Emperor of Russia to succeed in the projects which are the policy and tradition of his race, the fairest triumphs of the art, the science, the literature, and the religion of our time, would be destroyed under the heels of a new Attila. Great Britain, the nursing mother of infant nations, would descend from her lofty position, and fall so low, that she never could rise again; and Paris, the home of art, the Athens of the modern world, would become, with its outlying territories, the decaying appanage of a barbaric Sovereign. The light of civilisation in the Old World would be quenched in blood, and the only hope of humanity would be in another hemisphere.

The Kings who dread constitutional freedom because they imagine it might lead to dynastic changes highly inconvenient to themselves, will prove unworthy to govern if they do not learn wisdom from the instinct of the people; and if they do not recognise the broad and glaring fact that Swedes, Danes, Germans, Italians, Poles, Hungarians, Spaniards, Portuguese, Swiss, Belgians, Hollanders—in short, all the nations of Europe as well as the French and English, put up prayers for the speedy and utter discomfiture of the Czar: and look upon his triumph as the greatest misfortune that could befall the world. Were the decision of the wavering policy of Austria and Prussia left to the people of those states; were those countries polled man by man, there can be no doubt that their vote would be in favour of the objects pursued by France and England. It is not the present policy of the Allies to appeal to the people of any portion of Europe against their Sovereigns; but if those Sovereigns—false to their trust, blind to the interests, and deaf to the wishes of their subjects—should remain mischievously neutral, or openly hostile, in the deadly struggle, the day will come when the revolution that Despotism seeks to inaugurate in the blood of the Turks will have to

COUNCIL OF WAR, AT PARIS.—(SEE NEXT PAGE.)

be confronted with revolution of another kind. Revolution would, in that case, have to confront counter revolution, and the mighty warfare would convulse the world. That day has not yet arrived. We trust that it never may; and that the Sovereigns of Europe will recognise, ere it be too late, that Russia is the greatest revolutionist whom they have to fear, and that the Czar is an arch-anarchist, in comparison with whom the wildest of Red Republicans is peaceable and innocent. In the meantime, it behoves all the true friends of constitutional liberty, as well as the over-zealous patriots who suffer in exile for the excess of their enthusiasm, to beware how they complicate a position of extreme delicacy and peril, by urging extravagant claims, or by rushing headlong into premature and unconsidered movements. It is not for them to be impatient when their cause is about to triumph. Whatever advantages they may desire or merit, are petty in comparison with the benefit that would be derived from unity of action against the common foe. The defeat of Russia is not alone the triumph of the Western Powers, but of the liberties of all nations. The humiliation of the Czar might give Europe peace for another period of forty years; and in much less than that time Germans, Italians, Poles, and Hungarians, might quietly acquire all the liberty and independence of which they are capable. Their cause is in good hands, and they ought to know that if it had not been for the unwholesome influence obtained by Russia over the Councils of Germany, and the dread inspired by the barbarian hordes of the Czar, they might long ago have been in a position to make their voices effectually heard in the great senate of Europe, so as to have aided in preserving the peace of the world. Despotism had formerly many adherents and admirers, but the naked wickedness of that species of despotism exercised by the Czar has deprived it of the false halo that surrounded it, and exposed it in all its horror to the loathing of the world. Despotism has now no friends; for every lover of peace—unless, perhaps, it be Mr. Pease, Mr. Sturge, or Mr. Cobden—confesses the truth, that if there had been no despot in Russia, there would at this moment have been no war in Europe. Of the ultimate results of the war the British and French nations will not permit themselves to have any misgivings. They know the magnitude of the task they have undertaken, and they will perform it. Their cause is only nominally that of a Mahomedan power; it is in reality the cause of Justice, of Civilisation, and of Christianity.

COUNCIL OF WAR AT PARIS.

THE scene of a deliberative Council upon a great struggle, such as that which now agitates Europe, is an impressive subject for artistic representation. The Council introduced by the reader upon the previous page was held at Paris, last week, at the office of the Minister of War, Marshal Vaillant; at which were Marshal St. Arnaud and Lord Raglan, Commanders-in-Chief of the French and English forces for the East, and other officers. Notwithstanding their deliberations, and the points discussed, are kept in official confidence, we are enabled to state that the Artist of the prefixed Illustration has obtained from accredited sources the information requisite for the characteristic realities of the scene of important deliberation.

ENGLISH AND FRENCH CONVENTION.

We learn from Paris that the convention between the French and English Governments which was signed a few days ago in London has already been ratified, and that the text of this important document will probably appear this morning in the *Moniteur*. The object of the alliance of the two Courts is stated to be the re-establishment of peace between the Emperor of Russia and the Sultan on a permanent basis, and the preservation of Europe from the dangers which have disturbed the general peace.

For this purpose, and in order to rescue the dominions of the Sultan from foreign invasion, the English and French Governments agree to combine their military and naval forces in a manner sufficient to accomplish the result they have in view. They bind themselves not to accept any proposition for the cessation of hostilities against Russia without having communicated to each other the nature of such overtures. They distinctly disclaim all exclusive advantage to themselves from the events which may arise, and they invite the rest of Europe to co-operate with them in an alliance destined solely to protect the public interests of Europe.

The lateness of the hour at which this information reaches us compels us to defer till to-morrow all farther comment on this important convention, which seems to supply the necessary basis to the operations in which the English and French forces are now engaged, and will, we trust, cement the permanent alliance of the Western Powers.—*Times*, Friday.

OFFER OF A POLISH LEGION TO THE BRITISH GOVERNMENT.

A proposal has been made on the part of the Poles to form a Polish Legion, which, being supplied with the munitions of war, shall fight side by side with the English and French troops against the common enemy. An address to that effect was sent the Right Hon. the Earl of Aberdeen, First Lord of the Treasury, for his approval. The following is the noble Earl's reply:—

Downing-street, April 13.

Sir,—I am desired by my Lord Aberdeen to acknowledge the receipt of the letter you addressed to him on the 3rd instant, in which, adverting to the declaration of war by England and France against Russia, you express a hope, on behalf of yourself and your countrymen residing at Portsmouth, that her Majesty's Government will allow you to form a Polish Legion, which, being supplied with munitions of war, shall fight side by side with the English and French troops against the common enemy; and I am to acquaint you that your letter has been referred for the consideration of the Secretary of State for War and the Colonies.

I have the honour to be, Sir, your obedient servant,
CLINTON G. DAWKINS.

Major Stawiarski, 42, Grigg-street, Southsea, Portsmouth.

REPRESENTATION OF CAMBRIDGE.—There are already four candidates offering themselves to the Liberal party alone: the Hon. F. Campbell, Mr. Adair, Mr. Mowatt, and Mr. Edwin James, Q.C. There is little question but Messrs. Mowatt and James will be the parties selected.

LONDON AND BRIGHTON RAILWAY.—On Thursday a special meeting of this company was held at the Bridge-house Hotel—S. Laing, Esq., M.P., in the chair—when a bill authorising the enlargement of one or two stations, and the improvement of different parts of the line, at a cost of £359,000, was approved; a strong protest, however, being entered by the shareholders against the introduction of the Cardwell clauses into the bill.

RUSSIAN TACTICS.—The Russians seem bent on carrying out their customary prudent system of warfare, by fighting as little as possible, where they are likely to meet an enemy on fair terms. Hence the course pursued by the Emperor with regard to the island of Aland. Finding that the works erected on the coast of that island would not be in a state to resist the attacks of the English fleet, he has ordered all the troops which were in the forts to evacuate them promptly, carrying with them all the guns and military stores, &c. Letters from Stockholm fully confirm this news, and the Emperor had also ordered all the pilots and all men capable of bearing arms to emigrate to the mainland in Finland, and to remove all vessels large and small, boats, &c., to the ports on the mainland; and in case that cannot be done, to sink and destroy them, so that not a vestige shall remain. The least opposition is punished with the knout, or with Siberia. It is said that the same system of national defence and voluntary destruction had been organised, and will be followed throughout the whole extent of the Russian shore commencing from Helsingfors to Cronstadt, and on the other side of the Empire to Sebastopol.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The whole of the journey of the Prince Napoleon has been attended with the most flattering demonstrations, and continued cries of "Vive l'Empereur!" "Vive la Prince Napoléon!" At Valence the Prince visited the lodging occupied by the late Emperor when a simple officer of artillery. At Marseilles the reception was most enthusiastic, and the town was illuminated the whole night.

The review on Wednesday last passed off most effectively. In the morning a cloudy sky threatened literally to damp the enjoyment of the spectacle; and when, later, the rain began to fall, it was supposed to be set in for the day. However, towards the afternoon, the sun broke forth, and the laying of the dust and refreshing of the air added in no small degree to the enjoyment of both actors and spectators. Never was the vast plain of the Champ de Mars more densely crowded than on this occasion. It is computed that not less than 200,000 persons were present, and those who failed to find standing-room, flocked to Chaillot and the other heights, where they could obtain even a comparatively distant view. The number of English present was prodigious. A few minutes after one arrived the Emperor, having at his right (a subject of general remark and speculation, it being in general considered a point of Court etiquette that no sovereign places even an equal in this position,) the Duke of Cambridge, and on his left Lord Raglan. The English officers of the Duke's staff, and the principal officers of the French army followed *en grande tenue*. Having passed along the lines, the Emperor and his party placed themselves in front of the grand racing stand, where the Empress, attended by all her Court, and surrounded by Lady Cowley, and a large number of French and English ladies, had taken her station. The troops then defiled, and performed some manœuvres, forming a most brilliant *coup-d'œil*. Many of the regiments, and a good number of the spectators, added to the cries of "Vive l'Empéreur!" "Vive le Duc de Cambridge!" that of "Vivent les Anglais!" It is earnestly to be hoped that the good feeling thus manifested, and which it has taken such peculiar circumstances really to establish, may be maintained and strengthened by the close contact of the two nations.

On Sunday the Grandes Eaux at Versailles played in honour of the Duke of Cambridge, who, at the earnest invitation of the Emperor, postponed his departure till Tuesday; and on Monday evening, a brilliant, though not very general fête took place at the Palace of the Elysée, offered to his Royal Highness and the most distinguished of the English guests at present in Paris. In short, the whole week has been a series of reception, public and private, in which our compatriots play the principal part.

It is somewhat singular that under these circumstances, and with weather almost unprecedented for the season—the period of Passion Week being generally one of the worst in the climate of Paris and its environs, the ceremony of Longchamps should have been more than usually a failure. Is it that, like the unmeaning mummeries of the Carnival, this autumn—which we consider one that would be specially honoured in the breach rather than in the observance—it begins to strike the Parisians in the same light; and that they find to spend three hours in crawling in a line of hack and job carriages, broken here and there by an equipage—where something is certain to clash against correct taste—from the Place de la Concorde to the Barrière de l'Etoile, is not edifying? We hope and believe so. And let not our allies be wounded at our reflections on their equipages: we yield them the palm in *almost* all points of taste; let us, therefore, console our national *amour-propre* with this point of superiority, and claim to ourselves the monopoly of elegance and excellence in all that relates to what is comprised in the expressive term a "turn-out."

It is said that the Emperor proposes to give Paris, among the other improvements, a new race-course, on the model of those of Ascot and Epsom: the Champ de Mars being found in certain points defective for the purpose, and more exclusively calculated for military purposes.

An event of the most tragical nature, the assassination of the Abbé Guet, one of the most esteemed and respected members of the clergy, has excited universal consternation. Passing before the church of St. Vincent de Paul, at eight o'clock in the morning, and stopping to read a bill announcing the service and list of preachers of the Passion Week, a man approached him with a pistol in each hand, and, without a word, fired one at his head. Seeing that, though severely wounded, the Abbé did not fall, the miscreant attempted to discharge the second pistol, which missed fire; and the workmen, who, at some distance, had witnessed the attack, arrived but in time to seize the murderer. The Abbé was conveyed to the Hôpital Lariboisière, where, after lingering for some time in agony, he expired. The murderer, when arrested, so far from expressing any regret for the act he had committed, declared that he was only sorry not to have killed his victim on the spot. On being questioned as to his motives, he entered into an explanation the most trivial and unsatisfactory; and no real cause can be assigned for the commission of an act of cold-blooded atrocity, which has occasioned the death of a man universally beloved and respected in his calling and private character.

An unusual number of marriages in the higher circles are taking place at present, the high contracting parties having waited for the conclusion of Lent for their celebration.

Already has the scourge which visits France every summer—hydrophobia—begun to make its appearance in various parts of the provinces. It is really miraculous that an intelligent people, and one making at present in many points so marked a progress, should not adopt in this case a remedy so simple, and one which would go so far to remove this frightful evil and many minor nuisances, as a dog-tax: no such restriction existing, the streets both of the capital and the provincial towns and villages, swarm with worthless, quarrelsome, half-starved curs, which catch and spread the infection to a degree that at times becomes positively fearful. And what is the safeguard adopted? When the evil has made such a head as to call public attention to and excite public terror at its presence, the police scatter a few poisoned balls through the streets, and insist upon people shutting up or muzzling their dogs to prevent their eating them; the natural consequence is, that one dog in a thousand is poisoned; the rest are imprisoned and muzzled till the panic is lulled, and then let loose to recommence the same process.

The want of rain, though a certain evil, is not here felt to any serious extent as yet, and the fields and vineyards give brilliant promise for the harvest. On Sunday morning, a short-lived torrent of warm rain, greatly refreshed the verdure and herbage; and in the South, some genial showers have done much good.

The theatres are preparing to wind up the gay season with some brilliant productions. The Gaîté is about to produce a work, which, independent of its positive title to interest, possesses that of its being the probable farewell to the French stage of one of its most gifted and popular actors, Frédérick Lemaître. "La Bonne Aventure," the piece in question, is from the pen of M. Paul Foucher, who produces, the same week, at the Théâtre Français, his long-promised work "Aissé." The Gymnase has a brilliant success with "Le Gendre de M. Poirier," by MM. Emile Augier and Jules Sandeau.

The work of Lieut. Bellot, which has just appeared, is one of the greatest interest, and shows the character of its author in a light which can but add powerfully to the sympathy and regret caused by his noble career, and its early and tragic close.

THE WAR.

DEPARTURE OF GENERAL ST. ARNAUD.

Marshal de St. Arnaud, the Commander-in-Chief of the army of the East, left Paris on Saturday morning by the Lyons Railway for Marseilles, where he is to embark for Gallipoli. He is accompanied by Madame de St. Arnaud, and by a numerous staff. Marshal Magnan, the Commander-in-Chief of the army of Paris, and a great number of general officers and private friends, accompanied Marshal de St. Arnaud to the station of the railway. The Prefect of the Seine, the aides-de-camp of the Minister of War and of Prince Jerome, and several other high functionaries, were in attendance to bid adieu to the gallant Marshal. The Marshal was expected to arrive at Toulon on the 20th.

THE FRENCH BALTIC SQUADRON.

The only French ship of the line which had arrived in the Baltic, up to the latest account, was the *Austerlitz* steam-ship, which is said to have left Kloge Bay on the 19th inst. On the 12th inst., the following vessels sailed from Brest, to join Sir Charles Napier:—The *Inflexible*, ship of the line, Vice-Admiral Parseval-Deschênes, commander of the squadron; Captain Chevaud, head of the staff; Captain Perenneau, &c. *Jemappes*, ship of the line, Captain Dupaco, commander; Captain de Langle de Carry, second in command. *Le Tage*, Captain Fabre, commander; Captain Mequet, second. *Breslau*, ship of the line, Rear-Admiral Penaud; Captain Bedva, aide-de-camp, &c. *Darien*, frigate, Captain Didelot. *Pourvoyante*, frigate, Captain Prudhomme de Borre. *Semillante*, frigate, Captain Chiron de Brossay. Previous to the sailing of the squadron, nine companies of the First Regiment of Marines, forming an effective force of 900 men, were placed on board the three ships *Tage*, *Jemappes*, and *Inflexible*. Three batteries of artillery, formed on the war-footing, were also taken on board.

MILITARY MOVEMENTS IN AUSTRIA.

By a letter from the south of Hungary of the 10th we learn that the Austrian armamente are nearly completed. The transit of troops has been getting gradually less frequent, and the numbers of men less imposing. Large compact masses are collected for commencing operations, in case these should be necessary. The force which, in case of war, would be the first to act is at present under the chief command of the Archduke Albrecht, and consists of the 9th, 10th, and 11th infantry corps, with a part of the 1st cavalry corps. Furthest advanced stands the 9th corps, under the command of Field-Marshal-Lieutenant Count Schaffgotsches, who has fixed his head-quarters in Semlin, taking up his position from Mitrowitz to the confines of Transylvania. His right flank is secured by the position of a special corps in Croatia, opposite the Bosnian frontier, where the fortresses also of Gradiska, Brod, and Essek; all these, as likewise Peterwardein, Arad, and Temesvar, are fully armed and provisioned. The main army, however, is formed in the rear by the 10th corps, under the Archduke Charles Ferdinand, and the 11th corps, under Field-Marshal-Lieutenant Count Wangerski—each being 18,000 strong, and each with seventy-six guns. The cavalry is under Prince Francis Liechtenstein. Every arrangement has been made for keeping up the communications by land and by water, and camp-hospitals in the various towns of the kingdom will be in readiness to receive the sick or wounded. They will be conveyed to them by a ship, that is also fitted up as a floating hospital. The entire strength of the whole army, including the border regiments, number from 120,000 to 150,000 men. Should Austria take part in the war, her weight will in every case prove decisive.

THE DEFENCES OF CRONSTADT.

An attack on Cronstadt is only possible from the narrow channel which, in its various twistings and turnings, is commanded, for a distance of nearly four English miles, by the fort in front of the island. All signs, such as buoys, posts, &c., have been removed, so that even if the English vessels have the most experienced pilots on board, they will be obliged to move very slowly, and consequently a vessel advancing to the attack would be exposed for a whole hour to the fire of the Russian batteries, some of which have Paixhan guns of 130 pounds. If a single ship of the line is sunk, the channel is so effectually closed, that the others cannot advance. Cursory mention has already been made of Professor Jacobi's invention for destroying vessels at sea; and the German writer now gives some—apparently unintelligible—details on the subject. Strong iron chests, charged with powder and other combustible materials, are sunk into the sea, and connected by means of wires with a galvanic battery outside. "Above the chests is some machinery, which on being touched by the keel of a passing vessel, causes two galvanised rods to come down, which produces an electric spark, and with it an explosion." A hundred submarine mines of this kind are said to have been sunk in the channel leading to Cronstadt. Military men in St. Petersburg are divided in their opinions as to whether the fortifications of Cronstadt will be able to resist the heavy artillery of the ships. Four of the forts are formed of enormous granite cubes, the fifth is of log. The greatest danger for Cronstadt is that those forts may be taken one after the other, as each of them will be exposed to the fire of a great number of vessels. After all, the greatest security of the place is the narrowness of the channel, which just at the entrance to the port, behind Fort Menschikoff, will be commanded by two enormous floating batteries, formed of old ships of the line. Besides, the thickness of the ice whether it will be possible to send the two divisions of the fleet which are still at Cronstadt to Sveaborg (Helsingfors), which is considered impregnable. General Dehn, of the engineers, has been appointed Military Governor of Cronstadt, and Admiral Ricard, an old but energetic man, commands the fleet.

THE WAR ON THE DANUBE.

The latest accounts from the head-quarters of Omer Pacha prove the urgent necessity of the Allied forces arriving on the theatre of war without loss of time, if there be a desire to avoid, as General Baraguay d'Hilliers is said to have expressed it in one of his despatches, the repetition on land of the catastrophe of Sinope. A competent person, who has very recently examined, and with the greatest attention, the line of the Danube, from Widdin to Rassova, and who has very minutely scrutinised the effective force under the command of Omer Pacha, with its capabilities and organisation, is of opinion that that force is not able to meet the Russian army single-handed, or to oppose its onward march to the south. No doubt is expressed as to the zeal, the enthusiasm, and the valour of the Turkish army, but the same authority declares that, notwithstanding the wonderful efforts made by Omer Pacha to introduce regularity and order in the host he commands, there is still a great deficiency of discipline to contend with—the exception of Omer Pacha himself, who is admitted to be a man of much intelligence, and two or three others at the most, there is a great want of military capacity among the superior officers, and a still greater deficiency among the subalterns. Under these present circumstances it is thought most desirable that Omer Pacha should not, until supported by the Allies, risk a battle with the Russians who have lately crossed the Danube. According to the same accounts, the Turkish army of the Danube does not amount to more than 60,000 men, while the Russians have now 200,000 disposable and effective men in the Principalities and Bessarabia. Fortunately, the presence of the Allied fleets in the Black Sea renders it impossible for the Russians to obtain supplies from the coast, and a considerable portion of that immense force is employed in conveying provisions and stores to the Dobrudja. But the great danger is in the want of organisation of the Turks. Hitherto they have done wonders; but a pitched battle before the arrival of the Allied armies must be their ruin, and disastrous. A report has been forwarded to the French Government by Colonel Dieu, which is said to have hastened the resolution to send at once 100,000 men, or more, instead of the 50,000 spoken of at first.

The movements of the Russian forces in the Dobrudja are still very much enveloped in mystery. At one time we hear of their having appeared in the neighbourhood of Varna; and at another they are said to be advancing on Bassardjik, about twenty miles north of Schumla, where, according to one account, Omer Pacha has concentrated a force of 30,000 men. In addition to the forces already in the Dobrudja, the Russians are said to have formed a camp of 40,000 men and 30 guns, at Karasoubazar, which point they, no doubt, intend to make their attack on Silistria. The Turks have been keeping up a constant warfare along the river, at Oltenitza, Turnu, and Giurgevo. The *Vienna Presse* gives some particulars of a sharp battle, on the 4th, at Giditsch, near Kalafat, which ended in the defeat of the Russians, who were driven from the village with great loss. The Turks have since thrown a strong garrison into it from Widdin.

Varna, which is a strongly-fortified place, but which had a garrison of only 6000 men, having applied for reinforcements, a considerable force has been sent. The *Soldaten Freund* says that no less than 12,000 men have been landed at Varna, and recent letters from Constantinople speak as if a number of the Allied troops at Gallipoli would also be sent as quickly as possible.

THE CZAR'S REPLY TO THE DECLARATION OF WAR.

The *Journal de St. Petersburg*, of the 13th April, contains a long manifesto from the Emperor of Russia, in reply to the declaration of war, in which England and France are charged with having manifested undue partiality from the outset towards the side of Turkey in this contest; and that partiality, coupled with unjust suspicions of Russia, is stated to have drawn them, through a series of "increasing exactions," into "the path of war" with Russia. After alluding to the alleged dangers arising from Russian aggrandisement, he endeavours to show that Europe has more to fear from the Allied Powers opposed to Russia :—

It is for Europe, not for the Two Powers, to decide if the general equilibrium really runs the risks which are attributed to it from the supposed excessive preponderance of Russia. It is for it to examine which weighs heaviest to-day upon the freedom of action of states—Russia left to herself, or a formidable alliance, the pressure of which alarms every neutrality, and uses by turns caresses or threats to compel them to follow in its wake. Europe will also decide if, during the last years, it is from Russia that have come pretensions the most hostile to the rights of sovereignty, and to the independence of feeble states; if in Greece, in Sicily, in Naples, in Tuscany, it is for or against those rights that she has declared; whether in Germany between the great Governments she has sought to sow discord, or to re-establish union; whether, morally in Lombardy, and materially in Hungary, her efforts have not been consecrated to the maintenance of equilibrium; and whether the blows that are preparing against her, the isolation in which it is hoped to place her, by handing over the political world to a far different sort of preponderance, will not rather be the annihilation of that equilibrium.

In conclusion, he trusts—

That God, who has so often protected Russia in the day of trial, will assist him once more in this formidable struggle. He sincerely laments the infinite evils which are about to fall on humanity; but at the same time he thinks it to be his duty to protest solemnly against the arbitrary pretensions laid down by the Two Powers, which throw upon him alone all the responsibility of them. They are free, without doubt, to adopt against Russia such measures as may be most convenient to them, but it does not belong to them to lay the consequences to his charge. The responsibility of the calamities of a war belongs to the Power which declares it, not to that which is bound to accept the provocation.

THE RUSSIAN FLEET IN THE BLACK SEA.

The account which the Russian papers give of the proceedings of their own Black Sea squadron is not likely to raise their estimate of the vigilance and energy of our naval forces in that quarter. The *Invalid Russe*, for example, contains a full and circumstantial narrative of the very able manner in which the Russian vessels executed the somewhat dangerous task of conveying Rear-Admiral Panfiloff, towing row-boats; the *Crimea*, under the flag of Rear-Admiral Panfiloff, towing the *Mamai*, transport ship; the *Odessa*, towing the *Bayb*; the *Chersonese*, towing the *Gostaga*; the *Bosfa*, towing the *Kolco*; the *Mogoutchy*, towing the *Themes*; and the *Argonauta*, towing row-boats.

In coasting along the shores of Circassia, and whenever they arrived opposite a post, they left the vessels necessary for the embarkation of the garrison that, on approaching Navaghinsk, two steamers—one French, the other English—were signalled. The embarkation was suspended, and measures were taken to prepare for action; however, the enemy's ships remained in the offing, passed before ours, and the embarkation was resumed.

In the meantime, opposite the post Vellaminoff, these two steamers stopped the latter transport *Bayb*; two officers hailed her, and addressed to her commander (Lieutenant Tchebyschell) the following questions :—

"What steamers have you seen near the post of Navaghinsk?" Answer: "Seven Russian steamers of war."

"What are they doing at that point?" Answer: "There is an Admiral there, and he has not told me his instructions."

"What is among the ships?" Answer: "Provisions?" Answer: "We."

"Why do you burn them?" Answer: "Because such is the order given."

"Where is your fleet?" Answer: "I don't know, but I believe it to be at sea, and very near."

After having received these answers, the two steamers departed, having addressed the same questions to the *Mogador* and to the Simeon.

On the 5th the whole expedition anchored at Novorossisk, where it disembarked the garrison of the posts of Navaghinsk, Golovine, Lazarieff, Vellaminoff, Tenghinsk, and Gelendjik.

Storms had prevented the squadron of Rear-Admiral Youkotitch embarking the garrison of the post of St. Esprit. The removal of this garrison took place on the 9th and 10th, by means of the steamer *Constantin monosseta*, aboard which was sent Colonel Skolkoff, Aide-de-camp of the Emperor.

From all these posts, besides the garrisons, which make up an effective force of 5000 men, they embarked all the families of the soldiers, the women, and a great part of the stores of the Crown. The rest, as well as the buildings, were then fortified and afterwards blown up.

Our military resources have thus been augmented by an important body of picked troops, accustomed to war by long service in the centre of an unubdued country.

It is but fair to add that the crew of the English steamer *Samson* give a very different account of the affair. They say that, early in March, the Circassians, having been provided with arms and ammunition, attacked the Russians, and, after a severely-contested battle, drove them from their castles on the coast. During four days the forts were surrounded by the Circassians, and at last the Russians, finding that they could hold out no longer, blew up their powder magazines and sought to reach the sea. The captain of the *Samson* distinctly states that a party of Russians who had abandoned two blockhouses situated on a hill were attacked by the Circassians and all cut down. The loss of the Russians was represented as having been very considerable. As the Russians have not been remarkable for veracity on the part of the Christian population of Turkey in the name of religion and of nationality, others are seeking means to cause dissensions in Spain and in Portugal, which may, in the idea of the Russian Cabinet, cause a diversion in favour of the events of the East. For the last six weeks, a certain number of Russian travellers, among whom are several officers, have been arriving at Lisbon, from whence some have proceeded to the interior, others to the south of Portugal. The fact in itself of Russian officers choosing the present period of difficulties for making a journey of pleasure is enough to excite suspicions, if it were not be a journey of pleasure is enough to excite suspicions, if it were not be-known that they are commissioned to make enquiries in all kinds of intrigues in order to raise some kind of demonstration in favour of Don Miguel; but the Prince whom the Czar put a short time since designated as a *monster* and an *idiot*, a fact which is well remembered at Lisbon. We have every the probability of the information that we have received on this subject is, that the same symptoms are manifesting themselves in Spain; it is the whole Iberian peninsula which Muscovite intrigue has in view. Public opinion sees the hand of Russian agents in the Carlist demonstrations which have recently taken place at Barcelona, and many people go so far as to say that the agents of Russia have purposely thrown money in order to excite the workmen to revolt. We are very easy as to the result of the trouble which the secret diplomacy of the Russian Cabinet is taking. It is only necessary that such manœuvres be known for them to be paralysed, and they can only tend to confirm the two States of the Peninsula in the warm feelings of sympathy which they loudly express for the policy followed in the East by France and England.

CAPE OF GOOD HOPE.

The screw-steamer *Hydaspes* arrived at Plymouth on Thursday, with the Cape of Good Hope mails to the 26th February. The election of the Upper House was completed, and that for the Lower House was in progress. The statement that gold had been discovered at Graham's Town was confirmed.

UNITED STATES.

The steamer *Africa*, arrived at Liverpool, at midnight, on Monday, having left New York on the 5th inst. Washington had been the scene of intense excitement, owing to an expected duel between Mr. Breckenridge, of Kentucky, and Mr. Cushing, of New York, two prominent member of Congress, who had quarrelled about the Nebraska Bill, but were persuaded at last to arrange the affair amicably. The attempt to force the Nebraska Bill through the House of Representatives, against the feeling of the country, has not been successful.

Mr. Campbell, of Ohio, introduced a resolution in the House of Representatives, requesting the President to open negotiations with England, with a view of ascertaining upon what terms the latter Government would consent to the annexation of Canada to the United States! The resolution was rejected by a majority of 119 to 38.

An arrangement has been made between the United States and Australia, which embraces the entire ocean postage reform. Letters are to be carried between the two countries for 24d.; while from England to Australia, a letter, under the new system, is to cost 6d.

posted up in the city whereby all Greek subjects who are willing to become Ottoman subjects, and can give two securities for their conduct, must proceed to the police office and make a formal declaration, and they also will be exempted.

The loss to the higher classes is not so great as to those of humbler means. The Greek firms are very extended, and almost all have partners who are under French or Austrian protection, so that business, though obstructed, will not be entirely suspended. But the lower classes, consisting of sailors, domestic servants, porters, and the like, will be brought to utter ruin, and if they are to quit the country at their own expense, it is difficult to see how the orders of the Government can be carried out, as the greater number live only from day to day, and to find the means of paying their passage to the Pireus will be an impossibility to thousands. The Pacha of Smyrna has promulgated a similar order in his province, and the Hellenes inhabiting that prosperous city are to be banished to the number of about 9000. This course of policy is the less advisable, as the Rayah Greeks who remain behind, some tenfold more numerous than those expelled, are to the full as dangerous as the Hellenes; in short, they are one in feelings and desires, and there is no reason to suppose that the Hellenes are more active in their machinations than the native-born subjects of the Porte.

Lord Redcliffe has addressed a circular to her Majesty's Consuls in Greece and Turkey, explaining the attitude assumed by the Western Powers with regard to the Greek insurrection.

THE GREEK INSURRECTION.

A despatch from Prevesa of the 15th inst. brings intelligence that Arta and Zarina still held out against the insurgents, who are making no progress. Skirmishes were taking place daily, but with no important result. At Athens, the greatest enthusiasm was produced by the reply of the Greek Government to the ultimatum of the Powers. Enrolments are now made openly, and Lieutenant-Colonel Corsini is forming a new legion, by order of the Russian Ambassador, and with the assent of the Minister of War. This legion will be armed and clothed on the model of the Russian troops. In the midst of the latter display, however, the Russian party is busily plotting to raise a Russian Grand Duke to the throne of Greece.

A certain Colonel Wolkoff gives the impulse, in the name of the Czar to the enthusiasm of the Athenians, which augments or diminishes according to the nature of the news published by the journals—journals which are all subventioned with Russian money, and whose violence exceeds all bounds. Thus, when the crossing of the Danube by the Russians was announced, the whole of the Government party were mad with delight; and, during the night, a squadron of Lancers started off to join the insurgents, apparently by wealth, but in reality with the approbation of the authorities, who even encouraged the troops in their resolution, as it was evident, among many other reasons, from the fact that the person at the head of this body of men, and, in fact, the person who carried them off was one of the King's aides-de-camp. Another circumstance, which speaks volumes, is that the troopers left the whole of their horses—belonging to the Government—in their stables, but, before starting, they made a razzia of all private stables in the town, and carried off every horse that they could turn to account. The King and Queen are openly supporters of the movement; but in the Senate, in the Legislative Corps, among the most influential inhabitants of the city, the feeling is very different. They deeply deplore the conduct of the Government, which seems anxious to undermine the social edifice with its own hands, even if it should bring the whole structure down about its ears. There can be no doubt that the present policy of King Otho's Government not only puts a stop to the progress and prosperity of the country, but absolutely menaces the existence of Greece as an independent State. In the island of Spezzia the merchants and the inhabitants have employed their influence to prevent the Government from enrolling sailors for the corvette and the two brigs, which the Emperor Nicholas (by a pretended sale to a Greek merchant at Trieste) has proposed to give as a present to the Greek Government.

It is generally feared that if these Greek vessels, which are at present in Turkish ports, are forced to return to their own ports, an attempt will be made to arm some of them, and to send them out as corsairs; but the English and French men-of-war watch them closely; and if the necessity should arise, as the Archipelago is soon to be navigated by so many vessels carrying troops, they will not hesitate to establish a blockade of all the Greek ports, and even to carry off the rudders of ships whose intentions or movements may appear suspicious. Such a measure, however, would be fatal, in consequence, to every existence depends upon its commerce and its mercantile shipping; more especially the Government, with its usual want of forethought, has neglected to provide a sufficient reserve of grain for the support of the people till the next harvest. The kingdom of Greece is threatened with a frightful famine, and it is perhaps to escape the fury of the populace on that account that the Greek Ministry is endeavouring to gain a false popularity by flattering the momentary passions of the leaders and agitators of the people of Athens.

Montenegro still remains quiet, but Russian intrigues are actively at work. On hearing of the expulsion of the Greeks from Constantinople, Prince Danielo, Vladika of Montenegro, published a proclamation calling upon the people to take up arms.

RUSSIAN REVOLUTIONARY INTRIGUES IN SPAIN.

The French papers affirm that the late disturbances in Barcelona and other parts of Spain have been fomented by Russian agents. If what they allege be true, the Czar is the chief promoter of revolutionary designs in Europe, with a view, no doubt, to make himself useful as the great conservator of the peace of Europe. The *Pays* of Monday speaks of the Russian intrigues in the most explicit terms :—

We have received information both from Spain and Portugal which is not without interest, which gives an idea of the morality of Russian policy, as well as the expedients to which it is reduced. It appears that, despairing of finding allies nearer home and of enrolling on its side any regular Government, Russia now places all her hope in the disputes which she may cause elsewhere in order to distract our attention. Whilst the Czar is preaching such measures to the south of Portugal, the fact in itself of Russian officers choosing the present period of difficulties for making a journey of pleasure is enough to excite suspicions, if it were not be-known that they are commissioned to make enquiries in all kinds of intrigues in order to raise some kind of demonstration in favour of Don Miguel; but the Prince whom the Czar but a short time since designated as a *monster* and an *idiot*, a fact which is well remembered at Lisbon. We have every the probability of the information that we have received on this subject is, that the same symptoms are manifesting themselves in Spain; it is the whole Iberian peninsula which Muscovite intrigue has in view. Public opinion sees the hand of Russian agents in the Carlist demonstrations which have recently taken place at Barcelona, and many people go so far as to say that the agents of Russia have purposely thrown money in order to excite the workmen to revolt. We are very easy as to the result of the trouble which the secret diplomacy of the Russian Cabinet is taking. It is only necessary that such manœuvres be known for them to be paralysed, and they can only tend to confirm the two States of the Peninsula in the warm feelings of sympathy which they loudly express for the policy followed in the East by France and England.

PRINCE LOUIS-LUCIEN BONAPARTE.

THIS distinguished scion of the Bonaparte family (whose Portrait we engrave upon the next page, from a beautifully-executed Calotype), has of late been the subject of much comment in Paris, and various parts of Italy; and very recently he paid a visit to England, his native country.

Prince Louis Lucien Bonaparte is second son of Lucien Bonaparte, brother of the Emperor Napoleon I. Lucien Bonnparte was third son of Carlo Bonaparte, by Letitia Ramolini, his wife. He was born at Ajaccio, in 1775. After having held the important offices of President of the Council of Five Hundred, Minister of the Interior, and Ambassador to Madrid, he retired from France to Italy in 1804, the year of Napoleon's assumption of the Imperial diadem, and purchased the estate of Canino, in the Papal territory. Subsequently, in 1810, distrustful of the security of his Italian asylum, he embarked for the United States, but was captured by two English frigates, and conveyed to Malta to await the orders of Government. In conformity with those instructions, Lucien was transferred to England, where he arrived 18th December, 1810, and fixed himself in Shropshire, about fifteen miles from Ludlow, on a beautiful estate he was allowed to purchase. Here he sojourned, devoted to literature and the repose of domestic life, until the peace of 1814 enabled him to return to the Continent. During the Hundred Days he played a prominent part; and after Waterloo effected his escape to Rome, where he died 29th June, 1840. It was during his father's sojourn in England that Prince Louis Lucien was born—at Thorngrove, Worcestershire, in Jan., 1813. He passed his childhood in Rome, and his youth in Florence, where he has devoted much time to the culture of science, particularly of ehemistry and of philology. He has been one of the most active members of the scientific Italian Congress, and is author of several chemical works in the French and Italian languages. On the presentation of the celebrated chemist, M. Dumas, then Minister, he received the Cross of the Legion of Honour. The Prince was also a member of the jury for the French Exposition in 1849; and a French juror for the English Exhibition in 1851. He was elected a representative for Corsica at the Assemblée Constituante in 1848, but did not take his seat. The electors of the Department of the Seine, however, sent him with more than 120,000 votes to the Legislative Assembly, where he has uniformly displayed very moderate principles. He is now a Senator, the only one among the members of the civil family of the Emperor—from whom, on many occasions, he has received proofs of his consideration and sympathy. The Prince was present at the recent opening of the Legislative Chamber, when he occupied the second chair on the right hand of the Emperor.

The absence of Prince Louis Lucien Bonnparte from the festivities of the Court, in February last, gave rise to an unfavourable, but false interpretation; and, though it is well known that the Prince takes no active part in political matters, it was nevertheless said that the absence was owing to some such cause, and that a coolness existed between him and his cousin, the Emperor. This was not the case. There was no coolness between the cousins; and if Prince Lucien had not been seen lately at the Tuileries, it was simply because he had been for the previous month in England—which, as the place of his birth, he is much attached to. A few weeks ago the Prince paid a visit to Thorngrove, took a lively interest in his inquiries about the place, and especially in the rooms chiefly occupied by his late father. The aged poor in the neighborhood of Thorngrove have a grateful recollection of the kindness and liberality of the Bonaparte family, and they are spoken of by many of the inhabitants of Worcester in terms of respectful admiration.

The Prince has since visited Italy, and on March 12th he arrived in Turin. The Sardinian Government, who had previously received intelligence by telegraph of the Prince's visit, had ordered a detachment of Carabiniers to meet him at the frontier and escort his carriage. This attention the Prince, with many thanks, declined accepting. The Duke de Cariche, Minister of France at the Court of Turin, waited on the Prince on the morning of the 13th, and announced the visit of the Ministers; and M. de Cavour, the President of the Council, mentioned that the King would be happy to receive his Highness in the afternoon of the next day. The Prince, attended by his secretary, Major Cavagnari, dined at the French Embassy the same evening.

During the Prince's stay in the Lombardo-Venetian kingdom, though there is no Count, the whole of the authorities manifested the most respectful attentions, and immediately visited him. At Brescia it appears his presence occasioned a good deal of sensation; and though the Prince travelled in strict incognito, the people at once observed the resemblance between him and Bonaparte when First Consul. The crowds were so great in the streets that he had to get into his carriage to make his way from those who thronged to see the cousin of the Emperor of the French. At Venice the same reception awaited him from the Governor-General Gorzkowsky and the Imperial Lieutenant the Chevalier de Tuggenbrug, on his arriving at Verona he was immediately visited by Marshal Radetzky.

The Prince expends a great deal of the time he can spare from political cares in writing a great philological work, begun in Florence. For this purpose he has assembled in this country a large collection of books, relating to the languages and dialects of Europe.

Prince Louis Lucien has an elder brother, Charles Lucien, Prince of Canino and Musignano, born at Paris, 1803. He is known for his extensive acquirements in zoology, and is a corresponding member of the Academy of Sciences. He was President of the National Assembly of Rome in 1849. He is married to the only daughter of his uncle (the exKing Joseph Bonaparte). Prince Louis Lucien has two younger brothers—Pierre Napoleon Bonaparte, born in 1815, a member of the Legislative Assembly, and who served in Africa as Chef de Bataillon in the Foreign Legion; and Antoine Bonaparte, born in 1816, and also a member of the Legislative Assembly. Of his sisters, the eldest, Letitia, is the wife of the Right Hon. Thomas Wyse, British Envoy to Greece. Christiana Alexandrine Egypta, who married, in 1824, Lord Dudley Stuart, M.P. for Marylebone, and died in 1847, leaving issue of Lucien, by his first wife.

THE PRISON OF POERIO.

By a letter received from Naples, dated April 4, we learn that the authorities at the prison of Montefusco have imposed fresh cruelties on Poerio and his companions. A soldier pretends to have overheard the prisoners speaking disrespectfully of the Neapolitan Government. Orders were issued to have all the prisoners again chained to the wall. Poerio, however, for the moment has escaped, as the medical man of the prison declared he was not in a state to bear so severe a punishment. This is but a revival of the cruel treatment complained of about four months since, when a letter from Naples, dated December 4, brought to his friends the intelligence :—

Baron Poerio, who has now born the chains of a galley-slave for more than four years, is subject to fresh severities, which, if continued, will, ere long, remove him from the troubles of this world. Hitherto the police authorities have permitted the ex-minister to spend ten ducats (£2) per month for such necessaries as his state of health required. Orders have now been issued that henceforth he will be permitted to receive from his family only 1 carlino and 50 (6d.) per day. Now the prison in which this victim of the Neapolitan Constitution is confined, at Montefusco, is so exposed, that without fire the prisoners would perish of cold, and the turpence per day will scarcely pay for wood; independent of which M. Poerio is in such a wretched state of health as to require many comforts: such as are accorded to the very worst criminal are refused to the late friend and adviser of his Sicilian Majesty.

An artistic Correspondent has sketched Poerio and Pirouti, as they lately appeared chained to two felons in the Infirmary of the Bagno di Ischia. The figure on the left is Poerio, that with spectacles Pirouti. The Sketch, the reader is assured, is well authenticated.

The case of Poerio was detailed in the ILLUSTRATED LONDON NEWS for July 26, 1851. About this period, Mr. Gladstone, in a series of letters to the Earl of Aberdeen, laid bare some of the iniquities of Neapolitan misrule. He narrated facts of which he had been the eye-witness, and showed what atrocities were committed in Naples, in the outraged name of justice. "Among the supporters of the King may be inferred from the when he needed support, was one Carlo Poerio, distinguished for his eloquence as a speaker and writer, the blamelessness of his private character, and his attachment, not to extreme but to moderately liberal principles. Of so much value to the Government were his talents and character considered in the perilous days of 1848, that he was nominated one of the Ministers of the Crown. He resigned that position when measures were not prudently informed; but that he did not entirely lose the confidence of the King may be inferred from the fact that his advice was sought after he had ceased to be of service in the State. In July, 1849, he was accused, with forty other persons, of belonging to the extreme Republican party, and of plotting the murder of the King. On this charge he was brought to trial. Mr. Gladstone was one of the spectators on the occasion, and states that the evidence was inconclusive, the perjury of the witnesses palpable, and the conduct of the Judge most indecent and partial. The unfortunate ex-

Minister was, however, found guilty, and sentenced to "twenty-four years' imprisonment in irons;" and the present Illustration represents a phase of his suffering; and, in our Journal for August 2, 1851, will be found engraved another prison-house of Poerio, the *bagno* of Nisida, the indignities of which are minutely described by Mr. Gladstone.

HIS HIGHNESS PRINCE LOUIS-LUCIEN BONAPARTE.
(SEE PRECEDING PAGE.)

WALTON PIER, CARRARA.

THE same energy and indomitable perseverance, which has brought our commercial position at home to such a height of prosperity, is, from time to time, evident also in distant localities in which our countrymen have established themselves. Of this spirit we find an illustration in a new Pier at Carrara—a work undertaken at the sole cost and responsibility of the gentleman whose name it bears, who has been long resident at Carrara, and is well known as the proprietor of marble quarries. Fully 1000 tons of this beautiful material are shipped from this place monthly, principally to England, France, and America.

Up to the time of the opening of the Pier, the process of shipment had been most uncouth and expensive. The system, as described by an eye witness, was somewhat as follows:—The coasting vessels to be loaded were drawn up on the beach, and shears erected alongside, by means of which, and a clumsy capstan and tackle, the blocks were hoisted on board. With blocks of ordinary dimension this was the plan adopted, but when these happened to be of extra sizes, another most singular method was employed. The vessel in which a large block was to be embarked, after being hauled up on the beach, had her masts taken out, and the hold filled with sand, an inclined plane of the same material being raised from the shore to the craft; these preparations completed, oxen were yoked to a sledge on which the block was placed; it was then dragged up the incline, and ultimately deposited in the centre of the hatchway; the sand was then thrown out, and the marble gradually lowered into its place. The expense and delay attending this system were beyond conception. Weeks were often lost in waiting for fine weather and sufficient depth of water for re-launching the loaded craft, which, if of a large size, as a precaution against her capsizing, was engirdled with empty casks. Oxen and men then lent their assistance, and, by their united efforts, the vessel was dragged into the sea.

Such was the state of things up to the present day, until Mr. Walton took the spirited determination of supplying the want, and carried it through triumphantly, undeterred by the great difficulties which attended its erection.

POERIO AND PIROUTI, IN THE INFIRMARY OF THE BAGNO DI ISCHIA.

The Pier extends nearly 750 feet into the sea, is 22 feet wide, and has a double line of rails, and a depth of from 12 to 16 feet of water. The superstructure is supported on piles of enormous size, varying from 60 to 90 feet in length. The timber was brought from the Appennines, beyond Florence, down the Arno to Leghorn, and carried from thence by sea to the works. There are two cranes, of improved construction, capable of lifting fifteen tons, on the pier. Notwithstanding Mr. Walton has had to execute this work at his own risk and cost, it gives us pleasure to add, that all engaged in the trade are at liberty to take advantage of its convenience at a moderate toll.

The inauguration of this bold and enterprising work has made quite a *furore* in Carrara and the neighbouring cities. It is doubtless a great move; and, we trust, is the commencement only of further developments of commercial improvements in this rich and fertile country.

We learn with pleasure that his Royal Highness the Duke of Modena has taken an active interest in the prosecution of the work, and furthered it by liberally admitting the material imported for its construction at a reduced duty.

We have also been informed that his Royal Highness has given his assent for a railway to connect the Pier with the city of Massa and the marble quarries. These are all evidences of right feeling, and prove that our more remote Continental neighbours, even in the smaller principalities, are rousing themselves to that energy and exertion, so wholesome to society at large; and we congratulate Mr. Walton in having originated a movement tending so greatly to develop the commerce of Carrara.

THE NEW WALTON PIER, CARRARA, FOR THE SHIPMENT OF MARBLE.

LAUNCH OF "THE PHŒBE" AT DEVONPORT DOCKYARD

LAUNCH OF H.M.S. "PHŒBE."

This fine Frigate (50 guns) was launched from the Royal Dockyard at Devonport, on the afternoon of the 12th inst. It is usual at all launches of men-of-war vessels to erect seats and accommodation for a large company; but, on the present occasion, these preparations were dispensed with, the launch being a "pure matter of business," and not the least accommodation was provided for sight-seers. The Dockyard gates were opened at three o'clock to the public, and several thousand persons passed into the yard to witness this most imposing spectacle.

Our Artist had an excellent view of the launch, being stationed in a boat a few hundred yards from the stern of the vessel. The *Phœbe* was appointed to leave the land at four o'clock; but, first, our Artist's attention was directed to the *Nile* (90 guns), who had her "steam on," and was just leaving her moorings, surely and steadily. On she came, until she got in sight of the throngs assembled on board the *Phœbe* and in the yard, when she had three hearty English cheers: these were returned by the men on board; and the noble vessel passed alongside the yard at the stern of her "sister of the deep." Just as she had moved about a hundred yards further on, there arose a general shout, "She is off—she is off!" and off she moved majestically, and glided into the water. The air resounded with shouts—the tars on board the *Nile* rushed to the lower rigging and cheered most heartily.

The frigate was soon taken in tow by the steam tender; and the *Nile* moved out at a good speed to her moorings in the Sound, to await her orders to join the Baltic fleet. An old sailor, a bystander, stated that in the "old war time" it sometimes took four or five days to tow a vessel into the Sound. But now, by the aid of steam, this was done in less than an hour on the present occasion.

This noble Frigate was built in the same lines as the *Indefatigable*, 10 which she is a sister ship, and is of the following dimensions:—Length of keel, 174 feet 8½ inches; between perpendiculars, 180 feet; extreme breadth, 51 feet 6 inches; depth in hold, 16 feet 6 inches. Burthen in tons, 2043-82-94.

The utmost activity prevails in the Dockyard; and we are assured that more than three thousand hands are now lustily at work within the walls.

NEW CHURCH, WEST HARTLEPOOL.

CONSECRATION OF THE CHURCH AT WEST HARTLEPOOL.

A very few years since West Hartlepool was little better than a barren, uncultivated soil, yielding little profit, and unsightly in appearance. The scene is now changed; and where the farmer anxiously toiled to house his scanty crops, the mariner now floats, and the anxiety he evinces is to ship the produce—principally coal—from its native bed, to remote parts of the world. The three docks which occupy the space once tenanted by herds, by whom a bare subsistence was obtained, are crowded with vessels, each gathering its store, and thus aiding in the commercial prosperity of the place. The great importance of this position has rendered another dock necessary, and which has been recently commenced. Not only this dock, but other extensive works are in progress, which the increase of shipping has rendered absolutely necessary. The rapid demands of commerce have added to the wants in another direction, and building has become an extensive speculation. The sod is turned, and the hedges uprooted, to give place to streets

THE 8TH HUSSARS AT THE RAILWAY, PLYMOUTH.—(SEE NEXT PAGE.)

stretching in all directions from the main centre of activity; yet the supply of houses appears still to be insufficient for the rapidly-increasing population.

Mindful of the spiritual wants of this district, the Dock Company have, most liberally, given the ground, the stone, and lime, for the new Church. It is cruciform on the plan—the intersection of the nave and transepts being four massive piers, from which spring outwardly eight stone arches to the walls of the nave and transepts, forming on the north and south sides of the nave and chancel small aisles. The style of architecture is that which prevailed in the latter part of Henry III. The building is erected of magnesian limestone, from the quarry immediately adjoining, where the excellent lime was also burnt; the lantern in the centre of the roof is principally required for ventilation; it also forms an important feature in breaking the otherwise monotonous line of the roof. The Church is admirably warmed by the combined process of hot water and air.

The greatest external dimensions are—from west to east 183 feet; from north to south 95 feet. The height of the tower is 100 feet to the top of the parapet, and to the top of the angle-turret 27 feet.

In the progress of the works, when the characteristic features from time to time became more fully developed, an increasing interest sprang up, and many individuals, apart from the subscription list, liberally contributed to the internal decoration. The windows of the chancel were filled with elaborately-designed stained glass, presented by Ralph Ward Jackson, Esq., who also presented the stained glass of the south transept windows; those of the north transept were presented by the subscription of a few gentlemen connected with the West Dock-office. The whole of the other windows are glazed in ornamental forms in plain glass, except the borders, which are of stained glass, and were all presented by the architect. The communion service, and all the furniture within the communion, except the chairs, were the liberal donation of Mrs. Ward Jackson. The oak chairs were given by J. Cardan, Esq.; the font by Thomas Casebourne, Esq. Many other persons have contributed to the building, not forgetting the very noble donation of the organ by Mr. Langley.

A large churchyard has been formed and inclosed by a low wall and iron railing; there are four handsome entrances, with stone piers and iron gates; the internal space is laid with turf, and there is a broad gravel walk all round the churchyard near the railing, with other walks to the several entrances of the Church. As this churchyard will not be used as a cemetery—it being the consecrated ground of a cemetery elsewhere—this will, in a short time, be the only large open space in this fast increasing town. The edifice will eventually be surrounded by a large square, and a desire has been evinced to erect the buildings in a similar style of architecture to the Church. In the south-west angle of the square it is intended to erect large schools; the south-east angle is appropriated to the Parsonage. Plans for these buildings have already been prepared by the architect of the Church (Mr. E. B. Lamb, of London), who also designed the whole of the stained glass, the fittings, and decorations of that building.

EMBARKATION OF THE EIGHTH HUSSARS, AT PLYMOUTH.

THIS fine cavalry regiment, which has been stationed for some time at Exeter, has just received orders for embarkation to the seat of war. The first division entered Plymouth on Friday week, about two o'clock, and our Artist has sketched them passing through the principal road that joins the two important towns of Plymouth and Devonport. The roads and streets were crowded, and many a cordial cheer was given as the troops passed along. The regiment is known as the King's Royal Irish Light Dragoons, and numbers 800 sabres. Their insignia is the national one of the Harp and Crown; and they have won honours which are recorded in the glorious names of "Leswarree" and "Hindostan." Their Colonel is Sir John Brown, K.C.H.; and they are under the command of Lieut.-Colonel Frederick George Shewell.

The transport in which they embarked was a sailing vessel, the *Kohunga*, from Liverpool, 1200 tons burden. Her forecastle and chief cabins are elevated above the main deck; on the second deck ten tables are fitted up, five on each side, for the exclusive accommodation of the soldiers. Beneath this deck is the hold in which the horses have been placed. This is separated longitudinally into three divisions. These on each side are appropriated to the horses, which stand side by side, with their heads towards the centre, enclosed by barriers padded to prevent the animals being bruised. To preserve them also from danger to which they would be liable were they to lie down, a sling is prepared for every horse, which being fastened round his waist and attached to the beam above, affords him support. The third and centre space in the hold is left free, to enable the men to feed and otherwise attend on the animals. The base of the floor is formed of planks. The horses stand on a dunnage laid flat, while in the centre there is a quantity of shingle and iron ballast. The aperture in the main deck, through which the horses were lowered, was padded on three sides with bags of straw. The aperture in the lower deck was not so protected.

The embarkation commenced on Saturday morning, and was a novel and extraordinary sight. It had been anticipated by many that horse-boxes would have been used to place the chargers on board, but the hatchway of the transport was not sufficiently large to admit of these admirable contrivances being employed. There was occasion to regret this, as the restiveness of some of the horses put the limbs of the men in jeopardy. In the absence of boxes, the ordinary slings were had recourse to. Each of these slings consist of a piece of canvas about a yard wide and two yards long, with staves at each end, and loops attached, when the sling is placed under the horse's belly, meet over its back, and one loop with an eye is introduced within the other; ropes are also fastened one to each staff, and one is brought round the hind legs of the horse and fastened, the other being secured round its chest; when this is done a man, standing by with a hook, fixes it in the eye of the loop, and the signal being given, the labourers haul on the mainyard of the ship, when the tackle instantly rises, taking the horse into the air with it. The creature at first struggles, but soon ceases, looking helpless and foolish, while dangling amid air. Having been drawn to a certain height, about thirty feet, the crew on the mainyard, by the mainstay, drawing the horse towards the ship, and men with ropes in their hands attached to the horse's collar, guide it into the hold, where, as soon as it touches the firm deck, it gives a few plunges, as if in astonishment at its safety after its aërial flight, and is taken away to its appointed place.

About 60 horses were put on board, including the steeds of the officers of the division. The embarkation was concluded by half-past twelve o'clock.

When the horses were on board, the dragoons commenced inducting themselves into their temporary abode, bringing their arms, baggage, &c., into the ship. Many officers were present during the embarkation. Amongst them were Admiral Sir John Pakenham, K.C.B., Brigade Major Wetherall, and the Lieut.-Colonel and Major of the 8th Hussars (who were in plain clothes).

The transport, under the care of Mr. Brown, Master-attendant, was then immediately taken out in harbour; and as she passed the guardship *Impregnable*, Captain Lowe, the crew manned the yards, and gave cheer after cheer to their gallant countrymen, who, on land, as they upon the ocean, have the honour of England's name in their keeping. The *Kohunga* left for Malta, *en route* for Gallipoli, on Sunday morning.

PROCLAMATION OF THE FAST.—On Wednesday morning, at ten o'clock, Mr. Beddome, the Sergeant-at-Arms, and other civic officers, proceeded to the Royal Exchange, where the Queen's proclamation for a day of humiliation and prayer for the restoration of peace was read. A proclamation from the Lord Mayor, requesting the citizens will close their shops and abstain from all business on that day, in order that the day may be devoutly and reverently observed by all classes, was also read. The ceremony attracted a large assemblage of persons.

WEIGHING GOLD.—M. Ludwig Oertling, of Store-street, has just completed a set of balances for the weighing of gold, for the Royal Mint at Sidney: the largest to weigh about 1000 ounces in each side to half a grain; the smallest being a very delicate assay balance, to weigh to one thousandth of a grain.

NAPOLEONIC AUTOGRAPHS.—At a sale of autographs which has just taken place in Paris, in consequence of the death of M. Brisot Thivars, were the following lots:—A letter of Babeuf, written from St. Pelagie, was knocked down for 50 fr.; one from Dessaix to Kleber, 25 fr.; from Madame Elizabeth, 80 fr.; from Murat, 26 fr.; from Marie Antoinette, 130 fr.; and one from Madame Letitia, mother of Napoleon I., to Lucien Bonaparte, 10 fr. 50 c. Twenty-one lines of the writing of Napoleon I., without signature, were sold for 15 fr.; and ten pages of his writing, with corrections by his own hand, being a fragment of the history of Corsica, which he composed a little after his leaving the school of Brienne, brought 200 fr.

CALENDAR FOR THE WEEK.

SUNDAY, April 23.—1st Sunday after Easter.
MONDAY, 24.—Oliver Cromwell born, 1599. Daniel Defoe died, 1731.
TUESDAY, 25.—St. Mark. Princess Alice born, 1843.
WEDNESDAY, 26.—Oxford and Cambridge Terms begin.
THURSDAY, 27.—Sir W. Jones died, 1794.
FRIDAY, 28.—Mutiny of the *Bounty*, 1789.
SATURDAY, 29.—London University founded, 1827.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 29

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
M	A	M	A	M	A	M	A	M	A	M	A	M	A
h m	h m	No	h m	h m	h m	h m	h m	h m	h m	h m	h m	h m	h m

TO CORESPONDENTS.

C. F.—Arms cannot be legally used or adopted unless the party claiming them can show descent from some ancestor entitled to them, or is a grantee himself.

BURLINGTON HOUSE.—Our contemporaries persist in stating the purchase-money of Burlington House to be £150,000; whereas, the amount is £130,000 less than this sum, as stated in our "Table Talk" of last week.

S. A. C.—Clark's Treatise on Water-Colour Painting contains some useful instructions in flowers.

A. B. C.—Address the Officers in Waiting, College of Arms, London.

A SUBSCRIBER.—A christian name cannot be changed. A surname may be altered or adopted by Royal license.

W. F. H.—Sir Robert Peel was twice constituted Prime Minister: first in 1834, and again in 1841. The Duke of Wellington succeeded Lord Goderich as First Lord of the Treasury in 1828.

D. O., ESSEX.—If the two bills be separate, it would be safer to have a stamp on each; but if the whole be combined in one account dated, a receipt stamp for the balance will suffice.

J. C. K., Dublin.—Your coin is a groat of Edward III., of the London Mint.

J. J. W., Macclesfield.—We shall be glad to see a specimen.

ANTI-BEARD, J. N., Cork; J. L., Preston; O. W.; NEW PORTRAITS, &c.—We have not room.

CORINNA, Hampstead.—The practice is unsafe.

CRIB.—We do not interfere in card-playing disputes.

A CONSTANT READER.—Johnston's "Dictionary of Geography and Gazeteer of the World."

A SUBSCRIBER, City.—Booth's "Principles of English Composition" will be found a very useful work.

BETA, Stockton-upon-Tees.—Faraday's instrument to point out the action of the hands in table-moving, may be had of any philosophical instrument maker

E. P. T., Kilmarnock.—The "Saturday Magazine" may be had of J. W. Parker, 445, West Strand.

MIRNA.—For an abstract of the principal "Table-moving" phenomena of last year, with authorities, see the "Year-book of Facts, 1854." They were of American and German origin.

J. G.—The Map of the Census is contained in the Abstract, published this day, price 1s.

F. J. D., Exeter.—The Princess' Theatre holds about 1800 persons; the Surrey and Marylebone, 2000; Drury-lane, 2700; Covent-garden and Her Majesty's Theatre, 3000.

'ΑΛφα, Edinburgh.—No candidate for the East India College, at Haileybury, can be nominated thereto, whose age is less than seventeen, or above twenty-one years; and no person who has been dismissed from the army or navy, or expelled from any place of education, will be nominated to the College.

W. H. R., St. Paul's Churchyard.—The new street shall be illustrated forthwith.

CLARENS.—The coin described in your letter is an Irish penny of King John, worth from 3s. to 6s.

A SUBSCRIBER, who is desirous of obtaining some information concerning female training schools, is referred to Low's "Charities of London," for the present year, published in a cheap form.

G. E. is thanked, but we have not room for the illustration.

THE CENSUS OF 1851.

NOW READY,

THE CENSUS OF THE UNITED KINGDOM,

PREPARED FOR THE

ILLUSTRATED LONDON NEWS,

COMPRISING

A COMPARATIVE VIEW OF THE POPULATION

(DISTINGUISHING THE SEXES)

OF EVERY PARISH AND TOWN IN THE EMPIRE IN 1841 AND 1851:

With a Detailed View of the Population of the Metropolis; a Comparison of the Population in Counties and Towns, and of the whole Empire, at Different Periods; and a Variety of Interesting Information concerning the Movement of the Population—the groundwork of all Political Science;

WITH A LARGE ILLUSTRATIVE MAP.

These sheets will not be sent without orders from Subscribers.

TWO SHEETS, in a WRAPPER, ONE SHILLING; or STAMPED, so as to go FREE BY POST (without Wrapper), ONE SHILLING. Orders received by all Booksellers and Newsagents.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 22, 1854.

THE military operations of the Allied Governments are not of a promptitude sufficient to satisfy the British public. The Russians are pushing on; and, if in a position of peril or difficulty, are making the best of it by their energy and their daring. Immense masses of troops daily pour across the Danube into Bulgaria, and Varna and Schumla are no longer secure. At least, such seems to be the opinion of Omer Pacha—one of the ablest Generals of modern times—who has made, and continues to make, ineffectual appeals for reinforcements. If he be left to bear the whole brunt of the Russian attack, there will be an outcry from the British public that will be anything but pleasant to the ears of those who have wasted precious time, either by their incapacity or their unwillingness. While Napier is at work in the Baltic, there ought to be British hands and hearts at work on the shores of the Black Sea. The country asks why Sebastopol was not attacked before the Russians had time to fortify it? and why, at the present momen, the Black Sea fleet has not blockaded or taken Odessa and Nicolaieff? The Russian army in the Dobrudja depends for the greater portion of its supplies upon Odessa; and, if that place were captured, a great step would be taken towards its final defeat. Sebastopol is not impregnable, and we have a force sufficient for the enterprise. The policy of Russia in the Baltic is such as to leave Napier but small chance of striking a blow, except at Cronstadt itself. Everywhere the orders of the Russian Government to its officers in command of stations on the coast, are to abandon untenable positions, to destroy fortifications, and to move upwards, with all available men and ammunition, towards Cronstadt and the neighbouring defences of the capital. Aland and the adjacent isles have been abandoned; and the Czar, unable to rely upon the support of the Finlanders, barbarously threatens to depopulate that province, and to transport the unwilling inhabitants into the interior of Russia. But in the Dobrudja and the Black Sea the policy of the Czar is not of this character. His acts are not of passive resistance to the enemy, but of open defiance and impetuous attack. He seems to count upon the inaction of Admiral Dundas, and upon the delay that must occur before the French and British armies, or such portions of them as have landed on the Turkish side, can march from Gallipoli to the aid of the gallant Generalissimo of the Ottomans. These things are exasperating to the British mind, which can imagine no reason for the slumberous dilettantism of the fleet in that quarter, whatever excuses it may make for the delays which have occurred in the arrival of the troops. Lord Raglan and the Duke of Cambridge, having done their best, amid the galas, reviews, and other festivities of Paris, to popularise among the French the *entente cordiale*, and to render the cry of "Vivent les Anglais" no unmeaning formality, are now on their way to the East; and the plan of operations having been as fully discussed at Paris as in London, and finally agreed upon by all the high parties most competent to give advice or form an opinion, we may expect that the combined armies will immediately set to work. We have no idea that their objects will be confined to the defence of Constantinople. The country expects that they will include a bold and comprehensive system of offensive warfare against the Czar, at any and every available or vulnerable point. We do not pretend to be in the secrets of Governments or of military chiefs, but we believe it to be the fact that perfect unanimity of opinion exists between Lord Raglan and the Marshal de St. Arnaud, as the plan, to be pursued, not only to defend Adrianople, Sophia, and the passes of the Balkan, but to carry on an active warfare against the Russians in the Dobrudja, as well as in Wallachia and Moldavia. We only hope that these valiant soldiers and able commanders will not arrive at so late a period as to be obliged to confront the enemy at points considerably nearer Constantinople than the trans-Danubian marshes. The British fleet in the Black Sea has it in its power to render them effectual service long before their arrival. The capture of Odessa would make amends for months of delay; and that of Sebastopol, while it immortalised the memory of the Admiral who should be bold and fortunate enough to achieve it, would render of comparatively small importance the hitherto dilatory proceedings of the military authorities of Great Britain and France. The country is weary of protocolling, parading, and reviewing. It looks for business—that the war may end with the year which saw its commencement—and not be the parent of other wars, which may continue to afflict the world for a quarter of a century.

INSTEAD of strikes coming to an end, as we hoped they would they are, unhappily, increasing. In consequence of the master manufacturers at Stockport having given notice that the wages of their hands would be reduced to the standard at which they stood in May, 1853, the hands working for Messrs. Kershaw, Lees, and Co., 2000; for Messrs. Marshall and Co., 1400; for Robert M'Clure, 1200, Cephas Howard, 850, and others—in all amounting to 9800—have struck; and the hands at three or four other mills who have received an extra week's notice, are also expected to turn out. The Preston strike seems as little likely to come to an end now as in the first week of its existence; except as the evil increases in magnitude, it must, in some way or other, however disastrous, come the more speedily to a conclusion. From their earnings the Stockport hands subscribed £200 a week to the Preston turn-outs; that supply must now be stopped, and the Stockport hands will themselves need to share in the assistance the working-classes have most generously, but perhaps not prudently, given to the Preston turn-outs. By them this seems felt to be the hastening on of the climax, and the Stockport turn-out has accordingly been characterised by some of their supporters as hot-headed and impatient. It has already led to an addition to the taxes imposed on those who are at work. At Darwen and at Blackburn, the payment of 7d. per loom by the hands at work has, by recent resolutions, been agreed to. Neither masters nor men can long continue to carry on this extensive and extending conflict, and after all means of conciliation have failed, the only hope left is that this rapid extension of the conflagration must soon leave it without material to feed on. To extinguish it seems beyond ordinary power, and we can only prepare ourselves to reckon up the large cost of the ruinous conflict.

The well-meant meeting of the middle classes at Preston, which recently took place to mediate between the men and the masters, has been fruitless. In reply to the mediation committee, the masters' association has declared "that rates of wages cannot be settled by mediation, but must be left to supply and demand," and declines to accede to the proposed mediation. The committee rejoin "that other elements besides supply and demand enter into the solution of the question." They say that the property of "other classes not connected with the dispute is materially damaged and depreciated by it;" and they imply that it may be advisable to apply to Parliament to lay down rules for both masters and men, and "make the settlement of the dispute compulsory.' Thus, as very often happens, the mediators, finding themselves unsuccessful, have taken a side, and go further in their zeal than either of the original combatants. No persons have before publicly hinted that it would be right to introduce the Continental practice here, and have a compulsory settlement by authority, of disputes concerning the price of work and goods, and the value of mutual services. From the line of argument adopted by the masters and the committee, and from the arguments usually employed touching capital and labour, it is plain, whatever may have been the real origin of the dispute—such as a consciousness of growing power in the workmen, and something like hereditary and unreflecting arrogance in the masters—that it is now clothed in the language of political economy, and is referred to the very ultimate principles of social science and legislation. The rule is brought into question, by which the services one man renders to another is, or ought to be, estimated; and it has become practically agitated, whether that rule should continue to be, as heretofore, "the higgling of the market," as rather opprobriously called, and better described as the unrestrained influence of dealers on each other, or should be settled by a decree of the Legislature, which is notoriously here a partial body, and everywhere has peculiar interests of its own. The dispute, in fact, belongs to a series of questions which are now agitated all over Europe with intense interest, and have been agitated again and

again, more or less, as circumstances have increased the gains of different classes, for upwards of a century. Those who fancy they can settle such a dispute by any sudden and off-hand method, are greatly in error, and are more likely to become, like the mediation committee at Preston, zealous partizans of one side or the other—embittering the dispute—than successful umpires. We, at least, can pretend to do nothing more than record the facts of the case, and point out to our readers the necessity of studying and mastering the great principles of legislation, and of social science, which are at issue. If they were clearly and fully comprehended by the public—as are the relations between inches, feet, yards, poles, acres, &c.—there could be no dispute about them; consequently, the general ignorance is, in this case, as in most others, to blame for the public calamity.

THE COURT.

The past week has not been distinguished by any remarkable display of Court hospitality. The Queen and the Prince Consort have frequently appeared in public, and her Majesty has more than once enjoyed equestrian exercise.

On Good Friday the Queen and the Prince, with the Prince of Wales, the Princess Royal, Princess Alice, and the Duchess of Kent, attended Divine service in the private chapel. The Hon. and Rev. G. Wellesley officiated.

On Saturday the Queen held a Privy Council, at which a proclamation was ordered, appointing Wednesday next the 26th instant, to be observed as a day of humiliation. Her Majesty gave a dinner party in the evening; the guests at which included her Royal Highness the Duchess of Kent, the Duke of Newcastle, the Earl of Aberdeen, Lady Anna Maria Dawson, Lady Emily Seymour, Colonel the Hon. Charles Grey, and Lady and Miss Seymour.

On Sunday the Queen and Prince, the Prince of Wales, Princess Alice, and the Duchess of Kent, the Ladies and Gentlemen of the Court, and the domestic household, attended divine service in the private chapel of the Castle. The Hon. and Rev. G. Wellesley officiated, and administered the Holy Sacrament. In the afternoon her Majesty and his Royal Highness Prince Albert, with the Royal children, attended by the Ladies and Gentlemen in Waiting, walked on the Eastern-terrace.

On Monday the Queen and the Prince walked in the Home-park. The Princess Royal rode out on horseback. The Prince of Wales and the younger members of the Royal family, took their accustomed exercise. In the afternoon the Queen and the Prince drove out in an open carriage.

On Tuesday the Queen and the Prince, accompanied by the Prince of Wales and the Princess Royal, rode out on horseback. The Equerries in Waiting were in attendance.

The Countess of Desart has succeeded Viscountess Canning as Lady in Waiting to her Majesty.

The Court will return to Buckingham Palace on Monday next.

The Duke and Duchess of Argyll and family have left town for Clifden-house, near Maidenhead, for the recess.

The Duke and Duchess of Wellington have arrived in Paris, from a tour in the Italian States.

The Earl of Cottenham has left Park-lane, on a tour to the East.

Viscount and Viscountess Palmerston left town on Tuesday, for their seat, Broadlands, Hants.

Viscount and Viscountess Sydney have left town for Paris.

The Chancellor of the Exchequer left town on Wednesday, for Hagley-hall, Worcestershire.

NATIONAL SPORTS.

NEWMARKET CRAVEN MEETING.—MONDAY.

Craven Stakes.—Calamus, 1. Alas, 2.
Handicap Sweepstakes.—Sabra, 1. Coalition, 2.
Sweepstakes of 10 sovs.—Lady Elegant (late Pillion), 1. Apropos, 2.
Sweepstakes of 100 sovs.—Student, 1. Caliban, 2.
Renewal Sweepstakes of 20 sovs.—Royal Children, attended by the Ladies and Gentlemen in Waiting, walked on the Eastern-terrace.
Match, £600, h. ft.—Sittingbourne, 1. Pellon, 2.
Match, £200, h. ft.—Invasion, 1. Carnosra, 2.
Match, £600, h. ft.—Doubletongue, 1. Doodle, 2.
Handicap Plate.—Sesostris f., 1. John o' Gaunt f., 2.

TUESDAY.

Match, £100, h. ft.—Pharoid received forfeit from Marquis of Sevigné.
Plate, of £50.—Desrie, 1. Duke of Hamilton, 2.
Sweepstakes of 10 sovs.—Switch, 1. Jenny Wren, 2.
The Newmarket Handicap.—Coup d'Etat, 1. Sine-qua-non, 2. Veteran, 3. Bettinga, at Starting: 4 to 1 agst Epaminondas, 5 to 1 each against Nicotine, Veteran, and Little Jem; 6 to 1 against Sine-qua-non, 12 to 1 against Assault gelding, 15 to 1 agst El Dorado. A few bets at the rate of 100 to 8 and 10 were taken about Coup d'Etat.
The Riddlesworth Stakes.—Baalbec, 1. Fact, 2.
Subscription Plate.—Lioness, 1. Rackapelt, 2.

WEDNESDAY.

Sweepstakes of 10 sovs each.—Guy Mannering, 1. Mandricardo, 2.
Craven Handicap.—Ephesus, 1. Nathan, 2.
Handicap Plate of £56.—Lady Flora, 1. Legatee, 2.
Column Stakes.—Prince Arthur, 1. Miranda, 2.
Handicap Plate of £70.—Newbold, 1. Jack Keeming, 2.

THURSDAY.

Sweepstakes of 10 sovs.—Pebble, 1. Sir Hardbottle, 2.
Handicap Plate.—Antevenia, 1. Folly of Day, 2.
Sweepstakes of 100 sovs.—Incubus, 1. Oitipa, 2.
Sweepstakes of 50 sovs.—Quince, 1. Student, 2.
Handicap Plate of 100 sovs.—Inder, 1. Diomedia, 2.
Aske Produce Stakes.—Crossiane, 1. Humgufen, 2.
Buckhurst Stakes.—Botardo, 1. Baalbec, 2.
Subscription Plate.—El Dorado, 1. Rackapelt, 2.
Sweepstakes of 100 sovs.—Appollonius, 1. Caliban, 2.
Sweepstakes of 50 sovs.—Student, 1.

FRIDAY.

Port Stakes.—Orestes, 1.
Sweepstakes of 100 sovs.—The Trapper, 1.
Handicap Plate.—Khadijah, 1. Veteran, 2.
Sweepstakes.—Marble Hill, 1.

LATEST BETTING.

TWO THOUSAND GUINEAS.—6 to 4 agst Bolardo.
GREAT NORTHERN HANDICAP.—5 to 4 agst Virago; 25 to 1 agst West Australian; 50 to 1 agst Jobbe
CHESTER CUP.—9 to 1 agst Baalbec; 10 to 1 agst Newminster; 30 to 1 agst Catspaw; 50 to 1 agst Jujube
DERBY.—40 to 1 agst Canute; 40 to 1 agst Bolardo.

RACES NEXT WEEK.—Only two more meetings take place during the present month: on Tuesday, the York Spring Meeting is held; and on Thursday Malton Races take place—each occupying two days.

PHOTOGRAPHY.—M. Claudet has been honoured with the Queen's commands to arrange a portable apparatus, in the conservatory at Buckingham Palace, for the purpose of taking her Majesty's portrait, and those of the Royal Princesses, for the stereoscope—a graceful act of Royal patronage of the beautiful art of Photography, which it gives us much pleasure to record.

PHOTOGRAPHS OF GRECIAN ANTIQUITIES.—On the walls of the Society of Arts there are now exhibited a number of very beautiful photographic views, by Mr. Robertson, of Constantinople, in different parts of Greece. The collection comprises forty views in Athens, including the Parthenon, the Temple of Theseus, the Erechtheum, the Temple of Victory, the Tower of the Winds, &c.; three views at Ægina, two at Corinth, two at Sunium; and, in addition, views of the friezes of the Parthenon, and alto-relievos in the Temple of Victory. These pictures will remain on view for about a week or ten days, and should be seen by all architects, artists, and students of ancient history.

RAILWAYS SANCTIONED IN 1853.—From a Parliamentary return it appears that 752 miles of new railway were, in the session of 1853, authorised to be constructed, and 169 miles, sanctioned in former sessions, to be abandoned, leaving the increase in the authorised mileage, previously to 1853, 903 miles. The amount of capital authorised to be raised on shares, in 1853, was £11,383,740, and by loan, £4,158,962; but from these sums are deducted £346,300 of share capital, and £2,975,406 of loan, being the reduction, in capital and loan, authorised in former sessions by acts passed in 1853. The increase of capital and loan over the amount authorised previously to 1853 was, in the session of 1853, £11,010,440 on shares, and £1,783,556 on loans; together, £12,793,995.

PREPARATIONS FOR WAR.

DEPARTURE OF THE EARL OF LUCAN.

Major-General the Earl of Lucan, Commander-in-Chief of the British Expeditionary Cavalry, which will number about 2000 men, left the South-Eastern terminus on Wednesday evening for Dover, from which he will proceed, as quickly as possible, to Marseilles, where he will embark for Gallipoli. Lord Lucan was accompanied to the station by his daughters, Lady Augusta Gerard Sturt and Lady Lavinia Bingham, also by his youngest son, the Hon. G. Bingham. His Lordship was received by the officers of the company, who had set aside a special compartment for his use. Lord Bingham, son to the noble Earl, and on his staff, is already in Turkey; and Captains Walker and Charteris, also aides-de-camp, started on Sunday last. Brigadier Scarlett and Brigadier the Earl of Cardigan, commanders of divisions under the noble Earl, have not yet left, it being desirable, for the public benefit, that some of the staff should remain until the latest moment. Lord Lucan had prolonged his stay until Tuesday and Wednesday with the Secretary for War, the Duke of Newcastle. He also visited the General in Command of the Home Troops, Lord Hardinge.

EMBARKATION OF THE LANCERS AT PORTSMOUTH.

The first division of the 17th Lancers embarked on Tuesday at the Portsmouth Dockyard for the East. Familiar as are the inhabitants of this town and garrison with warlike displays, the presence of a cavalry regiment was a rarity, and, consequently, was productive of great interest. The weather was beautiful, many Easter holiday-makers were seeking for amusement; and to these the march of the troops from the town adjacent, where they had been billetted pending the arrival of the ships appropriated for their conveyance, was an unexpected treat. Five merchant-ships have been taken up by Government for this regiment, but only two had got alongside the dockyard. These were the *Ganges* (her number as a transport being 30), and the *Pride of the Ocean* (31). The first-named is a fine ship and rapid sailer, of about 950 tons burden; and the latter is an extremely beautiful American-built clipper, of about 1400 tons burden. Both these vessels had been properly fitted with horse-stalls by the shipwrights in this dockyard, who worked all day on Sunday upon them; the *Ganges* having seventy-eight and the *Pride of the Ocean* ninety stalls. Each ship has on board a large quantity of pressed hay, and every other description of provender and requisite for the well-being of the troops and their steeds. Commander Baynton, the Commodore of the division of transports that take out the 17th Lancers, has his quarters on board the *Ganges*.

The two divisions for embarkation marched into Portsmouth garrison—one at ten on Tuesday morning, and the other at three in the afternoon. The first division was met up the London-road, about a mile from the gates, by the band of the 79th Highlanders, who joined them, and accompanied them into the town and dockyard, playing on the road a variety of martial and popular airs. The roads were lined with people, who loudly cheered the troops as they passed along. On arriving in the dockyard, they dismounted near the jetty alongside of which the *Pride of the Ocean* was lying ready to receive them, and in a few minutes the business of slinging the horses on board was commenced; a large number of persons, among whom were many ladies, taking great interest in it. Most of the animals were very restive under the operation, some in particular plunging very much, to the great hazard of the men on whom this duty devolved. Several very hard knocks were received; and one man had his head cut, but not so seriously as to prevent his continuing at his post. In reply to Colonel Lawrence, the commanding-officer of the regiment, he said the cut was not much, nothing like what he should expect to receive before long. The whole of this division, consisting of eighty horses, were safely got on board, and stalled in rather less than three hours. The officers who proceed with this division on board the *Pride of the Ocean*, are Major A. S. Willett, Capt. A. F. C. Webb, Lieut. Sir W. Gordon, Bart., Lieut. J. W. Hartopp, and Adjutant Kendall.

In the afternoon the second division of the regiment arrived in the dockyard at half-past three o'clock, and embarked on board the *Ganges*. This division consisted of 70 horses and the usual number of men, with the following officers—Capt. J. O. Winter, Lieut. A. Learmouth, and Cornet A. Cleveland.

SIR CHARLES NAPIER IN THE BALTIC.

The telegraphic despatch from Copenhagen, of April 12, which we were enabled to give in our last publication, stated that the *Dauntless* had seen eighteen Russian vessels at Sveaborg, or Helsingfors, and that Sir Charles Napier had instantly set sail in that direction, from which it was inferred that we should probably have some important intelligence from the Gulf of Finland in a few days. But the distance of Sveaborg, or Aby Bay to Helsingfors, some three or four hundred miles, must take some time; and as the English fleet, on Wednesday last, was only off the Swedish island of Gothland, which is not half way to Helsingfors, it may be some days before we hear of anything decisive having been accomplished. Sir Charles Napier had previously sent to the island of Gothland to ascertain if there was good anchorage there for the fleet, and if provisions were to be procured. We learn also, from the *Ostsee Zeitung*, of April 16, that he had officially declared his intention to blockade all the Russian ports in the Gulfs of Finland and Bothnia. The Stettin paper, of April 16, says the ice had broken up between Revel and Helsingfors, which is a good way up the Gulf of Finland, but it was still firm in the harbour and bay of Revel.

The departure of Sir Charles Napier from Kioge Bay was very unexpected, as is evident from the following remarks of the *Stettin Zeitung*, of April 16:—

> The *Geyser*, Copenhagen and Stettin steamer, has brought the intelligence that Admiral Napier suddenly left Kioge Bay, with twenty large sail, on the 12th inst., and proceeded in the direction of the island of Gothland. The ground for so sudden a resolution on the part of the Admiral was the report, brought by a steamer which had gone out reconnoitring, that it had seen a Russian fleet of eighteen ships of the line near Revel. It was only so joyful a piece of intelligence that any war-ship could induce Sir Charles to renounce the pleasure of seeing on board the *Duke of Wellington* the notabilities of Copenhagen, as well as of making them partake of English hospitality, and at the same time of showing them the proud fleet of England. As the parties invited were preparing in Copenhagen to make the expected visit, they received from one of the steamers in the roads the intelligence that the fleet had, early that morning, gone out to sea from Kioge Bay. Even the shipping of the meat and other provisions for the fleet was countermanded. As the *Geyser* passed that bay, on the evening of the 13th inst., it perceived only four war-ships lying there, but met on its way with two others, which were returning to the bay.

On the 18th, twenty-five English ships belonging to the Baltic fleet were seen passing the island of Bornholm; and, on the evening of that day, a heavy cannonading was heard, which led to the belief that they had fallen in with the Russian fleet—a very improbable surmise, as the eighteen large vessels were nearly 300 miles from Bornholm. The "heavy cannonading" was, no doubt, the ordinary evening exercise of the English fleet.

Admiral Plumridge's division of the fleet, consisting of the screw-steamer *Impregnable*, 91 guns; the *Prince*, 31; the *Dauntless*, 24; and the paddle-wheel steamer *Leopard*, made the first capture last week. The very day the declaration of war was read to the fleet—April 4—Admiral Plumridge left Kioge Bay to look after some Russian ships, laden with sulphur and lead, which were said to be fixed in the ice. They were bound from Lubeck for some port in the Gulf of Finland; but, in consequence of the obstinacy of the Czar, they have become English prizes, and are now, we believe, on their way to Sheerness. A despatch from Copenhagen, of April 18th, says:—"Four Russian ships, laden with cargo, were captured in the Baltic yesterday, and carried past here as prizes to London."

Among the Russian vessels at Helsingfors are the following nine ships of the line—*Peter I.*, of 110 guns; the *Empress Alexandra*, 84 guns; the *Heszechel*, *St. Andrew*, *Alexander Newski*, *Wladimir*, the *Grand Syssoi*, *Hangoerda*, and *Kronstadt*, of 74 guns.

THE COMBINED FLEETS IN THE BLACK SEA.

The latest accounts from the English and French fleets in the Black Sea report that they were still anchored at Kavarna. The *Sidon*, *Firebrand*, and *Mogador* had been stationed at the mouth of the Danube to prevent the Russians throwing in supplies. The *Retribution*, *Tyre*, and *Niger* were in the Bosphorus. Accounts from Odessa of the 1st inst., state that the Allied fleets had appeared in front of that port, and had caused great alarm. Thousands were preparing to leave the city for the interior; but there do not seem to have been any grounds for their apprehensions, as the fleets deemed it most proper to return to Kavarna. On the 5th inst. a Tartar arrived at Constantinople with intelligence of six Russian ships of the line having left Sebastopol. Three were said to be stationed at Anakli, and three off Batoum. Much surprise was expressed as to what our cruisers were about, and a steamer was instantly despatched to apprise Admiral Dundas of the fact.

A Vienna despatch, of the 10th inst., states that the fleets were before Odessa, and that the French and English Admirals had declared the whole of the Russian ports in the Black Sea in a state of blockade.

THE ALLIED ARMY AT GALLIPOLI.

The whole of the British troops had left Malta by the 12th inst., except the Guards, and 200 men belonging to the 49th Regiment, who expected to leave on the 18th. The *Golden Fleece*, which had left Malta on the 31st ult., with General Sir G. Brown, a large number of officers, and nearly a thousand rank and file of Rifles, Sappers and Miners, arrived at Gallipoli on the 5th inst., and on the 8th landed the first body of troops in Turkey. The delay in the disembarkation is ascribed to the want of preparations for their reception.

The *Moniteur* says the reports from General Canrobert respecting the arrival of the French troops at Gallipoli, are highly satisfactory. A Turkish commission had been appointed to make all the necessary preparations, and the result was that everything had been arranged in the best possible manner.

A proportional part of the town (says the *Moniteur*) has been reserved for the English troops, and this division was made between them and us with the most perfect good feeling. General Canrobert has examined nearly the whole of the peninsula, and has designated the various sites on which the different corps will encamp by brigades as they land. The troops will be placed there in very satisfactory conditions, as the smallest possible distance from Gallipoli, and in places amply provided with wood and water. The country is exceedingly healthy, and provision has been made for the chance of illness by the establishment of a temporary hospital at Gallipoli. Premises have also been set apart in the town to serve as stores, and receive the supplies of all kinds which are being sent out from France for the use of the army. Our installation, consequently, has been commenced in the best possible conditions; and in a short time the three first divisions will be assembled at the Camp of Gallipoli, with all their artillery and engineering apparatus, and with the stores, hospital accommodation, and camp arrangements required for the expeditionary corps. All this immense amount of supplies has been embarked at the ports of France and Algeria, and without doubt at the present moment the greater part of it has arrived at its destination.

On the day they landed, General Brown and Colonels Sullivan and Lawrence, with the Rifle Brigade, and Colonel Victor, of the Artillery, with 100 Sappers, preceded to the Camp of Courrail, three leagues from Gallipoli, where 4000 French soldiers were also encamped, under General Canrobert. The best understanding was said to exist among the allied troops. The Pachs of Adrianople was doing everything in his power to facilitate their operations. The Sappers had begun at once to fortify the Isthmus.

CAVALRY FOR THE WAR.

So numerous and conflicting have been the reports relative to the route determined on for the cavalry destined for the East, that doubts still exist regarding their disposal. The following return offers the most recent arrangement approved by the authorities:—

Regiments.	Men.	Horses.	Place of Embarkation.
4th Dragoon Guards ..	250 ..	250 ..	Dublin.
5th Ditto	250 ..	250 ..	Cork.
1st Royal Dragoons ..	250 ..	250 ..	Liverpool.
6th Inniskillings ..	250 ..	250 ..	Plymouth.
8th Hussars	250 ..	250 ..	Plymouth.
11th Hussars	250 ..	250 ..	Dublin.
13th Light Dragoons ..	250 ..	250 ..	Portsmouth.
17th Lancers	250 ..	250 ..	Portsmouth.
Total	2000 ..	2000	

Of these regiments, destined for Gallipoli, only the 8th Hussars and 17th Lancers have embarked.

KARA FATIMA AT CONSTANTINOPLE.

WITHIN the last month the forces of the Sultan have received an accession which has excited very great interest at the great focus of enthusiasm at Constantinople. The new ally is Kara Fatima Hanoum, whom our Artist has sketched as he witnessed her procession through the streets of Stamboul, accompanied by her 300 Kurdish horsemen. To understand fully their importance, it may be as well to glance at the country whence they have been recruited. The eastern and southern parts of Asia Minor are the patrimony of wandering tribes, who to a fierce Mussulman spirit unite a strong feeling of independence, and who are always ready to contest the authority of the Sultan, except when it is in real danger. A line drawn from Sinope to Smyrna will mark the boundary of the regions which, totally subjected to the authority of the Pachas, furnish their contingent of Bashi-bozouks according to a regular military system of great antiquity. To the south-east of this line the peninsula contributes no certain supply of men; and it is by occasions like the present that the name of the Prophet or the love of plunder induces them to quit their plains and mountains, and

KARA FATIMA HANOUN, WITH HER KURD CAVALCADE, AT CONSTANTINOPLE.—(SEE PRECEDING PAGE.)

SKETCHES AT KALAFAT.

AFTER THE ALARM-GUN, AT KALAFAT.

We have received from our Correspondent at the seat of the war on the Danube the accompanying Sketches of the incidents described in his letter from Widdin, dated March 10. In the first scene we have the feint of the 8th, when two squadrons of cavalry and a cloud of Cossacks made their appearance on the right of the intrenchment at Kalafat, drew themselves up in order of battle, and, being supported by two guns, waited for the Turks to come out. Twenty-two Turkish squadrons were accordingly called to horse, and emerged from the intrenchment at a place where their movements were concealed from the Russians. The whole enemy could have been easily captured or destroyed by cutting off the retreat of the squadrons; but the Turks preferred to go out and show their force, and the Russians, after firing two shots from their six-pounders, disappeared at a gallop, and escaped.

Next day, the 9th, the alarm guns were again heard, and the batteries of the island told that the Russians had appeared in the same direction as on the previous day; but this time they stood in masses on the plain, far out of gunshot from the forts: seven battalions of infantry, with twelve guns, five squadrons of regular cavalry, and hosts of Cossack skirmishers, who patrolled the front. The latter advanced within the range of the lines, the alarm was given, and one Cossack lost his life by a Turkish shot. With the exception of a few officers who went forward, the Turks did not send out a single man; and the Russians, after four hours' array, without moving, withdrew. Meanwhile, an outer fort presented the scene of leisure which our Artist has depicted in the second Sketch: the Pachas Achmet, Moustapha, and Halib, sitting in the centre on stools, smoking their chibouks: on the left, several officers, English, French, and Turkish, are looking with telescopes at the enemy, over the parapet. The corner guns are à *barbette*—that is, above the parapet; the others are in embrasures. Around the Pachas are field officers, Albanians, &c.

A correspondent of the *Daily News* writes from Widdin, March 21:—

Everything is quiet here—that calm and stillness in the atmosphere before the earthquake which we know is coming. At ten last evening a battalion of regular troops crossed from Kalafat, and the heavy artillery again rolled over the ill-paved streets of Widdin, on its way down the river to Lom Palanka, which is more than one-third of the distance to Rahova. As hitherto, we have constantly received an accession of forces until the number of fighting men here and at Kalafat (for Widdin is also full again), amounts to 40,000 at least. We were somewhat surprised at this counter movement. It implies that the Russians are diminishing their forces here, have given up the proposed attack on Kalafat, and are either concentrating their men lower down the river, or are retreating out of Lesser Wallachia. * * * * * I have the best authority for believing that the Turks will advance from

THE FORTIFICATIONS AT KALAFAT.

Kalafat in ten or twelve days, if the weather continues fine. They are only waiting for the grass to spring, that they may have forage for their horses, as the Russians have burned up all the hay; and, indeed, destroyed almost everything in Lesser Wallachia. Kalafat and the neighbourhood yields nothing to the Turkish army, who derive all their supplies from Widdin. While we procure here meat in abundance—beef at 1d. and fresh pork at 1½d. per lb., eggs, potatoes, carrots, parsnips, and the finest cabbages—the scarcely find a vegetable on the Russian side between Kalafat and Krajova, except a few onions. This I have from an eye-witness. Meantime the country (Bulgaria) seems inexhaustible, and the Turkish supplies of hay, fifty or sixty loads in a row, often pass under my window. Rice, maize, meal, and wheat are still abundant.

THE WAR ON THE DANUBE.

We have received a communication from our Special Correspondent, dated Schumla, April 3, wherein, after describing the passage of the Danube, by General Lüders, with a large Russian force, he adds:—

The result of the successful Russian manœuvre is the complete frustration of the plans of the Turkish Generalissimo. Kalafat, which has been too long occupied by the Turks, and which can serve no purpose since it is effectually blocked by a small Russian force, must now be evacuated, and the soldiers despatched to Sophia Widdin, Nicopolis, Rustchuk, and Silistria, must be occupied in force, and the remainder of the places along the Danube must be evacuated. That Omer Pacha will do this is, I am told, probable. No one disputes the necessity of such steps, but the Turkish Generalissimo will not abandon without a pang the position of Kalafat, where he has spent so much time, so much money, and so many men.

In a short time 50,000 men will be concentrated in Schumla, and the Turks will remain on the defensive until the arrival of the European forces. The first French division, under General Canrobert, has arrived at Gallipoli. The regiments which form the army are all drafted from Africa, or have, at one time or another, fought in that country. France has four regiments of Chasseurs d'Afrique cavalry—two of those regiments are coming. She has three regiments of Zouaves—men dressed as Turks, and the bravest of her African army: those three regiments are coming. She has one regiment of native Arabs—that has also come. All the officers are the best and youngest in the army. All this, as well as the English force, will now be necessary to repel the Russians, who are not so easily to be beaten as one may suppose.

Several European officers are here—Colonel Diem, Aide de-Camp of General Baraguay d'Hilliers; Colonel Cannon, and Captain Symmons, More expected. Lieut. the Hon. W. Wellesley, of the Coldstreams; Lieut. Burke, of the Engineers; on the staff of General Burgoyne; and Colonel Dickson, Royal Artillery, left Rustchuk, on the 28th ult., for Tirnova, to inspect the passes of the Balkan.

It is supposed here, and I believe with reason, that Russia would not have advanced her troops into the Dobrudja, had she not been sure of the support of Austria. The presence of so large a force as that which now lines the banks of the Save, the arrival of their pontoon trains at Semlin, Mytrowitz, and Sabatcz, and the imposing army assembled upon the frontier of Transylvania and Wallachia, are also considered as proofs that the intentions of Austria are hostile. I have no reason, therefore, to withdraw any of the remarks which I made in my last letter with respect to the position which has been assumed by that Power. So alarmed has the Porte been by the preparations of her neighbours, that she has sent Assir Pacha—a young, but capable man, son of Izzet Pacha, commander of the fortress of Belgrade—to sound the Cabinet of Vienna. We shall soon see whether this assertion of Prince Coronini to the Pacha of Belgrade is confirmed, and whether the mighty preparations of Austria are merely for precaution sake or not. Our statesmen and the press of England, from what I can see and hear of them at this distance have been fondly hoping that an armed neutrality was the sole purpose of the Imperial German Power. I have no such hopes, and I cannot believe that 200,000 men are placed on a frontier for the sake of observation. If Austria cross the Save, one thing is certain—Italy will be in the hands of a French army within three months.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 20.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°				Inches.
Apr. 14	30.125	69·3	31·0	50·1	+ 6·1	63	E.	0.00
„ 15	29.967	67·0	34·8	51·2	+ 5·3	64	N.E.	0.00
„ 16	30.023	66·9	35·3	51·3	+ 5·3	63	N.E.	0.00
„ 17	30.229	49·0	41·3	47·0	+ 0·7	81	E. & N.E.	0.00
„ 18	30.104	57·5	35·6	52·3	+ 6·3	72	E.S.E.	0.00
„ 19	29.930	73·6	40·7	60·7	+ 14·0	64	S.E.	0.00
„ 20	29.766	77·2	42·3	60·0	+ 13·6	58	E.S.E.	0.00

Note.—The sign + denotes above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 30.22 inches at the beginning of the week to 30.03 inches by the morning of the 15th; remained at about this reading throughout the day, increased to 30.38 inches by the afternoon of the 17th, and decreased to 29.68 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.992 inches.

The mean daily temperatures have varied from 2° to 14° above their average values during the week. During the time they have been above their average, the total excess each day, from the 14th to the 20th, the average daily excess has been 6·2°. The mean daily temperatures of the 19th and 20th are the highest mean daily temperatures at present recorded on those days, the register extending back to 1815. The mean temperature of the 19th, 20th, and 26th was 58°, and is the highest mean temperature of the corresponding three days at present recorded—the nearest approach being 58.8°, in the year 1844.

The mean temperature of the week was 53·6°, being 7·3° above the average of the corresponding week during 38 years: and the warmest week—consisting of the same seven consecutive days—since the year 1814, when the mean temperature was 54·7°.

The range of temperature during the week was 47.8°, being the difference between the lowest reading of the thermometer on the 14th, and the highest on the 19th.

The mean daily range of temperature during the week was 29°. The greatest was 34·3° on the 14th; and the least 17·3°, on the 17th.

The weather, throughout the week, has been fine, and the sky almost entirely free from cloud, with the exception of the 19th, when it was almost covered with cloud throughout the day.

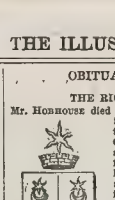
Lewisham, April 21, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the deaths of 1178 children were registered in the metropolitan districts: of these, 725 were boys and 778 were girls. In the nine corresponding weeks of the nine preceding years, the average numbers were 714 and 679 respectively, showing a increase of 180 above the average number. The number of deaths registered was 1067, showing a decrease on the returns of the preceding weeks. The average number in the ten corresponding weeks of the preceding years, corrected for increase of population, was 1114. The actual number of deaths, therefore, is 97 less than the estimated number. Diseases affecting the organs of respiration still continue to decline, the number of fatal cases this week being 179, and 13 below the estimated number.

THE LORD CHANCELLOR'S LEVEE.—Wednesday being the first day of Easter Term, the Right Hon. the Lord Chancellor, Lord Cranworth, held his ceremonary levee, and entertained the Judges of the several Courts of Chancery and Common Law, as also several Queen's Counsel and Serjeants-at-Law, to breakfast, at the mansion of his Lordship, in Upper Brook-street, Grosvenor-square, previous to proceeding in state to open their respective Courts at Westminster. Mr. Justice Crowder, on his arrival, was warmly congratulated by the Judges and counsel present on his elevation as one of the Judges of the Queen's Bench, in the room of the late Mr. Justice Talfourd. At the conclusion of the levee the Lord Chancellor, attended by the purse, mace, and train bearers, in his gold robe of state, the other Judges and counsel also wearing their full state robes, proceeded in procession to Westminster-hall, the High Constable of Westminster and the beadles of St. George's, Hanover-square, St. Peter's and St. Margaret's, Westminster, leading the procession alternately during the route. The legal *cortège* arrived at Westminster-hall a few minutes before two o'clock, where, as usual on these occasions, a large number of persons, principally ladies, were present to witness the ceremony. The Lord Chancellor and the Judges passed off to their several courts.

OBITUARY OF EMINENT PERSONS.

THE RIGHT HON. HENRY HOBHOUSE.



MR. HOBHOUSE died at Harpeden-house, Somersetshire, on the 13th instant, in his 78th year. The right hon. gentleman, born in 1776, graduated at Brasenose College, Oxford, was called to the bar in 1801, and filled the office of Under-Secretary of State for the Home Department from 1817 to 1827. On his retirement he was sworn of the Privy Council; and subsequently resided, principally, at his seat in Somersetshire, of which county he was a Deputy-Lieutenant, and for many years Chairman of the Quarter Sessions.

Mr. Henry Hobhouse was son of Henry Hobhouse, Esq., of Hadspen-house, and grandson of Henry Hobhouse, Esq., younger brother of John Hobhouse, Esq., of Westbury College, county Gloucester, whose grandson is the present Lord Broughton. He married, 7th April, 1806, Harriet, sixth daughter of John Turton, Esq., of Sugnall Hall, county Stafford; and leaves several children.

JAMES HOLFORD, ESQ., OF HOLFORD HOUSE, REGENT'S-PARK.

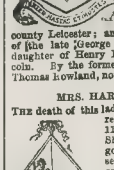
THE death of this opulent merchant occurred on the 9th inst. He was elder surviving son of the late James Holford, Esq., of Manchester, by Sarah, his wife, daughter of the Rev. Humphrey Owen, Chaplain of the Collegiate Church, of that town. His grandfather, Thomas Holford, also of Manchester, was eldest brother of Josiah Holford, Esq., of Hampstead, whose grandson, the late Lieut.-Colonel James Price Holford assumed by Royal license the surname and arms of Gwynne, on his marriage with the granddaughter of Thynne Howe Gwynne, Esq., of Buckland.

COLONEL WILLIAM EDWARD POWELL, OF NANTEOS, M.P.

THIS respected gentleman, Lord-Lieutenant and late M.P. for the county of Cardigan, died, at his town residence, Hyde Park-terrace, on the 10th inst. He was born 16th February, 1783, the eldest son of Thomas Powell, Esq., of Nanteos, by Elinor, his wife, daughter of Edward Maurice Corbet, Esq., of Ynysymaengwyn, and grandson of the Rev. W. Powell, LL.D., by Elizabeth, his wife, daughter and co-heir of Athelston Owen, Esq., of Rhiwaeson, county Montgomery. The Powells, of Nanteos, are a branch of the line of Edwin ap Gronwy, Lord of Tegengl, founder of the 13th noble tribe of North Wales and Powys.

Colonel Powell married first, 4th Oct., 1810, Laura Edwyna, eldest daughter of James Sackville Tufton Thelp, Esq., of Coston House, county Leicester; and secondly, in April, 1841, Harriott Dell, widow of the late George Ackers, Esq., of Moreton Hall, Cheshire, and daughter of Henry Hutton, Esq., of Cherry Willingham, county Lincoln. By the former, who died in 1837, he had two sons, William Thomas Rowland, now of Nanteos, and Cornelius.

MRS. HARRIET BYNG, OF WROTHAM PARK.



THE death of this lady, the widow of George Byng, Esq., so long the respected M.P. for Middlesex, occurred on the 11th inst., at her residence, in St. James's-square. She was daughter and co-heir of Sir William Montgomerie, Bart., of Magbie Hill, co. Peebles, the representative of a distinguished branch of the great and ancient House of Montgomerie. Sir William's other daughters and co-heirs were—Elizabeth, Viscountess Mountjoy; Barbara, wife of the Right Hon. John Beresford; Anne, Marchioness Townshend; Jean, wife of William Reynell, Esq., of Castle Reynell; and Amelia, wife of Charles Cobbe Beresford, Esq.

LIEUTENANT-COLONEL BRANDER, OF PITGAVENY AND KINNEDDAR.

THIS gallant officer (late 42nd Highlanders) died at his seat, Pitgaveny-house, Moraysbire, N.B., on the 23rd ult., in the 63rd year of his age. He entered the army at an early age, having joined his regiment (the 42nd) at Corunna. Present with them in all their engagements till the conclusion of the war, he was severely wounded at Orthes, and slightly at Quatre-Bras. He fought with his light company at Waterloo. Two war medals and several clasps marked his distinguished services. On the death of his father, in 1826, he succeeded to the entailed estates of Pitgaveny and Kinneddar, and sold out. Colonel Brander having left no family, his landed property devolves upon his sister Lady Dunbar, second wife of the late Sir Archibald Dunbar, eighth Baronet of Northfield. Her only son and heir-apparent is an officer in the Madras Cavalry.

THE will of the late Mr. Holford, of Regent's-park, which was proved in Doctor's Commons on the 18th inst., was sworn under £100,000 personalty, the whole of which he has bequeathed to his brother and nephew, and not to the Prince of Wales, as was reported in the papers of the 19th inst.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. R. Cage to Rathconnel, Westmeath. The Rev. Dawson to Little Horsted, near Uckfield; Rev. J. Hemsted to Gratwich, Staffordshire; Rev. C. F. Norman to Pirtishead, near Bristol. *Vicarages*: The Rev. H. Abud to Uttoxeter, Staffordshire; Rev. W. Marsh to Witherslead, near Braintree, Essex; Rev. M. Mitchell to Kirtling, near Newmarket; Rev. W. L. Newnham to Barrow-on-Soar, Leicestershire. *Incumbencies*: The Rev. E. G. Fausett, to South Littleton, and Middle Littleton, in the Vale of Evesham; Rev. E. Gillson to Warley, near Brentwood; Rev. E. T. Jenkins to Llangianing, near St. Clears; Rev. J. Keeling to St. Paul's Church, Lisson-grove Rev. F. Reade to the new Church of St. John the Baptist, Hove, near Brighton, Rev. L. Tuttiett to Les Marston, Warwickshire. *Perpetual Curacies*: The Rev. J. Colborne to Slad; Rev. J. Ross to St. James's, Norwich; Rev. C. Seaver to St. John the Evangelist, Belfast.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. E. Gillson, from the congregation of St. Edwards, Widcombe; the Rev. T. Hollway, from the inhabitants of Bolsby, Lincolnshire; the Rev. Charles Bryan, M.A., Rector of Woolastone, Gloucestershire, from his parishioners, an address, with nearly 550 names attached; together with a handsome and costly silver inkstand, as a memento of their esteem and regard. The members of St. John's Church, Little Bolton, presented their respected pastor, the Rev. Walter Chamberlain, with his portrait (painted by Mercier, of Eccles), in testimony of their appreciation of that reverend gentleman's efficient discharge of his duties during the past eight years.

CONSECRATION OF THE NEW BISHOP OF SALISBURY.—The consecration of the Rev. W. K. Hamilton, late Precentor and Canon of Salisbury, to the Bishopric, will take place in Lambeth on the 1st of May, being the festival of St. Philip and St. James.

ENTHRONIZATION OF THE BISHOP OF LIMERICK.—On Thursday week the ceremony of the enthronization of the Right Rev. Dr. Griffin was witnessed by a most numerous congregation in the Cathedral of St. Mary's.

SHORT PASSAGE TO AUSTRALIA.—The American paddle-steamer *Golden Age* left Liverpool in November last, with a small number of passengers, and an uncommonly small cargo, although a considerable bag. Post-office authorities having refused to pay her an extra sum for taking a mail. She reached the Cape in 36 days and a half, thus making to that point the shortest passage upon record. She was detained ten days, coaling; but she nevertheless reached King George's Sound so as to effect the entire passage from Liverpool to Australia in sixty-one days, including detentions; and in an actual running time of forty-seven days. Considering that, in future trips, the advantages of experience would enable distances to be saved, and greater speed to be attained, the possibility of the communication to Australia being regularly brought within fifty days, even by the Cape route, seems, consequently, to have been demonstrated.

THUNDERSTORM IN LIVERPOOL.—On Tuesday night and early on Wednesday morning Liverpool was visited by a very violent thunderstorm, which lasted several hours, accompanied by heavy showers of rain.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

ALL lovers of literature will be glad to hear that Mr. Lockhart has returned to England in improved health. He will not, however, just yet resume his duties on the *Quarterly Review*. Who does not wish that his health would enable him to give us a second series of Spanish Ballads, or a memoir of his deceased friend, Professor Wilson? No one knew Wilson better than Mr. Lockhart. Wilson was to have given us a life of the Ettrick Shepherd; but the promises of authors are too frequently like the vows of lovers. Andrew Marvell promised a memoir of Milton; and Warton was to have given us a biography of Collins.

We have stumbled on a curious newspaper paragraph of the year 1723, that affords a striking contrast to our gossip of last week, touching the recent purchase by Government of Burlington House, Piccadilly. The paragraph is as follows:—

All the waste-ground at the upper end of Albemarle and Dover-streets, is purchased by the Duke of Grafton and the Earl of Grantham, for gardening; and the road there leading to May Fair is ordered to be turned.—The *British Journal*, March 30, 1723.

The Duke of Grafton was the second Duke—the son of Charles II.'s son by the Duchess of Cleveland. His gardening purchase is commemorated in the present Grafton-street. How odd it seems to read of "waste-ground" at the upper end of Albemarle-street, and of a purchase made there for gardening purposes. Here, in 1854, we have newly bought an adjoining palace—not for cabbages and Scotch-kail, but for public offices and scientific assemblies.

The most magnificent private collection of antique rings and cameos to be found in private hands in this country will pass this season under the hammer of Messrs. Sotheby and Wilkinson. We allude to the collection of Mr. Hertz, of Great Marlborough-street—long a distinguished and liberal purchaser in every city in Europe. Mr. Hertz, some of our readers will remember, was considerate enough, during the year of the Great Exhibition, to allow his collection to be seen by all in any way entitled to ask such a favour. The exhibition of thousands of rings of rarity and value is no easy matter. The sale will, no doubt, attract such careful purchasers as Lords Hastings and Cadogan. The latter noble Lord inherits the taste of his great ancestor, to whom we owe the British Museum:

Give coins to Mead, and butterflies to Sloane;
But Sloane collected more than butterflies; he was fond of antiquities—and so is Lord Cadogan.

The death of Mr. Henry Hobhouse removes what, we believe, was the only existing difficulty in the way of transferring the contents of the State Paper Office, in St. James's Park, to the new Record Office, near Chancery-lane. Mr. Hobhouse was nominally the keeper, though his duties were entirely performed by his deputy, Mr. Lechmere, and by the chief clerk, Mr. Lemon. The removal of the Papers to the new office will materially help to centralise our records—now a matter of increasing importance.

The talked-of Talfourd memorial will, it is said, be confined entirely to the members of the Oxford circuit; but it is not yet determined what shape the memorial shall take. The meeting announced for the 29th will be confined to the bar. As Talfourd joined so agreeably the two pursuits of law and literature, it is to be regretted, we think, that the contemplated memorial itself does not assume a twin shape.

The article on Tom Moore in the new number of the *Edinburgh Review* is written by Mrs. Grote, the accomplished wife of the historian of Greece. We turned to it with interest, curious to see what a woman—and such a woman—would say of Tom's flirtations. She is, we think, over kind to the little poet; but the article exhibits many serious marks of editorial cuttings-down, so that, perhaps, more praise has been left than was intended by its writer.

The new number of the *Quarterly* contains an article on Lord Holland's Memoirs, by Mr. Croker, whose knowledge of the period over which the Memoirs extend is minute and to be relied on. It is odd, however, to see Mr. Croker voluntarily admitting that his favourite King George IV. told him a falsehood about his marriage to Mrs. Fitzherbert. He had, however, told the same lie to Mr. Fox.

The new British Museum Return, just laid before Parliament, by Mr. Goulburn, contains matter of moment connected with lit-rature and art. For instance, Mr. Panizzi, for the years 1853-4, asked for £2500, for purchases and acquisitions, and only asks for £2000 for 1854 5. The truth is, he has at present no place to put fresh purchases in. Sir Frederick Madden holds out his hand, as before, for £3500 for MSS. Mr. Hawkins wants £600 more for antiquities, he was coy in making his former estimate, and only required £3000. Mr. Carpenter, representing engravings and drawings, boldly and properly demands £2000, or £800 more than he sought and obtained on the previous occasion. If we turn to the binding wants of the Museum (books continue to require rebinding), we find Mr. Panizzi wanting less by £1500 than in 1853-4. Sir Frederick still requires, and will get, £800. If we turn to what the principal departments have been about, we shall find that Mr. Panizzi has not been asleep over his New General Catalogue, or his Supplementary Catalogue (containing the books acquired since Midsummer, 1847), or even his Hand Catalogue; that in the last year about 1442 volumes a day had been taken down by readers, and returned by attendants: that the number of readers was about 231—each reader consulting, on an average, about six works; and that the book acquisitions in the last year were 14,927 volumes, viz., 7730 purchased, 5707 acquired by copyright, and 960 presented. Sir Frederick Madden has been cataloguing, identifying, r epairing, collating, and re-arranging the Cottonian MSS., some of which have been supposed to have been lost since the memorable fire of 1731. Nor has he been inattentive to the wants of his department, and has added to the national collection during the past year the Dawson Turner Collection of Royal and other letters, bound in five volumes; twenty-eight volumes of papers relating to the building of Blenheim, by Sir John Vanbrugh; Dr. Hawtrey's "Dante," a valuable MS. of the fourteenth century; a portion of the original MS. of Sterne's "Sentimental Journey," in Sterne's own handwriting; and sixty-three letters from Lord Nelson to Lady Hamilton, including the last letter which Nelson wrote. Mr. Hawkins has been busy re-arranging the Egyptian antiquities in three large saloons. He has also been purchasing coins and other rarities, that call for collection. He has added two specimens of an entirely new silver tetradrachm of a King and Queen, who reigned, it is thought, in the neighbourhood of Parthia or Persia. The name of the King was Kapnascirus—of the Queen, Ansano. In the Saxon series alone he has added about 200 English pennies, part of a larger number found near Wednsore. They were claimed as treasure-trove by the Lords of the Treasury, and such as the Museum required, were given to the Museum by their Lordships. The value of the coins thus acquired was, however, properly paid to the discoverer, and the rest were returned to him. This deserves to be known, for the law of treasure-trove has hitherto led to the destruction of much that was curious. Mr. Carpenter has been putting the works of Hollar in order, and has, therefore, been well employed.

AMERSHAM GRAMMAR SCHOOL.—TESTIMONIAL TO MR. WEST.—On Thursday last a number of gentlemen educated at this school met at Amersham for the purpose of presenting their former master with a testimonial of their affection and esteem. More than sixty gentlemen, now actively engaged in commercial, literary, and professional life, had subscribed for this purpose, and, with the fund collected, a handsome tea and coffee service in silver had been purchased. This was presented to Mr. E. West, the principal of the school, on Thursday morning, by a deputation of his old pupils, and in the presence of those now under his care. Mr. West acknowledged the gift in appropriate terms; and the day will long be remembered pleasantly by both master and scholars.

EASTER AT THE THEATRES.

HAYMARKET.

Easter Monday was duly honoured at this theatre with a new extravaganza and a sterling English comedy. The latter brought out the comic power of the company in a more favourable manner than any previous revival. "Speed the Plough" is a drama well suited to its leading members. *Farmer Philip Blandford*, by Mr Rogers; *Sir Abel Handsel*, by Mr Chippendale; and *Farmer Ashfield*, by Mr. Compton, form an excellent cast. *Bob Handy*, too, found a lively representative in Mr. George Vandenhoff, who appeared to especial advantage in the character. Some portion of the comedy, indeed, is rather coarse in its manners. The relief of a henpecked husband by the discovery that his wife is a bigamist, and the mode by which he first hints the discovery to her, are points to which exception is illustrated, are incidents which would not pass without censure in a modern drama, and also somewhat opposed to the spirit of modern legislation in defence of the sex. But, as a picture of the past, it is not without its value. The vixenish lady was supported with spirit by Mrs. Poynter; and Miss Howard's *Susan Ashfield* was an exceedingly pleasing performance.

The Easter-piece that succeeded is, like that of last year, properly a *Revue*; and, by means of a diorama, with dramatic accessories, it contrives to make a allusion to the public events of the year, and also to connect them arbitrarily with the theatrical business of the season. "Mr. Buckstone's Voyage round the Globe (in Leicester-square)" is the title of this essentially satirical production. The curtain draws up on the exterior of the Haymarket Theatre, where the *Manager* is accosted by an *Author* (Mr. W. Farren), to whom he is indebted for the idea of the piece. Both proceed to the foot of the statue of Shakspeare, in Wyld's Model of the Earth, and while seated, in expectation of the lecture, fall asleep, and have a vision of *Cybele*, alias *Telius*, in the person of Mrs. Fitzwilliam. By this Goddess the *Manager* is led to make acquaintance in succession with the tuteler spirits of Europe, Asia, Africa, and America; each of them displaying to his astonished view the most famous scenes in her own quarter of the globe such as Constantinople and the Golden Horn, Gallipoli, and the theatre of war. But as the managerial dream proceeds, its ambitious pass from the political to the theatrical, and, as the manner of dreams is, connects together odds and ends of stage experience, and thus summons before the mind's eye, the rival *Richards* of Drury and Covent-garden, an Oriental *ballet* in Bayadere costume; the elephant of Astley's; the Feast of the Dragon, and the odorous feat of impalement, in which the Messrs. Marshall as *Chin Gan* and *Wan Sang*, were so successful; the stage-effects of Vauxhall; the gipsies, and Miss Cushman in *Meg Merrilies*, as the first of such weird sisters; the Mexican Sea of Ice at the Adelphi, and "the Struggle for Gold," at all the theatres—with the contrast for which the stage sinks, and Mr. Buckstone finds himself again in Leicester-square, waked up from his day-dream. The elegance of the dialo, ue, as usual with Mr. Planché, is the main charm of the piece; and the honours fall to the pencil of

"ST. GILES AND ST. JAMES."—PAINTED BY T. EARL.—FROM THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

cliff, and strain their eyes in the direction whence the missing craft should come. The sentiment suggested by the occasion is very powerfully realised, and the execution is highly artistic.

A. Siegart has a spirited picture, in the comic vein, founded upon a German proverb—"Where there is no money there is no law"(1) It represents a swaggering cavalier, of the Dando school, treating with ineffable contempt the demand for a score which "mine hostess" is enforcing upon his attention. There is a great deal of fun displayed in the study of the various lookers-on: the whole breathing with earnest life.

Amongst the other *genre* subjects which deserve attention are some small interiors, with old women, and other domestic material, by Geselschap, very effective, though unexaggerated in treatment; "A Village Scene in the Black Forest," by C. E. Boettcher—interesting as an illustration of manners; "The Middy's Lecture on Sobriety," by the late U. Ritter—his last work; and "Defending a Castle," by G. Sell—representing a scene of daily occurrence in the Thirty Years' War.

ST. GILES AND ST. JAMES. BY T. EARL.

Mr. Earl has doubtless adopted the idea of this little picture (which is exhibited at the Suffolk-street Gallery), from Douglas Jerrold's story of a similar name. The scene is near St. James's Palace, where a sleek pet of the King Charles' breed, secured by a dainty ribbon to the conducting hand of a fair mistress, turns round to look with scorn upon the rough terrier dog standing at the corner of the street, who has probably followed his master, the crossing-sweeper, all the way from St. Giles. The character infused into both animals is capital; but we may be permitted to observe that the representative of St. Giles is too well bred for his position. The handling throughout is clever, and highly successful; the surface texture of the coats of the two dogs being admirably real, and well contrasted.

MOUNT'S BAY, CORNWALL. BY S. P. JACKSON.

This clever landscape is exhibited at the British Institution. It is a genuine bit of English coast scenery, represented with a truthful hand. The Mount, with the small harbour beneath, forms a picturesque feature in the left; on the other side is a wide expanse of sea, slightly rippled with an inland breeze; the two portions being pictorially connected by the introduction of the dark hull and rigging of a coaster, astrand in the foreground.

"MOUNT'S BAY," CORNWALL.—PAINTED BY S. P. JACKSON.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

RESTORATION OF CHESSINGTON CHURCH.

Taking the railway to Kingston, and proceeding thence about two miles on the Letherhead road, a path across a few fields brings us to Chessington Church—not seen from the high road, and accessible only by footpaths and by lanes; but it is a spot that will repay a visit. The little Church, till now enveloped in plaster, is of the thirteenth century, and the churchyard commands picturesque views of Sutton, Ewell, and Epsom; while proceeding further westward, round the hall adjoining, so well known to the readers of Madame D'Arblay's Memoirs (now the residence of G. Chancellor, Esq.), a further varied prospect is obtained of the neighbourhood of Letherhead, Esher, and Kingston. To the lover of seclusion the walk will have additional attractions

The Church was re-opened by the Vicar, the Rev. W. C. Stapylton, on Thursday, the 20th inst., having undergone a complete restoration, under the superintendence of Mr. Robert Hesketh. We here present a View of the interior, showing the restorations. Choked with pews of every variety of deformity, which made the one little aisle almost as devious as the lanes outside—the walls bulging with loose plaster and whitewash—the interior was lighted by square wooden-framed windows, the work of some Vandal in former ages, who preferred the lighting of his own uncomfortable pew to general propriety. These square windows have now been filled up and the Early English arches and windows which have been discovered have been restored to their original purpose. Some of these are very

CHESSINGTON CHURCH, SURREY, RESTORED.

curious: there is the pointed arch with the circular splay, the depressed heading, the oak lintel, the hagioscope, and the low side window—all simple in design, but probably coeval with the building of the Church, and well preserved under the plaster. The high pews have been replaced by oak open seats, of the original pattern, of which one is still retained; while an old roof of chestnut has been exposed to view by the removal of the ceiling. A few new windows, of a design to accord with the old, have been added near the west end; a chancel-arch has been built; the font restored from a few portions which have been found imbedded in the walls; and a vestry added on the north side. Much additional accommodation has been obtained by lengthening the Church at the west end.

The exterior of the edifice has been no less improved, by the substitution of undressed flint for the old green-stained peeling plaster; and a neat shingle spire, such as is common among the old Surrey churches, has taken the place of a very mean belfry that lately bestrode the roof.

We hope this instance of successful scraping may encourage others to denude their churches of plaster, wherever there is reason to expect such a result as in the instance now before us.

MARY RUSSELL MITFORD.—FROM THE PICTURE BY LUCAS.

LAUNCH OF THE "LOUISA SHELBOURNE," AT BATTERSEA.

The launch of this vessel took place at Carnes yard, Nine Elms, Vauxhall, on Saturday last; and many circumstances connected with her peculiar build and construction attracted a large assemblage to witness the scene.

The *Louisa Shelbourne* was built expressly for the Baltic trade, and intended to ply between London and St. Petersburg. She is constructed on the barge, or flat-bottomed principle; she is by far the largest vessel ever built in the Thames above bridge; and, though measuring 560 tons, only averaged at launching a draught of 2½ feet. She is by more than two hundred tons the largest vessel of the kind ever built, is adapted for the screw propeller, has accommodation for passengers, and will be barque rigged. Her dimensions are as follows:—Length over all, 145 feet; length on keel, 119 feet; breadth, 26 feet 6 inches; hold, 19 feet 6 inches

The appearance of vessels hitherto built on this plan has been an unsightliness of bow and clumsiness in general appearance; but, in this vessel, a much better form has been adopted, and in room of the square short nose of the old plan, a figure-head and cutwater, with a finer bow, has been substituted. The advantage obtained by the light draught and stiffness of this class of vessel under canvas, may, upon the successful performance of the *Louisa Shelbourne*, cause barges of large tonnage to be more generally used for mercantile purposes.

The ceremony of "christening" the vessel was performed by the lady whose name she bears, and who is the daughter of the owner.

MARY RUSSELL MITFORD.

Only two weeks have elapsed since we devoted more than our usual space to a notice of "Atherton," and other stories, the latest published work of her whose likeness we have this day the pleasure of presenting to our readers. To the high qualities of the work just referred to, or to any critical opinion on her works generally, it is not our intention to devote this article. Our only object is to give a few particulars connected with the life of one whose writings will continue popular so long as unaffected simplicity, pure taste, exquisite art, and a love of the beautiful in nature, keep their place in the affections, and tend to form the habits of the English people.

Mary Russell Mitford was born on the 16th of December, in the year 1788, at the little town of Alresford, in Hampshire. Her father was George Mitford, M.D., the son of a younger branch of the Mitfords, of Mitford Castle, Northumberland, and Jane Graham, of Old Wall, Westmoreland—a branch of the Netherby clan. Her mother was Mary Russell, only surviving child and heiress of Richard Russell, D.D Rector of Ashe and Tadley, and Vicar of Overton, in Hampshire above sixty years. He died at the age of eighty-eight, before his daughter's marriage; and remembered having seen Pope when at Westminster School. He was intimate with Fielding and many of the wits of that period; and Miss Mitford has a portrait of him, with a wig, not unlike a judge's wig, hanging over it.

Three or four years after Dr. Mitford removed from Alresford to Reading; and three or four years after that again, when his daughter was in her ninth year, he went to reside at Lyme Regis, in Dorsetshire, in a fine old house, previously occupied by the great Lord Chatham, where his two sons frequently spent their holidays. By this time Dr. Mitford had spent between £30,000 and £40,000, and went to London to retrench and determine his future course of life. His daughter, then ten

LAUNCH OF "THE LOUISA SHELBOURNE," AT BATTERSEA.

years of age, was his favourite companion: and, lounging about, he one morning strayed into a dingy house, which proved to be a lottery office; and for what follows we are indebted to Miss Mitford's "Recollections of a Literary Life," vol. II. page 194:—

"Choose what number you like best," said dear Papa, "and that shall be your birthday present."

I immediately selected one and put it into his hand—No. 2224.

"Ah!" said my father, examining it, "you must choose again. I want to buy a whole ticket, and this is only a quarter. Choose again, my pet!"

"No, dear Papa! I like this one best."

"There is the next number," interposed the Lottery-office-keeper, "No. 2223."

Ay," said my father, "that will do just as well. Will it not, Mary? We'll take that."

"No," returned I, obstinately, "that won't do, this is my birthday you know, papa, and I am ten years old. Cast up the figures forming my number, and you'll find they make nine, the other is only nine!"

The father, like all speculators, was superstitious. The argument was irresistible. The ticket was purchased; and a few months afterwards intelligence arrived that No. 2224 had been drawn a prize of £20,000.

Ah me! (reflects Miss Mitford.) In less than twenty years what was left of the produce of the ticket, so strangely chosen? What! except a Wedgwood dinner-service that my father had made to commemorate the event, with the Irish harp within the border on one side, and his family crest on the other! That fragile and perishable ware long outlasted the more perishable money.

The next five years were spent by Miss Mitford at school, in London, while her father was building a very large house, about four miles from Reading, to which his daughter came at the age of fifteen, and where she wrote a volume of poems, which was published in 1810: she also published "Christian, the Maid of the South Seas," octavo, 1811; Enlarged Edition of Poems, 1811; "Narrative Poems on the Female Character;" "Blanche;" "The Rival Swans," octavo, 1813.

In about twenty years after the prize in the lottery, and other acquisitions from the deaths of relatives, had partly repaired his fortunes, Dr. Mitford had again run through his property, little or nothing being left beyond £6000, out of his wife's large property settled upon her for pin-money, which, in course of years, well nigh vanished also, together with different legacies to his daughter, given up by her on various emergencies. They retired to a small cottage at Three Mile Cross, near Reading, taken for three months, but inhabited by them for thirty years! and there, finding it needful to earn money if she could, Miss Mitford wrote the papers which formed the first series of "Our Village." Like many other of the best-standard works, they were lightly esteemed when they were first writ-n. They were rejected by Mr. Campbell, then editor of the *New Monthly Magazine*, and by several other periodicals but at last found a place in the *Lady's Magazine*. There they were observed and read in a volume, and published by Whittaker, in 1823; and so successful were they, that never after had Miss Mitford cause to fear the acceptance by any periodical of any paper she wrote. The first series of "Our Village" was followed by a second in 1826, a third in 1828, a fourth in 1830, and a fifth in 1832. After this Miss Mitford published, through Mr. Bentley, "Belford Regis," three vols., 1835, and "Country Stories," through Saunders and Otley, in 1837. She also edited, for Mr. Colburn, two tits of American Stories, of three volumes each, and for Whittakers, two sets of Children's Stories, three vols. each. During this period she wrote "Julian," a tragedy, which was produced at Covent-garden; "Foscari," a tragedy, also at Covent-garden; "Rienzi," tragedy, at Drury-lane; "Sadak and Kalasrook," an opera, at the English Opera House; and "Charles the First," a tragedy, at the Victoria—then the Coburg—Theatre. She published, in 1827, a volume of "Dramatic Stories and other Poems;" and she edited "Finden's Tableaux" for 1835, and the three following years.

In 1842 she lost her father; and in the autumn of 1851 left her old cottage at Three Mile Cross, for another at Swallowfield, about three miles further south. During the preceding winter she published three volumes, chiefly critical, called "Recollections of a Literary Life." This year we have from her pen "Atherton" and other stories, three vols.; and there are now in the press two volumes of her collected dramas. The introduction to the plays is now before us, and is full of interest. However charming her rural sketches may be, her future fame and reputation will, in our judgment, rest on the foundation of these dramas.

In her youth, Miss Mitford was much in London, with opportunities of seeing and mingling in the best society. Admired and appreciated by a large number of the leading literary characters of her own standing, she has now become the adviser and friend of many of the rising spirits of the age, forming, as it were, a graceful link between the past and present, while she is herself, as shown by her latest works, as fresh and vigorous in her mind as she was while enjoying robust health in the prime of life. She also visited different parts of England, chiefly the north. Latterly her life has been passed in a retired village, cheered by the kindness of literary friends, amongst whom she has dwelt so long, and enlivened by the frequent visits, and still more frequent correspondence, of many attached and accomplished friends—on both sides of the Atlantic. In America she is one of the most popular of our English authors. For many years her income also has suffered much from the injuries received by the accidental overthrow of her pony chaise. The shock was too great for her delicate system, and has caused her to abandon her out-of-door excursions, which she enjoyed so much, and she is now, for the most part, confined to her chamber. Those who desire to see sunlight, in suffering, should read her "Atherton," and not overlook the preface.

The influence her writings have had on the rising literary taste may best be shown by two extracts. One is of our most powerful and popular authors thus writes:—"Her name, I need not tell you, has long been 'a household word' all over England. For me, and I doubt not for thousands besides, it is mixed with the pleasantest associations. It recalls certain happy days of childhood, contemporary with the infancy of those pretty publications, the Annuals, when I used eagerly to search the smooth gilt-edged pages of Ackermann's 'Forget-me-not,' or the 'Literary Souvenir,' or 'Friendship's Offering,' for the tales and sketches to which, in the days of my earliest love-stricken fancy, the name of Mary Russell Mitford. And now to think that I have a letter written by her honoured hand; it brings with it a strange, agreeable sensation." Another charming author writes:—"My 'Sketches of Irish Character'—my first dear book—was inspired by a desire to describe my native place, as Miss Mitford had done 'Our Village;' and this made me an author." So write many others; but only those who have been admitted into the sanctuary of her heart, and partaken of her friendship, can thoroughly appreciate the value of her writings. Her life, its joyous laugh, the wise speech, the generous nature, and the ever-open hand of Mary Russell Mitford.

In the preface to her collected dramatic works, which we have had the privilege of reading, she writes—"To edit these tragedies myself seems a kind of anachronism, not unlike engraving the inscription on my own tombstone. I can only pray that my poor plays may be as mercifully dealt with as if they were indeed published by my executor and the friends who wrote them were all numbered with the dead. I cast glances through the great elm-trees in the beautiful churchyard of Swallowfield."

When we consider her advanced age, verging upon three score years and ten—remember her physical weakness, and the terrible agony frequently endured—the event to which she refers with so much calmness and cheerfulness may be nearer than any of us suspect. Come when it may, it will come too soon for those who love and honour her; but it is pleasant to observe that the evening of her life is green with laurels, and consolatory to feel, that, when posterity has impartially weighed her intrinsic qualities, few names will stand higher than that of Mary Russell Mitford.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The settlement of the Account has been one of the leading features in the Consol Market. It has passed over remarkably well, considering that the supply of stock has been unusually small, and that the leading *bear* jobbers, from having considerably oversold themselves, have been compelled to borrow largely. The effect of borrowing has been a "backwardation" in Consols, which, at one time, was as much as ¼ per cent.

The continuous drain of the precious metals for shipment to the Continent is creating considerable uneasiness; and many parties are looking forward to a higher value for money. The exports, it is true, are large; but the last return from the Bank of France shows an increase in the stock of gold, compared with the previous month, of upwards of £4,000,000 francs. It is possible, therefore, that the wants of France are now fairly supplied, and that future demands upon us will not be so extensive as of late. During the present week about £250,000 has been sent to the Continent; and we have had a shipment of £198,743—£89,085 being in gold, and £129,658 in silver—to the East From Mexico 500,000, and from New York 200,000, dollars have come to hand; whi st the import from Australia has exceeded £640,000. Our advices, both from Australia and California state that the yield of gold is falling off.

The demand for money for commercial purposes has been rather active. In the rates of discount, however, we have no change to notice.

The Consol market, on Monday, was inactive, and prices had a downward tendency. The Three per Cents were done at 87⅞ to ⅞ and 87½; the latter being the closing figures. The Three per Cents Reduced were 86⅝ ⅞, and the New Three-and-a-Quarter per Cents, 87¼ down to 87⅛. India Bonds was 225; Bank Stock, 214 to 213; Ditto for the Account, 215. India Bonds were 2s, and Exchequer Bills, 4s. premium. There was more firmness in the market on Tuesday, and the business opened firmly, at 87⅞ for Cents were 87⅞ to 88; the New Three-and a Quarter per Cents, 87⅝ ⅞ to 88; Consols for Account 87⅞ to ⅞; and the New Two-and-a-Half per Cents, 73¾. Long Annuities, sold at 11-11-16 ths. India Bonds were 3s. 6d. to 2s. prem; and Exchequer Bills, par to 4s. prem.

The whole of the foreign exchanges still continue against this country; and our advices from the Continent are to the effect that a very limited business is still doing in British manufactured goods. It is pretty well understood, however, that the stocks in dealers' hands have become limited.

There have been very few dealings in the Foreign House. Still, however, prices have been much better supported than for several weeks past. Transactions have taken place in Brazilian Bonds at 100 per Cents, at 98; Ditto, Small, 94½; French Four-and-a-Half per Cents, 91f. 50c. (exchange, 24f. 90c.); Greek Bonds (red), 6; Mexican Three per Cents, 24; and Spanish Three per Cents, 23¾.

There has been only a moderate business doing in Joint-Stock Bank shares. Australasia have marked 7; Chartered of India, Australia, and China, 4½; London Chartered of Australia, 2½; Ditto, London Joint Stock, 2¼; Oriental, 45. Miscellaneous securities have ruled dull. Australian Agricultural, 2; Australian Royal Mail, 1½; Canada Six per Cent Bonds, 109; Crystal Palace, 1½; General Steam Navigation, 2½; Peel River Land and Mineral, 4½; Peninsular and Oriental Steam, 55; Portland Iron Company, 2½; Van Diemen's Land, 10. Waterworks Shares have been Perlin, 2½; East London, 129½; Ditto, New, 3 pm; Grand Junction, 72; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 89½; West Middlesex, 108½; Ditto, New, 104½. Insurance Company Shares have been almost nominal. Alliance were sold at 72; Atlas, 20; Argus, 2½; City of London, 2½; County, 12½; European, 19; General, 5½; Globe, 128; Guardian, 8½; Imperial Fire, 370; Ditto Life, 20; Law Life, 57½; London, 20; Marine, 2½; Provincial, 65½; Reversionary and Bonus; Provident, 42; Rock, 7½; Royal Exchange, 235; Ditto, Life, 65.

Railway Shares have mostly sympathised with Consols. The changes in prices have not been important. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23; Caledonian, 83½; Chester and Holyhead, 14; Edinburgh and Glasgow, 75; Great Northern, 86½; Great Southern and Western (Ireland), 90½; Great Western, 73½; Lancashire and Yorkshire, 61½; London and Blackwall, 8½; London and Brighton, 99½; London and North-Western, 96½; London and South-Western, 77; Manchester, Sheffield, and Lincolnshire, 20; Midland, 59½; North British, 31; North Devon Guaranteed, 7; North Staffordshire, 11; Oxford, Worcester, and Wolverhampton, 9½; South-Eastern, 59½; South Wales, 35; Vale of Neath, 17½; York, Newcastle, and Berwick, 65½; Ditto, G.N.E. Purchase, 7½; York and North-Midland, 46½.

LINES LEASED AT A RENTAL.—Hull and Selby, 102½; Ditto, Quarter Shares, 26. Manchester, Buxton, and Matlock, 2½; Midland Bradford, 80½; Wilts and Somerset, 92.

PREFERENCE SHARES.—Chester and Holyhead, 15½; East Anglian, 3; Eastern Counties No. 2, ¼ prem.; Great Northern Five per Cents, 112½; Great Western, Four-and-a-Half per Cent, 94½; Midland, Four-and-a-Half per Cent, 1⅛; York, Newcastle, and Berwick, 38.

FOREIGN.—East Indian, Extension, 1½; Grand Trunk of Canada, 21; Great Western of Canada, 9½; Luxembourg, Guaranteed, 3⅜; Ditto, Constituted Shares, 2¾; Madras, 12½; Northern of France, 20½; Paris and Lyons, 22½; Paris and Strasbourg, 28½.

In Mining Shares, so little has been doing that the quotations have ruled almost nominal.

Friday Evening.

We have had a very dull market for Consols, to-day. The Three per Cents have been done at 87⅝ ⅞ ⅝; the Three per Cents Reduced, 87 to 86⅝; and the New Three-and-a-Quarter per Cents, 88 to 87⅞. Foreign Bonds and Railway Shares have continued dull.

THE MARKETS.

CORN EXCHANGE (Friday).—The arrivals of English wheat fresh up to this morning's market coastwise and by land carriage, have been small, the show of samples was limited; nevertheless, the demand for all descriptions ruled very inactive, at barely Monday's quotations. Foreign samples of wheat sold to the trade at full rates, and kinds were in very limited request, the currencies were a shade easier. Barley was in fair supply and sluggish request at late rates. No change to notice in oats or rye. Beans and peas were in fair request, at full prices. In flour nothing of importance was done. Arrivals from Ireland and Scotland, since Monday, 1,240 quarters, the sale for that grain was dull, at late rates. Foreign arrivals, 2,000 quarters. In beans and peas nothing doing. In flour, the few transactions reported were at previous rates.

ARRIVALS.—English wheat, 1810; barley, 2330; malt, 3740; oats, 1031; flour, 460. Irish oats, 3110. Foreign, wheat, 25,430; barley, 4760; oats 14,780; flour, 2310 barrels.

AVERAGES.—Wheat, Essex and Kent, red, 71s to 81s; ditto, white, 74s to 86s; Norfolk and Suffolk, red, 72s to 79s; ditto, white, 76s to 84s; rye, 46s; grinding barley, 30s to 32s; distilling ditto, 33s to 35s; malting ditto, 40s to 44s; Lincoln and Norfolk malt, 64s to 68s; brown ditto, 58s to 62s; Chevalier ditto, 70s to 75s; Hotch ditto, 70s to 74s; Kidderminster and Lincolnshire feed oats, 22s to 30s; potato ditto, 21s to 24s; Youghal and Cork, black, 20s to 20s; ditto, white, 22s to 24s; Galway and Sligo, 20s to 22s; beans, 40s to 44s; grey peas, 44s to 46s; maples, 47s to 49s; white, 57s to 59s; boilers, 60s to 62s per quarter. Town-made flour, 45s to 47s per sack. Norfolk, Suffolk, and Essex, 32s to 34s; Irish, to 42s per 280 lb. *Foreign*—French, 40s to 42s per 280 lbs; American flour, 38s to 40s per barrel.

BREAD.—Since last week's rise in the sale for limecod, owing to the stoady arrivals. Cakes round, extreme rates. Households, 6½d to 7d; seconds, 6d to 6½d per 4lb loaf.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11d.; of household ditto, 8½d. to 10d. per 4 lbs. loaf.

Teas.—Our market is well supplied with all kinds, in which a good business is doing, at full prices. Common sound congou, 1s. per lb.

Sugar.—The clearances for the last week were 1,778,430 cwt., against 1,607,740 ditto in 1853. The public sales have been fairly attended, and the demand has ruled steady, at last week's currency. Foreign sugars ofsale are mostly held for former delivery, at late rates. Refined goods are in fair request, at from 64s. to 68s. per cwt. Crushed moves off slowly on former terms.

Tallow.—This article is still dull and drooping. P.Y.C., on the spot, has changed hands at 65s and 65s. 6d. to 66s per cwt. There are sellers for forward delivery, at 65s. 6d. Town tallow is 61s. net cash, with a dull market.

Oils.—Linseed oil is 32s. 6d. per cwt. on the spot. All other oils are heavy. Turpentine is still drooping. Spirits, 42s 9d.; in puncheons, 43 7s.; rough, 14s. per cwt.

Spirits.—All kinds of rum are slow in sale. Proof brands, 2s. 5d. to 2s 6d.; and proof East India, 2s. 6d. to 2s. 8d. per gallon. In brandy, very little is doing. Sales of proof brands of 1851, have been made at 2s. 5d. to 2s. 5½d. per gallon. Hollands is quiet at 2s. 6d. to 2s. 8d. per gallon.

Hops (Friday). We have no improvement to notice in the demand for, or value of, any kind of hops. The show of samples is very moderate. Prices are by no means firm. Sussex and Continent this week.—Mid and East Kent pockets, £6 10s. to £12 2s.; Weald of Kent, £5 0s to £7 7s; Sussex, £5 15s. to £10 10s per cwt.

Coals (Friday).—Walker Primrose, 18s. 3d.; Bell, 17s.; Gosforth, 16s.; Belmont, 17s.; Lambton, 17s. 6d.; Hetworth, 16s.; Stewart, 16s.; Tanfield Moor, 15s.

Smithfield (Friday).—To-day's market was fairly supplied with beasts, in which only a moderate business was transacted, at Monday's prices. There was a steady demand for sheep—the supply of which was but moderate at full quotations. We had a steady sale for calves, at extreme rates. In pigs very little was passing. Prices, in the leading lots, were dull, at late rates. Mitch cows sold slowly, at from £14 to £18 10s. each, including their small calf.

Per 8lbs. to sink the offals:—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s. 8d.; prime large oxen, 3s. 10d. to 4s. 0d.; prime Scots, 4s. 2d. to 4s. 6d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime coarse-woolled ditto, 4s. 6d. to 4s. 8d.; prime South Down ditto, 4s. 10d. to 5s. 0d.; coarse calves, 4s. 6d. to 5s. 0d.; prime ditto, 5s. 2d. to 5s. 4d.; large coarse pigs, 3s. 8d. to 4s. 0d.; neat small porkers, 4s. 4d. to 4s. 6d.; lambs, 5s. 6d. to 6s. 6d.; suckling calves, 22s. to 28s.; and quarter old store pigs, 21s. to 27s. each. Total supplies: Beasts, 6061 oxen, 1361 sheep and lambs, 4940; calves, 320; pigs, 240. Foreign: Beasts, — sheep, 260; calves, 190.

Newgate and Leadenhall (Friday).—The general demand ruled steady, as for over

Per 8lbs. by the carcase.—Inferior beef, 2s. 10d. to 3s. 2d.; middling ditto, 3s. 4d. to 3s. 6d.; prime large ditto, 3s. 8d. to 3s. 10d.; prime small ditto, 3s. 10d. to 4s. 0d.; large pork, 3s. 4d. to 4s. 2d.; inferior mutton, 3s. 2d. to 3s. 4d.; middling ditto, 3s. 6d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d.; veal, 4s. 0d. to 5s. 4d.; small pork, 4s. 4d. to 4s. 8d.; lamb, 5s. 4d. to 6s. 10d.

On the 15th inst., at Richmond, Lady Elizabeth P Ashburnham, aged 90.

On the 14th inst., at Cheltenham, Admiral J. MacNeill, aged 86.

BALL AT SINGAPORE.

THE thirty-fifth anniversary of the formation of Singapore as a British Settlement was celebrated by a splendid fête given by the Governor, the Hon. Colonel W. J. Butterworth, on the 6th of February, in return for an entertainment which his Excellency and his family had been welcomed after a sojourn of two years in the Australian colonies. Another object of the fête of February 6th was to identify the Governor with the Free-trade principles of the settlement.

The entertainment was given in the Assembly Rooms. The ballroom was brilliantly illuminated; at the north end of the apartment was a marble bust of Sir T. S. Raffles, by Chantrey, resting on a pillar, supported by the British ensign and the East India Company's flag, in the background was a picture of Commerce supported by Natides, beneath which was the motto, "In Commerce lies Britain's Prosperity." Underneath the motto were two large sketches of Singapore, in 1819 and 1854.

The ball opened with a quadrille, and was kept up with untiring energy to the music of the band of the 43rd M. N. I. and a private corps. During the dances the scene was most enchanting. Here was seen a group of guests clad in the contrasted costumes of Europe and India; there, in the empire; there, in the flowing robes of Arabia and Persia, the magnificent and costly apparel of a Turkish Jew, the rose-tying garments of Siamese chieftains, the sparkling vesture of a Malay Prince, the uniforms of Consuls and of native officers of the Anglo Indian army, and a gallant Arab Shiekrev. In the reception-room were garlands of flowers and bouquets placed in china vases. The walls of the supper-room were covered with the flags of all nations visiting the port of Singapore.

After supper, the Governor rose, and proposed the health of Queen Victoria, which was drunk with enthusiasm. His Excellency then addressed the company, and took a retrospective view of the settlement; and referred to his intention of designating the light-house about to be erected on the Sunyer, as the entrance of the harbour, the "Raffles Lighthouse," in memory of the founder of Singapore. His Excellency then adverted to the "Trade Statements," to show the prosperity of Singapore as a free port. At the expiration of the first five years, the imports and exports were each about four-and-a-half millions sterling; at the close of the next ten years they amounted to three-and-a-quarter millions sterling; on the termination of the subsequent ten years, to five millions; and, by the last returns, to six-and a half millions, exclusive of specie—thus showing an advance regular and unprecedented; whilst in place of the few prahus which might be seen in 1819, no less than 1055 square-rigged vessels and 3380 native boats visited Singapore during the past year. As the close liberal and enlightened view and the opening of free ports, the culminating point of the Singapore trade was stated to have been reached. Since them, however, it has increased by a million sterling. Again, on the establishment of the colony of Labuan, the like evil prognostications were put forward, as to more ports than one; but the imports and exports being greater at the end of the last official year than at any time since the formation of the settlement. His Excellency then proposed "The Continued Prosperity of Singapore, with Free-trade in its fullest integrity."

Mr. John Purvis, the oldest resident merchant, acknowledged the toast; and, in conclusion, alluded to the "true interests" to preserve Singapore in all integrity a free port. Mr. Purvis added, the principles adopted by Sir Stamford Raffles, he left as a legacy to Singapore for its rule and guidance; and, as the Government are trustees to the bequest, I feel assured it will be faithfully carried out. Mr. Purvis then proposed "The health of Colonial Butterworth, and success to their enlightened Government."

The Governor then proposed "The Hon. Mr. Church, and the Ladies of Singapore."

The toast having been drunk, Mr. Church returned thanks.

The company returned to the ball-room, and dancing was kept up until about two o'clock.

On the following day the children of the Singapore Institution Free Schools assembled on the premises in front of the Government House, and were entertained by Mrs. Butterworth, the patroness; on which occasion the Ladies' Committee of the school was present. The fragments of the supper were sent to the Lunatic Asylum and Hospitals.

THE SHIP "ASIA" DISMASTED BY A WATERSPOUT.

A WATERSPOUT at sea is a most destructive phenomenon; for no ship could escape if it were carried entirely within the vortex. In the instance here illustrated, the vessel was only partially caught by the spout, and providentially escaped. The ship *Asia* is one of Hall and Brothers' Australian line of packets. She left London last year, on the 23rd of March, and Plymouth upon the 6th of April, with nearly 200 passengers on board, for Port Phillip. She arrived there in safety, but was detained by the desertion of the crew—which has become so general

(*Continued on page 373.*)

AMUSEMENTS, &c.

Lectures by Professor Hoblyn, Professor Ryan, Professor Bachhoffner, Professor Bachhoffner, Professor Bachhoffner

"THE ASIA" DISMASTED BY A WATERSPOUT, ON HER PASSAGE FROM PORT PHILLIP TO BOMBAY.

(Continued from page 370.)

n that land of gold. Accordingly she did not leave Port Phillip until the 27th of November, for Bombay. While on her passage, and in lat. 0 deg. 57 min. 47 sec. south, and long. 82 deg. 15 min. 15 sec. east, she was, unhappily, caught by a waterspout, upon the 22nd of January last, and almost totally dismasted. The weather but a few hours before was as follows: Jan. 21, midnight, light breeze from northward, with mizzling rain, and heavy lightning at south-west. About 1.15 a.m. light breeze, with rain, from the westward; steering north by west, going two or three knots per hour. At about 1.30 a.m. the second officer in charge of the midnight watch remarked that it looked very black ahead. Almost at the same moment a tremendous roar was heard ahead; and a gust of wind taking the ship flat aback, laid the masts prostrate on the decks. So instantaneous was the wind after the roar, that, although all halyards and sheets were let fly, it was of no avail. The wind was succeeded by a torrent of rain, which lasted about five minutes, and then left all calm and quiet, but water ankle deep on deck. The ship was a wreck, her decks stove, launch and bulwarks smashed by the fall of the foremast, and the first cutter crushed by the maintopsail-yard. At four a.m. the weather was calm and sultry, with rain.

BALL AT SINGAPORE, IN CELEBRATION OF THE ANNIVERSARY OF THE SETTLEMENT.—(SEE PAGE 370.)

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, APRIL 22, 1854. [GRATIS.

PROGRESS OF THE CRYSTAL PALACE.

LET us imagine a journey by the separate line of rails which now extends complete, and will in a month be open to the public, from London-bridge to the Crystal Palace—a line exclusively devoted to what, to coin a word, we must call Crystal Traffic. Arrived at the foot of the South Wing—which forms a sort of supplementary station to a brick and slate station, almost concealed by banks of earth and trees—we pause upon the steps, and, looking up, see before and above the far-extended towering mass, which rises before us in form and proportion quite unlike anything we have seen before. Our readers—making allowance for the conquests of working days, and warm spring time, between the hour when Mr. Philip Delamotte set his sun picture-manufacturing machine to work—and from that sun painting our Illustration was drawn and engraved—must imagine the scaffolding removed; the broad terrace smooth and clear—green turf in the place of the tramway; the trees budding; and the distant balustrade crowned here and there with marble statues. We must leave to be told by our pictures the vast difference which exists between the hasty, hurried sketch by which Paxton saved the first Exhibition from suffocation beneath brick and mortar, and this, the matured result of time experience, and the just confidence his genius has earned.

As to the series of Courts, as long as the art department of the interior is incomplete, it is premature to criticise details; for details cannot be fairly judged until seen with the accessories of colour and adornment for which they were planned. We will, therefore, after entering the building by the basement, ascend to the Central Transept, and turn our steps to the southern arm of the Palace. It will be difficult for upholsterer's ornamentative taste—as seen in the last George's reign, in Long Wellesley's solid gold cornices, and Lord Harborough's Green-park paling, with its gilt nails—to survive the lesson of the series of Courts.

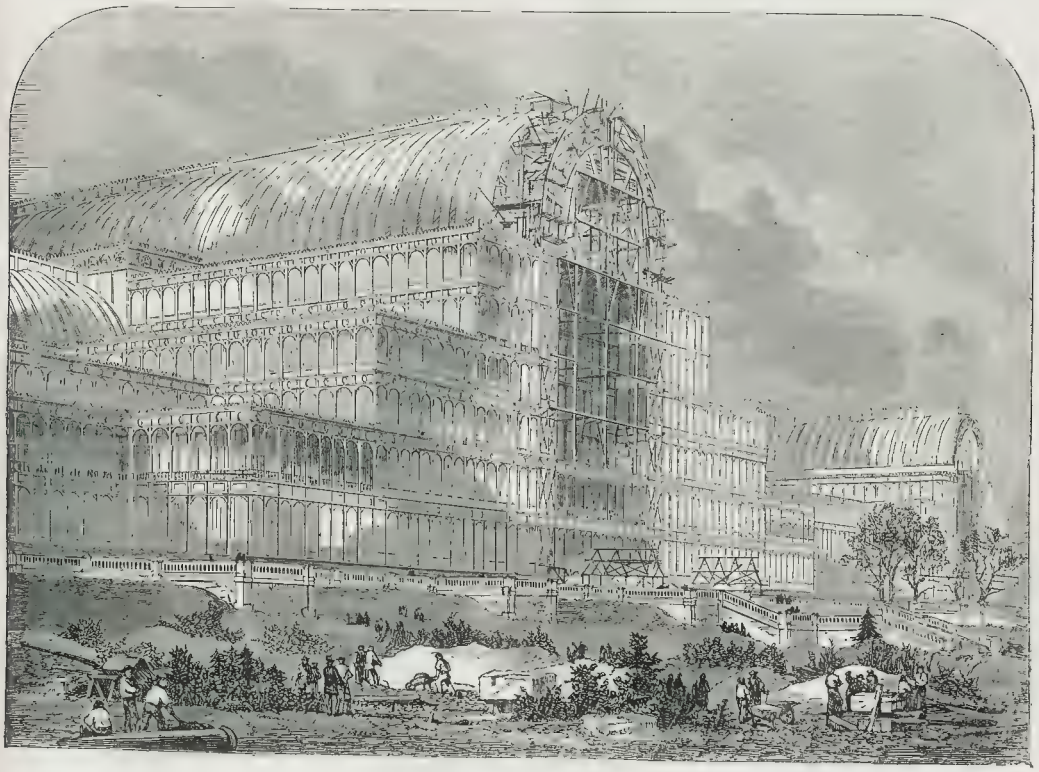
Pleased with the general plan; seeing in the details an admirable lesson in taste, in form and colour, in what to imitate and what to avoid, for the rising generation of workers and of patrons; with all our admiration, we cannot help fearing that the directors of these departments, in their anxiety to provide copies of the best works of sculpture in all ages, have run the chance of crowding up the space with plaster casts, which, however valuable to art students, will soon become wearying to the multitude. The fine vistas, the rich colouring, the beautiful details, the historical, theological, and poetical associations of the two series of Courts will unite the suffrages of all classes of visitors; but the plaster images from the works of known and unknown artists, and the long lines of busts of worthies, illustrious and obscure—from Alexander the Great to the Texian patriot, Colonel Ringtail Roarer, from Homer to the celebrated Senator Squabba, of Little Pedlington—will be found not very attractive out of a small circle of enthusiasts, which does not increase. People of all orders, educated and uneducated, never tire of trees and flowers, green turf, flowing water, of the gambols of parti-coloured carp. The changes of light and shade always afford some new picturesque effects in a vast harmonious building like the Crystal Palace; but a few statues in marble are enough for one day—a long regiment of plaster becomes wearyingly monotonous and harsh.

The Court of the Byzantine age is almost clear of the modelers; and the decorators have done enough of their work of flower and grotesque tracery, on golden ground, with coloured marbles, or undiscoverable imitations of coloured marble, to give a fair idea of what were the best works of the age extant when the Turks took Constantinople, and turned St. Sophia into a mosque. The next Court, the Mediæval, is still suffering severely from the strike of the plasterers: rich fragments of church architecture, unfinished, and bare laths, that are to grow into groined and fretted roofs, bid us pass on to the Rénaissance Court, where the decoration of the walls is proceeding with satisfactory zeal. We pause before the gates of Ghiberti, and rejoice that the copyist's art has given us all the pleasure of the originals, without robbing Florence as Florence robbed Pisa.

Turning from schools of art and architecture, botany, geography, and ethnology, to be hereafter described in detail, we enter the Southern Division, and Commercial Department, which, whether considered as a source of amusement and revenue, or as living epitome of the trade of the world, will certainly, if judiciously managed, become one of the most important, because the most original, and universally interesting parts of the undertaking.

The Southern Wing or nave is flanked on either hand by a series of square courts, destined for the special display of particular manufactures

The first on the right hand, looking south, is meant for Stationery goods of all kinds—books, prints, and ornamental work in paper and card. Built from plans and designs by Mr. Crace, it will show what can be done with wood and plaster not disguised to imitate stone or brick, but in their genuine forms: the plaster coloured, with various shades of ochre, and other earth colours; and the beams and panels of wood, representing the ornamental use of wood imitated in grain and texture with perfect fidelity. Of the result, it is impossible to say anything at present; but at any rate it will be quite new. In this, as in several other of the



THE GARDEN FRONT OF THE CRYSTAL PALACE OF 1854.

courts, medallions and friezes will represent the progress of the arts connected with the goods to be there exhibited. As, for instance, paper manufacture from the [illegible] and [illegible] the mud of Oil Nile, to the sumptuous [illegible] washing, drying process, which converts old rags into [illegible] Caxton, whose English [illegible] to commemorate by a sculptured [illegible] Lithgow [illegible] the [illegible] textures, and [illegible]

[illegible] Courts, who are names to speak their claims [illegible] while in the centre [illegible] Court for the [illegible] used by those chiefly [illegible] of Turkish [illegible] the Hardware [illegible] more conspicuous in their contents than might be [illegible] by the uninitiated from their names. [illegible] will bring to its adornment the works of the best manufacturers in a [illegible] of design has made decided progress. We ought to [illegible] celebrated enduring Sheffield plate and electrotype, but some specimens of real silver and silver-gilt plate, which, after [illegible] made in Sheffield, appears very often under the character of London West-end manufacture.

The Birmingham Court, entered by ornamental Iron Gates, opening to the Nave, will have materials for display not inferior to Sheffield, in the paper made, in iron, in steel, in brass, in gilt, in all that makes an English house comfortable, or cultivates an Indian plantation, or cooks a Spanish dinner. Birmingham, besides those articles in which a fair rivalry is carried on with Sheffield, makes a greater variety of useful and ornamental articles in steel, brass, and iron, than any other town—from lamps to spades, from swords to machines, or Indian hookah rings to tassels and the noses of negro Princes's equipage of all values, from the costly rifle or smooth bore, with which a Pallisser or a Gordon Cumming extirpates the lion of Africa or the grizzly bear of the Western Prairies, to the seven shilling musket, which the keen lemon-coloured Captain bargains for with palm-oil and ivory - slave prisoners being no longer a merchantable commodity. Fire arms, we understand, will not occupy any of the space in the Birmingham Court, but a special section will be set apart for them; and there, side by side with his American and Belgian rivals, the Birmingham gunmaker will be able to set up specimens of the quality, and statements of the price at which he is prepared to supply the fire-arms for a European war; probably, too section of the Exhibition will do more to settle the question of Government manufacture or private enterprise for the arming of our regiments than any number of Parliamentary Committees. We can only say that if a Government manufactory can turn out rifles and muskets constructed and better than private individuals can do on an exception to Government transactions in Public Works of any kind, from the Docks of Pembroke to the Kennington-park; which last has taken more time to plan than the Park of the Crystal Palace, and is still as dreary, unplanted, and unfinished. Another interesting feature of these Birmingham and Sheffield Courts is the opportunity afforded to ingenious workmen of exhibiting small inventions patented under the new law, or original designs, or specimens of superior workmanship, or hiring a single square foot or so, from a kind of margin reserved round the cases that ornament the counters, at a small annual rent. This will be a great boon to the inventors and designers among the hard handed, who form so numerous a class in the hardware towns.

Turquian Court, which we described in our notice of the Queen's visit, completes the series on the West Side of the Nave.

The East Side is flanked by the Court of Musical Instruments, in which manufacturers of pianos and substitutes for organs and other large musical instruments have applied. It is to be hoped that an arrangement as harmonious as the architect's design may be made with the exhibitors; if not, how distracting the concerts of even a drawing-room musicians, when the grand, the cottage, the pianoforte, without combining with the trombone, cornet-à-pistons, ophicleides, and other fearful instruments of wind and string, which are to fill up windows specially planned for their display. Music-books will be found in the Stationery Court. Two Courts are intended for Textile Fabrics, and the class for Textiles of Wool and Silk—follow next; the series is completed by a Foreign Court, intended to receive the choicest productions of France and Germany.

The Printed Fabric Court, designed by Mr. Cubitt, a son of Sir Charles, and the Mixed Fabric Court, by Professor Semper, the architect of the splendid theatre and the museum at Dresden, may be said to consist of a novel arrangement of pile-glass windows, and cases adorned with carved [illegible] pillars. The statue of Manchester will crown the centre Fabric Court, and reign over fifteen such medallions representing the rise, the progress, the triumph of cotton wool from the Indian distaff spinning on the floor to the self-acting mule, and other inventions, by which Cartwright, Hargreaves, Roberts, and a crowd of obscure but ingenious men have enabled the humblest labourer to indulge in a weekly clean shirt and clean pair of sheets, luxuries unknown to Norman Barons; which has made cotton stockings a necessary, and rendered it possible to discard the long-worn woollen garments, which [illegible] men was unknown and expensive, were the perpetual source of pestilential disease among the poorer classes. Something very pretty might be designed on the subject of chintz and calico printing. We wonder whether, in less warlike times, the architects would have given a medallion of Richard Cobden, whose Free-trade labours were sustained by his successful dyes and colour-printing processes.

We have not learned what symbols and ornaments Professor Semper means to use in his Court; but the lama ought not to be forgotten, or the Peruvian weavers of ponchos of wool, adorned with coloured designs, which even now form the best patterns for the South American market, and bears a considerable resemblance to Persian looms. After the wool of the lama, and its kindred tribe, the alpaca and vicuna, had been neglected for centuries, it was reserved for an Englishman, Mr. Titus Salt, to discover its value, and devise processes of manufacture, in which no country at present can vie with us. France, Italy, India, and China rival us in silks, Switzerland in cottons, and Belgium and France in merinos and fine cloths; but the beautiful results of a mixture of hair, wool, silk, and cotton, are only to be found in perfection in Yorkshire.

Other animals, besides the lama tribe, have a fitting place in the symbolism of mixed fabrics. For instance, the camel, the Cachemere, the Angora, the Syrian goat; the sheep, feeding on the fat pastures of Leicestershire, or nibbling the short, sweet herbage of the South Downs, or faring winter on the heather of Highland or Welsh mountains, or the moors where the Exe rises—the diminutive breed found in Shetland and Iceland, or the noble stock which, proceeding from Spanish pairings, from the vicinity of the Nave to the covered vineyards of Saxony and Russia, and were thence transplanted to give golden value to the Bush of Australia. Truly, when we summon up all these and many other tribes and varieties of the woolly and hairy race, which are represented in Leeds, in Bradford, in Halifax, in Huddersfield, and have created the model town of Saltaire, we feel that the Crystal Palace Directors would have done well to engage some of our animal painters to [illegible] assistance to the distinguished architects they have employed.

Ascending from the Orange into the Nave to the Gallery by one of the many staircases, we find almost the whole space given up to the display of manufactured goods; below, architecture, sculpture, trees, flowers, and fountains, and a few choice books for special manufactures, rented at a [illegible] price; above, the more serious business, to which some of the best men of all trades have contributed: at one extremity, tailors, hatters, shirt-makers, bootmakers, and all that goes to clothe the European man; at the other, china and glass. English, foreign, European, and Indian.

The Galleries of the Great Transept are fitted up to receive precious metals, fine jewellery, and precious stones; while, in appropriate [illegible] photography and perfumery, philosophical instruments and India-[illegible] Gallery, will be displayed, priced, and sold to those who choose to combine the pleasure of chopping with the pleasures of art or of idleness.

It is the man [illegible] itself to the many-sided taste of the multitude that [illegible] pect of the success of so gigantic an undertaking. The power which exhibitors at Sydenham will have of opening a large or a small shop of being wholesale or retail, of setting up their names and addresses, of fixing the prices of their goods, of attending to make sales and take orders will secure a living interest, a constant change of the articles displayed, and a degree of publicity greater than that of the Boulevards and arcades of the Continent, or the fashionable streets of London. The advantages in what may be plainly called the advertising point of view are obvious, as also as a bazaar or display of a collection of samples of the best or the cheapest manufactures of the world. This is the theory of the undertaking; the practical success will depend on whether the Crystal Palace Company's premises [illegible] Looking out into the iron gates of the Birmingham Court for the [illegible] the cool smith's anvil and the saucepans to Sheffield for the knives, spoons, and forks; to the Printed Goods Department for curtains and to the Woollen Department for carpets of Kidderminster, or Halifax or Axbridge. The mounting of the Gallery for china and glass, or Polish an chimney ornaments, or descending to the Nave for mirrors, or to the Basement, to see a heavy [illegible] machine. The husband going to the North Wing to order [illegible] the wife to the South Wing, to choose a [illegible] American, or Australian, or [illegible] preparatory looking to preliminary survey of the samples of [illegible] hard goods, damasks, velvets, satins, files, scythes, cutlery, [illegible] guitasses, and gilt beads, before travelling to Sheffield, to Birmingham, or to Leeds. All this is possible from the space at the disposal of the Company, from the interest of visitors, and from the character of the manufacturers who have contracted to send their goods there. Whether it will be realised depends not on theory, but on practice. Amongst other aids to the Commercial Department, a Directory will be issued containing the name and full particulars of the [illegible] and goods of each Exhibitor, so that Purchasers will have no difficulty in finding out the where and what they need.

The foundation of success rests on the managers of an undertaking so entirely novel in its character, adapting itself to the age of steam locomotion, electric telegraphs, and cheap postage. If they can manage to combine instruction and amusement with the transaction of a large amount of concentrated business, then the gardens and fountains, the statues and galleries, will be easily supported in at least their original freshness and splendour by the profits of a World Fair, an ever-changing school of manufacturing art and skill.

BANQUET TO HER MAJESTY'S MINISTERS AT THE MANSION-HOUSE.

On Monday evening a banquet was given, at the Mansion-house, by the Lord Mayor, which was attended by a numerous and distinguished company, among whom were the Duchess of Somerset, Lord John Russell, Lady John Russell, Viscount and Lady Palmerston, the Lord Bishop of Chester, the Earl of Kingston, Lord Robert Grosvenor, M.P., Viscount Ingestre, Sir George and Lady Hamilton Seymour, Sir W. Temple, Sir Richard Carr Glyn, Bart., Rear-Admiral Sir John Hill, the Misses Hill, Sir John and Lady Easthope, Mr. John Masterman, M.P., Mr. B. Oliveira, M.P., and Mrs. Oliveira; Sir Fitzroy Kelly, M.P., Sir W. Gore Ouseley, Bart., and Lady Ouseley, &c.

After the usual loyal toasts had been given, the Lord Mayor proposed "The Health of her Majesty's Ministers," coupling the toast with the name of Lord John Russell, of whose public services he spoke in very eulogistic term-

Lord J. Russell (who was received with much applause) said, this country was now at a remarkable crisis; and he hoped that the citizens of London, acting, as they ought to value, and having by long experience been taught to value, the blessings of peace, would not blame her Majesty's Ministers for having endeavoured by every means—by protracted negotiation, by every proposal, and by every offer, to avert war, and to continue that peace the blessings of which this country had so long enjoyed. But when he said that he did believe that they would not blame her Majesty's Ministers for endeavouring to obtain peace, he was equally confident that they would think that her Majesty's Ministers were worthy of confidence if, when the time came, when peace was placed on one hand and the honour and interest of England on the other, they determined to sacrifice the honour and interest of England for any other advantage, however great it might be (Cheers). As it had been their good fortune to have had the unanimous sense of the House of Commons in their favour when they were in power in carrying on war, so it would be their endeavour to attempt to obtain the restoration of peace, when peace could be restored on just, solid, and honourable conditions (Hear, hear). On behalf of those gallant men and navy who had gone forth from our shores to maintain the reputation of the flag of their country, he would beg them to believe that they were, one and all, intent on doing service to their country and to their cause. He knew well that their criticism was apt to be cast on men who might seem at one time not to carry exactly into effect the wishes and plans of those who knew not the difficulties, and had not weighed the dangers they had to encounter. But he wanted every one to believe that all those men were animated by a sincere desire to do their duty, and that at no time, even when their glory had reached to its highest pitch, was there an army and navy on whose courage and ability we could better rely; and he hoped that without listening to unfounded reports, the people would wait and see the whole actions of those men, and depend upon it they would prove worthy of England and their country (Hear, hear).

The next toast given by the Lord Mayor, "The Diplomatic Service, and Sir Hamilton Seymour," was responded to at some length.

Sir Hamilton Seymour, on rising to acknowledge the toast, was cheered most enthusiastically. He remarked that the compliment must have been paid to the diplomatic service rather than to himself. That system was a very simple one, and consisted only in keeping one's eyes open and calling things by their right names, and not by such as would be agreeable to their Governments to hear. In Russia there was no such system, simple as it was; and it was to the non-observance of some such system that he attributed many of the evils which had taken place; for if there was any country in Europe which required as it had been by England none of the present misfortunes which now threatened Europe would have occurred. Nothing could be more inexact than the accounts sent to the rest of Europe by Russia. As regarded the provinces of Turkey it was stated that the Greek Church suffered great persecution; that churches were burnt and priests killed. He attempted to discover something of all this, but he could never find any traces of it. What was said of Constantinople? The Emperor was told that Turkey was an interesting invalid, that she got worse from day to day, and that at last her obstinacy would be subdued to take the remedies offered by the imperial physician at St. Petersburg. What was said with regard to England? He did not allude to despatches of Prince Titoff or Count Thal, but he was talking of reports generally. It was said that John Bull was a very material fellow, who was always always buying and selling in the morning, and eating and drinking in the evening, so intent on his three per Cents that he felt no desire to interrupt the flow of his prosperity by interfering in matters that did not concern him closely. As regarded France, she was represented as a country hastily out of one great revolution, and only beginning to avoid a second. The principal men of that country were described as intent on realising large fortunes, while its Court was said to be very [illegible] in its tendencies; and, above all, it was affirmed that a close connexion between England and France was a myth, and would never be realised. The result had been, that England had been plunged into a war, by which a friendly power had been placed in the most [illegible] try; for there were, in Russia, many sympathies friendly towards England [illegible] to be counteracted by [illegible] and [illegible] latter knew, of course, that [illegible] people [illegible] would have effected [illegible] necessity for preserving the rights of [illegible] For centuries we have been on terms of hostility with our French neighbours, but now a state of [illegible] ed, which, it was to be hoped, [illegible] [illegible] [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Hon. T. E. M. Ll. Mostyn, son of the present Lord Mostyn, has issued an address to the electors of the county of Flint, soliciting them to confer on him the honour so repeatedly renewed to his father.

Lord Howden has addressed a note to the Spanish Government requiring that it shall close its ports against Russian privateers, if Russia issues letters of marque.

On the occasion of the marriage of the Emperor of Austria with the Princess Elizabeth, all the political prosecutions which have not yet been terminated will be suppressed, and sixty political prisoners will be set at liberty.

The Duke de Valentinois has been set at liberty by the Piedmontese Government, and the option allowed him either to return to Monaco by sea, or to France by land. He has selected this latter course.

Ole Bull's Norwegian colony speculation in Pennsylvania has placed him in considerable pecuniary difficulties, and he has been forced to go through the Insolvency Court.

Two beds of ironstone have just been let in Cleveland, on lease; one near Guisborough, at £7000 per year; the other near Normanby, at £3000.

The drought was causing great injury to the growing crops in different parts of Spain, and the Bishops have ordered prayers to be offered up for rain.

Mr. Thomas Duncombe is to move the House of Commons, on the 9th May, for a Select Committee to inquire in to the complaints of the Working and Industrious Classes.

The railway from Turin to Susa, on the southern side of Mount-Cenis, is to be opened to the public in the course of the present month.

The owners of Russian merchant vessels in the ports of Cadiz, Setubal, and Lisbon, have ordered them to be sold.

At a crowded meeting held in Halifax, on Tuesday evening, the Mayor in the chair, a large majority decided in favour of steps being taken to close public houses entirely on Sunday.

The ratification of the contract of marriage between the Emperor of Austria and Elizabeth, Princess of Bavaria, took place on the 7th. The ceremony will take place to-morrow (the 22rd inst).

The property of the Emperor of Russia, at the upper end of William-street, Limerick, consisting of stores and houses, which net a yearly rental of £400 a year, has been sold.

In consequence of the discontinuance of the Royal mail steamers on the Panama, New York, and Chagres route, an attempt is being made to get up steamers between New York and the Bahamas.

James Bailey, who was convicted at the last Somerset assizes of the murder of a young girl, named Eliza Coles, has been reprieved, with a view to a commutation of the capital sentence to penal servitude for life.

The *Stockholm Gazette* publishes a decree, permitting the free importation of corn and flour until the end of July, after which the former duties will be imposed.

The Weekly Dress Society, during the year just closed, have put into gratuitous circulation about 320,000 tracts, and sold at cost price 160,000; making a clear total issued of 480,000 tracts.

Count Zamoiski, nephew of Prince Adam Czartoriski, has received the permission of the Turkish Government to form a Polish legion. The legion, when organised, will be sent to Asia Minor to serve against the Russian General Georg.

The Postmaster-General has directed that the surcharge on letters or papers from London, sent through France, owing to there being no transit-route open on to Southampton, shall be allowed to appear.

Immense quantities of gutta percha said to have been discovered on the coast of Australia, near Geelong.

Commodore Vanderbilt and E. Mills, Esq., of New York, have entered into an arrangement for the establishment of an independent line of steamers from that city to San Francisco.

The *Plantagenet* left Southampton on Monday for Sydney, with upwards of 300 Government emigrants; all English agricultural labourers and their families, chiefly from the western counties.

The average daily yield of the diggings at Mariposa, by the last accounts, was from 16 to 20 dollars per head. In some instances it reached 100 dollars per day.

A piece of "may," in full blossom, was plucked at Impington, Cambridgeshire, on Tuesday, the 11th inst.

The *Alta California*, a San Francisco daily paper, has sent one of its editors to the Danube to report progress.

A very extensive bed of iron ore has been discovered in the commune of Hendaia, Department du Nord.

Several vessels were freighted at Shields, last week, to load coals for the Black Sea fleet, at £8s to £7p per keel.

The increase of the population of Toronto, compared with cities in the United States, is found to exceed that of Boston, New York, St. Louis, and Cincinnati.

A Norwegian vessel, bound to Hull, and laden with 400 barrels of gunpowder, was seized at Newcastle, last week, by Mr. Sanderson, landing-waiter of the Customs, and from him the decision of Government.

On Palm Sunday, three hundred palm branches, blessed by the Pope, were sent to the French General commanding the army of occupation, to be distributed to the officers who had asked for them.

The high price of food has caused an increase (last week compared with the corresponding week of 1853) of 664 paupers in Birmingham.

The French provincial journals contain accounts of a great many incendiary fires. According to one of them, there is reason to believe in the existence of secret incendiary societies.

A poor woman was apprehended in Glasgow, last week, for having embezzled a quantity of calico, out of which she had been employed to make shirts at 9d. per dozen.

Mr. Price, one of the East India Company's cotton agents, has been commissioned by Government to proceed to Rangoon, to inquire into the cotton-growing capabilities of the province of Pegu.

A Company has been formed to run a regular line between Liverpool and our gold-bearing colonies, under a Royal charter, with limited liability.

The Austrian Ambassador at Paris has left for Vienna, to be present at the marriage of the Emperor. He will be absent ten days.

A banquet was given by the Mayor of Cardiff on Saturday, to the officers in command of the French ships of war lying in that port, taking in cargoes of coal for the supply of the French squadrons in the Baltic and Black Sea.

Sir Edward Bulwer Lytton delivered an address to the members of the Literary Institution of St. Albans, on Tuesday evening. The Town-hall was crowded, and the speaker was loudly cheered.

The Spanish Government has issued an order prohibiting any privateers under the Russian flag from being armed, provisioned, or harboured, with their prizes, in Sardinian ports.

In Canada there are 35,000 fugitive slaves, most of whom are engaged on the lines of railway now constructing in that colony. In the abolition town of Buxton, in Canada, the free blacks own 9000 acres of land.

The suggestion of Lord Dungannon, that a public monument to the late Marquis of Londonderry ought to be erected in Belfast, is said to have been taken up by his friends in the north of Ireland.

The crew of a Russian vessel, which was sold at Waterford the other day, refused to obey the captain, who had sold her, and, according to his account before the magistrates, threatened his life. The men said, "they were free, and would fight for England." After two days' imprisonment for the assault, they were allowed to go to London.

Major-General Sir Joseph Thackwell, G.C.B., is appointed Inspecting-General of Cavalry during the absence of his Royal Highness the Duke of Cambridge in Turkey.

Arrangements are in progress for placing the Commissariat Department of the service in Ireland under a staff independent of the Ordnance, and solely responsible for the proper and regular supply of food and forage for the cavalry and infantry.

Several hundreds of German emigrants passed through from Hull to Liverpool, on Monday, on their way to America.

The Sabbath observance question is making great progress in France. A conclave at Boulogne, composed of both Protestants and Catholics, has agents actively employed in that town in the effort to put down Sunday trading.

The house of a scythe-maker at Millhouses, near Sheffield, was blown up by an infernal machine, on Sunday morning. Fortunately none of the inmates were injured.

The total number of hands relieved at Preston, last week, by the operatives' union, was 13,313, at a cost of £5,193 5s. 6d. Should the strike take place at Stockport, some 10,000 or 12,000 hands will be idle there also.

The Right Rev. Dr. M'Gettigan, Roman Catholic Bishop of Raphoe, has resigned his office as one of the Commissioners of the Board of Charitable Bequests, to which he succeeded on the death of Archbishop Murray.

Sir Joseph Paxton, Mr. Laing, M.P., and Sir Cusack Roney, had an audience of the Emperor of the French, on Saturday morning, on the subject of the opening of the Crystal Palace, at Sydenham.

EXPLORATION OF THE INTERIOR OF AUSTRALIA.

We learn from a Parliamentary Blue-book just published, some interesting particulars with reference to the recent navigation of the Murray River, styled, on account of its immense extent, "the Mississippi of Australia." The Murray River was partially explored by S. H. E. F. Young, Lieutenant-Governor of South Australia, in the year 1830, and subsequently by Captain Cadell in 1852, but neither expedition was productive of much information. The first voyage of importance was made in 1853 by the joint exertions of both these explorers. About the middle of the September of that year they succeeded in navigating the river as far as a place called Swan Hill, at a distance of 1300 miles from the sea. They proceeded in the *Lady Augusta* steamer, with a barge in tow, called the *Eureka*, and were accompanied by forty-five seamen and others. The first despatch forwarded by Sir E. F. Young to the Home Government, with reference to the navigation of this river was written on board the *Lady Augusta*, at Swan Hill, and dated September 17th, 1853. "Under Captain Cadell's able command," said his Excellency, "we have found a most ample depth and width of water throughout the long extent of course which we have just accomplished, without encountering any rapid or obstruction of any kind. The breadth of the river has averaged 300 yards; the soundings not less than three fathoms. After reaching the junction of the Wakool, 1100 miles distant from the sea mouth, the bends of the Murray become more frequent and sharp; the width, but not the depth, decreases, and the snags require more than usual attention. The average depth of channel through Lake Alexandrin is seven feet. Whether the river can at all times be continuously navigated throughout the year as easily as at the present season, is a point to be resolved only after a longer acquaintance with the periodical changes to which it is subject; but I have no reason to question its navigability by vessels propelled by steam during at least eight months of every ordinary year. From present and previous opportunities of observation and inquiry, I can bear testimony to the great natural advantages possessed by the extensive tracts of land which are drained by the Murray River."

In another letter, dated Adelaide, October 15th, Sir H. E. F. Young announced the further navigation of the Murray to the distance of 150 miles beyond Swan hill, to a spot known by the name of Gana Warra, where he found the average breadth and depth of the river the same as at most other points of its course. This was the furthest point at which the expedition arrived; but it was his opinion that the Murray Proper was navigable from the Goolwa (at the mouth of Albury, that is, for a space of 1900 miles. On their way back from Gana Warra, they navigated the Wakool to a distance of sixty miles from its junction. The other tributaries—the Loddon, the Campaspe, the Goulburn, the Puppal, the Billabong, and the Darling—were not explored, but the navigation of the last-mentioned river was in contemplation.

"I propose," said the Lieutenant-Governor, in his first despatch to the Home Government, in reference to the future colonization and management of the "Hundred of the Murray," "to be made of allotments of land, in blocks of one hundred and two hundred acres, to suit the various means of intending purchasers; and to give to the purchasers of these allotments a preference to the extent of their purchased acreage, a proportionate amount of surrounding waste land in the Hundred of the Murray, in South Australia.' Surveys of lines will be made in select spots as traffic and population require; roads leading to and from the river-side will be reserved for public use, and as a means of access to the back lands; whilst the alluvial flats, subject at periods to periodical inundation, may, by embankment, be rendered perpetually available. These flats extend, on an average, from about half a mile to three miles in depth; and generally both banks offer building sites of sufficient elevation to be beyond the reach of floods. Under the arrangement above described, the lessees of the waste lands (which are in South Australia open by law at all times to purchasers at public auction) will sustain an abstraction from the very large extent of their 'runs' for pastoral purposes, too insignificant to be detrimental to their special pursuits, yet sufficient to give to the owners of small allotments the space of pasture necessary to the sustenance of the live stock indispensable to their agriculture, their dairies, and other objects of domestic utility. The location of a population on the banks of the river will give to the squatters such facilities for obtaining labourers, that the pastoral objects to which, for very many generations yet to come, the immense tracts of back lands in the Murray district are destined, may be extended rather than restricted or interrupted by the appropriation of the alluvial margin of this great river to the settlement of freeholders. I took the liberty of suggesting to the Government of the day the necessity of reserving sites, at short intervals of one hundred miles apart to afford facilities for the formation of villages at spots likely to be convenient places of call for the river steamers; but my subsequent observation leads me to prefer the plan of continuous frontage reserves along both banks of the river necessary to the population which may be expected in future years to occupy this district. I am led to suppose that on the reserves in New South Wales and Victoria there is no right of commonage to the purchasers of allotments; the contrary of a commonage in the Hundred of the Murray, in South Australia is, however, as I am advised, essential to the early colonisation of the banks of the river; and in the case of so immense a water system as is the basin of the Murray, the omission to make very continuous reserves of frontage, could not but be a lasting injury to her Majesty's future subjects in Australia."

The banks of the Murray and its tributaries are described as abounding in trees and sheep. The principal trees are the gum-tree, the box, and the peppermint, chiefly found on flooded or alluvial soil; and the pine on the high lands, in red loamy earth. The gum timber of these parts is said to be peculiarly adapted to ship and house-building, which of itself will tend to the future prosperity of this new district. The number of sheep at present existing among the pastures of the Murray alone is estimated at upwards of 400,000; and there is grazing to spare for at least as many more, notwithstanding the quantity of horses and cattle which are at present reared. Flocks on the "runs" of the tributaries of the Murray are estimated at nearly one million and a half, although most of them are but poorly stocked, the banks of the Darling being almost unoccupied. The sheep are tended by the aborigines, who are known in numerous tribes. The quantity of wool from the pastures of these rivers, borne by steam down the Murray in the year 1853, amounted to 4000 bales of from 200 to 250 lb weight each. The transport of wool overland to Melbourne from the "Hundred of the Murray," is long and expensive, and the delivery is by no means regular; all which delay and inconvenience would, of course, be greatly obviated by the formation of a steam-packet company in the Murray River for the conveyance of wool, to the different markets. Sir H. E. F. Young expressed his confident opinion that the produce of wool in Australia is about to be very considerably and rapidly augmented by reason of the steam navigation, of which his voyage was the commencement.

The soil of the Hundred of the Murray is likewise admirably adapted for the cultivation of the vine, corn, maize, and rice, besides melons, enormous pumpkins, and other vegetables; of which several are already grown in the gardens of the squatters. The back-grounds swarm with wild fowl, and the waters abound in fish of several kinds; of which the principal are the "Murray cod," weighing sometimes as much as 70 lbs and the Mallawoy, valuable both for its nutrition and for the isinglass and oil which are extracted from it. "As regards soil, climate, and other natural advantages," says Sir H. E. F. Young, "there can be no doubt that the vast basin of the Murray is well adapted to sustain a large population, whilst in no part of the world can the extent and facility of internal communication by water be surpassed." The climate is of the same salubrious character as that for which the other more settled parts of this great continent are so justly celebrated. From the end of August to the 14th October of the year 1853, rain fell on twenty-nine days, and the mornings and evenings were rather chilly with heavy dew."

The other inducements set forth for emigration to the "Hundred of the Murray"—an extent of country "equal in area to seven times that of Great Britain"—are numerous and well worthy the attention of intending emigrants. "The route from Europe," says his Excellency, "viâ Port Elliot and the Murray, avoiding the dangerous navigation of Bass's Straits and Port Phillip Head, would be the most convenient route for emigrants, not only to the diggings, but also to the interior of the three colonies of South Australia, Victoria, and New South Wales. * * * A great passenger traffic may be expected hence to the gold-diggings, since they may be reached by way of the Loddon, within thirty miles of Bendigo and Goulburn, from the Murray, more easily than from Melbourne. Port Elliot, on the Murray, is described as being easy of approach, and sheltered against all winds, except that from the south-east—at what quarter it is expected, however, by a beach eight miles in extent. The anchorage is one of the best in Australia; and the jetty at the Goo wa, now in course of completion, which is joined to another jetty at Port Elliot by an iron tram-way seven miles in extent, forms a large basin, entirely sheltered from the winds and heavy seas. Another circumstance, too, which renders Port Ell ot likely to be one of importance is its easiness of access, and the facts as stated in official reports made in 1850 and subsequent years by Captain Lipson of the Royal Navy,—"that two mails may easily be delivered at Port Elliot for one at Port Adelaide during the winter months."

On the 7th October, 1853, an address was presented to the enterprising Governor of South Australia by the Murray settlers of New South Wales and Victoria on his return to Adelaide from Gana Warra. This address was signed by thirty nine subscribers, and congratulate his Excellency on the important discoveries he had made with reference to the Murray River. Fourteen days later he received an address from the Legislative Council announcing their gratification at his successful navigation, and awarding him a gold medal in consideration of the important commercial benefits of which his voyage was the harbinger. A gold medal was likewise awarded to his gallant companion, Captain Cadell, in consideration of his services as commander of the *Lady Augusta* and *Eureka*. A third medal was ordered to be deposited among the archives of South Australia in commemoration of the events, and as a tribute to the Legislature for the pecuniary encouragement which it voted in furtherance of the undertaking.

The little yet known of the Murray River and the surrounding district of the "Hundred of Murray," is highly encouraging; and there is no doubt, from its suitability with respect to climate, soil and production, that this immense region will one day become as populous and thriving as the most flourishing states of the Old or the New World.

THE ROYAL MARINES.*

Representations of the uniforms, together with historical notice of service performed by various regiments ordered to the East, have frequently appeared in the Illustrated London News; but no record has as yet been given of the Royal Marines. This highly distinguished corps has experienced great fluctuations in the manifold duties assigned to it during its existence. It has evidenced unbending courage and patient endurance under reverses, which have been repeatedly acknowledged by the Sovereign for the time being; and it has proved that when the demand is made upon it, it can be depended upon to support the honour of the British flag. The Marines gained every laurel they could win in 1797, the Marines stood by the Government when it was assailed by the mutineers. It remained staunch to its officers, and, in one instance, swerved from allegiance to the Crown. By a curious fact that has won some emulation for gallant exploits. When the Marines were engaged in the service of the Crown, they were always found on the right flank of the regiments they were brigaded among. Detached companies were usually brigaded with the malcontents on the enemy's side, and the Marines were always kept aloof from contamination, and, in cases of incertitude, the naval officers invariably reckon on the support of the Marines.

The origin of the Royal Marines is traced to 1664. It was raised for the express purpose of forming what was termed a "nursery for the navy, and the men were drafted into ships of war as necessity called for their services. They were [illegible] and the colours bore a red cross, with [illegible] from each angle. In seniority the corps stood third in the service, as the first in the line. In 1687 and 1689 several other marine regiments were raised; but in the latter year they were disbanded, leaving the original battalion only extant. During the reign of Queen Anne six regiments, and an equal number specified for sea service, were formed. The only difference existing between those forces arose from the Ensigns of the former being classed as Second Lieutenants, which advantage was not accorded to the latter. From this time, however, the corps ceased to be regarded as a nursery for the fleets. During the Queen's reign, several independent companies were embodied for the express purpose of defending our West India possessions; to which quarter they were sent, and formed into distinct battalions. From 1703 up to the present date, the Marines have been held in high estimation; and whenever a naval action has been fought, they have added laurels to those already reaped. At the period quoted the force numbered 8000 men, at an annual expense to the country of £1,200,000 sterling. The peace of 1714 occasioned the whole to be disbanded; and it was not until 1739 that the organisation of marine regiments was renewed, when six battalions were levied; and, for their better discipline and drill, five men from each company of Foot Guards were appointed sergeants and corporals to these corps. Three more regiments were raised in 1740. They wore camlet coats, brown linen waistcoats, and canvas trowsers. At the expiration of the three following years, the force amounted to 11,550 men. The Marines were placed under the control of the Admiralty in 1747. In 1755, the strength had increased to 14,845; and, in consideration of the very valuable services rendered by the corps, his Majesty instituted a new establishment of Marine Officers, entitled "General" and "Lieutenant-General of Marines." In these were added three Colonels, selected from the post-captains in the Navy. The corps was then divided into three parts, and designated the Portsmouth, Plymouth, and Chatham division.

The merits and utility of this body of men became so [illegible] from their gallant and spirited deeds on either element, that in 1760 additional companies were recruited, forming a total of 18,355 rank and file, being then one-fourth more than our naval force. The peace of 1763 was, as usual, marked by a general reduction of troops; and a considerable and most impolitic diminution was effected in this serviceable branch.

Any endeavour to furnish a record of the innumerable actions participated in by the Marines would be tantamount to recapitulating every dashing exploit performed by Englishmen at sea, since in no instance where hazardous enterprise opened promise of victory were the Marines absent.

The divisions could not carry on their colours a more appropriate emblazonment than "The Globe," with the pertinent motto, "Per mare per terram;" for truly it may be asked, in what quarter of the universe has not some portion of the corps been? It is now divided into four divisions, and takes precedence in rank immediately after the Fifty-seventh Regiment of Infantry, or, as it is commonly designated in the army, "the fighting half-hundred."

On the 29th of April, 1802, King George III. was pleased to issue an order directing that, in future, the Marines should be styled "The *Royal* Marines." The title of "Royal" was not acquired through influence: it was the reward of more than one hundred years of undeviating loyalty and zeal, a Monarch's acknowledgment of fidelity and honourable distinction.

At this instant detachments are on board every one of her Majesty's shipsin commission; wherever wood and iron can be made to swim, the Royal Marines will be found in the exercise of their duties.

It is said the detachments belonging to the fleet in the Black Sea have been landed for the purpose of occupying Varna. If so, and opportunity offers, they will add renown to the already acknowledged valour of British troops. The greater portion of the men and officers comprising the four divisions are now afloat, and the necessity of an augmentation is unquestionable.

* See Portraits of Royal Marines in the Illustrated London News for March 18, 1854.

LORD RAGLAN AND THE DUKE OF CAMBRIDGE AT PARIS.

The hearty reception of Lord Raglan and the Duke of Cambridge, on their arrival at Paris last week, of which we have given a Cut, must have been exceedingly mortifying to those partisans of Russia who still linger in London. Lord Cowley, our Ambassador at the Court of Louis Napoleon, and Marshal Vaillant, the Minister of War, were in waiting to receive them. A guard of honour was stationed at the railway terminus, and four carriages were in attendance for the Prince and his suite. These marks of attention on the part of the authorities, however, pleasing as they must have been, were not so valuable as the enthusiastic manner with which the distinguished visitors were welcomed by the inhabitants, who cheered and shouted "Vivent les Anglais" on their way to the Tuileries.

On Wednesday a review was given in the Champ de Mars in honour of the English officers. On Thursday morning, at nine o'clock, three of the Emperor's carriages were in attendance at the Prince and officers who accompanied them, to inspect the barracks of the regiments of Guides, at the Ecole Militaire. The distinguished party went over the building, and appeared highly pleased with all the arrangements. In the afternoon his Majesty the Emperor did the honours by conducting his Royal Highness to the promenade of Longchamps in his private carriage, the Emperor himself driving. In the evening Lord Cowley

RECEPTION OF LORD RAGLAN, THE DUKE OF CAMBRIDGE, AND THEIR SUITES, AT PARIS.

gave a splendid banquet in honour of the illustrious guests, to which a number of the principal English residents and visitors were invited.

On Saturday the Emperor, accompanied by the Duke of Cambridge, went in an open carriage to Joinville-le-Pont, to witness an interesting experiment in pontooning. In a second carriage were Lord Raglan, Commander-in-Chief of our expeditionary army; Maréchal Vaillant, Minister at War; and Maréchal Magnan, Commander-in-Chief of the army of Paris.

The Emperor was received, at the entrance of the park of Vincennes, by the General commanding and by the superior officers of the place, and escorted to the termination of it. There his Majesty quitted his carriage, and proceeded on foot towards the Marne, about seven hundred or eight hundred yards down the river, to the point where a bridge of boats, the invention of M. Janvier, civil engineer, had been thrown across. A considerable crowd surrounded his Majesty, and his distinguished visitors, and cheered loudly, as did the troops, who were drawn up at the approach to the bridge, which was 25 yards long, composed of 45 boats made fast to one another, and formed of very slight wood-work, covered with waterproof cloth. Its appearance was so extremely light, that people fancied it unequal to the weight it was destined to sustain; but any doubt on this point was completely set at rest when, without any visible oscillation, or the most trifling accident, it bore a battalion of infantry chasseurs, a squadron of cavalry, and a battery of artillery, consisting of twelve guns completely equipped. As the troops passed over in succession, they shouted "Vive l'Empereur!" with an enthusiasm which spread to the crowds who lined the banks of the river, and repeated the cheers with equal warmth. After the passage, the Emperor and his party minutely examined all the details of the construction of the bridge, and made many inquiries on the subject of the inventor.

On Sunday the Duke of Cambridge went to Versailles, to see the fountains play. During the visit the bands of the different regiments in garrison struck up "God save the Queen," which was received with cries of "Vive l'Empereur!" "Vivent les Anglais!" by the multitudes assembled. In the evening, the illustrious party dined with their Majesties at the palace of the Tuileries.

On Monday a ball was given at the Elysée, in honour of the Duke of Cambridge, which was very fully attended. The rapidity with which the gardens had been decorated for the occasion was quite astonishing. Only on Saturday last they were in a state of great confusion, as were also the approaches to the Palace—masons, carpenters, &c., being still at work on the new portions of the building; but before eight o'clock on Monday night the Palace and gardens were in as good order as if they had been completely finished—all the unfinished work being concealed by painted canvas. The Emperor and Empress left the ball at about one o'clock in the morning.

Lord Raglan left Paris on Tuesday morning, for Marseilles. The Duke of Cambridge followed him the same evening.

EMBARKATION OF PRINCE NAPOLEON, AT CHALONS, FOR THE EASTERN EXPEDITION.—(SEE NEXT PAGE.)

EMBARKATION OF TROOPS FOR THE EAST, FROM THE NEW PORT, MARSEILLES.

DEPARTURE OF PRINCE NAPOLEON.

Prince Napoleon, who left Paris on his way to Gallipoli last Sunday week, was received with much enthusiasm by the inhabitants of Chalons, Lyons, Avignon, and other large towns through which he passed. Our Artist, as will be seen, has given a Sketch of the departure from Chalons, on his way to the port of embarkation.

On the evening of the 12th inst. his Imperial Highness made a triumphal entry into Marseilles. He was cheered, not by hired bawlers, but by the wealthy and the laborious, from the terminus to the Prefecture. Every house was illuminated, and each window filled with well-dressed females, waving handkerchiefs and showering nosegays into the carriage of the Prince. Little was known of the Prince previous to his coming amongst them, but he was welcomed as the cousin of him who had twice saved France from anarchy, and for his chivalrous conduct in demanding to share the dangers of the brave army.

On the following day he assisted at the banquet offered to him by the Town-council. One hundred and eight persons were present. The first toast given by General Rostolan, "The Emperor," was received with the greatest enthusiasm. The second, given by the Mayor, was "Our illustrious guest." The reply of the Prince was short, but full of noble sentiments. It was as follows:—

I thank the Mayor of Marseilles for the toast he has just given. In demanding from his Majesty the Emperor the honour to partake of the dangers and labours of the army of the East, I only did that which every French soldier would have done had he been in my place—*my duty, and nothing more!* (Here there was immense applause.) In those who, by the will of the people, are placed the nearest to the throne, there is a right which I shall always demand—that is, to be at the head of the children of France when defending our influence, our rights, our honour, and our national independence (Continued cheering). The words so emphatic of the Mayor prove that you fully appreciate the sentiments with which I was inspired in my address to the Emperor my cousin. No one can foresee the political results that may arise from the war now commenced. But our glory and our interests are in good hands. Have confidence in him who has so nobly and so ably conducted the difficult question of the East. This much is certain should our arms and those of our allies triumph, vast commercial advantages will be obtained for this great city. The Black Sea, hitherto nearly closed, will be opened to the commerce of the West. The Ottoman empire, strengthened, and no longer fearing a suspicious and ambitious neighbour, will be enabled to develop all its immense resources, and progress in its liberal intentions. It is this which it is permitted to hope, and I notice it to show the great advantages that may be gathered for Marseilles in the war against Russia. Your interest is therefore blended with your duty. I beg to propose "Prosperity to the City of Marseilles."

At the close of this short but eloquent speech, everybody, and as with one voice, cried out, "Vive l'Empereur! Vive le Prince!"

The banquet broke up at half past eleven o'clock, when the Prince returned to the Prefecture. Even at that late hour of the night, the streets were thronged, so anxious were the people to catch a sight of his Royal Highness.

On Saturday, the 15th inst., he left Marseilles for Toulon, from which port he embarked, on the forenoon of Monday last, on board the *Rolland*.

EMBARKATION OF FRENCH TROOPS AT MARSEILLES.

The Marseilles papers describe the bustle which has lately prevailed in that port, during the Embarkation of Troops for the East—of which we we give an Engraving—as far surpassing anything witnessed in that locality since the grand expedition to Algiers. No less than one hundred vessels were alongside the great inner quay at one time, taking on board warlike stores, provisions, and fittings for the accommodation of the horses. The fleet of transports was distinguished by a red ensign at the main of each ship, inscribed with its number. The total number of transports employed was upwards of 200.

At Toulon, also, the embarkation has been going forward at a brisk rate. The last accounts from that port say that 10,000 infantry would be collected there by the 20th, to form another division for embarkation; by which period, it was hoped, the ships of war which last sailed for Gallipoli would have returned to receive them.

The total number of French troops which arrived at and departed from Malta on their way to Gallipoli, from March 23 to April 7, independent of a large number which passed the island without stopping, was 8192 men and 346 officers. The *Moniteur* stated some time ago that upwards of 50,000 French troops would be collected in Turkey by the beginning of May; and it is generally believed that these will be followed by another force equally large. Some accounts speak of a French contingent of from 100,000 to 150,000 men.

THE ALAND ISLANDS.

Aland (pronounced Oland), whose name will probably figure in the coming struggle in the Baltic, consists of a number of small islands, which, in ancient times, were doubtless inhabited by Vikings. By their love of freedom, and taste for adventure, the Alanders seem to prove their right to this descent; and such is their conviction of their own nationality, that, on being asked if they are Swedes or Fins, they will reply, "No, we are Alanders—we are a separate nation." They are good sharpshooters, and born sailors. The sea is their element, and by which they support themselves rather than by agriculture. They are generally well off, and gold and silver are to be met with in almost every house. The different islands compose seven parishes, with 12,000 inhabitants, of whom 3000 carry arms

After the union of Aland with Russia, in 1809, it was found advisable to fortify those islands, forming as they did the most westerly frontier of the empire. Scarpans, in Bomar Sound, was chosen as the most favourable spot, where, for more than twenty years, extensive works have been carried on, in the buiding of fortresses and fortified barracks, which extended their powerful arms along the channel between the mainland of Aland and Wardo. By the latest accounts, Aland had been disarmed by the Russians.

A glance at the map will exhibit the importance of the islands of Aland and Gothland, held by Sweden. It is thought that Russia may attempt to gain possession of the latter station—one of the most strategical points in the Baltic, and overawing Stockholm; but the Swedish Government have put it into an efficient state of defence, and despatched five regiments of infantry and one of cavalry to man its fortifications The principal Swedish naval station is Carlscrona. But it is in the Gulf of Finland—the probable destination of Sir Charles Napier's powerful fleet—that the public interest chiefly centres. Of the characteristics and defences of this coast, our information is meagre. Few parts of Europe are so little known. Russia studiously discourages the dissemination of such knowledge of her dominions as may be turned against her in time of war.

LITERARY MISCELLANIES.—No. XII.

WORDSWORTH'S FAVOURITE FLOWER.

At this time of year we are very desirous to introduce to such of our readers as know it not, a very common but striking wild flower, now everywhere shining on hedge banks, and on the slopes of fields. Were they to seek for it two months hence, or felt inclined to offer any sum for a specimen, no gardener or botanist could procure it. This flower is unknown to many, chiefly, because the ways across fields are generally muddy when it is in bloom, and some fancy that a walk in the country must be anything but pleasant at such time of year. We intend to introduce them to the plant commonly called the "Pilewort," now classically known as the "Small Celandine," under the latter of which names Wordsworth has celebrated it. Since childhood, most of us have known it, especially if we live or visit near fields. It is truly described by our poet, and we can now (1854) literally adopt his words—

> Modest, yet withal an elf
> Bold and lavish of thyself;
> Since we needs must first have met,
> I have seen thee, high and low,
> Thirty years or more, and yet
> 'Twas a face I did not know;
> Thou hast *now*, go where I may,
> Fifty greetings in a day.

We must for a time get personal. In 1833 the writer purchased his *first* botanical book; it was the second edition of "The British Flora," by William Jackson Hooker, LL.D., &c. This was in August: as the Pilewort is

> The first gilt thing
> That wears the trembling pearls of spring,

there was no specimen with which to compare the description. The season was then that of

> The yellow flowers,
> Children of the flaring hours!
> Buttercups, that *will* be seen,
> Whether we will see or no.

The three common species of Buttercup were described on Dr. (now Sir William) Hooker's opposite page, as they are clearly allied to our plant, and belong, indeed, to the same genus. The year 1834 enabled the writer to compare the flower and the description; and in three or four years he was introduced to the pages of Wordsworth. In the spring of 1846 he transplanted, from Copenhagen-fields to a little grass bed in Islington, some specimens of the Celandine; and, on a bright sunny day soon after, he was gratified, beyond measure, to see its golden rays dotting the green background. "I shall write to Wordsworth," exoisimed he to his wife; and to Wordsworth, with whom he had previously corresponded, he next day wrote; and, before the end of the week, he received a specimen now valued "inter spolia vatis optima." Here is a fac-simile of this specimen, drawn by Mr. Selter, and here follows a part of the venerable Poet Laureate's letter—

Rydal Mount, 16th April, 1846.

Dear Sir, I have great pleasure in complying with your request, and herewith send a specimen from a sunny slope within a few yards of my house, which I call Celandine Bank—it is so richly starred with that favourite plant of mine. * * * * Thanking you for your prayers and good wishes, and assuring you of the like on my part for yourself, I remain, dear Sir, faithfully your much obliged, WM. WORDSWORTH.

Had Chaucer or Robert Burns been alive, the writer might have sent for a daisy; he feels sure that each of these poets would have sent him one. Our esteemed friend Johnston, in his admirable, readable, amusing, and instructive "Botany of the Eastern Border" (1853, p. 165), tells his readers that the Celandine was the favourite flower of Dr. Patrick Neill (of Canonmill, near Edinburgh), so well known to all who love a garden; and he adds that "the last excursion Dr. Neill made (he had to take coach to make it) was to see what he called the Ficaria Bank of Cramond." We have sunny memories of Dr. Neill; they linger on our pen.

Another friend of ours—whose admirable works on the natural history of Canada, Jamaica, and Great Britain, are in the hands of every zoologist—thus writes, in that excellent work of his, published in 1838, "A Naturalist's Rambles on the Devonshire Coast," p. 107, "The Pilewort (or Celandine, as some call it), is one of my favourites; for I must certainly beg to be admitted among the 'three or four' whom

THE PILEWORT; OR, SMALL CELANDINE (*Ranunculus Ficaria*).

Wordsworth covets to praise his little flower of the 'glittering countenance'"—

> There's a flower *that shall be mine*
> *'Tis the little Celandine:*
> Prophet of delight and mirth,
> Ill requited upon earth,
> Herald of a merry band,
> Of a joyous train ensuing,
> Serving in my heart's command,
> Tasks that are no tasks renewing,
> I will sing, as doth behove,
> Hymns in praise of what I love.
> * * * * *

We love the quiet enthusiasm of the poet, and we cannot refrain quoting the conclusion of Wordsworth's second poem:—

> Let the bold adventurer thrid
> In his bark the Polar Sea,
> Rear the world a pyramid,
> Praise it is enough for me,
> If there be but three or four,
> Who will love my little flower?

P.S. For the benefit of such of our readers as have no Flora, we extract from the Sixth Edition of Sir Wm. Hooker's "British Flora," by Sir. W. J. Hooker and Dr. Arnott, the description of

R. ranunculus Ficaria L. (Pilewort Crowfoot, *lesser Celandine*); leaves cordate, petiolate angular, or crenate, sepals 3, petals 8, achenes smooth. Root *Engl. bot. t. 1*[illegible] *Fl. germ. exs. Dr. C.*) Pasture-s, woods, [illegible] Flowers glossy [illegible]

[illegible] the [illegible] notice may induce some few to *study* [illegible] of [illegible] hood. He remembers well his pur- [illegible] and "Flora," in 1835, and how at first it puzzled him. He persevered, and, having mastered the terminology, and found out many of the common plants, he can say, with Wordsworth to the Celandine—as the

> Buds and bells
> Open daily at thy side,
> By the season multiplied—

That wild flowers, like birds and fascets, have charms for him, and that on every walk, he has far more than

> Fifty greetings in a day.

When man was in a state of innocence he was placed in a garden; when, like Solomon, fallen, but gifted with knowledge, he studied plants, from the Cedar of Lebanon to the Hyssop that springeth out of the wall; when under the direct hearing of the Great Teacher, he was, and is, commanded to "consider the lilies of the field;" and in the "midst of the streets" of the New Jerusalem, there is to be "the tree of life," which bare twelve manner of fruits, and yielded her fruit every month, and the leaves of the tree were for the healing of the nations" (Rev. xxii., 2.)

And White succumbed.

(a) Black plays this game from the point where he gets the advantage in force, with great spirit and ability.
(b) It will be observed that White is always within a move of turning the tables on his opponent; but it so well not at every attempt that he can never afford his p ose, do what he may. (c) Some loss was now inevitable. (d) The finishe

BETWEEN THE SAME PLAYERS.

(French Opening.)

WHITE (Prince D. O.)	BLACK (Mr. S—r.)	WHITE (Prince D. O.)	BLACK (Mr. S—r.)

11. K Kt to K R 4th	P to K Kt 4th	33. R takes K R	R takes R (ch)
12. Kt to K B 5th	Castles on Q side	34. K takes R	Q to K 7th (ch)
13. Kt takes B (ch)	Q takes Kt	35. K to K t sq	Q to K R 7th (ch)
14. P to K B 4th	P takes P	36. K to K sq	Q to K B 6th (ch)
15. B takes P (b)	Q to K 2nd	37. K to K 2nd	Q takes R P (ch)
16. Q to her R 4th	K Kt to K R 4th	38. K to K 3rd	Q to K R 6th (ch)
17. B to K R 2nd	Q to K Kt 4th		
18. Q takes Q R P (c)	Q to K 6th (ch)		
19. K R to K B 2nd	K Kt to Kt 6th	39. K to K sq	Q to K B 6th (ch)
20. Kt to K B sq	Q takes B	40. K to K 2nd	Q to K B 7th (ch)
21. Q to Q R 8th (ch)	K to Q B 2nd	41. K to K sq	B to K Kt 5th
22. B takes Kt (ch) (d)	K to Q Kt 3rd		And wins.

(a) This game is very carefully opened on both sides. There are no premature feints and sk.rmishes, but the forces are well brought into action before either party strikes a blow
(b) White is now undoubtedly master of the position; and, considering how rarely he throws away his advantage by want of attention, we are surprised at his allowing the adversary to escape from the evident constraint he is now under
(c) More than ever do we now prefer the White game. The Prince must have borrowed a leaf out of Mr Löwenthal's book to let such an advantage as he has now acquired slip through his fingers.
(d) Instead of this move, he should have checked with his Queen, at Q R 6th, and Black's career would also have been but brief
(e) We should have preferred playing Q to her 8th.
(f) Mr S—r, having got his King out of immediate danger, is preparing to retort offensive measures.
(g) A poor, tame move, and at a time when some vigorous and decisive step was imperatively needed The obvious course was to shut out the Black Queen. We should, therefore, have played at once the Pawn to Q Kt 5th. In which case the following is the natural continuation.

29. P to Q Kt 6th	P takes P (best)	Q to Q Kt 4th
30. K K takes Kt	Q R takes R	R to Q 2nd, or (*)
		33. R to Q R 3rd—And White must win.
(*) 30.	K R to Q B sq	30 Kt to K 3rd
31. R to Q K 6th (The	R to K B 5th (Any	31 Kt to Kt 4th
winning coup)	other move would	32. P to Q R 5th (ch)
	be directly fatal to him)	And White gives Mate in two moves.

[To our readers we will repay examination, for they are instructive without being wearisome.]

(h) This enables Black to force the game in brilliant style.

CHESS ENIGMA.

No. 887.—By Mr. H. E. KIDSON

White: King at h R 3rd, Q at K R 2nd, R at K Kt 3rd, Bs at K Kt 4th and Q Kt 6th, Kts at K R 6th and Q 4th

Black: K at Q 4th, Qat Q R 7th, K at Q Rsq, Bs at K 2nd and Q B 7th, Kt at h 4th; P's at h R 2nd, K B 3rd, Q B 3rd, and Q Kt 5th.

White to play, and mate in three moves.

LITERATURE.

THE DECIMAL SYSTEM IN NUMBERS, COINS, AND ACCOUNTS: especially with reference to the Decimalization of the Currency and Accountancy of the United Kingdom. By Sir JOHN BOWRING, LL.D., &c. Illustrated with 120 Engravings of Coins. Cooke.

Sir John Bowring commences his work by stating that every human being—man, woman, and child—has been provided with a set of decimal machines in the shape of fingers and toes. He quotes Ovid to show that the Romans counted with their fingers; and refers to Quincy Adams as the authority for the assertion "that decimal arithmetic is distinctly proved to have been established before the General Deluge." After noticing its use amongst many ancient nations, he observes:—"From the remotest times traces of the quinary, decenary, and vicenary scale may be found in the languages that have come down to us. Their universality may be traced to the physiological construction of the human being; and in the same way in which the finger (digit) has been employed as the primary element of notation, so the palm, the span, the foot, the cubit (1½ foot), the arm (braccio), the yard (gyrd), Anglo-Saxon for girth—all measures which every human being carries about with him, have been employed from all times and in all regions of the world." Sir John shows, too, by many examples, that by following out this system, founded on the physiological construction of the human being, we can obtain a far more extensive and complete enumeration than by any other. In fact in all high numbers we depart from the duodecimal system, and reckon not by twelves but by tens—2,0—20; 3,0—30; 10,00 =1000 ; 10,00,000=1,000,000. Thus in the natural, complete, and universal system of decimal notation, our duodecimal system is an interpolation, a petty interruption—having regard to the universality of the decimal system in time and place—to a great national progress—which must, that the stream may flow smoothly, be removed. The *duo*decimal system has not an equally good foundation; and it accordingly is not universal. It had its origin, however, and has so long been preserved, in various parts of Europe, in an important fact. The division of animals when killed—of a great number of grains of corn, say a bushel—is not into *five* parts, like the fingers, but into halves; and, for further convenience, into quarters. Things in nature are, as it were, doubled: there are two eyes, two legs—two similar halves to almost all bodies. The natural division of substances into halves and quarters, though affording a basis of another and a different system, and explaining its continued use, cannot be made a substitute for decimal notation; and the great object to be kept in view, in all arrangements of measures and weights, is to adapt the natural system of notation to the natural system of dividing bodies into halves and quarters, which become fractions on the quinary system at the first division, while the number four halves into two, and quarters into one. There is some difficulty in accomplishing a union of the two natural systems, or they would not have been so long mingled in a confused manner. At present, by almost universal consent, the decimal system obtains the upper hand, and what is especially desired, is to establish, in conjunction with it, a unit of weight and linear measure, easily divisible into tenths.

Weights, measures, money—the measure of value—are, and have been at all times important elements of all human transactions. They are to be found in every period of history. The reader will not be surprised, therefore, to find in Sir John Bowring's book, illustrations of the subject drawn from every part of history. He will feel astonished, indeed, at the immense number and variety. The book embraces the whole subject, and information on it is brought together from all the countries of the world, and from all time—poets, historians, arithmeticians, the most vulgar reckoner on his fingers to the greatest mathematician of the age—all use arithmetic, and all supply Sir John with illustrations. His little work contains an immense mass of learning, and is most complete and elaborate.

With reference to the practical adaptation of the decimal system to our money and accountancy, Sir John Bowring coincides with the report of the Committee, and is strongly in favour of retaining the pound sterling as the unit or integer of account. Probably, in carrying out this recommendation, the pound sterling should be made a definite quantity of gold, easily divisible into halves and quarters without fractions—say the quarter of an ounce—instead of being, as at present, 113,001 grains of pure gold, or 123,274 grains of standard gold, the pound troy of standard gold being coined into 46 and $\frac{20}{123}$ sovereigns.

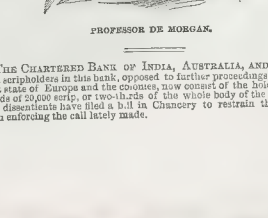
To coin it exactly into forty-eight would not make much change in the value, but would simplify our coinage On this particular branch of the subject, however, so much has been written, that before we can act we must wait till time has separated all the baser stuff, and cleansed from fallacy and verbiage the pure and unadulterated ore of reason for our use. Sir John's own personal experience in China reflects great light on his lore. He gives a good description of the Chinese swan pan, or abacus, and mode of using it, and tells us that the following is the Chinese multiplication table, the simplicity of which recommends the whole scheme. Ten tens are a hundred; ten hundreds a thousand; ten thousand a wan=10,000; ten wans a yih=100,000; ten yihs a chaou=1,000,000. The Chinese seem a very calculating people, and Sir John says of them:—

> At early morn, one of the first sounds heard in the shops of all the towns and cities of China, is the shaking and cleaning the swan pans preparatory to the business of the day. As, in Christian lands, the sound of the bells calls the worshippers to church as, in Mahomedan countries, the voice of the Muezzin from the minarets bids the devout Mussulmans to prayers—so, in "the middle kingdom," the rattling of the abacus announces that another morning's labours are begun.

With that instrument the Chinese youth has been as familiar as with his hemetrical classic, the first and most popular of his school-books. From it he has received the most correct impressions of the relation of numbers to one another; and he has acquired the habit of moving the balls on the wires of his swan pan with considerable dexterity and rapidity. Wonderful are the ease and accuracy with which all calculations are made and recorded. In my own person I have had to settle a great variety of accounts with various classes of people in China, and I never remember to have detected an error; and, in cases where my reckoning has disagreed with that of the Chinese, I have invariably found that their amount was correct, and my own erroneous. In China it might almost be laid down as an axiom, that a mistake in an account is in itself strong evidence of fraudulent intention. I have compared my observations with those of persons of the longest and most extensive experience as to the general correctness of Chinese accountancy; and my opinion has been fully confirmed, that among Chinamen intending to be honest, an error in reckoning is almost unknown.

The work embraces a comprehensive view of the whole subject, and reflects honour on the learning and industry of Sir John Bowring.

In addition to the numismatic illustrations, there are some portraits of eminent mathematicians, including the subjoined.



PROFESSOR DE MORGAN.

THE CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.—The scripholders in this bank, opposed to further proceedings in the present state of Europe and the countries, now consist of the holders of upwards of 20,000 scrip, or two-thirds of the whole body of the subscribers. The dissentients have filed a bill in Chancery to restrain the directors from enforcing the call lately made.

NEW MUSIC, &c.

A HEALTH to the OUTWARD BOUND. Song, written by the Hon. Mrs. NORTON. Composed by Charles Rahal. Price 2s. London: ELDER & Co., 65, New Bond-street.

MACARIODOS; or, the Happy Way in the Short but too often Sorrowful Journey of Life. By EDWARD WHITE, A.M., British Chaplain at Oporto, and late Fellow of Jesus College, Cambridge.

"Macariodos is, without exception, the most spiritualising work we have read for many a long day. The Chapter on the Design of Affliction is deeply, piously, and logically written. We will not weaken the effect of the arguments by attempting to curtail a chain of reasoning of which every link is of inestimable worth."—Britannia.

London: HAMILTON, ADAMS, and Co.

Just published, post 8vo, price 7s. 6d., cloth,

BLUE JACKETS; or, Chips of the Old Block. A Narrative of the Gallant Exploits of British Seamen, and of the Friends by Land and Sea who Rendered them Effective in the Reign of Queen Victoria. By W. H. KINGSTON.

This book has a peculiar interest at the present time, and should be read by all who admire British heroism. It gives a heart-cheering testimony that the "Blue Jackets" of to-day are worthy of their sires, stout, daring, and spirited, to uphold the "honour flag of England," and to know how to overcome the world's accusers of those who conquered at the Nile and Trafalgar.

GRANT and GRIFFITH, Corner of St. Paul's Churchyard.

London: JAMES JUDD, Gray's-inn-road. Simpkin and Co., and all Booksellers

LAMBERT'S MAP of EUROPE.—"As of the phantom Kings in the Witch-mirror, it may now be said of the map of Europe in the seat of war; let us hope, for the sake of the publishers, with a double meaning." Another, and another yet, succeeds." Their name is almost Legion. The one before us, after all, is one of the best produced for the reason that it is one of the last published. It comprises on its ample surface the whole of those portions of Europe bordering on the Baltic and the Euxine; embracing, of course, the seat of European war on the Danube, and the seat of Asiatic war on the Caucasus. It may be added that Lambert's Map of Europe is issued at an almost nominal price, considering the value and lucidity of its information."—The Sun, April 7, 1854.

London: DOBBS, RIDD, and Co. Edinburgh MENZIES. Newcastle: Lambert. And a. Bockel ore.

15, Old Bond-street, London.

LITHOGRAPHY.—Messrs. DAY and SON, Lithographers to the Queen, having been established and most extensive premises, largest and more appropriate than any other establishment in the world, are now prepared to carry out with greater perfection and dispatch, and more economically, all those higher branches of artistic Lithography for which they have so long been pre-eminent. Colour-printing, as perfected by them, is rendered available, from the rapidity and economy with which it is produced, for every purpose of illustration, either fac-similes of pictures or book plates: likewise to the production of pattern-books, show-cards, &c. Every description of engraving, drawing, plan work, and all kinds of commercial work, executed for professional persons or the trade, with a rapidity and superiority of style hitherto uncombined. Railway Lithography, Gate street Lincoln's-inn fields.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex, by WILLIAM LOVELL, 198, Strand, aforesaid.—SATURDAY, APRIL 22, 1854.

THE ILLUSTRATED LONDON NEWS.

No. 680.—VOL. XXIV.] SATURDAY, APRIL 29, 1854. [WITH A SUPPLEMENT, SIXPENCE.

FASTS AND TE DEUMS.

GREAT BRITAIN has entered upon war in defence of a great principle. She seeks no advantages for herself, except the inestimable advantage of peace. She desires no increase of territory—no augmentation of power. She has no ambitious objects of any kind to serve. She stretches forth her hand for the maintenance of law and order, and in defence of the morality of nations. In the great federation of the European States, one that is puffed up with pride, vaingloriousness, and lust of dominion, cannot be allowed to destroy the liberty and independence even of the meanest, without peril to them all. The rulers of this nation, impressed with a full sense of their responsibilities, exhausted negotiation before they resorted to war. It cannot be laid to their charge that they were unduly ready to decide the great question at issue by the instrumentality of fleets and armies. As long as there was the remotest chance that the dictates of reason and justice would prevail over the headlong passions of the disturber of the world, they refrained from any appeal to the sword. Even at the last moment it was with reluctance they confessed that the only means of pacification left to us was the exercise of physical force against the aggressor. The nation was more impatient than its rulers, but both were of one mind as to the ultimate duty which would devolve upon them. With a clear conscience, therefore, and with a noble cause, the British people are now involved in war with one of the most formidable States in the world. As a preparative for a struggle—which may task the energies and resources of her subjects, far more than they are aware—her Majesty, as head both of the State and the Church, commanded that a day should be set apart for fasting and humiliation, "in order to obtain pardon of our sins, and in the most devout and solemn manner, to send up our prayers and supplications to the Divine Majesty, and to implore His blessing and assistance on our arms for the restoration of Peace." There were, no doubt, many persons who, instead of making the day one of prayer and humiliation, converted it into one of riot and rejoicing; and there were others who, yielding no allegiance to the Church by law established, made it a point of principle to disobey the injunction. Upon the motives which influenced the conduct of both of these sections of the people we have no intention to expatiate. The national recognition of the fact, "that the Lord is King, be the Earth never so unquiet;" and that "He alone can give strength to the people, and restore to them the blessings of peace," was sufficiently solemn and emphatic; and in our country there is no such thing as unanimity. But even the dissentients from the authority of the Church approved for the most part of the spirit which dictated her Majesty's command for the observance of the day; although, for reasons of their own, they preferred to offer up their prayers at another time, and with another formula. No unseemly boasting profaned on this memorable occasion the lips of the Majesty of England; no undue reliance upon the arm of flesh was commanded by the Church; no braggart vaingloriousness was expressed or felt by the great majority of the people. As the pious knights and combatants of the days of Chivalry made ready for the morrow's conflict by the prayers and ablutions of the preceding night, the pious English nation prepared its spirit for the great encounter which it has undertaken by the most solemn recognition in its power that the issues of battle are in the hands of the Almighty, however great the courage, or splendid the resources, of a people. With a cause among the most righteous for which war was ever undertaken; with an ally once our foe, but now our firmest and most powerful friend; with the secret sympathy, if not the open support, of all the civilised nations of the earth; with mighty fleets—mightier than ever before were launched upon the waters; with armies and people inspired by the same sentiment of generous resistance to wrong and oppression; and with all possible circumstances of prosperity and national well-being in our favour, we humbled ourselves before the Throne or Grace, and prayed "that our councillors might be blessed with wisdom—that our commanders by sea and land might be inspired with valour and patience, and that they might be taught amid all their perils and hardships to show forth in their lives and actions the united graces and duties of Christians as well as of soldiers." We also prayed that in good time might be "vouchsafed to us such a secure and prosperous peace as might tend to the glory of God's name, to the honour and safety of our Sovereign and her dominions, and to the common welfare of mankind." Supplications uttered in this spirit were worthy of the cause which prompted them, and worthy of the Christian character of the nation.

But, while the British people, strong in the sentiment of right and justice, have comported themselves thus humbly, the enemy they have to combat has acted in a very different manner. He also has made appeals to the Almighty for aid; although every man in Europe who is acquainted with the facts of contemporary history knows that the cause for which the Czar has taken up arms is the cause of rapacity and injustice; that it has been supported by proved falsehood, and by a hypocritical pretence of religion, thinly veiling the most nefarious designs of spoliation and oppression. The Czar as constantly invokes the name of God as the Italian bandit, who prayed that rich travellers might pass his way, and that he might be successful in robbing them. The Russian Autocrat not only prays, but blasphemes. While the British nation appeals to the Almighty for support in a cause which is utterly unselfish, he takes the name of God in vain, and renders thanks for bloody massacres. We have our "*fasts;*" and Nicholas of Russia his "*Te Deums.*" In defiance of his solemn promise that his aggression should be confined to the occupation

"THE ARGUS" TOWING THE FIRST RUSSIAN PRIZE INTO PORTSMOUTH HARBOUR.—(SEE NEXT PAGE.)

of Moldavia and Wallachia; in defiance of the word and faith of a "gentleman"—which there is no word in the Russian language to express—he attacked in the most treacherous manner, and with an overwhelming force, a portion of the Turkish fleet that lay quietly, and suspecting no evil, in the harbour of Sinope. On that occasion, upwards of two thousand men were cruelly slaughtered; and the Russian fleet—proud of the achievement—returned in triumph to Sebastopol. It was the most "glorious" feat in the naval history of Russia, and the Emperor, to show the excess of his joy, ordered a solemn "Te Deum" to be sung in every church throughout his empire—not a prayer of humiliation, but a jubilant hymn of rejoicing that so many Turks had been murdered in the desecrated name of Christianity. In a similar manner the passage of the Danube, by a portion of his armies, was celebrated throughout his dominions. There is nothing but religious exultation to be heard in St. Petersburg and Moscow, to this day—nothing but "Te Deums" and Hosannas to the Lord for treacherous massacres, or successful acts of aggression against a neighbouring State which has committed no other fault than the great fault in the eyes of the Czar, of daring to exist, and to hold territories that he is desirous to possess. The world has already passed its verdict upon the Emperor and his "Te Deums." He has "begun in gladness," but "thereof will come in the end" defeat and shame; while we, on our part, have begun the war with reluctance—engaged in it with sadness and religious humiliation, and without the slightest taint of ambitious and selfish feeling. The day of our rejoicing has not yet come; but that it will come—certainly, if not speedily—it would be foolish, if not wicked, to doubt.

THE FIRST RUSSIAN PRIZES.

No little commotion was caused in Portsmouth on Friday evening (last week) by the appearance in the roadstead of one of her Majesty's steam-vessels, having a ship in tow, and making for the harbour with all speed. The ramparts were quickly thronged with the inhabitants, who, as soon as the vessel approached near enough for the colours of the small craft to be made out as Russian, loudly cheered her fortunate capture.

As the vessels came nearer, the steam-vessel was seen to be the *Argus*, revenue cruiser, Captain Grandy; and the captured vessel the *Freja*, a fine barque of 500 tons burden, built in Finland. The *Argus* had left Southend on Thursday morning, and fell in with the *Freja* next day about noon, between the Owers and Beachy Head, about eighteen miles from the latter point. The Russian vessel had no colours up at the time, but the suspicions of Captain Grandy were excited by seeing the Russian arms carved and painted on the ship's stern. He ordered her to bring to, which she did, hoisting Russian Finland colours. He then boarded her, but the captain refused to give him any information as to his country or destination. Captain Grandy, however, soon made himself acquainted with all he wished to know, by overhauling the ship's papers, and then told Captain Weekman, of the *Freja*, that he must consider his vessel a prize. Captain Weekman offered no obstacle or resistance, merely remarking that the capture of his vessel was a bad job for him. Resistance, indeed, was hardly possible, as, although the *Freja* had four guns on board, they were very small, and hardly serviceable, and not to be pitted against the two 32-pounders carried by the *Argus*; joined to which the latter had a crew more than double that of the Russian, and the additional aid of her screw-propeller, by which she could have placed herself in such a position at the stern of her prize, and retained that position, as would have enabled her to sink her easily.

On taking possession, the *Argus* put an officer and a crew on board, at 6, sending out a rope, took her in tow, and brought her into Portsmouth at sunset the same evening. The *Argus* towed her well up the harbour to moorings off the Dockyard, where she now remains. She is a fine ship, four years old, and apparently in good condition. She left Lisbon on the 28th ult., with about 600 tons of salt as cargo, and was bound for Abo, although her ultimate destination says Lisbon. It is supposed that she would not have attempted to get up the Baltic, but have tried to run into a Dutch port, where he could have sold the vessel with her cargo, and made his way home overland. The crew, who are mostly Finlanders, do not appear much distressed at their capture; in fact, they seem very cheerful. Had they reached Abo, they would probably have been forced to go on board a Russian vessel by order of the Czar.

Another Russian merchant vessel was brought into Portsmouth harbour on Tuesday morning. This was a revenue cruiser's capture. The lucky vessel that made this prize, which is a brig of 240 tons burden, laden with salt. Captain Grandy fell in with her off the Owers, at 9.30 on Monday night. It was very dark at the time, but the sharp eyes of the watch detected the prize, and a few musket shots across the bows brought her to. She is named the *Livonia*, Captain Matzkait, and was from Lisbon for Elsinore. She left Lisbon on the 26th ult., a week or so before the declaration of war had arrived out, having been detained in the Channel by contrary winds. Her capture was much surprised to learn that war had been declared, as well as chagrined to find himself a prisoner. He offered no resistance, and was at once taken in tow by the *Argus*, and brought into port. The *Livonia* is the property of the firm of Schroeder, of Riga.

Early on Tuesday morning a Russian merchant ship was reported to the Customs' authorities at Plymouth by a trawling boat to have been seen off that port on Monday evening. The master of the trawler boarded her about seven o'clock p.m. on Monday, five miles south of the Bolt, and having ascertained her tonnage and cargo—she was laden with 600 tons of salt—he proceeded with all despatch to Plymouth to give information. The master of the trawling boat, it appeared, boarded the Russian for the purpose of endeavouring to sell some fish, and the Captain then boldly told him that his was a Russian ship, and he knew not which way to steer for fear of being made a prize of. On being informed by the mate of the trawler of the proximity of the French fleet, the Russian Captain became alarmed much alarm, and immediately changed his course, preferring, in the event of his capture, to fall into the hands of the English. On receiving the intelligence, the Port-Admiral, Sir John Gamaney, ordered the *Avon*, 3, paddle-wheel steamship, to get up her steam and proceed to sea in search of her. The *Avon* left at half-past six, taking with her the person who gave the information, and a party of marines from the *Impregnable*, flag-ship. The master of the smack had directed another fishing-boat to keep company with the Russian ship in order that she might be easily detected from a distance. The Russian was under close-reefed topsails, and had an adverse wind to contend with. The *Avon* succeeded in laying hold of her at half-past one, about twelve miles south of the Start. She proved to be the *Carlos*, 460 tons of Finland, from Lisbon, to a Russian port in the Baltic. She left Lisbon on March 25, and had been beating about in the Channel since. She is built of fir, laden with salt, and is a splendid vessel; her crew numbers fourteen men, but they offered no resistance. She was compelled to hoist her flag, and was brought into Plymouth on Tuesday night with the English ensign flying at her peak end, and the Russian Black Sea flag under.

On Wednesday morning, the *Yesta*, of Wasa, a fine barque, 472 tons, 2 guns, 11 men, from Theres, laden with 600 tons of salt, was brought into Portsmouth, by the *Mermaid* screw revenue cruiser. The vessel alone is valued at £2500. On the same day the *Nadeschda*, of *Abo*, both from Lisbon, laden with salt—the one bound for Helsingfors, the other for Christianstand—were brought into Sheerness by the *Adam*, 4 guns, paddle-wheel steamer. The owners of the *Nadeschda* had sent directions to the captain to sail the vessel at Lisbon; but he refused an offer of £1500 for her, thinking he ought to have £2000.

PORTSMOUTH, Thursday.—At eleven a.m., H. M. revenue cutter *Petrel*, Mr. John Hughes, of the revenue service in command, captured the Russian barque *Sonia*, of Wasa, laden with salt, from Sardinia. John Oseman, master; said by those on board to be bound for some port in Russia. She is a fine ship, of nearly 500 tons English measurement. She was boarded in the Channel, St. Catharine's Point.

The Port Admiral's cutter, *Fanny*, Mr. Scarlett (second master) in charge, returned from her cruising ground this evening at five o'clock, bringing the intelligence that she had taken a fine barque, of 400 tons, laden with salt, yesterday at noon.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The circumstance of the Duke of Cambridge having gone to Vienna, instead of proceeding at once to his destination, has been the theme of yet more comments and speculation than that of the Emperor placing him on his right at the review. The Bourse, ever ready to jump with equal excitement to the most contradictory conclusions, was sensibly affected by this unexpected step. A thousand versions—most of them as destitute of plausibility as of truth—have been in circulation; and the idea that the Duke was charged with a special mission, to induce the Emperor of Austria to adopt a more decided course, and to join his forces to those of England and France in the coming war, has been generally adopted.

The Maréchal St. Arnaud is not to arrive at Gallipoli till about the 10th of May, as, instead of going there direct, he proceeds in the first instance to Athens; where, it is believed, he is to demand a categorical explanation of the course and intentions of King Otho.

The General Youssouf is to accompany the expedition, and his wife is to travel in company with Madame St. Arnaud, who—here is a detail interesting to our female readers—has provided herself for the dangers and roughing of the fierce campaign about to ensue with upwards of sixty dresses of the newest modes, to appear at the fêtes and receptions at Constantinople! We remember once listening with much interest to a clever traveller relating his experience of the Desert, and his impressions of the Pyramids, when one of the auditors, who had appeared to be extremely edified by the details, interrupted the narrator with the question, "Tray is the society in Egypt pleasant?" Mdme. St. Arnaud's travelling kit brought the anecdote strongly to our remembrance.

Marseilles has performed a culinary *tour de force* in serving to the Prince Napoléon, in consideration of its being the Jeudi Saint, a magnificent banquet *maigre*. The bill of fare was printed in gold letters, and a copy placed on the plate of each of the guests. At the departure of the Prince, the same sympathy and regard were manifested as during the whole of his progress. M. Emile de Girardin started for Paris on the night of the arrival at Toulon. *Apropos* of the celebrated *publiciste*, he has just gained a trial, on a complaint brought by him against M. Eugène de Mirecourt, for a libel contained in a notice of the life of M. de Girardin, published in his biographies entitled "Les Contemporains."

Our readers may recollect our mentioning, some time since, a formidable demonstration, made by the friends and admirers of Mdme. George Sand against M. de Mirecourt, for certain grave errors and mis-statements in his biographical notice of her, in the same publication. Decidedly, writing contemporary history, when treating of individuals, is treading dangerous ground—*qui s'y frotte s'y pique*. At the same time, if such difficulties present themselves in the way of obtaining the true histories of those who live in our own day, what degree of faith are we to place in the details given respecting the events of the lives of our predecessors? These examples, unfortunately, go far to invalidate anterior biography; for, be it understood, M. de Mirecourt is no wilful libeller—no abusive scribbler; and, however erroneous may be his assertions, they are made *de bonne foi*, and drawn from what he believes to be competent authority.

So much was the Emperor gratified by the rapidity and completeness of the execution of the preparations made at the Elysée, in removing the scaffolding, and other traces of the works of reparation going on, and in putting the entrance and exterior in order for the fête given there, on Monday week, to the Duke of Cambridge, that, to testify his satisfaction, he ordered that a dinner should be given to all the workmen employed. This fête took place on Thursday, in the *mairie* of the park of Neuilly, presided over by M. Eugène Lacroix, the architect of the palace. Upwards of 600 *convives* partook of the repast, and numerous toasts were drunk to the Emperor and Empress.

On Saturday, the Princess Mathilde gave a splendid ball, which their Majesties attended. On Tuesday, a fête and theatrical representation took place at the Hôtel de Ville; and during the course of the week, various Ministerial receptions occurred.

The Archbishop of Paris has commanded to be posted and read in the churches, a circular letter which has produced a strong sensation. This circular is one relative to the observance of the Sabbath, and the creation of labour on Sundays. It is expressed in very energetic terms, and, in accordance with the well-known democratic principles of the Archbishop, exclaims warmly against the spirit of interest and cupidity which, independent of the question of disregard of religious motives, induces those in authority to sacrifice the repose of the people on the day specially intended for rest.

The work of demolition is going on with, if possible, increased activity here. In the Rue St. Honoré, from the Place de Palais Royal to the Rue de Rohan, all the houses are marked for destruction, and the work of pulling them down, commenced but a few days since, is, it is said, ordered to be terminated in a fortnight. The same process is then to begin in front of the Théâtre Français; and the Rue de l'Echelle, in the same neighbourhood, has almost entirely disappeared.

The Odéon has produced three new pieces—"La Taverne," "Au Printemps," and "La Conquête de Ma Femme," by three young authors, MM. Barbier, Leroy, and Lelarge—all possessing very considerable merit, and likely to continue for some time in high favour. The Porte St. Martin draws crowds with the miraculous performances of the Chinese Jugglers. The "Bonne Aventure" at the Gaîté, taken from a work of Eugène Sue, the farewell piece of Frédérick-Lemaître, has not had the success anticipated for it—another instance of the inexpedience of dramatising novels.

PRINCE LUCIEN BONAPARTE.

A private letter from Rome of the 12th instant gives some details of the journey of Prince Louis Lucien Bonaparte (whose portrait we gave last week), and of his reception in the various towns he passed through. On his arrival at Bologna his Highness was visited by M. Grasselini, Extraordinary Commissioner of the Holy Father, and by His Excellency Count de Dreschenfeld de Schonberg, Lieutenant Marshal commanding the 4th Corps of the Austrian Army in the Roman States. These two personages took great interest in showing the curiosities of Bologna to the Prince. The box of the Pontifical Commissioner was placed at the disposal of the Prince on his visit to the Opera in the evening. His Highness met with a similar reception at Ancona on the part of Monsignor Arnici, Commissioner Extraordinary, and the Count Hojos, the General commanding the Austrian troops. The object of Prince Lucien's visit to Ancona was to see his mother, the widow of Lucien, Prince of Canino, the brother of Napoleon I. The Prince arrived at Rome on the evening of the 9th. On the following morning he received a visit from Cardinal Antonelli, the Minister Secretary of State; from Count de Rayneval, Ambassador of France; and General de Montreal, Commanding-in-Chief the French army of occupation. In the course of the day, Cardinal Antonelli informed the Prince that the Pope would receive him on the 11th. The French Ambassador called for his Highness at his hotel, and presented him and Major Cavagnari, the Prince's secretary, to his Holiness. Prince Lucien remained alone with the Pope, and his audience lasted an hour and a half. It was remarked as a particular favour that the Pontiff gave so long an audience to the Prince in the midst of the occupations of the Holy Week; and it was said that his Holiness expressed very warmly his gratitude for all that the Emperor did for him. On Thursday, the 13th, and Sunday, the 16th, the Prince was to be present at the great religious solemnities. Rome was full of strangers of distinction, and it was with some difficulty that the Prince and attendants were able to procure an apartment in the Piazza di Spagna, at the Hôtel Terny. His Highness was to leave Rome on the 19th for Florence.

PARIS, Thursday Evening.—The Three per Cents closed at 69f. 30c. for the end of the month, and the Four-and-a-Half per Cents at 90f.

At Madrid, on the 22nd, the Three per Cents were at 33 15.

The following is a despatch from Berlin, dated Thursday evening:—"The resignation of Chevalier Bunsen was accepted yesterday. Count Bernstorf, at present Prussian Minister at Naples, succeeds him."

THE WAR.

DIFFICULTIES OF THE CZAR.

The latest accounts from St. Petersburg speak of the financial difficulties of Russia as increasing with so much rapidity that a climax may be daily expected. It appears that, in his last ukase, the Czar has ordered an augmentation to his army of 144,000 men. Upon this, the *Pays* remarks that it is very easy to order such levies, but that an ukase will not create finances, nor ammunition, nor provender, nor the many thousand *et cetera* which are indispensable in order to make an army formidable or efficient. In the Hungarian war, which was a mere joke when compared with the present gigantic struggle, and in which the Czar had only 120,000 men engaged, he was forced to have recourse to England for a loan; and he actually contracted one in London for 137 millions. The present war has forced almost all the Powers of Europe to contract loans. France has completed hers; England is adding six millions to her floating debt; and Austria is at the present moment endeavouring to negotiate a loan, which she would be glad to get in London or anywhere else. But where is the Czar to turn for the money which he requires, and which he has not got?

Stockholm and other Swedish towns are swarm with fugitives, who are pouring out of Finland. Many, too, have left Aland, in order to escape the Russian press-gangs. The Russian fleet is in great want of seamen, and, as it is preparing to take the sea as soon as the ice gives way, the authorities lay violent hands on young and old. In the night, fathers of families are hurried off without a moment's grace, and the result is, that whole households fly to Sweden with bag and baggage, in order to escape such tyranny.

The St. Petersburg *Police Gazette* contradicts the report of the Imperial family intending to leave St. Petersburg for Moscow. The hard cash of the bank of Helsingfors has been transported to St. Petersburg, and many of the inhabitants of the former place were leaving from fear of a bombardment.

Letters from Abo, of the 4th, state that the 9th regiment of infantry had left there *en route* for Wasa, and that on the 2nd inst. two companies of Riflemen had been ordered from Abo to Aland; by which disposition of troops the former reports, stating that Aland would be evacuated by the Russians, seem to be contradicted.

THE WAR ON THE DANUBE.

For several days reports have been received regarding an important battle in the Dobrudja, in which the Russians are said to have been defeated with a loss of 3000, while the Turks lost about half that number. Letters from the Lower Danube, of the 13th, state that the engagement took place on the 10th, between Paschagees and Kustelli; and that, although victorious, Mustapha Pacha, owing to his want of more forces, was unable to follow up his advantages as he would have wished, and was therefore obliged to content himself with driving his adversaries into the swamp which lies between Paschagees, Kagarlik, and Taschaul. A body of marines from the British and French fleets stationed off Kustendje, are said to have rendered the Turkish commander immense assistance, by keeping the Russian left wing warmly engaged during their comrades' defeat. Like a great many other pieces of intelligence from the East, "this news requires confirmation;" but there seems to be some ground for the report, if we may credit the statement that the Emperor of the French announced it as reliable that a battle had taken place, and that a victory had been gained by the Ottoman troops.

At Kalafat the Russians, who had been preparing for a combined movement for some days, made an attack on the 16th, but were repulsed with the loss of nearly 500 men. A telegraphic despatch from Vienna, of the 24th instant, states that "sixteen squadrons of Hussars and eight squadrons of Cossacks, with six cannon, having come to reconnoitre the Turkish lines, the Pasha sent two regiments of regulars, some of Bashi-bozouks, and six cannon, against them. The combat lasted three hours. The Russians were defeated with vigorous energy. They lost 500 men. The Turks had 14 men killed, and 38 wounded."

There are rumours of the surrender of Silistria; of the withdrawal of the Russians from Kalafat to Widin; and of the Russian army in the Dobrudja having begun to fortify its position there, instead of marching forward; but none of them have been confirmed. A telegraphic despatch from Belgrade, of the 27th inst., says the Russians have met with a severe defeat at Tschernawoda.

THE FLEETS IN THE BLACK SEA.

On the 14th the *Furious* had been sent to Odessa to bring away the English Consul and the English subjects there. She was fired into and driven back, although she carried a flag of truce while on her errand.

The fleets were at Kavarna on the 14th. The news of the declaration of war which arrived there on the 9th, had caused great rejoicing. On the 13th a general illumination took place on board the vessels, on account of the welcome intelligence.

Accounts from Odessa, of the 20th, state that the Allied fleets had formed a junction, and come to anchor off that port.

The Russians seem determined to shut the navigation of the Danube against the passage of the Allied fleets. Not content with what had been previously done to interrupt the navigation, General Schilder had notified to the inspector of the Austrian Lloyd Company at Galatz, that he intended to close the mouths of the Danube altogether, by sinking three vessels laden with sand. When that has been accomplished, the only mouth that will be left open is that of Kilia, where there is not more than eight feet of water. The last accounts from Odessa state that the people of that town had seen some monster dredging-machines in tow of our war-steamers, whence it was inferred that our men were going to deepen the Sulina channel. Should they attempt that task, they will require to silence the heavy batteries which the Russians have erected there.

THE "FURY" AT SEBASTOPOL.

Captain Tatham, of her Majesty's steamer *Fury*, has had the honour of "opening the ball" in the Euxine. He was sent by Admiral Dundas to reconnoitre Sebastopol; and on Tuesday night (the 11th) he anchored near Cape Loukoul, some fifteen miles north of Sebastopol, so as to be able to run in towards the fortress just before daylight. Cossacks were seen riding towards the city to give information of his presence. At daylight, when about a mile and a half from the forts, he observed two man-of-war brigs standing out, followed by two merchant schooners. Being anxious to get information, he thought it desirable to make a prize of one of these schooners; he therefore, hoisted Austrian colours and stood right in for the harbour, passing these vessels. Having got inside of them, he put on full speed, turned round, chased one of the schooners, and ran alongside of her, with the intention of boarding her fast to the *Fury*; but the danger of lowering a boat. In this he failed, and subsequently lowered a boat, and sent his first lieutenant with the end of a hawser, made her fast, and brought the crew out of her, and took her in tow. On running alongside to bring the vessel out, the batteries opened with a heavy fire on the *Fury*, and simultaneously the brigs and steamer were observed to leave the harbour in chase, with a strong, favourable breeze. Observing that they were fast gaining upon him, he found it necessary to cast off the schooner. For nearly three hours he was very hard pressed, and several shots were exchanged; but, by dint of good seamanship, and misleading the enemy by signals, they eventually gave up the chase. He has brought in the master and crew of the schooner, from whom some valuable information has been obtained. Thus, the enterprising little *Fury*, mounting but six guns, was honoured by a chasing force of some 120 guns, and has now safely rejoined the fleet.

It appears that there are lying at Sebastopol thirteen or fourteen line-of-battle ships, of which six are three-deckers, besides a number of frigates, and thirteen steamers, ready, at a moment's notice, to put to sea.

THE ALLIED TROOPS AT GALLIPOLI.

Take dilapidated out-houses of the farmers' yards in England—remove rickety old wooden tenements in Holywell-street, Wych-street, and the Borough—catch up, wherever you can, any seedy, cracked, shutterless structure of planks and tiles that have escaped the ravages of time in our cathedral towns—carry off sheds and stalls from Billingsgate, and the wooden huts along the shores of the Thames between London-bridge and Greenwich—bring them all to the European side of the Straits of the Dardanelles—and, having pitched on the most exposed portion of the coast, on a bare round hill, sloping away to the water's edge, where the sea will surely tumble them "higgledy-piggledy" on its declivity, in such wise that the streets may resemble, on a large scale, the devious traces of a bookworm through some old tome—let the roadway be very narrow, of irregularly varying breadth, according to the bulgings and projections of the houses, and filled with large round slippery stones, painful and hazardous to walk upon—here and there borrow a dirty gutter from a back street in Boulogne let the houses in parts lean across to each other so that the tiles meet, or that a few planks thrown across from over the doorways unite and form a sort of "passage" or arcade—steal some of our

popular monuments, the shafts of various national testimonials or Irish round towers—surround them with a light gallery about twelve feet from the top, put on a large extinguisher-shaped roof, paint them all white, and, having thus made them into minarets, clap them down into the nose of buildings—then let fall big stones all over the place—plant little windmills with odd-looking sails on their crest of the hill over the town—transport the ruins of a feudal fortress from northern Italy, and put it in the centre of the town, with a flanking tower extending to the water's edge—erect a few buildings of wood by the water side to serve as café, custom-house, and government stores—and when you have done this, you have to all appearance imitated the process by which the town of Gallipoli was created

A very short time, however, will serve to make considerable changes in the place. A speculator from Smyrna has already transformed an old tumble-down ruin into a grand *Restaurant à l'Européenne*, with the following inscription above, marked out apparently with the finger "*Restaurant de l'Armée Anglaise.*" The Turkish market is amply provided with every kind of provision. Meat is from three to four sous a pound; the wine of Tenedos is from eight to ten sous a bottle—that is, the large bottle holding a French litre; and fowls are from fifteen to twenty sous each. Rice, bacon, salt, meat, bread, and wine, for the troops have been sent from France by the French Government, and each soldier is to have daily a ration of wine or coffee. A contract entered into at Smyrna ensures to the French army 2000 oxen, which are to be conveyed to Gallipoli by the *Marmora* and the *Ajaccio*. All along the Dardanelles, and particularly on the European side, are thousands upon thousands of sheep, to all appearance waiting the arrival of the troops. In addition, a commission has been formed of nine of the principal persons in the country, to second the administration in all the operations of victualling the army.

The soldiers of the Engineers are busied in making carriage-roads from the point of landing to the different camps, in order to facilitate the transport of the various stores and artillery which are shortly expected. The streets are swept every day with care, particularly in the quarter occupied by the officers of the staff and the administration, and before long Gallipoli will have assumed the air of a French town of Algeria

Captain *Sévérin*, of the Chasseurs de Vincennes, has been named commandant of the town, and is occupied in establishing order in the most perfect manner, so as to completely reassure the inhabitants. A few days after the French troops arrived, the Turkish women and children had begun to make their appearance in the streets. It seems that the Greek women had conceived the most alarming apprehensions of the French soldiers, in consequence of a frightful picture which their bishop thought fit to make to them of the morals and character of the French. This zealous pastor, who was formerly a monk, has received orders to quit the town.

On the 17th inst. there were 25,000 French, and 8000 English soldiers at Gallipoli, and provisions were said to be very scarce. The remainder of the troops are now, therefore, going forward to Scutari, where the *Himalaya* landed nearly 2000 men, women, and officers on the 15th. On the 17th the steamers *Cambria* and *Indus* arrived, with the 49th, 72nd, 41st, and 88rd regiments.

PRINCE NAPOLEON AT MALTA.

On the afternoon of the 20th, by the French steam corvette *Roland*, from Toulon, his Imperial Highness Prince Napoleon arrived at Malta, accompanied by a brilliant staff, among whom were Colonels Demeresc, Bizinski, and Roman, General Prim, and his Excellency Saith Effendi, the Turkish Ambassador. Signor Dalang, a celebrated artist, accompanied his Imperial Highness. At five o'clock the Prince landed at the Custom-house, and was received by his Excellency the Governor, in full uniform, wearing his hard-earned medals. A guard of honour, supplied by the 88th, received his Imperial Highness, who, having entered the Governor's carriage, proceeded to inspect the fortifications, and did not reach the Palace till after six o'clock, where was another guard of honour, supplied by the 68th Light Infantry. After remaining a few minutes at the Palace, the Prince, attended by his Excellency the Governor and his staff, visited the splendid Church of St. John. On his return he dined with his Excellency, and at ten o'clock honoured the Opera with his presence. He retired at the end of the third act, and on leaving was vociferously cheered by the assembled crowd. The Prince and his suite embarked at midnight for the East.

On his arrival two Royal salutes were fired—one from Fort St. Angelo, and one by the flag-ship.

DEPARTURE OF LORD RAGLAN FROM MARSEILLES.

Lord Raglan and his staff arrived at Marseilles, *en route* for Constantinople, on the night of the 20th inst. His Lordship intended to embark instantly on board the *Curadoc*, but it blew so fierce a hurricane from the south-east that he gave up the notion and took up his quarters at the Hôtel d'Orient. On the following day, the weather still continued boisterous, several of the transports which had sailed on Thursday having been forced to return; the *Curadoc*, therefore, did not start till next day.

At one p.m. on Saturday the steam-ship left Marseilles harbour with Lord Raglan and suite for the East, touching at Malta. Notwithstanding the boisterous weather, the gale from the south-east not having ceased, the captain gallantly put forward, and sailed out of the harbour in dashing style. The passengers on board the *Curadoc* were—Lord Raglan, Lord De Ros, Colonel Steele, Colonel Somerset, Major Wellesley, Captain Blackwood, Captain Bradford, Admiral Boxer, his Secretary and Flag-Lieutenant, Mr. and Mrs. Stewart, and Mr. Wood.

SIR CHARLES NAPIER IN THE BALTIC.

The boisterous state of the weather appears to have prevented the transmission of news from the Baltic fleet, for the last fortnight. Very little has transpired regarding the movements of Sir Charles Napier, for the last ten or twelve days. In order to blockade the Gulf of Finland more closely, he has ordered one portion of the fleet to be stationed in the Gulf of Bothnia, while another portion examines the coast of Finland. Nearly forty Russian vessels have been captured by the English cruisers in the Baltic.

The English flag has been hoisted upon the various Russian and Finnish merchantmen in Kioge Bay. These ships are now all of them manned by English sailors, while the Russians are placed as prisoners of war on board the English men-of-war that are on the eve of sailing from the Danish to English ports.

COPENHAGEN, April 26.—The *Tritonia* has just brought in two Russian prizes. The fleet is off Goetgram, in Gothland.

THE FRENCH BALTIC SQUADRON.

The French squadron for the Baltic, under the command of Admiral Parseval Deschênes, consisting of five sail of the line, two sailing frigates, one steam-frigate, and one steam-sloop, arrived and anchored in the Downs between eleven and twelve o'clock on Thursday morning.

MELANCHOLY ACCIDENT IN THE BALTIC.

A letter from Memel of the 19th inst. reports the melancholy death of a most meritorious officer, Captain J. Foote, of the corvette *Conflict*. Captain Foote went on shore on the morning of the 19th, with another officer, on business connected with the prizes. About five in the afternoon he wished to return on board. A fresh north-wester had been blowing for some time, right against the stream of the Haf, where it debouches. There was a heavy surf, especially between the moles. The pilot at Memel strongly advised Captain Foote to take a larger boat for his return, but in vain. The captain, with his lieutenant, got into a long narrow gig that was manned with five sailors. In less than ten minutes after the boat suddenly disappeared. In an instant the life-boat was launched and manned with pilots, but it came too late to save all; the lieutenant and one of the men were still alive, and clinging to the thwart-straps of the boat, but half frozen: the captain, with four of his men, had already found a watery grave.

PREPARATIONS FOR THE WAR.

The Admiralty have had in consideration a plan by which their Lordships will render available for service at sea the officers, non-commissioned officers, and men of the Woolwich division, now required to do duty at Deptford and Woolwich Dockyards. The plan is understood to be carried into effect by increasing the strength of the police force in these establishments ashore.

Considerable excitement was created among the apprentices to free lightermen and watermen this week, it having been announced that it is the intention of the Waterman's Company immediately to provide a portion of the quota (600 men) that the company is compelled by its charter to supply for service in the Royal Navy. This rule of the feudal system was strictly observed during the last war, and the requisite number is completed as follows:—Lists of the apprentices of three, four, five, and six years' standing are filed, and the number is balloted for, first from the junior classes; and should the list of apprentices be expended before a sufficiency has been obtained, the free watermen then take their turn on the ballot, or provide substitutes.

The Master General of the Ordnance has issued instructions for the different recruiting parties to use every exertion in obtaining the desired number of men to place the Royal Artillery in such a state as to be ready for any contingency.

IMPORTANT CONVENTION BETWEEN ENGLAND AND AMERICA.

The steam-ship *Canada*, which sailed from Boston on the 12th inst., arrived at Liverpool on Monday. The most important news brought by her relates to a treaty which is said to have been negotiated by Mr. Buchanan between Great Britain and America. In the House of Representatives on the 10th inst., Mr. Dean, of New York, moved the following resolutions, for the purpose (as is stated by some of the papers) of opening the way for the treaty:—

Resolved: That in the war which now seems impending in Europe, it is the policy, and is declared as the manifest interest, of the Government of the United States to observe and maintain a strict neutrality between all the belligerents; and, in the event of a war, the rights of our citizens and the security of our commerce demand the maintenance of the principle heretofore asserted and strenuously contended for by this Government, but not hitherto admitted or established as the law of nations, that free ships make free goods, except as to articles clearly known as contraband of war; and that the neutral flag protects from unwarrantable search and seizure the ships bearing it; and also that neutral property on board a vessel of any of the belligerents is not subject to seizure and confiscation.

Resolved: That the President of the United States be requested, if in his opinion not incompatible with the public interests, to communicate to this house whether any, and if any, what, arrangements have been made, and what correspondence has taken place between this Government and any of the Governments of Europe to establish the foregoing principles as international law, and to protect the neutral commerce of the United States in the event of a war between any of the Powers of Europe.

The *New York Herald* states that the draft of a convention has been concluded between Mr. Buchanan and Lord Aberdeen, on behalf of their respective Governments, "by which England admits, in the approaching European war, the doctrine that the flag covers both ship and cargo, and that free ships make free goods; also renouncing the right of search for the impressment of seamen so far as American vessels are concerned, and conceding the restriction as to the right of blockade. In return, the United States is pledged to strict neutrality and non-intervention in the contest between the Western Powers and Russia." The American papers speak of the arrangement as a great diplomatic triumph. "It places us in the position that we should have occupied years ago," says the *Herald*, "and at once enables us to become the great carrier on the seas of the world."

THE SPANISH AND AMERICAN QUARREL.

The affair of the *Black Warrior* does not seem likely to be settled in an amicable manner. All accounts agree in representing the notes of M. Soulé, the United States Chargé d'Affaires at Madrid, as exceedingly violent. It is said that he gave the Spanish Government only forty-eight hours for an answer; and this, moreover, in the Holy week, when, in countries professing the Christian religion, business does not go on at a slower pace than usual. Such haste and violence have given ample grounds for suspecting that the American Government really intended to pick a quarrel with Spain. It is too much like the conduct of Prince Menschikoff towards Turkey. The impetuous M. Soulé demanded nothing less than 300,000 dollars paid down instanter, and the disgrace of the Captain-General of Cuba. The reply of the Spanish Government was to the effect that as the official report had been received on the subject; and that, consequently, they could not, until they had received information from their own agent, come to any determination. Thus the matter stands for the present.

THE OVERLAND MAIL.

A telegraphic despatch from Marseilles anticipates the Overland Mail. It is rumoured at Rome that a revolution has broken out at Ava, and that the war Prince has poisoned his elder brother, and seized that throne. Dost Mahomed has made overtures to Major Edwardes for an alliance with the British Government. The report of the discovery of gold in Ceylon has been confirmed.

SUBSCRIPTIONS FOR SOLDIERS' WIVES.

(From our Military Correspondent.)

CONSIDERABLE collections of money being now gathered for the Wives and Children of our Soldiers whose husbands and fathers are employed on foreign service, a suggestion touching the appropriation of such donations may not prove unacceptable to the givers. England having at length awakened to the condition and sufferings of this long-neglected class of our fellow-creatures, in all probability, large sums will, eventually, be raised for so charitable a purpose. The evil now exposed to the public has existed since the formation of the British army, but that offers no apology for its continuance. Astonishment pervades every class that so long a period should have elapsed without some effort being made in behalf of these unfortunates. Those who, a few days since, beheld the Dublin district pay-office thronged with deserted beings craving their miserable pittance to enable them to reach their parishes cannot readily forget the scene. Many were in rags, emaciated and care-worn, presenting most deplorable aspects. There were others more respectable in appearance, striving to maintain a decent exterior in the presence of the spectators. Nearly all were accompanied by one or more children. Anxiety and sorrow were stamped on the features of these supplicants for the public bounty; but the generality shrunk from the exposure to which their pressing necessities urged them. In all classes there must be degrees of decadence, together with grades tending to the reverse. The soldier's wife forms no exception; but, though instances of profligacy may be found among the number, there are hundreds who would willingly labour for an honest livelihood, if opportunity offered for the exercise of their industry. Subjected to the prevailing prejudice against the class, little chance is afforded them of attaining a desirable position. The very fact of having lived in barracks militates against admission into private families; and who would entrust needlework to one unpossessed of a fixed domicile, and regarding whose respectability it might be difficult to gain information? It cannot be expected a ready welcome would greet these persons from needy relatives on their re-appearance, especially if penniless and burthened with children. In such cases, the workhouse is their only place of refuge. The sum bestowed on them by Government is limited to the means of enabling them to reach their respective parishes: on arrival, they are destitute. Subscriptions now collecting for soldiers' wives would be greatly augmented were it generally known in what way the money was to be applied. A paragraph recently appeared in the *Times*, signed by the commanding officers of the three regiments of Foot Guards, deprecating the pecuniary result arising from the case of a particular individual. The view there taken was perfectly correct, since nothing could prove more beneficial to the general object aimed at than the consequence of sympathy directed in behalf of one whose position was in no degree more deplorable than that of thousands. The donations, it is presumed, are being raised for the advantage of all. With a view towards accomplishing the main object the following suggestions are advanced.—The wives and children of soldiers are scattered in every town and village throughout the kingdom; and, in advocating any particular system for their relief, it may be difficult to select the deserving from others less entitled to notice; but be it remembered that such is the case alike, and in the first instance the whole should be relieved as far as possible. After arrangements will speedily distinguish the industrious from the idle. Many well-conducted persons feel a diffidence in applying at police courts where donations have been left for their aid. However much in want, they experience a sense of degradation in openly stating their cases in a civil court, and would rather continue to suffer than pass through so repulsive an ordeal. It savours too much of parochial charity; whereas these women have an undoubted right to demand assistance from the country which separates them from their protestors when summoned abroad by the necessities of the State. Indiscriminate distribution of the boon would be obviated by the donors forwarding their contributions to the Secretary at War. There cannot be a doubt but that gentleman, so conspicuous for his many deeds of philanthropy would willingly undertake the trouble of judiciously apportioning the money either through the district pay officers, or by the hands of the staff officers, of pensioners. The women would then appreciate the gift as some recompense for the services of their absent husbands. This, however, is mentioned but as a temporary measure. A more permanent good is equally feasible of achievement.

Every military man is conversant with the mode by which shirts, socks, mitts, sawealls, and to the cavalry flannels are issued. Why should not the wives, widows, and children of soldiers be employed in making these articles? In every county throughout England magnificent edifices have been raised, denominated "unions." Could not a portion of each building be appropriated to this purpose? The sums now raising would furnish the necessary materials and machinery, while the profits arising from the women's labour would not only exempt the parishes from their present additional expense, but at the same time afford a profit to those employed at the work. The contractors would, doubtless, feel aggrieved; but monopoly should never counteract general good. As it is, the articles quoted are principally made by women, and surely none have a better right to be employed in their manufacture than the wives and children of those who wear and pay for them. Each family might be allotted a room, or apartments, to a number of soldiers, with suitable allowance of fuel, light, food, and medical attendance. If the women obtain employment outside the building, they will earn the means of supporting themselves, while those engaged in preparing the necessaries quoted, can never want occupation. Let them be paid in accordance with the work performed. If sick, they must necessarily receive subsistence and attendance. This plan would ensure a comfortable shelter, and the well-disposed would meet encouragement. When finished, the articles should be forwarded to the Ordnance stores in London or Dublin, where they would be subject to examination. If approved, they could supply the whole army, whether at home or abroad, on requisition from corps, as is now done with the great-coats. Not an item enumerated ought to pass inspection in a man's kit without being stamped by the Ordnance mark. The troops would thus be better served, and every industrious woman afforded opportunity of maintaining herself and children respectably.

If the highest authority would patronise the undertaking, the army would largely contribute to the fund, and the wealthy and benevolent, without doubt, would aid in a far greater proportion.

OBITUARY OF EMINENT PERSONS.

WILLIAM ACTON, ESQ., LATE M.P., OF WEST ASTON, CO. WICKLOW.

The death of Lieut.-Colonel Acton, for several years the respected Knight of the Shire for the county of Wicklow, occurred on the 10th instant, at his seat, West Aston. He had attained the age of sixty-five.

Colonel Acton was son of the late Thomas Acton, of West Aston, and grandson of William Aston, Esq., by Jane Parsons, his wife, granddaughter of Sir William Parsons, Bart., of Birr Castle, King's Co. His elder sister, Anna-Maria, who married Major Warburton, was mother of Eliot Warburton, the accomplished author of the "Crescent and the Cross," and of the Rev. Acton Warburton, also favourably known to literature.

The deceased gentleman was a Magistrate and Deputy-Lieutenant for the County of Wicklow, and served as its High-Sheriff in 1820.

JOHN DAVIES GILBERT, ESQ., OF TRELISSICK, CORNWALL, AND EASTBOURNE, SUSSEX.

THIS gentleman, one of the co-heirs of the Barony of Sandys, died on the 16th inst., in his forty-third year, at Prideaux-place, Cornwall, the seat of his brother-in-law, Mr. Prideaux-Brune.

He was only son and heir of the late Davies Gilbert, Esq., M.P., of Tredrea, who attained to high a reputation in science and antiquities, and eventually succeeded Sir Humphry Davy in the Presidency of the chair of the Royal Society. It was through his grandmother, Catherine Davies, daughter and heir of John Davies, Esq., that the co-heirship to the Barony of Sandys descended to the family.

MILITIA EVENING SCHOOLS.—THE WEST NORFOLK REGIMENT.—At a time when it is not improbable that the services of the Militia may be required, it is gratifying to know that, in several districts, much interest is taken in the moral welfare and mental improvement of the men. The West Norfolk corps, mustering 680 officers and strong, are now in course of training at Norwich; and we learn, from a programme, that evening schools have been organised, and that lectures and concerts, and a reading-room have been provided, to afford the men every opportunity of receiving instruction and rational amusement during their stay in Norwich. The arrangements have originated, and have been conducted by the Rev. Dr. Heal, a clergyman in the neighbourhood, who has, for many years, devoted himself to the promotion of adult schools for the working classes, and taken an active interest in the popular institutions of the above city. A series of lectures was arranged, last year, by this gentleman, for the West Norfolk Regiment, in which, Professor Sedgwick and others, were his coadjutors, and the efforts of these gentlemen are stated by the commanding officer to have been materially conducive to the good conduct of the men while under command. Attempts are being made, to ensure the formation of a lending library, to be permanently connected with the regiment. We have pleasure in recording these facts, as they furnish an example worthy of being imitated by the clergy and others, in the different districts in which the Militia may be quartered.

BALL AT THE JARDIN D'HIVER, AT PARIS.

THE annual Ball in favour of the English Charitable Fund took place on the night of the 20th instant, at the Jardin d'Hiver, and passed off quite brilliantly. The large room near the entrance, was used as a vestibule, whilst the vast hemicycle of the garden was transformed into a magnificent ball-room, at one end of which was a raised platform, occupied by Strauss's band; whilst the other end was fitted up with seats for the lady patronesses and other guests. The whole was brilliantly lighted up with a vast quantity of chandeliers and girandoles, and by four lofty palm trees, the slight foliage and branches of which were marked out by jets of gas. Flowers and evergreens were disposed with great taste on every side, and the *coup d'œil* which the animated scene presented about half-past ten, when Lord and Lady Cowley arrived, was exceedingly striking. The company consisted of the élite of the English society now in Paris, together with a considerable number of foreigners and French celebrities, amongst whom we noticed Count de Morny, General Count de Flahault, Count de Bonneval, &c. A tolerable sprinkling of English and foreign uniforms added to the animation of the scene, and the display altogether was as fine as is usual at the English Charitable Ball, the most charming attraction of the scene. Buffets were arranged at each side of the entrance, amply provided with refreshments; and dancing was kept up until an early hour in the morning.

Amongst the guests were the Marquis and Marchioness of Ely, Marquis of Hertford, Marquis and Marchioness of Stafford, Lord and Lady Sydney, Right Hon. E. Ellice, Mr. Lawrence and Lady Jane Peel, Lord and Lady Gray of Gray, Lord and Lady Poltimore, Hon. Col. Duncombe, Mr. Buchanan, Lord Munster, Lady E. Pringle; Mr. Frankiyn, M.P.; Mr. Locke, M.P.; Mr. Moffatt, M.P.; Mr. and Mrs. Huddleston, Mr. and Mrs. Tudor, Mr. and Mrs. Blount, Hon. H. Howard, Admiral Dundas; R. Duff, Esq., of Fetteresso; Mr. and Mrs. Gould, &c.

THE BALL AT THE ELYSEE.

AMONG the brilliant and cordial hospitalities of which the Duke of Cambridge was the distinguished object during his visit to Paris, one of the most remarkable entertainments was the grand ball and concert at the Elysée. The most magnificent preparations were made for the occasion, numerous workmen having been employed night and day, so that the Palace, which is in course of extensive alteration, and which, only a few days before, presented a scene of the utmost confusion and disorder, was transformed, as it by enchantment, into one of those fairy edifices which French workmen appear to possess the secret of creating at short notice, beyond all others. The principal entrances were beautifully ornamented with carpeting and light-blue cloth, and the side entrances the same. The façade was decorated with an awning of blue and white alternately, and with carpet-covered steps, at intervals bordered with shrubs, for setting down the guests.

The company began to arrive shortly after nine; and a few minutes before the Imperial carriages, with his Majesty and the Empress, and the Imperial household, the Duke of Cambridge and suite, &c., arrived. From this time till a late hour the carriages came in rapid succession, the company comprising the Ministers of State, the Foreign Ambassadors, the principal nobility, English, French, and foreign, at present in Paris. The gardens were most tastefully and splendidly lighted, and had more the appearance of a scene of enchantment than a reality: the large trees were adorned with coloured lanterns of different sizes and colours, representing fruits of various forms, whilst the walks were ornamented with festoons of different coloured lights, and vases, &c., of the same description, and recalled to mind the magic beauty of the gardens described in the "Arabian Nights." The view of the garden from the ball-room on the ground floor—the lofty illuminated trees in the distance forming an immense amphitheatre, with a

BALL AT THE JARDIN D'HIVER, AT PARIS, IN AID OF THE ENGLISH CHARITABLE FUND.—(SEE PRECEDING PAGE.)

grotto in the centre, composed of pink and green Chinese lights—presented a *coup d'œil* of which none but an eye-witness could form an idea; whilst the varied groups tended to enhance the brilliancy of the scene. Of the palace itself—the apartments all newly restored and gilt with profusion, the furniture of the most splendid description, with the various decorations, together with the brilliancy of the scene, illuminated by thousands of wax-tapers from splendid candelabra in every direction, together with the brilliancy of the various military costumes, and the variety and elegance of the dresses of the fair sex, must have given his Royal Highness and the visitors who accompanied him an idea that they were present at a "house-warming" unequalled in the annals of France—so celebrated for its national fêtes. The buffets were served with more than ordinary profusion, the refreshments of all sorts being of the choicest kind. Their Majesties retired about one o'clock; after which the remainder of the company began to retire gradually, but it was not until "daylight had begun to dawn" that the whole of the company had left. Dancing—which, at the commencement, had been almost an "impossibility"—was kept up with spirit to the last.

FETE GIVEN BY THE EMPEROR TO LORD RAGLAN, THE DUKE OF CAMBRIDGE, AND SUITES, IN THE GARDENS OF THE ELYSEE, AT PARIS.

Bridging experiment at Joinville-le-Pont, near Paris, before the Emperor, Lord Raglan, and the Duke of Cambridge.

BRIDGING EXPERIMENT NEAR PARIS.

During the late visit of the Duke of Cambridge to Paris he was present at a very curious experiment, in throwing a bridge of boats over the river Marne, which was made for the satisfaction of the Emperor, at Joinville-le-Pont, last Saturday week. A large crowd had assembled to witness the experiment, and the Emperor and his Royal Highness were received with acclamations by the people.

The Emperor was received at the entrance to the Park of Vincennes by the Commandant of the fortress and the superiors officers of the garrison, who escorted them to the limits of the park. They then proceeded on foot towards the Marne, to the spot where the new bridge of boats, invented by M. Janvier, civil architect, had been thrown across. It was 225 feet long, and composed of forty-five boats, joined together with very light frames covered with indiarubber cloth; and, notwithstanding the lightness of the structure and the delicacy of the framework, it supported, apparently without straining, a battalion of chasseurs, a squadron of cavalry, and a battery of 12-pounders. Its appearance was so slight that the spectators were alarmed for the consequences at first, when they saw the cavalcade of troops venturing across it; but their fears were speedily set at rest: the battalion, the squadron, and the battery of artillery, all passed over it without any perceptible oscillation, or the slightest accident. As the troops passed over, they shouted "Vive l'Empereur," with an enthusiasm, which spread to the crowds who lined the banks of the river, and who repeated the *vivats* with equal heartiness. After the passage of the troops, the Emperor and his party minutely examined all the details of the construction of the bridge. Before leaving, the Emperor congratulated the inventor on the success of his experiment, and assured him that, if subsequent trials should turn out as well, the new bridge would certainly be adopted.

EMBARKATION OF FRENCH TROOPS AT TOULON.

The French Minister of Marine lately addressed a despatch to the Maritime Prefect of Toulon, expressing his satisfaction at the activity displayed in the dockyard. The rapidity with which the various detachments of troops for the expedition to the East were embarked on board the vessels prepared for them, has also been highly commended, as showing the excellent order prevailing in that port. During the twelve days ending on April 4, no less than 8000 infantry sailed from Toulon for the Dardanelles. The screw-ship *Napoleon* carried 1200 men; and the *Suffren*, line-of-battle ship, 1100. Among other regiments which sailed from Toulon was the 3rd Regiment of Marine Infantry, 2200 strong. These troops, who were originally intended to do duty exclusively in the colonies, were fully equipped for a campaign, each man carrying, besides his knapsack, a blanket, hatchet, shovel, and sticks to fasten the tents.

Marshal St. Arnaud, on Friday, the 21st, reviewed the troops of the garrison and of the different corps at Marseilles, intended to form part of the army of the East. The troops were drawn up in the Allées de Meilhan. The Marshal arrived on the ground accompanied by Lord Raglan and their respective staffs, and also by General Rostolan and a number of other officers. After passing along the lines, the Marshal and Lord Raglan took their station opposite the Lycée, and the filing off took place amidst loud cries of "Vive l'Empereur!" In the evening, Lord Raglan and his staff were present at a grand banquet given by

Embarkation of French troops, at Toulon.

Marshal St. Arnaud to all the superior officers at Marseilles. The English Generals, who was the great object of attraction, was seated between Mdme St. Arnaud and the Prefect of the department. Next morning the Marshal and his lady, accompanied by Lord Raglan and Admiral Boxer, visited the *Caradoc* steam-ship. The following order of the day has been published:—

Head-quarters, Marseilles, April 20.

Soldiers.—In a few days you will leave for the East; you go to defend allies unjustly attacked, and take up the defiance the Czar has thrown to the nations of the West. From the Baltic to the Mediterranean, Europe will applaud your efforts and your successes.

You will fight side by side with the English, the Turks, and the Egyptians. You know what is due to companions in arms—union and cordiality in the camp, and absolute devotedness to the common cause in action.

France and England, hitherto rivals, are to day friends and allies. They have learned to esteem each other in fighting together. They are masters of the seas. The fleets will provide for the army, whilst famine will be in the enemy's camp.

The Turks and Egyptians have been able to stand their ground against the Russians since the commencement of the war. Alone, they beat them in several actions; what will they not do when backed by our battalions?

Soldiers! the eagle of the Empire again takes its flight, not to menace Europe, but to defend it. Carry it again as your fathers did before you. As then, repeat, all of you, before quitting France, the cry which so often conducted them to victory—"Vive l'Empereur!"

The Marshal of France,
Commander-in-Chief of the Army of the East,
A. DE SAINT ARNAUD.

Since the commencement of the embarkation of the French expeditionary army for the East, the War Department has freighted 354 merchant ships for the transport of troops, of which 288 were hired at Marseilles, and 66 at Genoa. The whole of these vessels are capable of carrying 86,600 horses, with 14,000 tons for stores of every kind. More than the half were engaged for four months, during which they could make two voyages—each occupying, on an average, fifty days for the departure and return. In addition to this, a certain number of vessels was also freighted in Algeria. The creation of the sixth squadron for each of the fifty-three regiments of cavalry, as decreed in the *Moniteur* of Wednesday, will give an addition to the army of from 8000 to 10,000 horses.

CALENDAR FOR THE WEEK.

SUNDAY, April 30.—2nd Sunday after Easter.
MONDAY, May 1.—Prince Arthur born, 1850. Dryden died, 1700.
TUESDAY, 2.—Camoens born, 1524.
WEDNESDAY, 3.—Columbus discovered Jamaica, 1495.
THURSDAY, 4.—Seringapatam taken, 1799.
FRIDAY, 5.—Napoleon I. died 1821.
SATURDAY, 6.—St. John the Evangelist. Battle of Prague, 1757.

TIMES OF HIGH WATER AT LONDON-BRIDGE.

FOR THE WEEK ENDING MAY 6, 1854.

TO CORRESPONDENTS.

OUR CENSUS.—Some statements have reached us of omissions in the Census, which are chiefly amongst the towns, and are of less consequence inasmuch as there is in another part of the Census a list of Parliamentary towns, containing the omitted places. A correct list of all omissions will be hereafter published, and supplied gratuitously to purchasers.

MR SCALES is informed that the figures he referred to fell out in going through the press, and the error is corrected.

A CONSTANT READER, Hendon.—See the "Self-Instructing Latin Grammar."

KNAPSACK.—A Correspondent suggests, with reference to the derivation of the word "knapsack," at page 357, that the word is pure Danish—"knap," a coat, and "sack," a sack or bag. The word is pronounced *knopp*, the p being distinctly uttered. Webster gives the derivation from the German *knoppsack*.

A CAPTAIN'S DAUGHTER, who has commenced a penny subscription for the widows and children of those brave fellows who have gone to the war, is thanked for her communication; and is referred to a paper in our present Number, entitled "Subscript ons for Soldiers' Wives."

J. N. H., Hexham.—Mr. Hensler's picture of "La Fenoda" was engraved in the ILLUSTRATED LONDON NEWS for April 8.

A CONSTANT READER.—Lady Sharp is the widow of the late learned antiquary Sir Cuthbert Sharp, F.S.A., who died in 1849.

A CONSTANT READER.—An illegitimate child may adopt any surname.

W. H. W. H.—Apply at the College of Arms, Doctors' Commons.

D. N. G.—Lord Llangbel's peerage and title will be inheritable by his family, so long as one male descendant of his body remains.

PYRARCH.—It is indeed enviable that a Lady be presented to the Queen by some other Lady who has already been at Court.

J. T.—The Marquis of Anglesea was born 17th May, 1768, and will consequently in May next complete his 86th year. He fought with great coolness at Waterloo, and lost a leg on that celebrated field.

C. B.—A blazon, or description, in addition to the engraving of the arms in the Obituary, would be but a mere repetition, and we could occupy too much room in this paper, where space is so particularly valuable.

THE CENSUS OF 1851.

Now ready,

THE CENSUS OF THE UNITED KINGDOM,

PREPARED FOR THE

ILLUSTRATED LONDON NEWS,

Comprising a Comparative View of the Population (Distinguishing the Sexes) of every Parish and Town in the Empire in 1841 and 1851;

WITH A LARGE ILLUSIRATIVE MAP.

These sheets will not be sent without orders from Subscribers.

TWO SHEETS, in a WRAPPER, ONE SHILLING; or STAMPED, so as to go FREE BY POST (without Wrapper), ONE SHILLING. Orders received by all Booksellers and Newsagents.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 29, 1854.

THE Emperor of Russia and his Chancellor, Count Nesselrode, are unfortunate in the use of the pen. But it is proverbially a difficult thing to make the "worse appear the better reason," and it is not surprising that the Emperor should fail in his logic, or pervert the truth, to serve his own purposes, when he has so bad a cause to defend. The Imperial "Declaration," published in the *St. Petersburg Journal* of the 31st March (a date answering in civilised Europe to the 12th April), is a remarkable document—temperate in its tone, clever in its arguments, hypocritical in its protestations; but false in its assertions, and fallacious in the reasoning based upon them. It purports to be a reply to the declaration of war by the Maritime Powers, upon whom it throws the whole blame and responsibility. The Czar never admits or even seems to reflect upon the notorious fact, that his invasion and occupation of the Danubian Principalities was an act of decided hostility and the real commencement of the war. He states that "he sincerely laments the manifold evils which are about to fall on humanity," but his acts, both of the present and the past time, belie his words. If he had been as sincere as he pretends, he might long ago have withdrawn, without loss of honour or dignity, from a false and perilous position. If he cannot at the present time retract without self-stultification and dishonour, and without danger to his throne, from the wounded feelings of his humiliated people, the fault is entirely his own, and in no way chargeable upon the Two Governments—which exhausted negotiation as well as patience before they were reduced to the unhappy, though inevitable conclusion, that the Emperor was bent upon his purpose, and would not be deterred from its pursuit, except by the application of a physical force superior to his own. In allusion to the demand made upon him for the evacuation of the Principalities on or before a certain day—fixed by Great Britain for the 30th of April, and by France for the 15th—he asks, "By what right did the Two Powers thus pretend to exact everything from one of the two belligerent parties, without demanding anything from the other?" The obvious reply is that Turkey was wholly in the right; and that Russia was wholly, grossly, and insultingly in the wrong. It was impossible to exact from Turkey anything whatever that Russia had a title to demand. The "Declaration" also alleges that "all honourable retreat was peremptorily cut off for the Emperor by an imperious summons, such as Russia never before received within the whole period of its history;" a fact which is but too true; for it would have been for the advantage of all Europe at the present moment if a summons equally imperious had on another memorable occasion been addressed to it, by Powers able to enforce it. When Poland was partitioned was the proper time for such a summons to Russia. It is a European misfortune that so gigantic a wrong was permitted. Had it been resisted, the probability is that the ambition of the Czars would have received a check, and that they would never have been in a position to attempt, much less to carry out, a similar design against the Ottoman Empire. But Europe is at last awake to its duty; and if the Czar do not relish the nature of the summons directed to him, he will, it is to be hoped, learn for the future to deserve respect, and not hostility. The "Declaration" accuses Great Britain and France of exaggerating the object of this "disastrous" war by "bringing vague accusations against Russia;" and denies that the Emperor either attacked their "honour" or their "material interests." The accusations brought against Russia are by no means vague; but clear, precise, and tangible. The Emperor's favourite image of the "sick man and his inheritance," and the negotiations he attempted to build upon the state of things thus vividly allegorised, are not vague to the understanding of any man in Europe. If any doubt existed upon the meaning of the Emperor's words, his actions would be far more than sufficient to remove it. The honour of Great Britain and France are, no doubt, intact; and the Emperor, as far as we know, never made any attempt to emperil that of either Power, unless when he conveyed, through Sir Hamilton Seymour, the offer of Egypt and Candia, as bribes, to the English Government, if it would aid him in the dismemberment of the Ottoman Empire. As regards the Emperor's denial that he ever attacked the material interests of either Power, the world has only to be reminded of the fact that Russia, contrary to treaty, has blocked up the Sulina mouth of the Danube by its studied and systematic neglect, to see how little truth there is in the Imperial allegation. The Danube is a great artery of European commerce; and if Russia, which is solemnly pledged to prevent it from being silted up, wilfully and maliciously allow sand-banks to accumulate until the only inlet by which merchant vessels can proceed into it from the Black Sea is strewed with wrecks and the remnants of valuable cargoes, he inflicts a material injury upon every commercial nation, and more especially upon Great Britain and France. The Emperor appeals to all Europe against the Two Powers, "to decide if the general equilibrium be really exposed to the dangers which are attributed to it from the alleged excessive preponderance of Russia;" and hints a danger of revolution or insurrection in Lombardy, Hungary, and Germany, to be apprehended from the efforts of the Maritime Allies. The Emperor of Russia deceives himself if he imagines that such arguments will have any weight. The Emperor of Austria must know, by this time, who is the great anarchist and insurrectionist of Europe; and the King of Prussia must be equally aware of the real source of the dangers which menace him. The two great German Powers have signed a treaty of alliance, and whichever side they take, they will go together. The Emperor of Austria is young and able, and surrounded by wise counsellors. He has already taken the auspicious occasion of his marriage to raise the state of siege throughout his dominions, to pardon political offenders, and to show his people that his reliance is not upon Russian bayonets, as in the unfortunate years of 1848 and 1849, but upon the patriotism and affection of his subjects. There are other and more powerful reasons for the belief that the anti-Russian alliance will not long be confined to France and England. With or without the aid of Germany, the Maritime Powers will speedily convince the Czar that he alone is responsible for the war. We wish with all our hearts that he alone might be made to suffer its penalties.

THE railways not long ago introduced the custom of borrowing money on bonds bearing interest payable half-yearly, and redeemable at certain fixed periods. These bonds having coupons, which enable the parties holding them to obtain the interest without parting with the security, have become rather a favourite investment with the public; and last year the Chancellor of the Exchequer proposed to issue similar securities under the name of Exchequer Bonds for the conversion of the Debt to a considerable amount. He fixed the interest too low, in the face of a rising Money-market, to succeed; and of the £30,000,000 of Bonds he took power to issue, not £500,000 were purchased. The Money-market at present being fully stocked with Exchequer Bills, and it being probable, or rather certain, that a greater amount must be issued to meet the current expenses of the Government, the Chancellor of the Exchequer has issued proposals to borrow £6,000,000 on Exchequer Bonds bearing interest at three-and-a-half per cent. Of this sum £2,000,000 are to be paid off at par on May 8, 1858; £2,000,000, in 1859; and £2,000,000, in 1860: the interest to commence on May 8th, and to be paid half-yearly. Thus, he is to borrow £2,000,000 for four years, £2,000,000 for five years, and £2,000,000 for six years, certain. The price he will accept for the Bonds will not be known till May 2, when no more tenders will be received, and the lowest price declared. Offers will, no doubt, be abundant; but whether they will fall or not within the Chancellor's terms, and whether he will be successful in negotiating the loan, cannot till then be known. That the Government can easily raise twice as large a sum of money is certain; but there is some doubt whether the Chancellor and the public take the same view of the future condition of the Money-market, and regard this new security with equally favourable eyes, and as they agree or differ on these points, he may or may not be successful.

Because the public have regarded the railway debentures favourably, it is supposed that the Exchequer Bonds will be very acceptable to the middle classes; but it is very rare that they take such kind of securities except at second hand: they buy them of bankers and others, who subscribe for them in large sums. Admitting, therefore, that Exchequer Bonds will be acceptable to men of small means and saving disposition, it will not be they but the bankers and other moneyed classes of London—as no lenders below £1000 will be accepted—who will now offer for them, and they will be guided by the value of other securities. For them, an Exchequer Bill at the same rate of interest (3½ per cent) which it now bears, will be more acceptable than an Exchequer Bond; and the Chancellor must put his Bonds at rather a low figure to induce the exchange. His object, in fact, is to take Exchequer Bills out of the market, and to substitute for them Bonds redeemable at distant and certain periods. He advertises expressly for Bills at par, and he requires on every £100 in money 1s. more than on £100 in Exchequer Bills. Should he succeed, the loan thus raised will no doubt be the forerunner of similar loans, for the current service of every year—reducing the number of Exchequer Bills, of which the Government always stands a little in awe, as it may be required to pay them at an inconvenient time—and a new species of Government security payable at fixed times, will get into general use. Then the saving middle classes, and the classes immediately below them, will be very likely to invest £100, £200, or £300 in these Bonds; but, while no less a sum than £1000 can now be tendered for them, the middle classes are not likely to become purchasers. It is quite a fallacy to represent this as a popular loan, like that of the French Emperor. It is both too small in amount, and the smallest sum for which tenders will be accepted is too large, to deserve such a character.

Though the loan is contemporaneous with the beginning of the war, it is not made necessary by any expenses yet incurred on its account. For any that may immediately arise, the Chancellor is authorised to issue £1,700,000 Exchequer Bills, to be redeemed by the increased Property-tax as it accrues. But the Chancellor has appropriated the balances in the Exchequer to pay off dissentients from his plan of conversion, and now finds himself, while unknown demands on account of war are threatening him, with little more than £2,400,000 in hand, including a variety of trust moneys which he cannot touch; while, for many years back, at the same period, the balances have been rarely less than £6,000,000, and generally more. The loan is intended, as has been said, to place the Chancellor of the Exchequer in credit with his banker, or have in the Bank a good available present balance.

THE COURT.

The Queen and Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Princess Alice, Prince Alfred, the Princesses Helena and Louise, Prince Arthur, and Prince Leopold, left Windsor Castle, at twenty minutes before three o'clock on Monday morning, travelled by a special train on the Great Western Railway to Paddington, and proceeded in several of her Majesty's carriages, escorted by a detachment of Carbineers, to Buckingham Palace, where they arrived at twenty-three minutes before four o'clock. At four o'clock the Queen held a Privy Council, at which a proclamation was ordered to be issued respecting the Fast Day.

On Tuesday morning the Duchess of Kent paid a visit of congratulation to the Queen at Buckingham Palace, on the birthday of her Royal Highness the Princess Alice. Her Majesty and his Royal Highness Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, went, at one o'clock, to pay a complimentary visit to the Duchess of Gloucester, at Gloucester House, on the return of her Royal Highness's natal day. The Queen and Prince Albert left the Palace at half past three o'clock for the Crystal Palace at Sydenham. In the evening her Majesty and the Prince Consort honoured the Haymarket Theatre with their presence.

On Wednesday (the day of the Solemn Fast) the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, Prince Alfred, and the Duchess of Kent, attended Divine Service in the private chapel of Buckingham Palace. The service was performed by the Bishop of Chester and the Hon. Rev. G. Wellesley. The Bishop of Chester preached the sermon.

THE DRAWING-ROOM.

The Queen held a Drawing-room (the second this season) on Thursday afternoon, in St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived from Buckingham Palace at two o'clock, escorted by a detachment of Life Guards, and were received by the great officers of State. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary were present, attended by Major Baron Knesebeck.

The Queen and Prince entered the Throne-room attended by the Mistress of the Robes, the Duchess of Sutherland; the Ladies of the Bedchamber—the Countess of Charlemont (in Waiting), the Duchess of Wellington, the Countess of Desart, the Viscountess Canning, and the Viscountess Jocelyn, and the Ladies and Gentlemen of the Royal household.

Her Majesty wore a train of lilac and silver moire antique silk, trimmed with white tulle and silver stars. The petticoat was white crape, with two flounces, and was trimmed with silver, and silver and crape ribbons. The Queen's head-dress was a diadem of emeralds and diamonds, and feathers.

The diplomatic circle was first introduced. The general circle was brilliantly attended. A number of presentations took place.

Her Royal Highness the Duchess of Gloucester completed her seventy-eighth year on Tuesday. Her Royal Highness, although still very weak, has quite recovered from her recent indisposition.

The Duke and Duchess of Wellington have arrived in Belgrave-street, from Italy.

The Duke and Duchess of Northumberland have arrived in Paris, *en route* to London, from Genoa.

The Earl and Countess Granville have returned to town from Paris.

The Earl and Countess Constance Grosvenor have returned to town from Cliden.

THE EMPEROR OF AUSTRIA'S NUPTIALS.

The Imperial bride arrived at Schonbrunn on Saturday. She left Linz at eight in the morning, and was met at Nussedorff by the Emperor. The solemnisation of the Imperial nuptials took place on Monday. Great enthusiasm prevailed on the occasion in Vienna. The Emperor has granted an amnesty to 356 political prisoners, of whom 248 receive a full pardon; the sentences of the others are commuted into various terms of imprisonment. All criminal suits in Galicia for treason are quashed. All similar suits for off-nces against his Majesty throughout the empire are quashed. The state of siege in Lombardy and the Venetian territory will be raised entirely after the 1st of May. The Emperor has also ordered 200,000 florins to be distributed among the poor of the various provinces.

SVEABORG.

THREE miles south-east of Helsingfors, the capital of Finland, rise the threatening walls of Sveaborg; the honour of which gigantic work belongs to Count Augustus Ehrensvärd, who is buried there. The building of the fortress was begun in 1748. With infinite labour, and at the cost of immense sums of money, docks were blown out of the rocks; deep water channels were filled up, and thus rendered impassable; while walls of granite rose above the barren steeps.

The main fortress stands on five separate islands, viz., Wargön, Stora and Lilla (the Large and Little), Oster-svartö, Wester-svartö, and Lemnan. Close to these lies the Fort of Gustafsvärd, strengthened by all that science can devise, and commanding by its guns the narrow and only inlet for ships of war.

With astonishment the eye rests on those mighty walls and battlements—those wharfs and arsenals, which bear witness to the stupendous exertions which have been lavished upon them. Prisoners from all parts of Finland are confined here, while Russian shipsof war are always lying at anchor: some, dismasted, being used as block-ships and dwelling-houses—others in all the proud attire of war. Gardens here and there garland the grey walls with green, but fail to divest the fortress of its sombre aspect

The loss of Sveaborg may be called the loss of Finland to Sweden; for, as long as that stronghold was in the hands of its rightful owners, they felt secure. But the first tidings of its capitulation fell like a stone on the hearts of the soldiers, and crushed every hope within them. It was on the 8th of May 1808, that the Russians sang their Te Deum at the grave of Ehrensvärd—that the Swedish flag was struck, and the Russian eagles hoisted in its stead. a dark day in the annals of Swedish and Finnish story!

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

[A portion of the following Letter appeared in our Late Edition of last week.]

SCHUMLA, April 3, 1854.

AFTER leaving Sistova, where the preparations for the advance of the Turks into Wallachia appeared to intimate that the operations carried on there were only part of a plan of general operations, I proceeded to Rustchuk, where, as I had reason to suppose, Omer Pacha intended to effect the passage of the Danube in force. There, indeed, everything seemed prepared. Gun-boats of large dimensions, capable of carrying upwards of a thousand men, were ready for the transport of troops to the other side. His Excellency Ismail Pacha had just been appointed to the supreme command, in place of Hall Pacha; and had made known his appointment to the troops in garrison by the issue of a general order, in which he gave the soldiers to understand that valour alone was not the bond by which an army could be kept together, but discipline, without which no army could exist in time of war. He then, in a series of articles, recapitulated the duties which he considered it incumbent on the men under his command to perform; and he ended by saying that his Excellency Omer Pacha, the General-in-Chief of the Sultan's armies, had recently given a notable example of the fate which might befal officers inattentive to their duty, by dismissing from the service a Pacha, several majors, and other officers, who had been proved to be guilty of conduct unbecoming the high military commands which they filled. Japhir Pacha, an Albanian, who had recently been elevated from the rank of Bey to that of General of Brigade, had embezzled the Imperial moneys, by drawing pay for 2000 Arnauts, whilst he really had but 400 under his command. Another officer had been dismissed for drunkenness; and he rest for crimes not less unbecoming or contrary to discipline in time of war. Yet, whilst it was evident that active steps were about to be taken against the enemy—whilst 8000 Egyptians were known to be on their way from Schumla, means were not neglected to prevent an attempt, on the part of the Russians, to effect a landing upon the Turkish shore. Not only were the soldiers of the garrison of Rustchuk actively at work in repairing the fortifications of the place, many parts of which were in a state of neglect; but the inhabitants, Turkish as well as Bulgarian, were pressed into the service; and the streets of the town offered the strange spectacle of a deserted city, of which all the shops were shut, and all the trade for a moment brought to a sudden stand. By the help of such vigorous measures, even an unpractised eye could see the speedy progress with which the scarp was disencumbered at its base from the loads of earth which in course of time had fallen from the parapet; the embrasures were everywhere made square with blocks of hardened loam; and the ditch itself was deepened in parts where vegetation had sprung up, and in course of years choked up the space. At the same time several English officers who were in the town were consulted as to the mode of improving the defences, and they suggested various small changes and improvements in the flanking fires of the batteries.

Rustchuk is built in an oval form, and has a ditch and scarp—the former not so wide, the latter by no means so high, as those of the fortress of Widdin; but the natural position of the place—strengthened by a line of forts on the heights behind it, and by outworks on one side—is such as to render the utmost art of fortifications unnecessary. The walls which face the Danube are at a considerable height above the river, and within seven hundred yards of the banks of an island occupied by the Russians. The near proximity of the sentinels and videttes, caused a perpetual fire to be kept up during the day, as the Minié rifle was plied on both sides, sometimes with effect more frequently, however, without success. During a walk which I took with his Excellency Ismail Pacha, and several British officers along the lower batteries, we were more than once fired at; and in one instance, the aim of a Cossack was very near being painfully true. Meanwhile, also, batteries *en barbette*, were built on the plains above and below the town, pierced for eight guns each, and made large enough to contain a strong force. The position of Maritina, twelve miles distant, was fortified; and a fort was built there, containing twelve field pieces, firing from a considerable height, and scouring the plain below and the opposite bank of the Danube.

It so happened, however, that the preparations of the Turks to cross into Wallachia were foiled by the activity of the enemy. Ismail Pacha, who had taken possession of his command in Rustchuk on the 26th of March, was suddenly recalled on the 28th, and on the 29th was on his way to Schumla. There were endless rumours as to the cause of this recall; but there seemed every reason to believe that offensive operations had been put an end to by a movement of the enemy. I left Rustchuk, accordingly, on the morning of the 29th, in company with his Excellency Ismail Pacha. We slept the first night at Byzantz, a small village distant about twenty-five miles from Rustchuk; on the 30th we reached Rasgrad, which we passed at noon; and, spending the night in a village seven miles further on, we arrived in Schumla on the 31st before twelve o'clock. Near Rasgrad we met 8000 Egyptians, under Suliman Pacha, marching back to their old quarters. Although the sun was warm, the wind was cold. For miles along the road were hundreds of arabas drawn by oxen, carrying the provisions and tents of the troops. In front, near Rasgrad, were six heavy pieces, drawn each by six buffaloes, and the ammunition waggons, drawn by four. The sight of these guns, so drawn, appeared to excite the choler of Ismail Pacha. He called upon Suleiman Pacha to know how it was that the guns were not drawn by horses; and why the ammunition waggons, which are heavier than guns, had but two pair of buffaloes harnessed, whilst the guns had three. The Pacha threw the blame on the Major of Artillery, who said that he had sent the horses on before. Ismail Pacha reproved him by telling him publicly that he was an ass, and no soldier (*askier yok amma eschek*), and rode off, leaving the crest-fallen Major to groan over this public reproof. As I approached Schumla, I perceived how strong as a natural position was that place, which has never succumbed to the Russians in any war. About three miles from the town, we found ourselves at the base of a high and precipitous range of hills, up which our horses toiled for half an hour. Having accomplished the ascent, we entered a pass commanded by several forts, and then slowly descended on the other side; the minarets and houses of Schumla appearing to us at the bottom and on the sides of a deep hollow. The town, in fact, is encompassed by hills, all difficult of access; but, perhaps, less so on the side of Varna. There, however, art has added to the natural strength of the place, and numerous fortifications impede the progress of an enemy.

We were not long in Schumla before we learnt the cause of the retrograde march of the troops and the recall of Ismail Pacha. We were informed that the Russians had crossed the Danube in force at Galatz, and had taken possession of the Dobrudja. This was startling news; but the attention of Omer Pacha had been already attracted, as I informed you, to the concentration of the Russian forces in the direction of Matchin. On the morning of the 4th ult., the corps of General Luders, supposed to be 30,000 strong, effected the passage of the Danube, near Matchin. The Turks had erected a barbette battery of four guns on the island of Chatalbournu, to which they had access by a bridge of boats. This battery had been erected by the Turks some time before, so secretly, as they conceived, that the Russians knew nothing of it. A battalion had been placed there; and it was supposed that the Russian flotilla might be easily bombarded from that place. The enemy, however, were made aware in proper time of this operation, and he even endeavoured to surprise the place; but, on the first occasion, the attempt was unsuccessful, and the enemy was repulsed. On the 4th of March, however, a large Russian force was embarked before daylight in nineteen gun-boats and two steamers. The island was occupied in every part, the sentries killed, and the bridge of boats communicating with the mainland seized. By this means the unfortunate battalion found itself immediately cut off from all assistance. It was briskly cannonaded from two sides by the Russians, who then endeavoured to storm it. Twice the gallant defenders repulsed the enemy, but at the third charge they were overwhelmed. The Russians entered, and killed or took prisoners the greater part of the battalion. A few men cut their way through, swam over, and got off; the rest were killed or made prisoners. In this desperate affair, the loss on the Turkish side was 640 killed, wounded, and prisoners, and four guns. Among the killed were Ali Bey, colonel; Osman Aga, major; and other officers. The Russian loss it will be impossible to ascertain. It is supposed to have been great.

The passing of the Danube by so large a Russian force of course rendered untenable the positions of Matchin, Isaktschi, and Toutscha. Osman Pacha, in command in Isaktschi, was, it appears, so struck with terror at its advance, that he retreated in a panic without order, and without any plan as to what position he should fall back on. The garrison of Toutscha retired on Varna, that of Matchin on Silistria; the remainder made their way to this place. The greater part of the baggage and ammunition, and all the guns in the positions, were taken off in safety. The places were all subsequently occupied by the Russians, who advanced their Cossacks to Babadagh: it is feared that by this time they have pushed as far as Kustendje and Karasu, Trajan's Wall.

The result of this successful Russian manœuvre is the complete frustration of the plans of the Turkish Generalissimo. Kalafat, which has been too long occupied by the Turks, and which can serve no purpose, since it is effectually blocked by a small Russian force, must now be evacuated, and the soldiers despatched to Sophia. Widdin, Nicopolis, Rustchuk, and Silistria must be occupied in force, and the re-union of the places along the Danube must be evacuated. That Omer Pacha will do this is, I am told, probable. No one doubts the necessity of such steps; but the Turkish Generalissimo will not abandon without a pang the position of Kalafat, where he has spent so much time, so much money, and so many men.

In a short time 50,000 men will be concentrated in Schumla, and the Turks will remain on the defensive until the arrival of the European forces. The first French division, under General Canrobert, has arrived at Gallipoli. The regiments which form the army are all drafted from Africa, or have at one time or another fought in that country. France has four regiments of *Chasseurs d'Afrique* cavalry: two of these regiments are coming. She has three regiments of Zouaves—men dressed as Turks, and the bravest of her African army: these three regiments are coming. She has one regiment of native Arabs—that has also come. All the officers are the best and the youngest in the army. All this, as well as the English force, will now be necessary to repel the Russians, who are not so easily to be beaten as one may suppose.

Several European officers are here—Colonel Dien, aide-de-camp of General Baraguay d'Hilliers, Colonel Carmon, and Captain Symmons. More are expected. Lieut. the Hon. W. Wellesley, of the Coldstreams; Lieut. Burke of the Engineers, on the staff of General Burgoyne; and Colonel Dickson, Royal Artillery, left Rustchuk on the 26th ult. for Tirnova, to inspect the passes of the Balkans.

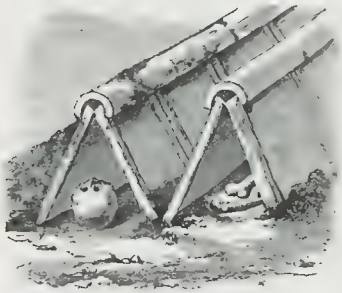
It is supposed here, and I believe with reason, that Russia would not have advanced her troops into the Dobrudja, had she not been sure of the support of Austria. The presence of so large a force as that which now lines the banks of the Save. The arrival of their pontoon trains at Semlin, Mytrowitz, and Sabatcz, and the imposing army assembled upon the frontier of Transylvania and Wallachia, are also considered as so proofs that the intentions of Austria are hostile to Turkey. I have no reason, therefore, to withdraw any of the remarks which I made in my last letters with respect to the position which has been assumed by that Power. So alarmed has the Porte been by the preparations of her neighbours, that she has sent Assiz Pacha, a young but capable man, son of Izzet Pacha, commander of the fortress of Belgrade, to sound the Cabinet of Vienna. We shall soon see whether the assertion of Prince Coronini to the Pacha of Belgrade is confirmed, and whether the mighty preparations of Austria are merely for precaution sake or not. Our statesmen, and the press of England, from what I can see and hear of them at this distance, have been fondly hoping that an armed neutrality was the sole purpose of the Imperial German power. I have no such hopes, and I cannot believe that 200,000 men are placed on a frontier merely for the sake of observation.

REMAINS OF A ROMAN BUILDING, AT CUMA.

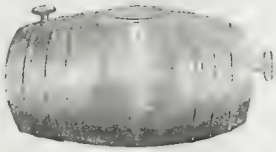
FURTHER DISCOVERIES AT CUMA AND CANOSA.

NAPLES, April, 1854.

THE excavations which have taken place this year at Cuma and Canosa, afford new and interesting material which may be turned to public utility. The antiquary of to-day is not the mere collector of objects for the glass-case; we are beginning to copy and adapt to modern purposes and practical uses the arts of the ancients. Classical antiquities, therefore, are likely ere long to become interesting to the manufacturer, and will certainly educate the public mind and improve our taste. The discoveries now in progress at Cuma and Canosa are the more attractive, inasmuch as they represent the best periods in the art history of the world. My present report may be considered as a continuation of what has already appeared in the ILLUSTRATED LONDON NEWS on the same subject.



GRAVES OF ROMAN POOR, AT CUMA.



GLASS VESSEL, FOUND AT CUMA.

It is necessary to remind the reader that Cuma is, perhaps, the most ancient city of the Mediterranean. The roving Phœnicians brought the art and civilisation of the East to Cuma; from which period, up to the time of Lucullus, this city was of considerable importance. Its Necropolis, therefore, records the art and architecture of past centuries.

INTERIOR OF A GREEK TOMB, AT CUMA.

On my last visit to Cuma I found a group of workmen uncovering a number of Roman graves, evidently of the poorer class. Flat tiles (*tegulæ*) leaning on each other, and covered by the *imbrex*, formed a grave (See Illustration). With the skeleton are sometimes found a few terra-cotta vases, but more frequently nothing but the bones of the dead. Whilst sketching, my friend, Mr. Ashpitel, the architect, who accompanied me, suddenly disappeared. Presently a boy came running up, and informed me my friend had tumbled down a tomb. On arriving at the spot, I found him safe and sound, engaged in sketching and measuring a large Greek tomb, of which I send you a copy. The roof of this building is most interesting. It is not vaulted or arched; the stones have all a level end, projecting gradually over each other, like the celebrated Treasury of Atreus, till they meet at the top. Nothing of importance was found in this tomb; its chief interest consists in the solid construction of the building. Not far distant is a Roman tomb, with three chambers, and the usual columbaria.

Further on, and some thirty feet below the surface of the earth, workmen were employed in excavating the graves of the earliest settlers at Cuma, which are supposed to be those of the Phœnicians. Occasionally they handed up small terra-cotta vessels, whereon are painted grotesque animals—strange metamorphoses of birds and beasts, such as a naturalist might dream into existence after an uncomfortably heavy supper. I send you a drawing of one of the most remarkable They are generally from three to eight inches high; the animals are represented in dark-red and brown colours, and have a marked Egyptian character The people whose remains occupy these graves appear to have burnt their dead; you find the urn with burnt bones therein, generally protected by rude stonework. The vase were tributes which accompanied the ashes, and have, no doubt, a religious meaning.

Strolling over the site of this classical city, I came upon a very picturesque farm-house, built on some Roman remains (see Illustration). It was a scene for reflection: a modern house, spliced on to a huge mass of Roman brickwork. An excavator was smoking his pipe very tranquilly, with a number of antique vases at his feet, whilst a pig and a dog were getting up a quarrel in the foreground.

H.R.H. the Prince of Syracuse, at whose expense the excavations at Cuma are carried on, has added some valuable objects to his collection this year: including three noble vases, with wreaths of gilt flowers in relief round the necks of the vessels; carved ivory pins; penates; perfume-boxes; two terra-cotta figures, painted in colours; many small Phœnician pottery, and an endless variety of small objects. The Prince is still carrying on the excavations with much spirit, and thereby increasing the archæological wealth of the world. I have selected one object for illustration—a curious glass chemical vessel. In the centre is a basin to hold the liquid; with taps, so to speak, at each end of the vessel, for introducing hot water to set on the middle bowl. This object is from a Greek tomb. It is about a foot and a half long, and the largest example of ancient glass yet found.

PHŒNICIAN VASE, FROM CUMA.

M. Bonucci, by Royal authority, is continuing his excavations at Canosa. The Necropolis is of far greater extent than was at first supposed, and the tombs lately indicated are on a grand scale. A grave near the northern gate of Canosa has been opened, and found to contain a complete suit of armour. Scattered round the skeleton were many *pateræ* and small vases, together with five large vases, not less than five feet high: the drawing of the figures representing some incident of the Greek mythology of the highest order. Indeed, Canosa promises objects of the best period of Greek art.

E. N. B.

"THE DRAGON WELL" AT WALTHAMSTOW.

THE subject of this Illustration derives interest, as well for its rarity in modern days, and for the liberality of the donor, as for its intrinsic merit and usefulness. It has recently been erected on the Forest, at Walthamstow, from the design of Mr. G. E. Pritchett, of Bishop Stortford, architect, through the liberality of a neighbour, whose object was to provide with water a poor neighbourhood hitherto unsupplied. The whole is beautifully executed in Caen stone, by Mr. Rattie, of Cambridge. An eagle's head forms the spout, and above is an iron lamp, of pleasing design. The basin is of oak, slightly ornamented. In the carved panels is inscribed:—"Jesus said, whosoever drinketh of this water shall thirst again, but whosoever drinketh of the water I shall give him shall never thirst, but the water that I shall give shall be a well of water springing up to everlasting life." Under the carved work at the top is inscribed:—"Ho every one that thirsteth, come ye to the waters." The popular name is derived from the dragon sculpture.

PUMP, RECENTLY ERECTED AT WALTHAMSTOW.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

The Exhibition of the Society of Painters in Water-Colours, for the present year, may be pronounced an unusually attractive one. The landscapes and sea-pieces are of the usual amount and variety; and there is more than the average number of figure subjects, all more or less interesting.

The two places of honour, at the north and south ends of the room, are occupied by group pictures, illustrative of the Royal Sports at Balmoral, by Carl Haag, "Hofmaler" (*Anglice*, Court Painter) to H.S.H. the reigning Duke of Saxe-Coburg and Gotha, which will attract more than ordinary attention. The first, entitled "Morning in the Highlands, the Royal Family ascending Loch-na-gar," represents the Queen, with Prince Albert, and the Royal children, seated on their ponies, and scrambling up the steep side of a rugged hill, attended by the usual retinue of gillies, dogs, &c. The Queen occupies the centre of the picture, half way up the pass; the Prince-Consort is on the topmost pinnacle; the younger members of the family, and the attendants, forming a winding train below. The portraits have been carefully studied, and, for the most part, are happy in expression, and considerable ability has been displayed in the arrangement of a rather difficult subject: not, however, without betraying some symptoms of effort. The companion picture, "Evening at Balmoral—the Stags brought Home," represents the arrival of a party of gillies before the porch of the Palace of Balmoral, leading a stout mountain pony, upon whose back the antlered victims of the day have been carried in from the scene of action. The gillies are occupied in unpacking the stags, and casting them to the ground for the inspection of her Majesty and her Court, who, in full evening costume, have apparently just left the dinner-table for the purpose. Prince Albert, in a spirited attitude, lays his hand upon the antlers of a noble stag, which he points out with an expression of pride to the Queen and Prince of Wales. Close behind the Prince stand the Prime Minister and another nobleman; other members of the Royal family, and of the Court circle, complete a very effective group — the scene being illumined by the glare of torches, which the gillies held aloft at various points. This is in all respects a more pictorial and effective production than the other. The artistic execution of the details in both is admirable, and the colouring clean and luminous. The "Morning" subject has been painted by command of Prince Albert; the "Evening" by that of her Majesty.

The same artist has several other works, in different styles, and of more or less merit. "The Ruins of the Temple of Vesta, at Tivoli" (29), is sober and delicate in tone. "A Roman Monk—Study of a Head" (114) wants character in the expression, and the roundness and reality of life in the structure of the head. "Un Campagnole" (131) represents a mountaineer, standing leaning against a pole, and surveying the surrounding country from an elevated spot. Not a badly-painted figure, but very like one which we have seen before, and engraved.

Gilbert has not been idle during the recess; and the result of his labours are such as to support and enhance his well-earned reputation. "The Rosary" (6) is a small study of a female, half-length, kneeling at a *prie-Dieu*, and telling her beads—treated with sobriety of colouring, and a happy freedom from affectation in the expression.

"Hudibras and Ralpho in the Stocks" (18) discovers a rich vein of humour, and a nice appreciation of character, entitling the picture to honourable companionship with the same artist's "Sancho Panza," in the British Institution. The colouring is delicately and agreeably balanced.

The work, however, upon which most labour and study have evidently been bestowed is "The Drug Bazaar at Constantinople" (24), which is admirably real. The Bazaar is a long gallery with a vaulted roof, the narrow passage beneath which is flanked with wooden stalls, within which turbaned Mussulmans sit, cross-legged, waiting for custom. The crowd of pedestrians hurrying to and fro in the midst, comprise an endless variety of character, occupation, and costume, amongst which are prominently seen, near the spectator, a Turkish woman of the middle rank, with her black slave, both enveloped in their white veils or *yashmaks*; and an Armenian carpet vendor. But it would be impossible by description to give an adequate idea of the amount of detail crowded into this production, or to do justice to the richness of colouring in which the whole is produced. "A Turkish Water-carrier, Constantinople" (137), is a clever study of a single figure.

"The Witch Acrasia charming her Lover in the Bower of Bliss" (66), by J. Stephanoff, is a florid

"HUDIBRAS AND RALPHO IN THE STOCKS."—PAINTED BY JOHN GILBERT.

But Hud'bras, who scorn'd to stoop
To Fortune, or be said so droop;
Chew'd up himself with nods of verse,
And sayings of philosophers.

Quoth he, "Th' one half of man, his mind,
Is, *sui juris*, unconfined,
And cannot be laid by the heels,
Whate'er the other moiety feels.

'Tis not Restraint or Liberty,
That makes man prisoners or free;
But perturbations that possess
The mind, or examination . . ."

Quoth Ralph, "How great I do not know
We may by being beaten grow;
But none, that see how bare we sit,
Will judge us overgrown with wit."
Hudibras, Part I., Canto 3.

NEW CHURCH IN THE PUNJAUB.

This edifice, which has recently been erected at Sealkote, in the Punjaub, acquires additional interest from its being the first Protestant church opened in that province, the latest of our Indian acquisitions. The good work was commenced in 1852, when the foundation-stone was laid by the Archdeacon of Calcutta. At this time, only about £600 had been raised by subscription, and there was little hope of aid from the Government, who, however, shortly afterwards, promulgated a wise and comprehensive scheme of church building. For this boon, the European residents are mainly indebted to the advocacy of the present Governor-General of India, who has uniformly evinced a pious sympathy in the work, and largely aided by his own contributions. Assistance has also been derived from unexpected sources. Through the interest of Mr Inglis, the district officer, the bricks of a ruined little fortress (dismantled on account of the rebellion of its owner, an influential Sikh), were placed at the disposal of the Church-building Committee, in quantities sufficient for the entire structure. Another timely gift was tendered by the Maharajah of Cashmere. Sealkote joins the Jummoo frontier, and Gholab Singh has always manifested a friendly interest in the concerns of the Station. Admiring the exertions of his Christian neighbours in the cause of their religion, this heathen Prince offered gratuitously as much wood and lime as might be needed for the Church; and the offer was thankfully accepted, by permission of Government. It should be explained, that the above materials are extremely scarce in the Punjaub, and can only be procured in large quantities from the Jummoo territory; and the wood and lime which the Chief thus generously gave is valued at not less than £1000.

CHURCH, RECENTLY ERECTED AT SEALKOTE, IN THE PUNJAUB.

The Church having been completed, was opened by the joint chaplains of the Station, the Rev. C. Sloggett, and the Rev. Cave Brown, on the Sunday before Christmas-day last; and Divine Service is now regularly performed in the sacred edifice. The style of the architecture is Decorated Early English. The windows are filled with stained glass, procured from Delhi. The gabled roof is ornamented with trusses and pendents, coloured in imitation of dark oak; whence punkas (swinging fans) have been suspended. In the aisles are niches and recesses, some of which are occupied by tablets to the memory of those who fell at Chillianwallah and Goojerat. The flooring will shortly be laid with stone to be obtained from the Jummoo territory. A private subscription is in progress for adding a portico, tower, and belfry, with chimes; and one large bell has already been supplied from the Ferozepore foundry.

To adapt the Church to the climate, the clerestory windows are made to open; the aisle windows have only their upper portions glazed, the remainder being filled with Venetian blinds, or, in the sultry season, with "tattas," or wetted grass-mats. There are openings along the ridge piece, and at the ends of the roof.

The Rev. Mr. Sloggett has, with truly pastoral zeal, aided in the good work by collecting subscriptions, and acting as Secretary of the Building Committee. The Church was designed by Lieutenant Harley Maxwell, who superintended the works. The masons and carpenters employed were all natives of the Punjaub, and Sikhs by religion. The accompanying View of the edifice is from a photograph.

affair. Above, in mid air, is a numerous group of nymphs and cupids, very striking as to colour, but inaccurately drawn; below, the lovers sleeping in a bower of roses; the gay plumage of a peacock giving additional brilliance to the scene.

Miss E. Sharpe produces a touching illustration of womanly weakness, in its weakest point—personal vanity (92). The incident is related in a German romance of the Lady Richildi proceeding to consult the magic mirror, trusting to be assured that she is still the most beautiful woman in Bruant, when the silken curtains draw apart, and present to her view the still more beautiful image of her step-daughter. The uplifted hands, no less than the perturbed features, betray the poor lady's agony of mind.

Jenkins's study, so called, of a "Russian Serf" (97), is rather *couleur de rose*. A female, not ill looking, apparently well-fed, and of contented aspect, clothed in woollen drapery of coarse material, but gracefully arranged, bears a pitcher of water on her shoulder, in classic attitude; whilst a young, blue-eyed slave—her son, perhaps frolics near her, smiling, unconscious of the terms of the "protecting" power which rules his after destiny.

"Valentine's Day" (121), by O. Oakley, is a clever production, though we are not quite clear about the story intended to be told. The scene is in a gipsy encampment; where two young females, and of the tribe are seated, with valentines, of the transfixed-heart style, open beside them. Their looks evince the mingled surprise and satisfaction which they experience at the perhaps unexpected compliment, whilst an elder female looks on, from behind with a mysterious, and not altogether contented expression.

"The Festival of the Popinjay" (144), by Frederick Tayler, is a large picture, full of figures, illustrative of a well-known passage in "Old Mortality."

The Green Marksman, as if determined to bring the affair to a decision, took his horse from a person who held him, having previously looked carefully to the security of his girths and the fittings of his saddle, vaulted on his back, and, motioning with his hand for the bystanders to make way, set spurs, passed the place from which he was to fire at a gallop, and as he passed, threw up the reins, loosed one foot upon his saddle, discharged his carabine, and brought down the Popinjay. *Vide Old Mortality*, Vol. I., chap. 8.

On the left is Lady Margaret Bellenden, seated erect and stately on her favourite palfrey, and wearing still the widow's weeds which the good lady had laid aside since the execution of her husband for his adherence to Montrose; next to her, her grand-daughter, the fair-haired Edith—looking like "spring placed close to winter." The lumbering state equipage of "the Duke," so particularly described by Sir Walter Scott, with its jolly-looking occupants, forms a conspicuous object on the left. On the right are troopers, soldiers of the Guards, with their band, &c. The grouping is scattered, but effective; displaying in its several parts a great variety of colours. The same artist has a little picture of a "Highland Shepherdess" (232), which is pretty, but rather formal in treatment.

"St Patrick's Day in the Morning" (165) and "St. Patrick's Day in the Evening" (226), by H. P. Riviere, are two sketches, not devoid of spirit and humour, though rather coarsely treated. In the former a raw Irish lad is sallying forth upon the adventures of this adventurous day, his sweetheart being a shamrock in his button-hole, exclaiming, "Success to St. Pat'," &c., in the words of the song. In the latter, the happy pair are dancing "a right Irish jig," also according to the song.

"The Top of the Morning to you" (226), by the same artist, is another bit of low life, blocked off without effort at qualification.

"The Contrivance" (169), by T. M. Richardson, is a window scene, taken from within the tap-room rent, with a lady playing a lute—produced with high finish. The same artist has a larger picture in a very different style, a "View of the Town of Lauenberg, in the kingdom of Poland," which is fine, bold and characteristic, with masses of buildings in various parts; executed with a free and feeling hand.

Margaret Gillies has several pleasing studies, finished with great miniature delicacy. "The Mourner" (182) breathes a tender sentiment, in harmony with the lines of Tennyson—

> I watch thee from the quiet shore—
> Thy strength to mine can reach,
> But in dear words of human speech
> We two can commune no more.

"Listening to the Nightingale" (276) shows us an extremely pretty face. The lady, however, has laid down her guitar, and ceased to sing, whilst she listens to her feathered rival.

Hunt has apparently cleansed his well-known ugly boy, who has served him as a model for so many humorous sketches, and has adopted a female subject, which he treats with no less poquancy of effect in "Diffidence" (258) we have a small girl, in a bright spotted frock, seated in a chair, plunging up her left shoulder [illegible] in the secret with awkward mixture of shamefacedness and pettishness.

No. 166 is a story without a title, of a girl looking upward with an earnest and intelligent expression.

On the same screen with the above is another clever study of a simi-lar class, by W. Hemsley, entitled "The Lesson" (287). In these little cabinet pictures everybody evidently tired of her studies, and anxious to be off to play with her doll.

But it is time we make mention of some of the principal Landscape subjects. Harding with Calcott, we have from his pencil a view, finished and the like view of the fine old city of "Basle" (9), taken from the bridge; and a view of "Eastgate-street, Chester" (45), done in a rich brown tone of shade, on an autumnal evening. "La Rue d'Arras," at Calais (77), is another architectural.

John Callow produces several capital sea-coast views: among others, "Yarmouth," and "Mount St Michael, Cornwall," besides some pretty shipping pieces. In the "Reet at Sotheal, July 28, 18—" (5) the effect of the rays of the setting sun upon the sails which hang lazily from the cross-trees, is bright, genial, and cheerful. "Shipping on the Humber, Hull" (110), is executed in a good healthy tone of colouring; the hay engravings, with her bright yellow paddle-boxes, forming the centre object, with novel effect.

Copley Fielding has numerous specimens, but of unequal merit; some of them betraying hasty execution. "Langdale Pikes, near Ambleside, Westmoreland" (16), is rather jottery in appearance. "The Clyde at Lowther" (20) is an effective view, with Shakspeare's Cliff in the distance. The "View over Menteith to the Highlands from Stirling" (30), "Over the Clyde from near Greenock," "Arran from Ardlamont," "Loch Tay, at the Head of Loch Tay, Perthshire," are conscientiously and successfully executed. In the last-named the arrangement of the plane in the foreground, with mountainous background, is [illegible] "A View of Snowdon" (101) must also be mentioned with praise.

Mr. W. C. Smith has a fine view, upon a large scale, and elaborately treated, of the "Bay of Uri, Lake of Lucerne" (61), taken from near Tell's Platte—the mountain character of this celebrated mountain gorge being well given. "Loch Lomond, from the Road to Inversnaid" (79), and "A Calm, Vessels off Northfleet Creek" (256) are characteristic sketches of objects near home.

J. Holland, amongst other coast or beach pieces, has one of peculiar historic interest, viz.—"The Britannia, [illegible] steamer, for Sir C. Napier, entering the Baltic, 1854." The morning is foggy, and the fleet are in close order, the flag-ship signalling to the rest. Success and honour attend them!

NEW PALACE AT BALMORAL.—The new buildings in course of erect on at Balmoral are rapidly progressing. The portion including apartments for the Princesses, Ministers of State, visitors, &c., has been roofed in, and the first story of the principal state-rooms has been built. The building will be fire proof, patent malleable iron beams being used. A portion will be finished in course of next autumn, but it is not intended that any part shall be inhabited during the present year.

ELECTRIC TELEGRAPH TO BALMORAL.—Through the liberality of Prince Albert, whose example in contributing £300 towards the extension of the electric telegraph to Aberdeen has been followed by the merchants and manufacturers of that city—there is now a certainty that the telegraph will be erected in the course of the present summer. The directors of the Deeside Railway Company are to have the telegraph extended to Banchory, and so to the Castle of Balmoral to Parmoss from about thirty miles, it is intended, we believe, to lay a wire to Balmoral, so that the Court may be in immediate communication with London.

THE ROYAL ACADEMY EXHIBITION.

YESTERDAY was the Private View of the Eighty-sixth Exhibition of the Royal Academy. Her Majesty was present before the nobility and critics were admitted, and it is said to have expressed her entire approbation of the Exhibition. All the artists, we observed, looked pleased, and there was an air of good humour about connoisseurs and professional critics, as if the Exhibition were, as a whole, one worthy of the position which English artists seek to support and advance. There can be no doubt of its being a good Exhibition, in spite of finding such men as Mulready and Millais, Dyce, Herbert, and Gibson absent as exhibitors. Maclise and Frith were never seen before to such advantage; Stanfield and Roberts sustain their old and well earned reputations; Lee and Sydney Cooper are on the move forward; Creswick has made a decided advance; Ward exhibits a great sense of colour; Frost is still nearer Milton's mark; Frank Stone betrays no falling off; Edward Cooke is once more in Holland; and, as for the outsiders—the men without the pale of the Academy—how much have they done, and ably done, to rival some of the best within the pale! Yes, it is an excellent Exhibition, in spite of a solitary Female Head from Sir Charles Eastlake; in spite of a professedly "unfinished" picture by Sir Edwin Landseer; and in spite of any great work from Webster, or from Egg.

Our readers will remember that the Exhibition is shown in three great rooms, leading into one another; in two offshoots, for Miniatures and Architectural Drawings; and in a kind of coal-cellar, for Sculpture. The principal room is to the east, facing the portico of St. Martin's Church; and there the places of honour are occupied by Eastlake's "Irene" (a female head so called); by Landseer's very large picture of "Royal Sports on Hill and Loch," by Frith's "Life at the Seaside;" and by Leslie's picture, from Sir Roger de Coverley, "Sir Roger and the Gipsies." Next to these, among the portraits of honour, we find Grant of the Life Guards, "Lord John Russell" facing Pickersgill's bad full-length of "The Archbishop of Canterbury." In the Middle Room, the best places are occupied by Maclise's "Sisters;" Frank Stone's "Old, Old Story," Creswick's "Passing Cloud;" Landseer's "Dandie Dinmont, the favourite old Skye Terrier of her Majesty;" "The Chequered Shade" of Lee and Cooper; Edward Cooke's "French Lugger Running into Calais," and Ward's "Last Sleep of Argyll." Passing westward, into the West Room, we observe that the Hanging Committee has determined to display the places of honour to Hannah's "Countess of Nithesdale," "Phillip's "Seville Letter-writer," Dobson's "Charity of Dorcas," "Le Jeune's "Christ Blessing Little Children," Egg's "Sophia Western Face," Roberts's small picture of "The Frith of Forth," and Charles Collins's pre-Raphaelite, "Thought of Bethlehem."

If we had to characterise the Exhibition, we should say that Maclise and Frith excel in their best pictures, as a whole, is unquestionably Mr. Frith's "Life at the Sea-side"—a picture of such surpassing merit, that it is fairly worth any other half-dozen pictures in the Exhibition. In Scriptural subjects, and in the higher order of painting, Dobson and Frost most unmistakenly take the lead; in Landscape, Roberts and Stanfield, Lee and Creswick, Cooper and Cooke, are still pre-eminent—though there is an Anthony in the West Room (his only picture), "A Solitary Pool," that is more than up to the level of the best of them; in History, Ward and Hannah may be named together; in Portrait-painting, Grant takes the lead over all competitors—his full-length of Lord John Russell being by far the finest portrait in the Exhibition. He has this year outdone (no easy matter) Sir Thomas Watson Gordon, though he is followed hard, but in a different way, by Boxall. Strange to say, Grant is not good in his female portraits—his best is a full length, in black, of Mrs. Percival Heywood. In the Miniature and Crayon Room, Ross and Thorburn reign without a rivals likely just yet to rob them of sitters. Though we must own that the "Lady Sarah Choimondeley" of Mr. R. J. Wells, is all but up to the Thorburn and Ross level. Among the Crayon portraits, we miss Richmond and Watts, but are glad to find a new exhibitor of successful practice—a Mr. Charles Martin, the son of the distinguished painter so recently deceased. In the Architectural Room there is nothing in point of excellence to be mentioned in the same breath with the three Pen-and-ink studies of Mr. E. Falkener: three sheer drawings are to be seen in any exhibition where they are done with the skill of an architect, the knowledge of an antiquary, and the feeling of an artist. Of the Octagon Room we are unwilling to speak: our inspection of it was a hurried, unrewarded one. In the Sculpture Room, the chief point to be noted is that there is no large portrait statue, beyond that of Sir Robert Wolpole (by Bell), for the New Houses of Parliament. Mr. Jones's busts of the Queen and the Prince, to be presented to Sir Dargan, occupy the principal place in the room, and are likely just yet to rob them of sitters. Though we must own that the "Lady Sarah Choimondeley" of Mr. R. J. Wells, is all but up to the Thorburn and Ross level. Among the Crayon portraits, we miss Richmond and Watts, but are glad to find a new exhibitor of successful practice—a Mr. Charles Martin, the son of the distinguished painter so recently deceased. In the Architectural Room there is nothing in point of excellence to be mentioned in the same breath with the three Pen-and-ink studies of Mr. E. Falkener: three sheer drawings are to be seen in any exhibition where they are done with the skill of an architect, the knowledge of an antiquary, and the feeling of an artist. Of the Octagon Room we are unwilling to speak: our inspection of it was a hurried, unrewarded one. In the Sculpture Room, the chief point to be noted is that there is no large portrait statue, beyond that of Sir Robert Wolpole (by Bell), for the New Houses of Parliament. Mr. Jones's busts of the Queen and the Prince, to be presented to Sir Dargan, occupy the principal place in the room, and are likely just yet to rob them of sitters. Though we must own that the "Lady Sarah Choimondeley" of Mr. R. J. Wells, is all but up to the Thorburn and Ross level. Among the Crayon portraits, we miss Richmond and Watts, but are glad to find a new exhibitor of successful practice—a Mr. Charles Martin, the son of the distinguished painter so recently deceased. In the Architectural Room there is nothing in point of excellence to be mentioned in the same breath with the three Pen-and-ink studies of Mr. E. Falkener: three sheer drawings are to be seen in any exhibition where they are done with the skill of an architect, the knowledge of an antiquary, and the feeling of an artist. Of the Octagon Room we are unwilling to speak: our inspection of it was a hurried, unrewarded one. In the Sculpture Room, the chief point to be noted is that there is no large portrait statue, beyond that of Sir Robert Wolpole (by Bell), for the New Houses of Parliament. Mr. Jones's busts of the Queen and the Prince, to be presented to Sir Dargan, occupy the principal place in the room, and are likely just yet to rob them of sitters.

When one who has seen the Exhibition chances to meet with a visit to another who has not seen it, the question is always, "What has Landseer got?" We will answer the question at once, and leave it to us by the public. He has two figures, both connected with the Queen: one is the Dandie Dinmont dog, to which we have already referred as being the property of her Majesty, attended by the Viscountess Jocelyn, stepping from a boat, to inspect the produce of the Princess's sport on hill and loch. The Prince, on foot, and the Prince of Wales, on a pony, are both by the side of the lady, ready to receive her Majesty. The foreground is of course, strewed with dead game, painted in the best manner; but, as a whole, we confess the picture is not altogether to our liking. On the frame we observe the word "unfinished," on a gilt ground. The picture is to be engraved. The Dandie Dinmont dog picture has a hedgehog in the foreground—the whole in Landseer's happiest mood.

Taking the pictures—as the Duke of Wellington always took them—in the order of the Catalogue, we would direct attention to the following (the Nos. having already mentioned): 68, Head of Mr. Macaulay" by Mr. Grant—an admirable portrait painted on the Raebarn principle; 70, "Beckerbring" by G. Smith—a small picture by no common hand; 73, "The Silver Reel," by R. Lee; 85, "A Villager's Offer," by Calcott Wehnert, R.A.—a fine effect; 94, "Lake Scene," by Creswick, R.A.; 102, "Le Rocheble," by Stanfield, R.A.; 200, "Church of Santa Maria de la Saute, at Venice," by Roberts, R.A.; 205, a portrait (Lady Dunbar), by Boxall, A.; 212, "An old French Interior," by Hemsley; 216, "The Last Sleep of Argyll," by J. C. Hook, R.A.; 220, "The Landing," by Cope, R.A.; 227, "A Study," by Egg, A., and 233, "The Flight of the Persecution of the Christian Reformers in Paris" by Hook, A. In the Middle Room—"Harvey's hand-looker-by," observe 254, "Norman Abbey," by Cobbold; 257, "Dolgelly," by W. H. Hunt: and 260, "The Old Old Story," Stone, A.; 263, "Zuyder Zee Boiler"—a picture by Cooke, A.; 267, "First Class, the Meeting," by Frost, A.—a picture of considerable merit; 269, "Mr. H. Solomon," a small but masterly portrait by Grant; 270, "Christ Blessing Little Children," by Le Jeune, A.—a picture, by W. H. Hunt: and 280, "Evening in the Meadows," by Linnell, Sen.

Her Majesty expressed a wish to become the possessor of Mr. Frith's picture, as we mentioned in our column or Table Talk, a few weeks ago. It was a commission from Mr. Lloyd, the publisher, at the price of one thousand guineas, and her Majesty, unless she is very urgent, is not likely to become its fortunate possessor.

APPREHENDED LOSS OF THE "CITY OF GLASGOW" SCREW STEAMER.—The fate of this Liverpool and Philadelphia steamer, so long a missing ship, excites the most painful attention at Lloyd's, where, day and hourly, anxious inquiries are made by the relatives of the people who sailed in her—numbering in all no fewer than 480. She sailed from the former port on the 1st of last March, since which no tidings have been heard of her. An impression prevails that she has been beset by the ice, large masses of which are known to be drifting about on the banks of Newfoundland and the coast of North America. A New York correspondent, writing on the missing steamer, says an opinion prevails there that she may have been in the ice and damaged her propeller, and stood away for the West Indies to procure repair and replenish the stock of provisions and water.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—THURSDAY.

ACCOMMODATION FOR OUR TROOPS ABROAD.

The Earl of ELLENBOROUGH called the attention of the Government to a statement made by a correspondent of one of the morning papers, to the effect that no preparations had been made for the proper reception of our troops upon their arrival at Malta or Gallipoli, and that they were consequently exposed to much privation and inconvenience.

The Duke of NEWCASTLE said he was happy to be able to give the statement a most complete contradiction. So far from the troops having suffered from the want of due preparations, in the places referred to, the most satisfactory arrangements for their reception were made both by our Consuls and Commissary officers.

The Earl of HARDWICK reminded the Earl of Clarendon that the statement he had made on a former evening in respect to the movements of the Russian fleet in the Black Sea, was completely contradicted by an official statement recently published by the Russian Government in the *St. Petersburg Journal*, by which it appeared that the Russian fleet had been scouring the Black Sea, and had conveyed troops from various forts on the Circassian coast to Sebastopol, with the view of strengthening that garrison.

The Earl of CLARENDON said that he had made the statement upon the authority of a despatch received from Admiral Dundas, which statement he believed to be correct. The facts were these. An English steamer which had been sent to survey the Circassian coast observed four small Post-office steamers of Russia employed in conveying some troops from a few small forts on the coast which had been dismantled and destroyed. When those steamers saw the English vessel, they immediately made for the nearest Russian port, having been pursued for a time by the English steamer. That circumstance, however, took place on the 16th March, and war was not declared until the 28th; so that it was impossible that the English steamer could act otherwise than it did.

The Marquis of CLANRICARDE hoped that all the despatches received upon the subject would be immediately placed upon the table of the House, inasmuch as the Russian Government had published an official statement which differed widely from that of the noble Earl. Although the formal declaration of war had not been made at the time alluded to, yet a declaration of war had virtually been made previous to that date, by the fact of our Government having sent a message to the Governor of Sebastopol to keep the fleet in harbour, for, if the ships were seen in the Black Sea, the British fleet would either compel them to return to port, or would destroy them. He (the noble Marquis) thought that our power in the Black Sea would have been greatly increased if our fleet had destroyed these forts on the Circassian coast, instead of permitting the Russians to have done so (Hear, hear).

The Earl of CLARENDON consented to the production of the despatches.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

On the motion of Mr. HAYTER, a new writ was ordered to be issued for Flintshire, in the room of the Hon. Mr. Mostyn, who, since his elevation, has succeeded to the Peerage.

Mr. REID gave notice that on Tuesday next he would call attention to the conveyance of the civil and military servants of the Government to the East.

Mr. PACKE gave notice that, on Tuesday, the 9th of May, he would call attention to the question of Church rates.

In answer to a question from Mr. M. Gibson, Lord J. RUSSELL said, that, at present, he was only informed that the goods of Sir H. Seymour would not be allowed to be taken from St. Petersburg; but he would soon give a more definite answer to the right hon. gentleman.

OXFORD UNIVERSITY BILL.

On the motion that the Speaker do leave the chair for the House going into committee,

Mr. HEYWOOD moved that the bill be committed to a select committee. The hon. gentleman said that the Universities had ceased to be national institutions, and, like all monkish foundations, required extensive reformation. He complained that the private tutors, on whom really devolved the work of education, were not consulted in the bill, as he thought that where they possessed the requisite learning and ability, they should be eligible to Professors' chairs. Brasenose College was, in a great measure, connected with the county of Lancaster; and in the case of what was called Hulme's Exhibition, the property originally bequeathed for it being greatly increased, about £60,000 was collected, with which it had been expected that new scholarships would have been created; and the authorities of Brasenose would not allow of it, but insisted that the money should be expended in the purchase of Church livings. He was opposed to the system of granting scholarships and fellowships to persons of particular counties, and to the practice of compulsory examination. Unjust as was the exclusion of the Dissenters from the advantages of the University of the people, it also rendered impossible those reforms which would, on the contrary, be greatly benefited by a free and open election of the University officers.

Mr NEWDEGATE thought that a great number of the members present were not acquainted with the constitution of the University of Oxford or with the nature and extent of the privileges of which it was now sought to deprive it. The hon. member read the recent protest of the Heads against the measure—a protest which had been signed by 500 members of the University.

In the course of the discussion, Sir. DISRAELI said that inasmuch as a question affecting the interests of the University of Oxford was involved in the present bill, he should not oppose it, but that the latter reform should not also be postponed.

The House having divided, the numbers were—For going into committee, 179; against it, 89: majority for going into committee, 82.

The committee was then proposed.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

There being no business before the House, their Lordships adjourned a few minutes after five o'clock.

HOUSE OF COMMONS.—FRIDAY.

In reply to Sir J. Walsh, Sir J. GRAHAM entered into some details as to the number of troops which had been sent from England since the 8th of February; and as to the facilities which already existed for the rapid transport of soldiers and of military stores.

In reply to Mr. D. O'CONNELL, Sir J. GRAHAM stated that, according to Act of Parliament, it was necessary that the service performed by naval chaplains should be in accordance with the Ritual of the Church of England; and he was not prepared to advise any alteration in the law upon that subject.

THE ALLIED FLEETS.

In reply to a question from Lord D. Stuart, Sir J. GRAHAM detailed the circumstances under which a certain number of Russian troops were conveyed from the coast of Circassia to Sebastopol, which operation had been witnessed by the vessels of a British steamer, but the Commander of this vessel, acting under instructions, did not conceive himself bound to interrupt the progress of those operations; and he (Sir J. Graham) was prepared to maintain the propriety of that course—this movement, on the part of Russia, having been made previous to the declaration of war.

In reply to Lord D. Stuart, Lord J. RUSSELL stated that Austria had agreed with the Porte that the troops of the latter should not occupy Servia, except in case of the entrance of Russian troops into Servia, or in the event of an insurrection.

RECEPTION OF OUR TROOPS AT GALLIPOLI.

In reply to Mr. D. Seymour, Mr. S. HERBERT stated that the reports which had appeared in the public papers respecting the reception of the British troops at Gallipoli were incorrect. The reception had been as satisfactory as the rapid transit of the troops rendered possible, and no blame was to be attributed to the Commissariat officers. He understood the duties of foreign newspaper correspondents to be the writing of graphic pictures for the perusal of the English reader, and not the furnishing of official information to occupy the serious attention of that House.

THE GREEK INSURRECTION.

Mr. COBDEN asked Lord J. Russell, whether the Government intended to lay before Parliament any papers relating to the insurrection of the Greek Christians in Turkey, and explanatory of our present relations with the Court of Athens. The honourable gentleman censured the conduct of the Government in the matter, and characterised its decree on the subject, as worthy an Hebrew cat parallel with the edict of Nantes.

Lord J. RUSSELL said, it was the intention of the Government to lay before the Parliament papers relating to the question as speedily as possible. The noble Lord described the Greek insurrection as inspon-

tuneous and unsystematic, and as another effect of the unscrupulous ambition of the Emperor of Russia.

Mr. Bright insisted that the interests of British commerce had been sacrificed by the conduct of our Ambassador at Constantinople.

Mr. Layard said that, although the Greeks residing in the Turkish dominions had the advantages of Turkish subjects, they refused to pay even the local taxes which the Turks themselves were bound to pay in Turkish coin. Their complaint was, therefore, of a most frivolous kind.

Mr. Gibson complained that, notwithstanding the Orders in Council, that neutral and foreign vessels might be allowed to sail from a British or any other port up to the 10th of May, yet our vessels had taken ships under the foreign flag before the 10th of May had arrived. The right hon. gentleman referred particularly to the case of the *Ann M'Alister*, which had landed last year at a Russian port for an English port, and that they should not be seized as prizes of war. By the law of nations, the *Anne McAlister* had nothing to fear from England or France, as her cargo was on board before the declaration of war. The effects of Sir Hamilton Seymour were not on board that vessel, but on shore, and would, under any circumstances, be allowed to pass.

Lord D. Stuart called the attention of the House to the dilatory measures pursued by the Government in the prosecution of the war. And said it was his opinion that we should have made preparations for war here and abroad for the reception of our troops in the East, before the declaration of war was promulgated.

In the course of some further discussion, Lord J. Russell said that Sir H. Seymour's effects had not been seized or confiscated at St. Petersburg. They were only prevented being put on board a vessel.

The subject having dropped, the House went into Committee of Supply, when £16,024,100 Exchequer Bills were voted.—Adjourned.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 27.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches
	Inches.	°	°	°	°	°		Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 29·53 inches at the beginning of the week, to 29·44 inches by the morning of the 22nd; increased to 30·44 inches by the morning of the 26th; and decreased to 29·81 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29·956 inches.

The mean daily temperature was below the average on every day, except on the 21st, when it was 39° nearly, exceeding the average by 12° nearly. It fell to 4l° on the 22nd, to 4l° on the 23rd and 24th, and to 40° only on the 25th.

The mean temperature of the week was 46·1°, being 2·1° below the average of the corresponding week during 38 years.

The range of temperature during the week was 44·2°, being the difference between the highest reading of the thermometer (71·9°) on the 21st, and the lowest (27·5°) on the 25th. On this day the lowest reading of the thermometer is placed on grass, was 13°.

The mean daily range of temperature during the week was 15·3°. The least was 8° on the 22nd; and the greatest 24·9° on the 25th.

Rain fell during the week to the dep h of half an inch.

The weather throughout the week has been dull, and the sky has been mostly overcast. The wind has been almost constantly from the N.E quarter, and blowing hard.

James Glaisher.

Lewisham, April 28th, 1854.

Health of London.—During the week ending last Saturday, the births of 1,168 children were registered in the metropolitan districts; the average num e r in the nine corresponding weeks of the years preceding years was 1,047. The number of deaths registered during the same week was 1,021, showing an increase of 106 upon the preceding week. The average number in the ten corresponding weeks of the years preceding years, corrected for the increase of population, was 1,000. Therefore, the actual number exceeds the estimated by nearly 100 to measles, 41 deaths are referred to diarrhœa, 28, and to hooping-cough, 33: the number of deaths registered from the same diseases last week, were 34, 18, and 63, respectively.

The May Meetings or Nine Weeks.—Next week the month of May begins, and Exeter-hall will be filled each day, and even twice in a day. The societies which meet there in that week have an annual income of about £500,000. The Wesleyan Missionary Society will fill the hall on the morning of Monday, the 1st of May, and that of the Church of Scotland in the evening; the Church Missionary Society on Tuesday, both morning and evening; the British and Foreign Bible Society on Wednesday; the London City Mission on Thursday morning, and the Sunday School Union in the evening; the Society for the Promotion of Christianity among the Jews on Friday morning, and the Religious Tract Society in the evening.

St. Marks Hospital.—The seventeenth anniversary of this excellent charity, and the opening of the new Hospital, just erected in the City road, were celebrated by an anniversary dinner at the Albion Tavern, Aldersgate street, on Tuesday, St. Mark's Day. The Right Hon. the Lord Mayor presided; and in proposing "Prosperity to St. Mark's Hospital," the Chairman very advocated the claims upon the institution for increased support. Since the first establishment of the infirmary in 1835, upwards of 8,000 patients had been attended to; the number of applicants was increasing, there having been no less than 6,000 patients received during the past year, of whom 283 were cured, and 242 much materially relieved. But, withstanding there had been several very liberal donations towards the building fund, a further sum of about £2,000 was required before the committee could fully carry out their intentions with regard to the institution. The toast was drunk with great applause. The healths of the Chairman, the Treasurer (Mr. Mastermann, M.P.), the Auxiliary Society (a society of working men who have experienced the benefits to be derived from the in-titution, and who annually subscribe about £25 to the funds of the parent charity), and its treasurer, Mr. Alderman Copeland, were then drunk. Next followed the healths of the members, Messrs. Daniell; and Mr. Salmon, the founder of the institution, to whose unwearied exertions in its behalf ample testimony was borne by several speakers. A variety of other toasts were drunk. The report stated that Her Royal Highness Prince Albert had contributed during the past year the sum of £25 to the funds of the hospital, which was hoped would lead to a more extended recognition of its claims by the higher classes of the country. There was now, and a noble contribution of £17 17s. from a body of workmen in the employ of Messrs. Broadwood, several of whom had themselves experienced the benefits of the institution. The munificent subscription had also been contributed, anonymously, towards the building fund; yet the demands upon the charity, and the extended sphere of its benevolence, rendered the increase of its annual income indispensable. The sum realised during the evening amounted to £1,600, including £1,111 towards the building fund.

Moses Moses, the Receiver of Stolen Property.—The cash deposited at his bankers' is stated to be but little short of £20,000. The principal property already recovered remains packed in large wicker baskets, in vaults under the Mansion-house, and from its varied character, gives the place the appearance of an exhibition. The prisoner remitted his premises of a few cab proprietors; and, from the peculiar construction of them, they appear to have been admirably adapted for the felonious purposes to which they have been applied. In the course of the multifarious inquiries instituted by the police, they have discovered that an organised gang of cabmen exists, ready, upon all occasions, to assist in the pilfering of London warehouses at midnight. In many instances the vigilance of the police has been frustrated by their carrying sliding plates, bearing different numbers, and substituting one plate for another, in order to prevent their being traced from p ace to place. The detectives have just made the discovery; and a communication has been made to the Excise respecting the reputed owners of these veh cles, which will lead, it is expected, to important disclosures. It has been ascertained that several vessels, laden wi h stolen goods, are now on the high seas for Australia; and measures have been adopted to secure the booty.

CHESS.

TO CORRESPONDENTS.

F. A., Chester.—The "stifled mate" is not so uncommon in actual play as you suppose; and the enemy's sent. It useless, for Black throws away an easy w n ng game by playing his Queen to Q Kt 7th, instead of giving the obvious check w th her at R 5 th.

E. B. We shall with pleasure find you every assistance in our power, but your endeavours are not likely to be advanced, nor our readers edified, by the publication of such a game as that received

F. S. A.—1. It is a copy of the ancient MS work on Chess by Jacobus de Cessolis—one of which may be seen in every great library of Europe. 2. For an account of the magnificent set of Chess-men said to have belonged o Charlemagne, which were preserved at the Abbey of St. Denis, and are now in the Archæological Museum of Cluny, see the "Archæologia," vol xxiv.

M. de R., Circle des Echecs, Paris.—A private communication has been forwarded ten days since.

J. D., of Bruges.—No. 1 admits of an easy mate in three moves No. 2, a neat and ingenious, and shall appear shortly

A. F., of Florence. Problems (with answers) safely received, and very acceptable.

Argus, T.—*The New Series of the Chess Player's Chronicle* began last year. Your best course is, therefore, to commence with that Volume, and order the Monthly Numbers for this year to be sent as they come out.

Ignotus, Clifton.—The Bristol, of Bridgma. No. 850 appears to be—1. R takes Q P., and then discovering Checkmate by playing the Kt to K 5 th, or Q Kt 3rd, according to which of the Rooks Black takes. 2. Your solutions are all wide of the mark.

Sigma B., Rome.—See our notice below to "Foreign Correspondents." Two letters addressed to you must be sent, have been return d to the Dead Letter Office, and it is useless to write again until you favour us with a more regular address

J. E. R., Stuttgarde.—1. It's common custom abit to run his name into a bull "Stuttgarde" in the Germ n vernacular, tongue. 2. Problem 39 cannot be solved in four moves.

J. R., of B.—1. To do away with all doubt on the subject of the integrity of Mr Horwitz's Problem, No. 829, it has been suggested that a *White Pawn* should be added at Wh te's K B 5th square. It appears to us that this slight addition will make the stratagem perfect! We are compelled to publish the solutions by Correspondents as they reach us—those sent first appear first.

Old Subscriber.—There is but one St. George's Chess-club in London. This Club is at No. 38, St. James-street. Candidates for admission must apply by letter, addressed "to the Committee of the St. George's Chess-club" The whole of the solemn and gentlemanly ceremony of members

Cecil.—1 Those problems are best which most resemble actual end-games 2. Your attempted solution is quite a failure; by your move Q ch, P might be promoted indefinitely.

B. T.—Accept our warmest acknowledgments of your attention

J. S. Y., Dorchester.—It shall be seen next

Blue Cub.—The first game is cleverly played on both sides, and if the competitors are "young beginners," it is highly creditable to their cancel ors. The second has been writ en down to exhibit only as to the first attempts to tread the move

M. T., Wisconsin.—We are glad to hear that our suggestion respecting the introduction of a Chess column in "The Illustrated London News" has not been without effect and that the projectors of that Journal have made arrangements with M. de Rivière, the Honorary Secretary of the Paris *Cercle des Echecs* for a weekly supply of Chess matter. We have no doubt this arrangement will be mike beneficial to the periodical itself, and to the interests of Chess in France.

A. K., Arundel.—A player cannot so alter after moving his King.

G. G. C.—It shall be noticed on next week.

Solutions of Problem No. 529, by F. R., of Sir W. Grimshaw, S. S. A; A. H., of Bradford; P. Q. R., W. H., Gamma, Subaltern, Deuvon, Arnold, Vasikens, Munco, J. S. F., are correct

Solutions of Problem No. 530, by Agnes; F. R., of B; R. Pall, Devron, Liverpool; A. H., of Bradford, J. C. D. Ayla, Hastings, Lancaster, each are correct.

*** To Foreign Correspondents We request the attention of Correspondents from abroad to a resolution on the part, which subjects us to a good deal of needless correspondence and loss to many disappointment. We allude to their invariable practice of sending us only a general address, as "Paris," "Rome," "Florence," "Genoa," "Leghorn," &c., the consequence of which is that three letters out of four are directed by us, are, after a delay of months in the Foreign Post-office, returned to London. Every communication addressed to us which requires a private acknowledgment should be accompanied by an exact and unmistakable address, including both the name of the street and the number of the house to which the writer resides

Solution of Problem No. 529.

WHITE.	BLACK.	WHITE.	BLACK.
1. R takes Q B P	R takes Kt or (a)	3. P to K 8 sth (be- coming a Kt)	R takes K (best.)
2. Q to K Kt 5th	B to K Kt 2nd (best)	4. Q to Q B 4th (ch)	R takes Q
		5. Kt to K 6th—Mate.	

(a) 1. Q takes Kt
(The variations on Black's first move are too numerous for us to give.)
2. Q to K R sq

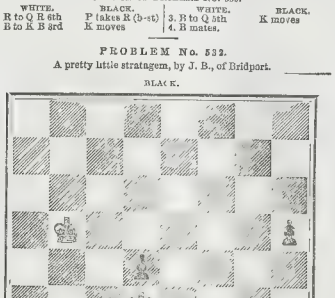
1. Q to K Kt sq (ch) Kt interposes
2. Q to Q B sq (ch) Kt interposes
3. Q to K R 4th—Mat .

Solution of Problem No. 530.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q R 6th	P takes R (b-st)	3. R to Q 3rd	K moves
2. B to K B 3rd	K moves	4. B mates.	

PROBLEM No. 532.

A pretty little stratagem, by J. B., of Bridport.



WHITE.

CHESS IN INDIA.

Brilliant little affair between Mr. Cochrane and the Brahmin Moheschunder.

(*Irregular Opening.*)

WHITE. (Mr. Cochrane.)	BLACK. (The Brahmin.)	WHITE. (Mr Cochrane.)	BLACK. (The Brahmin.)
1. P to K 4th	P to Q Rd (a)	15. Q B P takes Kt	K takes Kt
2. P to Q 4th	K Kt to Q B 3rd	16. Q to K R 5th (ch)	K to K sq
3. Q Kt to Q B 3rd	P to K 3rd	17. K Kt to K B 3rd	P to K 4th
4. P to K 5th	B to K 2nd	18. R to K Kt 3rd	P to K B 4th
5. K Kt to K B 3rd	Castles	19. Kt K 4th takes P (ch)	K takes Kt
6. B to K 2nd	P to Q Kt 3rd	20. B to K R 6th (ch)	K to R sq
7. Castles	P to Q B 4th	21. B takes R (discvch)	K to Kt sq
8. P takes P	Q Kt P takes P	22. B to K R 6th	Kt to K B 6th (c)
9. Q to K 2nd	Q Kt to Q 2nd	23. Q to K 8th (ch)	K to K R 2nd
10. P to B 5th (b)	P takes a P	24. B takes B	P takes Kt
11. P takes P	K Kt to Q 4th	25. Q to K R 7th (ch)	K to K sq
12. Q Kt to K 4th	Q to Q B 2nd	26. B to K Kt 5th	B to Q sq
13. K Kt to Kt 5th	Kt takes K P	27. B to K B 8th (ch)	And Black resigned.
14. Kt takes a K R P	Kt takes K B		

(c) As we have before observed, the "close" game, with its crafty lures and subtle ambuscades, is much more common in India than in this country. The daring and impetuous onslaughts of the European school, that, even after long acquaintance with the latter, so frequently put terror into better pleased, and more at home, with his Pawns are one step in advance and meet o. his hero pieces hidden behind them, than if he had a King, Queen, Bishop, and commanding power.

(b) Mr. Cochrane's treachant style is the one of all others to confound and overthrow a player of inferior tactics. In the present game, as runs through Mr Mosehunder's combined Pawns and pieces with such rapidity, that the latter is fairly bewildered, and has been completely carried off his legs by the very essence of the assault.

Mr. Cochrane's quiet and Mohesch under's self-possession, he might have retrieved his fortunes. He should have played the Queen to her Kt 3rd. While must then have abandoned his attack; and, being a gen nious, would have lost the game

CHESS ENIGMAS.

No. 868.—By Ricardo.

White: K at K 4th, Kt at Q B 2nd, B at Q R 4th, Kt at Q B 6th; Ps at K B 2nd, K 6th, Q Kt 5th, and Q R 2nd.
Black: R at K 6th; P at K Kt 4th, K 2nd, Q Kt 3rd, and Q R 4th.
White to play, and mate in five moves.

No. 869.—By B. W. F.

White: K at K R 5th, R at Q B sq, Bs at Q 8th, and Q R 3rd; Kt at K B 3rd, Ps at Q 2nd and Q Kt 2nd.
Black. K at K B 4th, Kt at Q Kt 2nd; Ps at K B 3rd and 5th, K 7th Q 2nd and 6th, Q Kt 6th, and Q R 4th.
White to play, and mate in five moves.

No. 870.—By Mr. W. Grimshaw.

White: K at Q Kt 7th, Q at Q sq, Bs at K B sq and K B 8th, Kts at Q 4th and Q B 7th; Ps at Q R 3rd and 4th.
Black: K at Q B 6th, Q at K R 6th, Rs at K Kt 4th and Q 3rd, Kt at K 4th; Ps at K 4th, K Kt 3rd at 7th, and K 3rd.
White playing first, gives mate in two moves.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

We were pleased the other day with the poetical and retrospective turn given to the present war by a distinguished English author. "This is not the first time," said our friend, "that the English will have fought on the banks of the Danube.

> Illustrious youths that left their native shore
> To march where Britons never marched before."

The great Duke of Marlborough carried our arms to the banks of that celebrated river, and won victories for us—happy preludes, I believe, of what the coming campaign will be by a more distant portion of the same stream. Addison, in his beautiful poem of "The Campaign," has much that is applicable to the present juncture. What was true of Queen Anne is equally true of Queen Victoria:

> To Britain's Queen the nations turn their eyes;
> On her resolve the Western world relies;
> Confiding still, amidst the dire alarms,
> In Anna's counc ls and in Churchill's arms.
> Thrice happy Britain, from the kingdoms rent
> To sit the guardian of the Continent.

It is as guardian of the Continent that this very war is entered upon by Great Britain. Nay, what was true of Louis XIV, is equally true of the Emperor Nicholas:

> Deluded Prince! how is thy greatness erost,
> And all the gaudy dream of empire lost.
> That proudly set thee on a fancied throne,
> And made imaginary realms thy own!
> Thy troops, that now behind the Danube join,
> Shall shortly seek for shelter from the Rhine.

Parallels are not always exact; but there is much in Addison's poem that may be applied to the present moment.

The author of "Pelham" and "My Novel" has been delivering a lecture at St. Albans, on the "Literary Associations of Hertfordshire." Sir Edward is a well-read man, and Knebworth is one of the finest seats in the county to which his lecture related; but, strange to say, Sir Edward has missed two of the most attractive points connected with places particularly referred to in his lecture. When mentioning Hitchin, he did not tell his hearers that old George Chapman, the translator of Homer, is called by Brown, the pastoral poet—

> The learned shepherd of fair Hitchin-hill.

When alluding to Hatfield, he should have remembered that in the church (so well seen from the rail) lie the remains of Richard West, the correspondent of Gray, and the most promising of all our young scholastic poets. Hertfordshire, we may observe, is particularly associated with Lord Chancellors. Here was one of Wolsey's seats; at Gorhambury Bacon lived; Somers had a house within its boundaries; and Panshanger was the property and re idence of Lord Chancellor Cowper.

We are glad to observe that a subscription is on foot for the purpose of erecting a statue in Edinburgh to the memory of Professor Wilson. It is undecided yet whether the statue shall be in bronze or marble, but it is settled that it is to form "an ornamental object in some prominent station in Edinburgh. As, in every public subscription, so much depends on the activity of the secretary, we are pleased at finding that Mr. Robert Chambers is already at work in that important office. We have no fear about the complete success of the subscription.

There is nothing, it is said, more remarkable in literature at the present juncture, than the unanimity of the press, in the propriety of the war. Pamphleteers were divided on the propriety of the campaigns of the Duke of Marlborough and Lord Peterborough. When Walpole was at peace—poets and prose writers incited him to war—*Pope*, Johnson, Akenside, and Thomson were all for a time—

> When Spain shall rob and France insult no more.

If we refer to publications of the period of the American war, or newspapers referring to what is called "the last war," we see, at every turn, how faction was divided, and how hot party spirit ran, both in print and in the House. Now our writers are unanimous, that our present war is a wise and necessary proceeding.

We are assured by Mr. Panizzi, in his report on the Library of the British Museum, just presented to the House, that "the necessity for the steps taken to enforce compliance with the provisions of the Copyright Act has been abundantly proved by the results." During the year 1851 publishers, who were in arrears, were required to forward the books due from them, but no proceedings, Mr. Panizzi informs us, were taken, and the number of articles received was 9871. When, in 1852, proceedings were taken, the number of articles received rose to 20,364. During the past year the number has further increased to 14,081. But as this, we are told, includes the receipt of arrears from the country, from Scotland, and from Ireland, it cannot be expected that the numbers should be so high in future. But, concludes Mr. Panizzi, no doubt with an eye to Mr. Bohn, "a considerable increase upon the previous years may be looked for, now that it is well understood that the provisions of the Copyright Act will be steadily enforced."

People are talking about the election on Thursday last, into the Royal Society. It was once an honour to belong to that learned body. Only really eminent persons were members. Like other institutions, it became easily abused. Candidates of every complexion were admitted to (what Pope calls)—

> Shine in the dignity of F.R.S.

Sir Joseph Banks was, it is said, too good-natured; Sir Humphry Davy, too inattentive; Mr. Davies Gilbert, too idle; the Duke of Sussex, too stupid; the Marquis of Northampton, too indulgent; as Presidents; and now we are told the Earl of Rosse is too strict. There are more candidates of distinction on the list than the law, on Thursday last, would allow to be admitted. Candidates, we are told, will be excluded of greater merit than hundreds already within the Society. We do not care for this. It was wrong to admit anybody on anybody's recommendation. As this was unchecked, out you will be able to admit more worthies in. The distinction of belonging to such a society chiefly consists in the rarity of the distinction. If the Order of the Garter was as common as the Order of the Bath, it would be less coveted than it is at present. When we see the letters R.A. attached to an artist's name, we know that he is one of forty chosen by his brethren in art, after a long knowledge of his works; but when we see the letters F.R.S., we find that there is no other present notion attached to this combination of letters than that the person is respectable, on a scale one degree higher than the famous "gig" principle of recognition.

CHEVALIER BUNSEN.

The departure of Chevalier Bunsen, who had so long filled with ability the post of Prussian Minister in London, will be a subject of regret to the literary and artistic circles. A short time since, the clever medallic portrait of the Chevalier, engraved upon the next page, was taken by Mr Alexander Munro, by whom it has been sculptured in marble: it will be found in the approaching Exhibition of the Royal Academy. Chevalier Bunsen is highly respected for his learning, for his sound sentiments, and genial manners. He was born in Germany in 1790, early distinguished himself for scholarship; won the friendship of Niebuhr and Neibuhr, and became eventually the successor of the latter as Prussian Ambassador to Rome; and subsequently represented his country in Switzerland and at the Court of St. James. He has written an elaborate work upon Egypt, a "Life of Niebuhr," and "Hippolytus and his Age."

With respect to the recent misunderstanding between the Prussian Ambassador and his own Court, it is now stated that Chevalier Bunsen has conveyed to the King of Prussia his determination not to remain in the service of his Majesty on any ambiguous terms, or as the instrument of a policy at variance alike with the true interests of Germany and of the Western Powers. He has, therefore, replied to the clandestine efforts to obtain his recall by placing h s resignation in the hands of the King, and by requesting to be relieved from the performance of duties which are neither consistent with his political opinions, nor with the firm alliance between Prussia and this country. At Berlin, it is thought that the resignation will be accepted promptly. Count de Bernstorf, Prussian Envoy at Naples, is spok n of as his successor or temporary successor. Meanwhile, M. de Bunsen is expected at Homburg in a few days.

FORT JOUABS ON THE BLACK SEA.—BLOCKHOUSES ON FIRE.

A CRUISE IN THE BLACK SEA.

(From a Correspondent.)

CONSTANTINOPLE, March 21, 1854.

We have just returned from a very interesting cruise in the Black Sea, rounding the coast of Georgia and Circassia, to reconnoitre the Russian forts; and, as it is the first time that coast has been visited by an English man-of-war, I send you few details.

We left Beicos on the afternoon of the 9th, with the French steamer *Cacique*, under our orders; and we having on board Capt. Brock, the surveyor, a civil engineer, Lieutenant Strunton, and Mr. Elcock, chief engineer, who had formerly been in the Russian service, and knew the coast well. We got to Sinope at 12 p.m., on the 10th; it was in just the same state as when we were last there. We went on, touching at Trebizond and Batoum, but heard no news of consequence; and on the morning of the 14th, found ourselves off the Russian fort, called Redoubt Kaleh. We went in close enough to make observations; when the Russians all ran to their guns, evidently not knowing what to make of it; but as they none of them pointed seaward, it was not very formidable. We next got to Soukum Kaleh, where there are a good many soldiers who have wooden barracks above the fort; they also ran down to their fort on seeing us, but they let us pass quietly. I have no time to go regularly all through the forts; but, on the 15th, off Cape Constantine, we saw a Russian steamer, which immediately turned, and ran off as hard as she could. On our nearing the next fort, we perceived four steamers (Russian) blowing off their steam. We cleared all ready for action, and I think we could have managed them, but they again got under way, and crept up under the guns of the fort. The next fort (Golovin) we were surprised to find in flames. The Circassians, who had fired, and were plundering it, ran up the hill on seeing us, but returned when they made us out friends. I enclose you a sketch which may give you an idea of the place. After we had passed on, we heard a tremendous explosion, we supposed a magazine. As we proceeded, we saw several Russian vessels, and one steamer towing a transport, which seemed full of troops. As soon as they perceived us, the steamer dropped the poor transport and made off. We boarded the transport, and learnt she was taking troops to Gelenjik. The Russians had evacuated Golovin; and the Circassians immediately came down and burnt it. We went on to Jouabs, about the best fort we had seen. Here the Russians were on the beach, in heavy marching order, waiting to embark in transports; and we observed a number of Circassians on the heights above, evidently waiting their departure to burn the fort. They had already set two block-houses outside on fire. In the evening we arrived off a fort, of which only the blackened and smouldering ruins remained, the Circassians plundering as usual. We anchored there for the night; and Captain Brock went on shore to learn any news. They told him the Russians were evacuating all the forts, except Gelenjik, where they were concentrating their troops, and making stronger fortifications; and they (the Circassians) made an offer that if two of our steamers would attack it by sea, they would at the same time by land, which terms we could not agree to, as war had not been declared. We proceeded to Gelenjik, which did not appear nearly so strong as we had expected. At Soudjak Bay, the next fort, we saw a little steamer coming out; but on sighting us, she turned and beat a retreat to the fort at the head of the bay. Anapa was our last station, the fort there (more formidable than any we had previously seen) is situated on a cliff, with the guns pointing right over it.

We coasted along the Crimea, passing Cape Aitodoro, called the garden of Russia. Here are some magnificent palaces, Prince Woronzoff's amongst the best. We passed about thirty miles from Sebastapol, and steered straight for the Bosphorus, where we arrived on the 19th; and, after communicating with the Admiral, proceeded to Constantinople, where we are now coaling, with a brig on each side.

I should add that the forts are, for the most part, of a rectangular shape, with two square and two round towers at the corners, the walls between loopholed, and the barracks generally inside. Most of them have a number of poplar trees inside. The houses are built of wood, with shingle roofs, painted either slate colour or bright green. The native villages are curious; you can hardly distinguish them; they are so much the colour of the earth, being built of clay and thatched. The Circassians have very fine horses, and we saw them galloping along the beach. Their dress is a sort of brown tunic, fastened round the middle; leggings; the cap the same as the Russians' (with the exception of the conical top), is made of fur. They are armed with rifles and knives, and I have no doubt can use them well. The weather the whole time was beautiful, and the view of the mountains of the Caucasus, covered with snow, was very fine.

MEDALLION OF CHEVALIER BUNSEN, BY ALEXANDER MUNRO.
(SEE PRECEDING PAGE.)

FORT GOLOVIN, ON THE BLACK SEA, ABANDONED BY THE RUSSIANS, AND BURNT BY THE CIRCASSIANS.

SCENE FROM "MATILDE DI SHABRAN," AT THE ROYAL ITALIAN OPERA.

ROYAL ITALIAN OPERA.

The Illustration represents the scene in the opera of "Matilde di Shabran," which forms the finale to the first act. The scene is in the hall of *Corradino's* castle, when the hostile rencounter is about to take place between that chief and the young *Edoardo*, who seeks to free his imprisoned father. On the left, *Corradino* (Lucchesi) is receiving his arms from the hands of his mistress; and the ridiculous poet *Isidoro* (Ronconi), grotesquely armed, is beating a drum to animate the soldiers. They are confronted, on the other side, by *Edoardo* (Mdlle. Marai), the *Countess d'Arco* (Albini), and *Raimondi* (Polonini). The soldiers on each side are ranged in the background. The figures are all portraits.

HAYMARKET THEATRE.

Mr. Planché's "Revue" and Mr. Buckstone's "Voyage" meet, we are happy to find, with the success fairly earned by the elegance of the composition and the costly style in which the pictorial and scenic successes are placed on the boards. The mind is carried through the events of the year by a series of significant symbols, skilfully chosen, and accompanied by remarks in the dialogue—not only witty but wise, calculated to instruct as well as amuse. One of the brilliant scenes in the piece we have selected for the above illustration. The worthy manager is supposed to have traversed Europe. Crossing the Dardanelles, he continues his journey by the Overland route to Asia, whose Divinity discloses herself to his enraptured view, in the manner delineated in the picture. The opportunity for the introduction of "a Grand Oriental Spectacle" is naturally seized; and the Dance of the Bayaderes exhibits to great advantage the attractions of the *corps de ballet*, and the skill of Miss Lydia Thompson and Miss L. Morris. It is in creating such opportunities, and in skilfully improving them, that the merit of this peculiar sort of drama consists The scale and extent of the illustrative decorations depends on the liberality of the management; and it may be truly asserted that Mr. Buckstone has very judiciously spared no reasonable expense in making the spectacle most ornamental and effective. Of the continued success of such a piece there can be no doubt; one which, pleasing as it is to the eye, has also mental allurements that distinguish it even among Mr Planché's productions, which in most instances are classical in their finish, and, as in this, as remarkable for the intellectuality of their aim as for the beauty of their appointments.

SADLER'S WELLS.

This theatre, for the summer season, has been placed under the management for the performance of vaudevilles and the lighter class of modern pieces; "The Times," as produced at the Olympic, being among the number. The comedy of "Vanity Cured" has been recently added. Mr. Henry Farren and Mr. Ranger figure as the leading performers of the company, which seems sufficiently well adapted for the purpose intended.

SURREY.

Miss Cushman has migrated to this transpontine stage, and appeared on Monday in *Lady Macbeth*. The part formed one of the earliest triumphs of this celebrated actress; and she still performs it with considerable force, though perhaps not with all the effect for which it was once remarkable. We noticed many differences, both in style and detail; and particularly the presence of more effort than formerly. This was still more distinguishable in the somnolent scene, which was characterised by certain physical exaggerations of which we have no recollection on former occasions. But these probably, are portions of that system of realisation which it would appear Miss Cushman's present aim to carry out. She seeks to become the principal in the Physical School of acting, substituting power for subtlety. In her case, there can be no necessity for taking refuge in any such expedient. No actress can better indicate mental processes than she, or speak to the soul more directly. We would, therefore, sincerely counsel her to retrace her steps, and rather aim at intellectual refinement than sensible embodiment. By much study of a character, no doubt, many suggestions are added; but a tasteful selection is in most cases of more importance than an ambitious accumulation. Mr Creswick performed the over-tempted and superstitious Thane, with his usual care, and occasionally with a success that served to mark the progress which he has lately made in the difficult art of which he is so worthy a professor. His influence at this theatre cannot fail to be beneficial; and we wish it were more effectual to promote the inte-

HAYMARKET THEATRE.—SCENE FROM "MR. BUCKSTONE'S VOYAGE ROUND THE GLOBE (IN LEICESTER-SQUARE)."

rests of the higher drama. We stayed to witness the new piece entitled "The Sultan and the Czar," in which an attempt is made to turn the present war with Russia to theatrical account, but the thing is utterly worthless, and not at all calculated to promote the dramatic education of the popular mind, which ought to be the purpose constantly held in view by the conductors of so large and important a suburban theatre. They have, however, already deserved praise for meritorious management. Our object is not so much to censure what has been done or is doing, as to point to the expediency of still higher efforts in a praiseworthy direction.

MUSIC.

At the Royal Italian Opera, on Tuesday, Donizetti's pretty "Elisir d'Amore" furnished an agreeable entertainment to a numerous audience Mdlle. Bosio acted the little rustic girl charmingly, and sang with even more than her usual brilliancy. Ronconi's *Dr. Dulcamara* was inimitable; it is the finest piece of buffo acting on the stage The gallant *Sergeant Belcore* had a very good representative in Taglialico, Had the *Nemorino* been, as the part used to be, in the hands of Mario, the performance would have been complete; but Signor Lucchesi, though he performed the character carefully and respectably, was unable to give it sufficient interest, either vocal or dramatic On Thursday evening Mdlle. Sofie Cruvelli made her first appearance this season, in the character of *Desdemona*, in Rossini's "Otello," Tamberlik being the *Otello*. We shall notice this performance fully next week.

At the Drury-lane Opera, the "Freischütz," in German, was produced on Thursday evening. *Agathe* was performed by Madame Cardori, *Max* by Reichart, and *Caspar* by Formes. This opera is familiarly known to everybody, and there was nothing remarkable in its performance. Things of much greater interest, however, are said to be immediately forthcoming. "Don Giovanni" is to be produced next week, and the celebrated German *prima donna*, Madame Rudersdorff, is to make her *début* in this country in the character of *Donna Anna*. The same lady is afterwards to appear in the "Abduction" of Gluck,

John Hamilton Hart.
Fire, Life, and Marine Assurances may be effected with the Corporation, on advantageous terms.

The assured are exempt from liabilities of partnership, and payment of their claims is guaranteed by a large capital and reserve fund.

Life assurances are granted with participation in profits; or, at lower rates, without participation in such profits.

The reversionary bonus has averaged two per cent per annum on the sum assured, at the last seven septennial periods.

Any sum not exceeding £10,000 may be assured on one life.

In Endowments, the sum assured is payable at specified fees, and requires no entrance money; the assured, therefore, are subject to no expense beyond the premium.

No extra charge for service in the Militia.

Loans are granted on the security of the full value.

This Corporation affords all the advantages of modern practice, and possesses the privileges granted by the Royal Charter and Special Acts of Parliament, and is ed by the experience of nearly a century and a half. There is but one older Life Office in existence.

Further particulars may be obtained on application at the Office of the Corporation, or to the Agents appointed in all the principal towns in the Kingdom.

ALEX. GREEN, Secretary.

PARIS FASHIONS FOR MAY.

EVENING DRESS.

BONNET, CAPE, AND CANEZOU.

EVENING WALKING DRESS.

(*Continued from page* 394.)

wrists ornamented with handsome Valenciennes lace. Another dress was *en grenadine*, the colour blue Louise, with large squares formed by lines of three different blues, trimmed with three rows of flounces, edged with quilled ribbon, on a dress of pale rose-colour. Sarcenets and watered silks are worn plain. Plaid silks admit of a great variety. The petticoats have returned to the greatest simplicity, and are worn quite plain. The body is worn rather open on the chest, and turned back with Chinese basquines; the sleeves are almost Amadis at the top, but they gradually widen to the elbow. For such as prefer ornament, fashion sanctions the bows Louis XIII., which are placed at will on the bodies and on the skirts, with the small ornaments in velvet cut out like lace. A very singular, as well as useful, ornament are the puffed ribbons, which have all the appearance of bows, are tastefully arranged, and possess the advantage of constantly retaining their form. The bonnets continue to be worn small, but are rather wider; they are literally covered with lace. The capotes and crape bonnets are ornamented with peach-blossom flowers, or a bouquet of Alpine violets.

The fashions for young ladies are beautiful novelties. Barège dresses are most in vogue. The skirts form three tunics; the body forms the point plain without basques, rather low. Grenadine is also much worn by young persons. The following is a very pretty dress: pink sarcenet plaid dress, with cherry-coloured stripes; canezon in spotted net and ribbons; trimming, Valenciennes lace; head-dress, bandeaux puffed and turned up, accompanied by a large bow of ribbon of the same colour as the ribbon of the canezon. This completes a very pleasing toilette for young persons.

THE ILLUSTRATIONS.

Children's Dresses.—The most charming costumes for children are seen in the Champs Elysées, round the carriage drawn by goats, the favourite amusement of children.

A favourite dress for a little girl is Scotch poplin, or pink, pale-green, or blue Louise sarcenet, in small squares, formed by a black and-white stripe, trimmed with flounces. Some children's dresses are made with basques, slashed in the Spanish fashion. Round hats in Leghorn straw are worn, with long ends to the bows.

The little boys wear doublets of poplin, or of satin de laine, ornamented with velvet or braid, white shirts, or striped cambric, collar turned over, and scalloped with the same colour as the stripe; light beaver or straw hats, trimmed with feathers, ribbons, or galoon.

Evening Walking Dress.—Dress of grey sarcenet with three flounces, ornaments in violet-colour velvet, placed at intervals from the bottom towards the top of the dress. Mantilla, with a wide fringe.

Toilette for Small Parties.—Dress of pou-de-soie of the best quality in shot silk; canezou of the same material, fitting tight to the shape, with bows of ribbon trimmed with a puffing of silk fawn-colour; head-dress, bandeaux, with bows and ends of ribbon.

Bonnet.—with puffings of net; top trimmed with Parma violets.

Morning Caps.—with Valenciennes trimmings.

Canezou in spotted net; ribbon of the same colour as that of the skirt; bows arranged *à la vieille*, and Valenciennes form the basques.

CHILDREN'S DRESSES FOR MAY.—THE GOAT-CHAISE IN THE CHAMPS ELYSEES.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, APRIL 29, 1854. [GRATIS.

PILGRIMAGE TO "THE HOLY CITY" OF KIEFF.

KIEFF, Kiew, or Kiow, one of the most picturesque spots in Russia, the "Holy City" or Rome of the Greek Church, draws each year thousands of pilgrims to the shrines of its many saints. It is situated on the Dnieper, in the government of the same name, and is the capital of Little Russia and the Ukraine. It possesses twenty-four churches, to most of which are attached wealthy convents. Among the most famous is the Lavra, occupying a commanding position on the summit of the steep banks of the Dnieper, in the centre of the Petchersky fortress, seen in our Engraving. Its lofty tower is visible from the long flat Moscow road on the opposite side, at a distance of seventy versts. Here the metropolitan of the Greek Church resides. This monastery is supposed to contain immense riches in gold and jewels—reserved, probably, to pay the expenses of our gallant troops, should they penetrate so far in pursuit of the flying Muscovites. Beneath the hill on which the church and citadel stand are the catacombs, a vast labyrinth of cells and chapels, in which are preserved, it is stated, undecayed, the bodies of 110 martyrs, and various relics of saints. Formerly, Kieff boasted of 800 religious establishments. Accounts of that city in the seventeenth century make mention of inscriptions in the Greek language, on some of the monuments, then almost illegible.

In 861 KIO, Prince of the Muscovites, made this town his capital; and it had become celebrated for its Eastern magnificence and luxury in 1070, when Boeslas, Duke of Poland, with a view to the conquest of Russia attacked Kieff, and, after a long siege and dreadful carnage, took the capital. The most authentic historians relate that Boeslas, tempted by the luxury of Kieff, and captivated by the beauty of the women, remained there with his soldiers, so long indulging in every excess, that his subjects at home broke out into open revolt. Upon this Boeslas raised an army of Russians, and, falling upon his rebellious subjects, put the innocent and the guilty alike to the sword. Poland was inundated with blood. The primate of Warsaw, Stanislas, dared to reproach Boeslas with these excesses, and was slain by him at the foot of the altar.

In 1615 Kiew was invaded by the Tartars, from which time its ancient importance declined. It was subsequently overrun and possessed by the Cossacks under the protection of Poland; but in 1654 the inhabitants, discontented with their rulers, revolted, and submitted to Russia, and have since remained subject to that Empire. The vast privileges enjoyed by the natives have gradually been abolished, and they are now on the same footing with the other Russian provinces.

This government is exceedingly fertile, and produces the best wheat in Europe, although the climate is subject to great extremes of heat and cold. The population, according to the last census, amounts to 1,665,800. The city of Kieff is about 490 miles S.W. of Moscow, has 45,000 inhabitants. It is divided into three parts. The Fortress of Petchersky, on the heights facing the south, contains the Lavra church, monastery, and dependencies, and the suburbs of Petchersky and Libki. The part called Old Kiev is built on an eminence facing the north, where stands the ancient cathedral of St. Sophia: on repairing the interior walls of this building frescoes were lately discovered, which are being restored. Padol, the commercial part of the town, lies below in the plain on the banks of the Dnieper, and contains numerous churches, besides the shops and magazines. In that quarter an annual fair is held (similar to the one at Nijeni-Novgorod): it is called the "Contracts;" and is the scene of great gaiety. Both Petchersky and Old Kieff are fortified, according to the mountainous nature of the situation: the fortifications, connected by numerous detached round forts, is still in progress of completion.

The Easter Festival of the Greek Church is the appointed season for the pilgrimage to the various churches and monasteries: the "Lavra" and catacombs being the chief objects of attraction—adjoining which various buildings have been erected by the monks for the accommodation of the pilgrims. To the poorer of them, who sleep *à la belle étoile*, black bread is distributed daily by the nuns. A pilgrimage to Kieff is one of the essential acts of the Greek religion; and from high to low there are few Russians who have not, once in their lives, performed the journey. One church has a beautiful silver canopy, offered to the patron Saint by the Countess Orloff. The serfs, however, form the mass of pilgrims. Nothing can exceed the picturesque appearance of the groups that, day after day, during the Easter week, enter the city, from the borders of Turkey to the distant regions of Kamschatka. The dress of the Russian peasantry in each of the governments is marked by peculiar characteristics, and partakes of the Oriental type; and the artist's eye is struck by the draping of their linen and woollen garments, which fall about their figures in classical folds. Distance, however, as in many other cases, decidedly "lends enchantment to the view;" for, on a nearer inspection, cleanliness is not the distinguishing feature. It was amongst the crowd collected around the "Lavra" that the cholera broke out in 1848; and the authorities of the town, alarmed at its fearful ravages, issued an order for the immediate dispersion of the devotees; but the evil was done. The small figures in the Sketch, though each taken from nature, scarcely convey an idea of the variety of costume; bright colours mark the dress of the females; and the young girls of the Ukraine plait and adorn their long hair with flowers and flowing ribbons. The effect of the scene is heightened by the clear sky, the broad noble river, the rafts, and the high-masted craft, with their immense expanse of canvas; the wooded heights of the hills of Kieff, are crowned by the lofty tower and splendidly gilt cupolas of the "Lavra" in clear outline on the deep blue sky; and in the distance, the Padol, with its Asiatic minarets.

The weary pilgrims will this year have a more expeditious, though less picturesque, mode of crossing the Dnieper than in the old ferry-boats; since the magnificent suspension-bridge—half a mile in length, erected from the designs and under the superintendence of the English engineer, Mr. Vignoles—was opened last autumn. (AN Engraving of the bridge, with particulars, may be referred to in the ILLUSTRATED LONDON NEWS for Feb 24, 1850.)

A more important advantage to the Czar, under present circumstances, is the facility of transporting his troops across the wide river, from the interior of Russia on their road to Turkey: a few hours now being only required for the passage of an armament that would formerly, at this present season of floods, have required days, and even weeks, to effect.

PILGRIMS CROSSING THE DNIEPER TO "THE HOLY CITY" OF KIEFF

THE DAY OF HUMILIATION AND PRAYER.

WEDNESDAY having been set apart for the solemn observance of a General Fast, Humiliation, and Prayer, invoking the Divine blessing and assistance upon our arms during the present war, and for the speedy restoration of peace, business was very generally suspended throughout the whole of the metropolis. The public offices were closed as far as the requirements of the service permitted; the banks, counting-houses, and shops were almost universally shut; and, in fact, the day was observed with more strictness than Sunday is in general.

Upon two ensuing pages we have Engraved a selection of Portraits of the Clergy of the metropolis by whom Sermons were preached in observance of the day. The series appropriately commences with his Grace the Archbishop of Canterbury, by whom were composed the impressive Collect and Prayers in the appointed "Form." We next present to our readers brief Abstracts of the Sermons preached by those of the Clergy whose Portraits are here engraved.

ST. JAMES'S, PICCADILLY.

REV. J. E. KEMPE.

"Humble yourselves, therefore, under the mighty hand of God"—1 Epistle of St. Peter, v., 6.

The rev. gentleman commenced by observing that, within the recollection of nearly all who were present, days had been set apart for national humiliation and prayer before God, on two occasions when this country was ravaged by a fearful pestilence. The calamities of those visitations were forced upon the attention of all, and it might be fairly presumed that there was a very general impression as to the fitness of the posture which, at the periods to which he referred, the nation was required to assume. A peace of nearly forty years' continuance had raised up a generation which knew nothing of the sad and frightful realities of war. Some persons might ask, "Why should we humble ourselves? Where is our present chastisement? Where is the cause of fear? Have we not every prospect of a complete and speedy triumph?" Now, in justification of the act of the Sovereign in summoning her subjects not only to prayer, but also to humiliation, he wished to impress upon his hearers a clear and strong appreh nsion of the general truth, that the suitable attitude of the suppliant to God must always be that of abasement and contrition. The rev. preacher called upon his hearers not to remember how much was involved in the prayer for exemption from temporal evils. It was, in fact, a kind of special miracle of grace which they sought to have wrought in their behalf, and they ought to ask this boon in the posture of patience and humiliation. In the next place, they ought to understand and feel, at the present time, their need of God's help and defence in the coming struggle, and the utter hopelessness of success to their arms if He was not on their side as their strength and salvation. It was a truth rather to be apprehended by faith than enforced by reasoning. Let them look to the enormous weight of neutral power in Europe which might, before the end of another year, be thrown, more or less largely, into the opposing scale. What seemed, however, to render the position of this country one of the most anxious uncertainty was one of the most absolute dependence upon the will of God was the circumstance that one-half of their strength might be rent from them by the quenching of a single spark of human life. Who would venture to assure them that if to-morrow the Lord of Life and Death were to bid his angel knock at the Palace-gate of their Imperial ally, the very next day the English alliance might not be repudiated, and the fleets and armies which had been called into efficiency by the present crisis might not be employed against this country? On a former occasion he had enumerated some of the chief calamities of a state of war, even to people who watched its progress at a distance from their own shores. He might, however, remind them of another consideration—the evils which war would inflict upon them, to which they were themselves the to the ills it was sure to bring upon themselves. Persons might talk exultingly of our strength, and might be anxious to see our fleets wield their tremendous powers of destruction; but could any one contemplate without horror the picture of a noble ship, loaded with the freight of brave and gallant men—men born for eternity? These were men, be it remembered, who, though not of our race and not speaking the same tongue, were men of the blood which God had infused into the veins of every nation under heaven, and Christian men too. They must feel, then, that the period of history upon which they were entering was a period of calamity, and therefore of Divine chastisement. "Wherefore should I chasten?" it might be asked. "God does not willingly afflict the children of men." But national sin was the aggregate of individual sin; and therefore, under national chastisement, individual self-examination, individual confession, and individual amendment, were required to turn away the wrathful frowning of God.—Among the congregation were the Earl of Aberdeen and his brother, the Hon. Admiral Gordon, the Bishop of London, Earl de Grey, and the Bishop of Winchester.

ST. GEORGE'S, BLOOMSBURY.

HON. AND REV. B. M. VILLIERS, M.A.

Help us, O Lord our God, for we rest on Thee, and in Thy name we go against this multitude. 2rd Chronicles, xiv., 11.

The preacher first drew attention to the original circumstances under which the words were applied—to the excellence of Judah's king, the number and effic ency of his army, and yet to the deep conviction which existed in the Royal mind, that the only real independence rested upon the arm of the Omnipotent, so that under these feelings he cried unto the Lord in prayer. The preacher then spoke of war being an unmixed evil, though a necessary evil, and a lawful one. He was anxious to remove from the minds of his hearers any mistaken notion that war was in itself unlawful, and that it was possible to hope for peace and to maintain the rights of nations, without having recourse to arms. At the same time, the very principles of Christianity demanded the greatest exercise of patience and forbearance, and required that every means of maintaining peace should be exhausted before recourse was had to war. He remarked it was in accordance with those principles that the Church urged her members to pray for the Queen that she may be led to keep her people in peace, godliness, and honesty. Mr. Villiers then contrasted the difference between private revenge and public justice, and remarked that, such was our fallen state, a great war might be essential to the maintenance of a great and lasting peace. The preacher then remarked on his hearers that difficulties to be successfully foiled in the day implied there were grounds for which we should humble ourselves; that though it would be unjustifiable to connect a war, such as this, in any special sense, with the day demanded that our eyes should be directed to it as one peculiar sin. Many of a grosser form might be mentioned, but he would only speak of some which, he thought, might well deserve to be mentioned. The first to which he alluded was national pride. The question, he said, was not were we superior to other nations in wealth, power, and moral character; but if superior, did we recognise the hand of the Lord, and give glory to God. He next spoke of worldliness. He did not attempt to interfere with questions of Political Economy, nor presume to suggest remedies for evils; but the fact he thought patent to all, that, while we were not to expect men to have all things in common, or that the poor should cease from the land, or that perseverance and intelligence should not succeed over idleness and stupidity, yet that the principle of every man for himself was diametrically opposed to the Royal law of love one neighbour as ourselves. The next point was the neglect of opportunities of spreading the Gospel at home and abroad. Fears of results upon the heathen mind had interfered with the national duty of spreading the Gospel. No knowledge of that only name by which men of every clime and every age can be saved. The last sin he would touch upon was the tampering of the national Church with the Romish principle. He preferred, as anxious to guard himself against being supposed to allude to the political question of admitting Catholic into the Legislature, the most earnest Protestant, in his opinion, could refer to that; but he referred to the Reformed Church of England. Towards none were the Romanists more active than towards those who were the truest members of the Church of England. Between the Church of Rome and the Roman abyss, while they themselves could maintain their standing, they rather favour preferment, in the Protestant Church of England, than by their open profession, at the fast of 1000 clergymen and regretting that members of the Greek Church should leave their own holy altars, if that body, to seek the purer worship of the Protestant Church to which we belong. After that, the rev. gentleman drew on the fact that the best reliance implied acknowledgment of weakness. We were about to enter our council on courage for our armies, and on strength for our enemies. The prayer of faith was effectual—but prayer must be earnest, and spring from a truly penitent heart. This led to the practical inference of personal holiness. Attention was required to the preaching evinced for the soldier, but the rev. gentleman's sympathy should be shown for sailors also.

ST. CLEMENT DANES.

REV. W. W. ELLIS M.A.

And Asa cried unto the Lord his God, and said, Lord, it is nothing with Thee to help, whether with many, or with them that have no power: help us, O Lord our God; for we rest on Thee, and in Thy name we go against this multitude. O Lord, thou art our God; let no man prevail against Thee.—2nd Chronicles, xiv., 11.

The text here chosen seems to contain much at least, if not all, that is absolutely requisite for our practical consideration at the time when our hosts are going forth—in a righteous cause, as we believe—against the enemies of peace. First, the text is a prayer—the surest weapon in war, as in all other emergencies; secondly, it is the prayer of a king on the eve of battle, and therefore partakes of a national character; thirdly, it is a prayer of faith, exhibiting reliance upon the Divine arm for help, and therefore implying humiliation, together with a distinct conviction that no human force, however vast, can ever prevail, except under the recognised championship of the Almighty. The appropriateness of this text will appear still more striking if we call to mind the historical circumstances with which it stands immediately connected. This is the prayer of Asa.—and Asa, it will be remembered, was one of the good Kings of Judah, the greater part of who e long and prosperous reign was blessed with peace in consequence of his integrity, and whose arms were crowned with victory in a war of necessity against the Ethiopians, because, whilst making every human preparation to meet the hosts of a mighty enemy, he showed, by public acts of piety and faith, his entire dependence upon Divine succour for a successful result. The peace which Asa and his people had enjoyed is attested directly by God: "The land had rest: and he had no war in those years, because the Lord had given him rest." Nevertheless, in that time of peace, he made great preparation for war, not exceeding, in the usual course of human events, that, however, favoured by the Almighty, he should be always exempt from the necessity of national conflict with an enemy. Accordingly, we read that, during peace, he built fortified cities, and raised an army of 580 000 men, of whom 300,000 were spearmen, and 280,000 drew the bow. Nor was this preparation in vain, for at length a gigantic enemy arose Zerah, the Ethiopian—and made an aggressive attack against him, with a host of 1,000 000 of armed men. The battle was on the point of being set in array—army against army—and then it was that Asa employed the critical interval in offering up a public prayer, in conjunction with his people, to invoke that indispensable arm without which countless hosts would be as nothing, and by aid of which a sling and a stone might prevail against Goliath. And Asa cried unto the Lord his God, and said, "Lord, it is not ing with Thee to help, whether with many, or with them that have no power: help us, O Lord our God, for we rest on Thee, and in Thy name we go against this multitude." I do not purpose to make here any lengthened application of those circumstances in the Sacred History to the dread occasion which has now called forth our national cry of supplication to Him who alone can "defend the right," and give victory to the battle. I will only say, by way of testimony to the fact, that we, too, as a nation, have been highly favoured with the blessings of a long peace. Thrice happy are we under the benignant sway of a good and virtuous Sovereign, though, as a nation, we cannot dare to claim these blessings as a reward for our national or individual righteousness. We have made also a vast preparation against an impending struggle. Compelled at length, in spite of the most patient and persevering efforts for the preservation of peace, to go forth in defence of a weak ally against a powerful aggressor, whose palpable aim is to strike through that weaker side, a deadly thrust at the heart of other nations, and eventually to paralyse our own empire; and, having made this preparation, determined to employ all human means that are lawful to check the unjust aggressor, with a simple view to regain for ourselves and for others the Christian object of an exclusive and permanent peace, we now solemnly commit our cause to the disposal of the Almighty. We use the precious interval between the rush of conflicting armies and the crash of embattled navies to implore the crowning consummation of the whole, that, as ever, and thy sword of the Lord of Hosts. Not trusting merely to our human equipments, however vast, which might be blasted in a day, or an hour, by the breath of the Almighty—not depending only upon the help of earthly allies, though never strengthened by fairer treaties of friendly concord, which might be snapt asunder in a moment, if not held together by a power of unity from above—not boasting of former victories as if past success must necessarily insure success for the future—not calculating upon the numbers enlisted on the one side or the other, as if numbers alone were to decide the issue—but rather resting on the same kind of faith as that which dictated the prayer of Asa, "Lord, it is nothing with Thee to help, whether with many, or with them that have no power: help us, O Lord our God, for we rest on Thee, and in Thy name we go against this multitude." The preacher next asserted the lawfulness of a just and discriminating process of reasoning by a quotation from Bishop Horne's sermon before the House of Parliament on the breaking out of a former war, in the year 1780, and then proceeded to show the important one of this days humiliation. But, though perfectly justifiable as a means of preparation for the exercise of wise and corrective justice, we are, nevertheless, bound as Christians to view this war in the light of Scripture, as in itself an evil, as a national calamity, and, it may be, as a Divine judgment for national transgressions. Hence the paramount importance of this day of humiliation. The sword is drawn—who can tell when that sword shall return peacefully to the scabbard? For let us not be wilfully blind to the future) who can tell, now that the sword is once drawn, what a complication of national disasters it may possibly entail—what vast treasure may be exhausted what sacrifices we may have to make—what national and personal losses we may have to sustain—what oceans of blood may be doomed to be shed? And, lastly, on what incalculable contingencies may and must hang the final conclusion of peace. Nations must be kept together in unity; myriads of human will must be overruled; a bridle must be put in the mouth of Sennacherib. Ought we not to feel more than ever that we are at the mercy of the Almighty? If so, is there not still more ground laid down for our humbling ourselves before God—spreading the case before the Lord—solemnly committing and into His hands, and, with hearts full and eyes turned upward, breathing the spirit of Asa's supplication while the hosts are rushing to the scene of battle, "Help us, O Lord, our God, for we rest on Thee, and, in thy name, we go against this multitude"

ST. JAMES'S CHAPEL, HAMPSTEAD-ROAD.

THE REV. HENRY STEBBING D.D., F.R.S

I will arise and go to my father, and will say unto him, Father, I have sinned against heaven, and before thee, and am no more worthy to be called thy son.—St. Luke, xv., ch. 18

With these words the service of this day commences, and they explain the principle upon which the day has been set apart. It is for humiliation and confession of sin, by each individual, that so the general punishment of guilt may be averted. All calamities have their origin in sin; and war, with all its consequences—the dearness of food, the distress of the poor, the non-remunerating of industry, the want and poverty, no less than the sacrifice of life and the friendless homes it involves—is one of the effects of sin. It would be a blessed thing indeed if, in obedience to the call of our Sovereign, every man in this kingdom would take up the parable of the text, confessing his own individual sinfulness; and, if generally, we entreat the Lord, as we have forfeited our claim, personally and nationally, to our right to rule, still to permit us to become His servants, and, by His grace, to be enabled to fulfil His will. But there are national sins also demanding our attention. No country, perhaps (and we bless God for it), has so few national sins as our own: for we ought to be thankful that those which are countenanced by the will and voice of the people, as represented by their representatives in the Legislature, and not those which are only generally prevalent, are properly so called. Of these, one is intoxication—a vice which is legitimated by the Government, by granting so many licenses to houses for the sale of ardent spirits, instead of being repressed. Another is that of Sabbath-breaking, which is lightly thought of in the Senate, and is set at nought by the great companies who offer excursions and pleasure trips, by railway or steam boat, on that holy day. No one who has seen an excursion train disgorge its cargo of debauchery on the Sabbath can listen to the plea that such persons are as fit to confess their sins, and pray for pardon and grace, at the end of their journey, as if they had remained at home. Nor ought we to lament if God should visit upon all such enterprises the ruin and distress which such undertakings deserves. Another national sin is spreading up among us, which, perhaps, requires to be dealt with more tenderly, but is of no less importance. England owes all its safety and prosperity in the past to its Protestantism; it gained the respect of the world, and stood firm amidst general confusion so long as it allowed the pure Evangelic faith to be spread throughout the land, and its Church abided by the word of God. But what shall we say of the courage or firmness of British Christians who will suffer the introduction of a pseudo-Romanism, simply because of the position of those who, with the prestige of a great name, or of high station, venture to propose it. Why not crush the serpent while it is yet in the egg, rather than allow it to come forth, the curse of the nation, the destroyer of its liberties and the cause of provoking God's wrath upon our land? But while these are national sins, let us not forget that they are all personal ones, which every one, more or less, in his position, can help to diminish. It is in this way that we can make the day of humiliation profitable—first, by bringing our sins before us, and mourning over them, and then by taking care not to allow the good impression of the day to pass from us, but to regulate our future conduct by our present resolves. Not thus to act is to make a mockery of the solemn service: for while, indeed, we all meet together to pray that God's bless ing may rest upon the noble defenders of our country who are engaged in the war, and earnestly desire that they may return victorious; yet the purpose of humiliation and confession of sin is our first duty, as it is only by the application of the great doctrines of the Gospel, the pardon which we obtain through Christ in the blood of Christ, and by the quickening and sanctifying power of the Holy Ghost, that this nation and all others can be made, in each of their members, peaceful and happy, as well as prosperous and united, in their efforts for the general good and improvement of the world.

ST. MARGARET'S, WESTMINSTER.

REV. WILLIAM CURETON, M.A.

And it shall come to pass in the last days that the mountain of the Lord's house shall be established in the top of the mountains, and shall be exalted above the hills, and all nations shall flow unto it. And many people shall go, and say, Come ye and let us go up to the mountain of the Lord, to the house of the God of Jacob; and he will teach us of his ways, and we will walk in his paths: for out of Zion shall go forth the law, and the word of the Lord from Jerusalem. And he shall judge among the nations, and shall rebuke many people; and they shall beat their swords into ploughshares, and their spears into pruning hooks; nation shall not lift up sword against nation neither shall they learn war anymore.—Isaiah, ii., 2, 3, 4.

The general scope of the sermon (after drawing attention to the solemnity of the occasion upon which they were called together, and commending the act of her Majesty's Government in thus publicly seeking for God's blessing on our arms) was to show how the prophecies contained in the text, predicting Christ's kingdom and the prevalence of universal peace throughout the world, are gradually being accomplished how the vast resources which the long peace we have enjoyed has developed have proved to all, even the men of the world, that peace is beneficial to all classes of society and for all nations; and that, consequently, it becomes the interest of even the man of the world to co-operate with the Christian in promoting and maintaining that peace which, of it self, affords the best opportunities for the propagation of the Gospel; and now, both of these mutually are co-operating to effect, in the end, the accomplishment of that glorious prophecy, and, as the practical inference, to exhort all men, in their several conditions and capacities, to labour diligently to fulfil their Christian duties, by which means they will best contribute to the maintenance and preservation of that state of peace throughout the world which contributes so vastly to men's temporal happiness, as well as tends so visibly to hastens the perfection of the kingdom of the Prince of Peace, both in the hearts of men and in the political relations of the world.

WESTMINSTER ABBEY

THE VEN. ARCHDEACON W. H. BENTINCK. (MORNING).

Some trust in chariots, and some in horses; but we will remember the name of the Lord our God. Psalm xx., 7.

The rev. gentleman's petition (said the rev. gentleman) in our liturgy which we are in the habit of repeating day after day, and Sabbath after Sabbath, is, that is to be feared, without sufficiently attaching to it the importance it deserves. In the petition I speak of is—"Give peace in our time, O Lord; because there is none other that fighteth for us, but only Thou, O God." For nearly forty years that prayer which it may have been carelessly uttered and slightly appreciated—has received a gracious answer; for the Lord has given peace in our time, and we have enjoyed that peace so long that we seemed almost to have forgotten that God is the author of temporal as well as of spiritual peace. We learn to appreciate the value rather by their loss than by their possession. Now that war is proclaimed in our time, it is well we should remember from whom acknowledgment which we connect with our prayer. "There is none other that fighteth for us, but only Thou, O God." As far as human foresight will allow us to judge, the prospect of victory is in our favour. Yet the enemy is not one to be despised. In the words of a writer of the day, "the enemy against whom our arms are directed is not one whose power is to be safely slighted. A colossal empire, possessed of vast resources, wielded by a sovereign of indomitable character and vast ambition, who has for years been collecting strength for a gigantic effort to sweep away every barrier by which the realisation of that ambition has been impeded. In our opponent. The issue to him is most momentous. It is to decide whether he is to be hereafter the controlling power in Europe and Asia; to rule absolutely the Baltic; to hold the keys of the Euxine and Mediterranean, and push his conquest east until he clutches Hindostan; or whether he is to be driven back, and confined within the limits of the empire which Peter the Great established to his successors." On the other hand, Great Britain enters into this struggle with every recognised prestige of success. She has as her active ally the greatest military nation in the world, whose soldiers and sailors are for the first time ranked with ours to fight side by side against the common enemy. Looking at our possession of the finest fleet ever yet seen in ancient or modern days, and the best disciplined troops that ever marched to battle, our great mercantile marine, as well as our command over all the improved appliances which modern science has constructed for war, we might, I feel sure, be almost full enough to trust in. The records of our own national history will remind us of the great fleet prepared in former days against our own land—the "Invincible Armada." Our gallant fleet, puny in comparison, sailed to meet it and protect our shores. The victory was gained, not by fair valour and skill of her sailors, but by the hand of God. He blew with His wind, and our enemies were scattered. Again, there was the vast expedition against Russia, composed of the bravest troops, and led by one of the most consummate generals of the age. In their victorious career they penetrated the very centre of the Russian empire, and possessed themselves of the Russian capital. But how short-lived was it at triumph! The Grand Army returned a scattered band of wretched fugitives. It was His, and His alone weapons are the elements which saved the empire against whom it was led. These instances, my brethren, will serve to show us it is vain to trust solely to naval or military preparations in time of war; it is the proud confidence of those who put their trust in horses will be be ught low. We have not rushed heedlessly into this war; it has been forced upon us. We are not striving for dominion or power, but to check the ambitious design of our enemy. An honourable peace with security against them: therein is what is declared and what we should be fervent with our pray, "Give peace in our time, oh, Lord! because there is none other that fighteth for us but only Thou, O God." Peace was vouchsafed to Israel for forty years; let when forgetfulness of God came on the people, "their enemies were strengthened against them," and because they chose new gods, "then was there war in the gates." We, my brethren, have national sins to atone for; let us, then, enter upon individual repentance. The seat of war are on our land; may it please Almighty God to lighten them to us, and speedily remove them from us; to defend those who have gone forth to fight our battles; to preserve our land from foreign enemies, and again to give peace in our time.

THE REV. LORD JOHN THYNNE, D.D.—(AFTERNOON).

When Thou saidst seek ye my face, my heart said unto Thee, Thy face, Lord, will I seek.—Psalm xxvii., 8.

The purport of the sermon was, in the first instance, to deduce a lesson from the example of David; then, after observing how the present war had been forced upon the country in spite of the truly Christian efforts of the Ministers to maintain peace; to show that, being evidently ordered by the wise providence of God, we should regard it as His will to effect some great and special purpose; which purpose appeared to develop itself in the concessions already made by the Turkish Government to England as an ally, which were indignantly denied to the imperious demand of the Russian Autocrat; so that the emancipation of the Christians living in the Holy Land, and the re-establishment of Christianity through all Palestine became appa ently the design of God in the turn of present events; and the selection of England as the honoured instrument to [illegible] gious purpose, appeared to them to seek His face with great fervour in their guidance and support.

ST. GEORGE'S, HANOVER SQUARE.

REV. H. HOWARTH, M.A.

And all Judah stood before the Lord, with their little ones, their wives, and their children. Then upon Jahaziel, the son of Zechariah, the son of Benaiah, the son of Jeiel, the son of Mattaniah, a Levite of the sons of Asaph, came the spirit of the Lord in the midst of the congregation; and he said, Hearken ye, all Judah, and ye inhabitants of Jerusalem, and thou King Jehoshaphat, thus saith the Lord unto you, Be not afraid nor dismayed by reason of this great multitude, for the battle is not yours, but God's.—2nd Chronicles, xx., 13–15.

The rev. preacher, in a very lucid and logical discourse, combated the notion of those who hold all wars whatever to be contrary to Scripture and injunctions, and showed from various precepts of the Bible that they were not only justifiable but that on some occasions the people had been commanded to engage in them. He then proceeded to inquire into the justice of this country entering into the present contest, and contended that justice was on their side. Adverting to the vices by which a great portion of the community are degraded, he exhorted his congregation to examine their hearts, and implore the Divine grace for amendment. An element of hope in the Divine favour was to be found in the example set by her Majesty the Queen, and by many in exalted positions.

ST. PAUL'S CATHEDRAL.

THE VERY REV. DR. MILMAN. (MORNING)

In Thee, O Lord, do I put my trust; let me never be put to confusion.—Psalm 71, 1.

The sermon commenced by observing, that of all the awful duties which belonged to the office of a minister of God, none could be more awful than that which was imposed upon him by the ceremony of that day. To him was not merely committed the solemn office of inviting the people to prayer and acts of humiliation at a period of impending peril and difficulty, but he was likewise compelled to perform the incongruous office of appealing on behalf of the people to the judgment of God, upon the war in which we are now unhappily engaged. God is, as it were invoked upon this great and momentous question, and his approbation is supplicated in the proclamation of a war which rests as of the blessings of a peace unexampled in duration, and the wonderful advancement in human civilisation. The rev. preacher having observed that our appeal to arms was only to be justified by stern and indexible necessity, proceeded at considerable length to depict the horrors of war, and concluded a most sublime discourse by maintaining the necessity of cultivating the love of God, an unshaken trust in his mercy and goodness, a perfect resignation to his Divine will, and a meek submission to the sacrifices which all persons will be called upon to make during the continuance of the awful and momentous crisis.

THE BISHOP OF LONDON.—(AFTERNOON)

The afternoon service commenced at a quarter to three o'clock. The Lord Mayor, Sheriffs, and other members of the Corporation, attended in state, and walked to the Cathedral in solemn procession. The cloisters were crowded in every part.]

There is no King saved by the multitude of an host: a mighty man is not delivered by much strength. A horse is a vain thing for safety: neither shall he deliver any by his great power. Behold the eye of the Lord is upon them that fear Him, upon them that hope in His mercy. To deliver their soul from death, and to keep them alive in famine. Our soul waiteth for the Lord: He is our help and our shield.—Psalm xxxiii., 16–20.

The Bishop of London commenced by observing that within the last few years they had met together twice in that church under extraordinary circumstances. The first occasion was to supplicate the throne of Mercy to avert from us the pestilence which had visited the country; the second was to offer up our prayers for the cessation of the famine which had destroyed whole families and villages in the same island. They were assembled now again for the third time to acknowledge their sins, and to send up their prayers and supplications to the Divine Majesty, imploring His blessing and assistance on our arms, for the restoration of peace to her Majesty and her dominions. Those evils were probably sent to us by God's providence as a punishment for our transgressions, and for the purpose of convincing the nations of the world how much we are all dependent upon Almighty God for everything we possess. The right rev. Prelate then proceeded to notice in vivid language the various evils of war, and the many crimes and sufferings which followed in its train. "War is the greatest scourge with which our unkind—the most comprehensive and the most diffusive of physical and moral ill. It is an evil the most to be dreaded, and the most earnestly to be deprecated. The late Illustrious Duke—the greatest military character of his age—was accustomed to say, during the period that sacred place had declared that, next to a defeat, the most dreadful of all calamities was a great victory. If the evils, then, of a war are so great, it is, of course, the duty of Christian rulers to avert them, if possible—only from their own country, but from all the nations of Europe. He thought that we had all good reason to be thankful to our own Government for having so long striven to preserve to this country, and to Europe, the blessings of peace. Whatever our wishes may be, we have not to answer for having brought this war upon our country, by running to arms, impelled by a love of conquest, or a thirst of gain. Notwithstanding the praise worthy efforts of our Government to avoid the horrors of war, we are at length compelled to resort to arms to oppose the ambition and unprovoked attacks of the Sovereign of Russia, who is seeking to establish a despotism over several of the nations of the earth. Were it not for the belief that the downfall of the Turkish empire would inevitably lead to the domination of the Autocrat of Russia, it might be reasonably considered that our position was anomalous in protecting an unbelieving people from the aggression of a Christian power. But we believe that the progress of Christianity is more secure, and will be better, though more silently, advanced by supporting the existence of the Mahomedan power, and thereby leaving it to be gradually improved by its free intercourse with Christian nations; while, at the same time, every security is taken for the enjoyment of equal privileges and the most perfect toleration by the Christian subjects of the Sultan. Amid much that is gloomy, there is, however, one consolatory feature in the present crisis of our affairs—namely, our present friendly relations with that great and powerful people of France, who have been too long known as our implacable enemies. We, however, cannot but look upon war as the greatest and most dreadful of all calamities, and as being fraught with countless evils both to the victor and the vanquished. The first cannon shot will announce the beginning of sorrow—of which no man can see the end—to thousands of our fellow creatures and to the world at large. This, ther fore, is a most fitting subject for national humiliation. We have all many grievous sins to answer for, and we should prostrate ourselves before God for His mercy and assistance. As the sins of nations are made up of the sins of individuals that compose it, so national repentance must be testified by individual repentance. Whether this great calamity be a judicial visitation or not, and although we know that Almighty God has decreed or permitted it, we should also recollect that He has the power to mitigate its evils, and to shorten its duration. We have been told how effectual with God is the fervent prayer of one righteous man What then may we not hope for from the united supplications of a whole Christian people prostrate at the throne of Mercy, acknowledging God's omnipotence and goodness, and confessing our own great unworthiness." The right rev. Prelate concluded a most eloquent discourse by the utterance of a beautiful prayer in behalf of the people, and of all those engaged in the present war.

ST. MARY LE STRAND.

THE REV. J. P. DENHAM, M.A., F.R.S.

I cannot hold my peace, because thou hast heard, O my soul, the sound of the trumpet, the alarm of war. How long shall I see the standard, and hear the sound of the trumpet?—Jeremiah, iv., 19, 21.

The reverend gentleman said:—"We are called upon to renew those humiliations and petitions which are among the earliest recollections of the aged. The reign of death, in its most revolting form, has recommenced; the bereavement of families by the spirited destruction of life against his fellow man has returned: the prosperity of commerce is checked; the progress of science and art is impeded, public expenditure increased, and the demoralising effect of national hostilities again blights the sympathies of the national mind. Our position, though alarming, is not without its consolations. The foremost of these is derived from the efficacy of rightly-offered prayer, in averting impending evils, or causing them to be overruled by the Providence of Heaven for the production of still greater and more lasting good. If 'the fervent effectual prayer of one righteous man availeth much,' how great may be the advantage accruing to our native land from the united supplications this day, of multitudes who are equal holiness render them successful supplicants before the throne of Mercy! We may hope that the present check to our prosperity may also check that self-ness and idolatry of earthly things which a long-continued course of prosperity tends to produce. It was the pious hope of the prophet that 'when the Divine judgments were abroad in the earth its inhabitants would learn righteousness.' It is, however, lawful to mingle confidence in the designs of Providence with our humiliation and repentance. National improvement—moral, moral, and religious—have often followed war and conquest. As far as the present conflict has proceeded, it has already served to cement the interests of two nations commonly calculated to be useful to each other, and to the world at large; and to emancipate the Christian population of the Turkish empire from a unjust and injurious disabilities; and it may terminate in the restoration of Christianity itself to the land at seat of its dominion." The duty of continual prayer for our rulers, and for our country, was then inculcated; and the reprehensible impropriety of contributing to the association formed for the assistance, protection, and employment of the wives and children of soldiers and sailors, was pleaded. The gift of time—always sanctified by prayer, through the mediation of the Saviour—would be redeemed in the Divine blessing upon a nation, renewing its repentance with an act at once so highly just and humane.—The collection for this object was then made.

ST. MAGNUS THE MARTYR.

REV. S. M'CAUL, D.D.

Rend your heart, and not your garment, and turn unto the Lord your God: for He is gracious and merciful, slow to anger, and of great kindness, and repenteth Him of the evil.—Joel, ii., 13.

Our assembling here to-day, by the Sovereign's command, reminds us that we have commenced a new, solemn, and anxious era of national existence. We find ourselves engaged in a fearful struggle with a young, extensive, and powerful empire. The war is, indeed, "just and necessary," but this is not sufficient to bring us to a successful issue. Our gracious Sovereign reminds us that to ensure victory the blessing and help of Almighty God is required, and that this is to be sought by humiliation and prayer. Leaving the bitter subject for the consideration of the evening, we proceed now to consider the necessity and nature of national repentance. The Royal proclamation proceeds on the principle that obedience to God is the bounden duty of nations as of individuals, that national sin is followed by national punishment. The prayers that we have offered up, remind us that, as a nation, we have sinned, and that our sins call for the Divine judgment. A general confession is not enough. We are bound to examine our conduct as a nation. The sins mentioned in Scripture, as followed by national ruin, are impurity, idolatry, preference of tradition to the written word, opposition to or neglect of missionary efforts. Of these, as a nation, we have been guilty. To escape ruin, therefore, national repentance is necessary. A day's outward humiliation is not repentance. Rend your hearts, and not your garments, and turn to the Lord. Forsake your sins: do what you have omitted; contribute, each in his station, to maintain Divine truth, to extend the kingdom of God, and so to influence the powers that be, that this nation may be a people fearing God and working righteousness. Go to your houses, and humble yourselves before God: confess your own sins, which have helped to swell the awful account of national guilt, and to draw down vengeance.

ST. MARTIN'S-IN-THE-FIELDS.

THE REV. H. MACKENZIE, M.A.

Lord, behold, here are two swords.—St. Luke, xxii., 38.

The rev gentleman said he trusted that, in the solemn declaration of war, which was the cause of that day's humiliation, they would lead not merely the words of a great Sovereign seeking to defend the rights of humanity, but also the awful will of the Sovereign of Sovereigns, who had therein sent one of His "four sore judgments" upon the earth that it might learn righteousness. His duty to the King of Kings made it imperative on him to go before them that faith in the revelation of God's Word ought to lead them to look upon war as a scourge of God—as a sign of his wrath—as a judgment upon the earth. It would be superfluous, he remarked, for him to point to members of the national Church the lawfulness of engaging in a righteous cause; for that was essential, as her deliberate judgment in the 37th Article of Faith. In illustration that that judgment was in perfect harmony in Scripture, he referred to the fact that war had been sometimes given to the people of God as a mission—as in the cases of Moses, Joshua, Gideon, Barak, and Saul; that it was sometimes laid on them as a necessity, in invasions of Judah and Israel; that it was sometimes encouraged as an act of justice as when Abraham pursued the Kings, and when David, with his armed followers, attacked the churlish Nabal; and that, at other times, it was considered as an act of patriotism, as in the case of the youthful David and Goliath, and of the King David against the Philistines. War had been declared by God, by the mouth of Ezekiel, to be one of His "four sore judgments." It was as a recognition of God's will and authority that that day of humiliation had been set apart by the nation. Without wishing to derogate from the valour of our fleets or of our armies, they had yet to confess that their confidence was not in them, but in God. The preacher then proceeded to point out the grounds of humiliation. The first was the perfect holiness and exalted majesty of Jehovah; and the second, our sins—as national, as local, as of sin personal. Among our national sins might be reckoned pride, intemperance, profane swearing, and covetousness. Licentiousness took the lead among our local sins, followed by indifference to religion, and flagrant neglect of the Lord's day. Of personal sin what could be say, but that "the heart knoweth its own bitterness"? It must be the hope of all that the war might not interfere with the advancement of those sanitary and social improvements at home which had hitherto lingered rather than vigorously progressed. The sword had been drawn—the scabbard had been cast away, and the question, "Are we right in so doing?" demanded consideration. The voice of the country was that their cause was that of independence against tyranny, of justice against oppression, and of the right of nations against the arrogance of an encroaching power. The circumstance that should be unparalleled solemnity, for they were at war with an empire whose territory was enormous—whose resources were exhaustless—whose wild and snow-clad regions had swallowed up within the memory of some present the noble army of a powerful and warlike state. Our bond of union was poli ical expediency, and military rule; but how powerless that would be—if we had no other hope—against the subtle policy of those powers. He was sorry he had been misled, as he alluded to our ignorance of prophecy in connection with coming events; but it was not uninteresting to know that, while uninspired records of extreme antiquity contained predictions of the Muscovite power occupying the seat of the ancient Greek empire, men had been earnest and devout expositors of the Word of God who had fixed the exhaustion of the Mahomedan power at a date little remote from the present day, and who had led people to expect that the destruction of the city of the Seven Hills would be contemporaneous with the downfall of the symbol of the Crescent. Recurring to the words of the text, "Lord, behold here are two swords," the preacher remarked that of the two only one was used, and that the use of that one was elected by the benign words of the Prince of Peace. So it might be with us. God might issue the word to sheathe the drawn sword, and might then give us grace to draw the other sword, which by its rest in the scabbard indicated the Spirit of Peace.

After the sermon a short prayer, which had been drawn up and used so far back as 1597, was offered up for the success of her Majesty's forces by sea and land.

CHRIST CHURCH, NEWGATE-STREET.

REV. M. GIBBS, M.A.

My bowels, my bowels! I am pained at my very heart; my heart maketh a noise in me, I cannot hold my peace, because thou hast heard, O, my soul; the sound of the trumpet, the alarm of war.—Jeremiah, iv., 19.

The rev. gentleman said, the Christian was affected by things in a different manner to the ungodly. The ungodly deeply deplored war on account of heavy taxation, depression in trade, and the general inconvenience felt in commercial enterprise; but the lamentation on account of war manifested by the Christian arose from an alliance with the false prophet, whom God denounced. Two other services were performed in the afternoon and evening to a very attentive congregation.

ST. BRIDE'S

THE REV. CHARLES MARSHALL, M.A.

It is He that giveth salvation unto Kings.—Psalm 144, part of the 10th verse.

"The horse is prepared against the day of battle," says the wise man, "but safety or victory is of the Lord." It is for man to use means, but God alone can make them successful. David was very sensible of this, and was no less forward in openly avowing that he owed all his safety and success in enterprise to the Lord Almighty. "I will not trust in my bow, it is not my sword that shall save me;" "In God we boast all the day long." "It is He that giveth salvation unto Kings" who delivered David, His servant, from the hurtful sword." It is a humiliating consideration, that creatures endued with reason and humanity should ever so allow their passions to gain the ascendancy over them, as to employ force against one another, and add the direful miseries of war to the many sufferings to which life is subject. Humiliating, however, as this is, when wicked passions and resentments, or a desire for unjust gain, or a greedy ambition, prompts men to war—or when wrongs leading to unjust usurpation are done to a nation, and persisted in, and all redress refused, there remains no method of protecting or recovering invaded rights, but by an appeal to arms. If this appeal be made, as in our case it is, for the purposes of justice, with a sincere desire for peace, we are encouraged by the Word of God to look to Him for His blessing on our fleets and on our armies. Under such circumstances, our first duty is to humble ourselves before God, for our sins, and in doing so let us not shrink from charging home to ourselves the guilt we have contracted by neglecting to improve the privileges and blessings God has bestowed upon us. We a nation have been so highly favoured as ours, in respect of the means of grace and opportunities for knowing the will of God as revealed to us in the Gospel? Yet how many thousands among us live as if they had no soul to save, no knowledge of a judgment to come—how many are neglectful and careless of the duty of public worship—how many are so engrossed in the business and pleasures of this life as to give themselves no time for religious consideration, self-examination, or for making their peace with God, through Jesus Christ. Nor is this the only cause for humiliation. Even among those who are really in earnest about their souls' eternal welfare, how few are to that self denial, holiness of life love of their God and Saviour, and benevolence to man, which ought to result from their abundant means of grace? And are there not many who place such confidence in their skill, their talents, their resources, as to leave out of mind the only source whence any certainty of success can be obtained? Let us, therefore, caution you against attributing to second causes what you ought to view as the appointment of a Divine hand. A real safety and repose are alone to be found in God's protection and favour, which is to be obtained through Christ alone. Such as these their neglects and sins in their own persons, houses, or preparations, provoke God's displeasure, and tempt Him to frustrate their endeavours. If to depend on the interposition of Providence without human exertion is to tempt God; to confide in an arm of flesh, without a king like unto his is to deny Him. The Dove of peace does not always first visit with its vengeance those who have run the greatest career of guilt. Far otherwise; judgment often begins at the "house of God." He frequently chastises his servants with severity before he proceeds to the destruction of his enemies. To decide on the comparative guilt of two parties demands a much more comprehensive knowledge of circumstances than we are usually able to obtain. The mere external conduct is not sufficient to form the basis of a sound conclusion. It is certain that much might be urged in extenuation of the guilt of other nations which cannot be alleged in our favour. We have long possessed the clearest display of Divine truth, and the fullest liberty of conscience. At the same time, is it not a melancholy truth that many a member of our Evangelical Church has continued in the midst of this light unchanged and unimpressed? May it not, with all propriety, be asked, "Are there not with you, even with you, sins against the Lord?" Are there not many who adopt the forms of religion, and are virtual destitute of its power? who bear the name of Christ, without having any sense of Christianity in their heart. Awful, indeed, is the condition of such! Our first duty, therefore, in all our circumstances of prosperity or sorrow, is a devout acknowledgment of the hand of God. Let us, then, implore God's blessings on our counsels and our arms. Be it our prayer that God would so accompany our efforts with success, that peace may be soon and permanently restored. Our first duty is to humble ourselves for our sins, then to acknowledge God's hand and implore His blessing, for Christ's sake, on the means used for obtaining success, and with confession and humiliation should always be joined praise and thanksgiving. While, therefore, you humble yourselves before God, alleviate, as far as you can, the distress of the wives and children whom our soldiers have left at home; and, for the purpose, I now ask your liberal contributions out of that which God has given you.

ST. SAVIOUR'S, SOUTHWARK.

THE REV. S. BENSON, M.A.

The Lord sitteth upon the flood, yea, the Lord sitteth King for ever.—Psalm xxix., 10.

All things serve the Divine purposes; all things contribute to the bringing round of his designs, however short-sighted mortals may be, whose understanding is limited, and power finite, may be unable to comprehend the Divine ways; may be utterly confounded in their variety, greatness, and depth. Our conclusions, as to their design, and nature, and extent, and termination, may be altogether erroneous in the finish. It is not given to us, unless to do our duty in the station of life in which Providence may have placed us, to observe the constant unfolding of the same. Providence, and to be encouraged to perseverance in good works, in the Divine promises, and in the unmistakable operation of the Divine power, wisdom, and love. The preacher, having dwelt on the Psalm as one pre-eminently for the comfort of God's people, applied the text, first, to several periods of the history of the Jews; and then to several parts of English history—as the Reformation from Popery, the Civil War, and the attempt of Rome to recover her lost power; ending in the Revolution of 1688, from which time to the present—amidst many contests by sea and land, and civil and commercial changes—the country had been enabled, without material alteration, to maintain a proud position among the nations—the sanctuary for pure Christianity—the refuge for the oppressed. For about forty years our God permitted the sound of war on our own shores, but made us a saviour of the civilised world, and restorer of European liberties. This oppressor had in an unexpected hour become a barrier to his triumphant progress. He could subdue others, but not us. We came to the rescue of nations; as all that was dear to us, our very existence, was at stake. And God said to him—Thus far shalt thou go and no farther. If we were now to have war with a power with which we were then friendly, and, in alliance with a power, the ambition and tyranny of whose head we then sought to restrain, such were the extraordinary occurrences in God's providence, we should look with thankfulness towards the past, and rejoice that still the Lord sat on the floods—the Lord was a king for ever. But, was war really allowable? God did not only in old time permit His people to make war, but it was His will when there should be war. The New Testament showed that men might take up arms and not be disowned of God; be soldiers and yet Christians; and that it was our duty to submit ourselves to temporal rulers in this matter, as in others, affecting the general welfare. Nearly all persons in the country were agreed in the justice of the present war. A small matter kindled the strife: but, this being apparently settled, demands succeeded, clearly evidencing a desire for aggression, for ambitious conquest to take advantage of the declining strength of the Mahometan power, by the aid of a greatly extended dominion. The injustice of such a proceeding appealed for resistance; and, in association with France, we were willing to spend our resources and best blood, that the injured may be righted, and the wrong and evil-doer made to understand the folly of his course. God's hand was in all; His purposes were accomplishing; His word fulfilling. The way might be preparing for the return of His people to their land, and the establishment of the Redeemer's kingdom. Both great and mighty nations might help to ensure for a while the Mahometan power; but Mahometanism, and Popery also, must shortly fall. God might permit us to be foiled in our hopes; only He delighted in mercy; and, as He had exalted us among the nations, and given us large possessions, and distributed our people and language, and customs, and religion, in most distant and in various places, so might there be a most important part to be acted by us ere the end might come; and England and her happy institutions and privileges only disappear, the kingdom of Christ having become those of the God and His Christ. For "He is King of Kings and Lord of Lords."

ST. STEPHEN'S, WALBROOK.

REV. GEORGE CROLY, LL.D.

[The service was attended by the Lord Mayor and the Lady Mayoress, and the Sheriffs and other civic officers were also present.]

Happy art thou, O Israel. Who is like unto thee, O people, saved by the Lord, the shield of thy help, and who is the sword of thy excellency! And thine enemies shall be found liars unto thee, and thou shalt tread upon their high places.—Deuteronomy, xxxiii., 30.

By the Queen's command, the preacher observed, they had been summoned to meet together that day to unite in supplication for the help which God alone could give—to acknowledge His sovereignty, to confess

their own unworthiness, and to solicit His mercy. A whole people at once bowing down before their God was the noblest sight that earth could witness. It was a practical command to "be just, and fear not"—to think only of our duty, and to be resolute in its performances. It preserved the individual from all perplexity, the nation from all fear, and made them respect their interests in the hands of a Power that could not be defied.

The Almighty would guide them, like the Israelites, through the wilderness; and, like the Israelites, their harps would hang under their own vine and their own fig-tree. The object of the war was that they was to prove the existence of two principles: one, that the nation which upheld the cause of the weak and the injured, against the powerful and the oppressor, would ultimately never suffer for its generosity; the other, that the breach of treaties was never passed by without a speedy visit of punishment directly connected with the offence. Unlike individuals, nations whose judgments are pronounced and executed upon them here, and those judgments must be in the eyes of men conspicuous and condign. For evidence in support of this assertion, he would go no further back than the history of the last century. In 1772 the three great powers of Austria, Prussia, and Russia, entered into an iniquitous conspiracy to dismember the kingdom of Poland, a country with which they all had treaties. Now the special guilt in breaking treaties was the disregard of society and God wilful, the existence of society, of which treaties were the buttresses and support. The conspiracy succeeded the unjust principle triumphed, and Poland was enslaved. Then came the retribution (a quarter of a century had scarcely elapsed, when those three great powers—themselves the principal military powers of Europe—were successively delivered into the hands of a remorseless executioner—France. Their territories were invaded their towns were slaughtered—their capitals were besieged—and their kings, in chains, and bleeding under the scourge, they were compelled to sue for peace at the feet of the conqueror! But the country, too, supplied a prominent example of the eyes of sanction. In 1775 the English colonies in North America revolted. In 1778 the Bourbon King, unable to resist the temptation of enfeebling England, broke his treaties, and made war against us. What was the instant consequence? Revolt in America was followed by revolution in France. That unhappy King perished on the scaffold; his family were exiled; his nobility and priesthood were massacred; and a Monarchy of 800 years' duration was cast to the ground and trampled on. Further, when in 1798 the French Republic had conquered peace, the use it made of the opportunity was to break its treaties with Turkey, and invade Egypt. The fleet was the largest, the army the most perfect, the General the most famous in Europe. But what was the result of this national crime? Shame, defeat, ruin! Of that fleet not a ship ever returned to its native shore; not a sailor returned but as a prisoner. That consummate General returned but as an escaped fugitive! And Egypt was lost. But vengeance went even further than this. That General had conquered Italy in the space of about two years. Italy was reconquered in the same number of months. The whole French army was slaughtered. The French standard was tossed over the Alps. The Republic was overthrown. Its Government was extinguished. All hopes of a free constitution were scattered to the winds; and a whole population, which had fought so gallantly for liberty, was defeated into the iron hands of despotism, the most imperious and inexorable of all despotisms, the despotism of the sword. The Rev. Doctor, having referred to similar examples in Spain, proceeded to observe—In 1791 the French Emperor made his treaties with Russia, without excuse, and for the sole purpose of excluding England from the Russian ports. He passed the frontier with half a million of men—beat back the Russian army—penetrated to the heart of the empire, and captured Moscow itself. But the hour of Russia's triumph—of Judgment was to come from Heaven not from man. The hand of Him who sent a storm against the vaunting Armada was to be seen in the destruction of the invader: and the snows of Russia were the death-bed of his army. Then came the arrest of Englishmen travelling under the Imperial passport of the French Emperor—a manifest and flagrant breach of treaty and national faith. What was the consequence? An unexampled act of treachery was followed by an unexampled punishment. The Emperor of France—the noblest man in the world—was given up a prisoner into the hands of England; and he was the only Sovereign of France for a thousand years who had died in a prison. Who, then, could resist the belief of these histories, or doubt a principle that had so often been exemplified? Above all, who could deny that most lofty, essential and luminous of all principles, that there was a God who governed the world? He could not hesitate to express his humble yet full conviction that the Emperor of Russia was laying up for himself, or his people, or both, a tremendous measure of Divine vengeance. Still, that vengeance might yet be delayed. There might yet be much to do in the councils of the Almighty. The infidel city of Germany and the profligacy of all Continental life might require a scourge. The cup might not yet be full, but the judgment could assuredly come; for there was never a more unprovoked war, or a war less won more destitute of palliation. Ambition never stood before the world in more marked deformity. Plunder itself had never been more lawless in rapine. The sole offence of the Turk was that he possessed territory; the sole motive of the Russian was that he coveted its possession. That the Emperor of Russia, amidst all the enjoyments wealth could give—the dazzling, or costly, could imagine—and satiated with pleasure and power, should seek for a new excitement in usurpation, rapine, and blood—what a conception did this supply of human nature, and what of the horrors of despotism! A word from that man could still save the lives of thousands of his own people; and there was not a family in the country from Cape to Archangel, that knew how to maintain them! But already was the Imperial spoiler beleaguered in his own land. Yesterday the Sovereign of two years; to-day he dared not show himself in the streets of his capital from a his palace window without seeing the banners of his enemies. He could not obtain a sound from Europe that was not one of execration. He could not draw a breath that was not surcharged with the scorn, the ridicule, and the reprobation of mankind. The whole disaster of a hundred millions of human beings, he could now associate with none but the slaves over whom he ruled. And fortunate for him would it be for him if the ferocity of his wild beast, he had the insensibility. Yet, even in this case we should not ask the hand of Christianity, and pray for his ruin but his reformation. We prayed, scarcely for victory; for we knew it was for the noblest of victories, a victory over his evil nature—over his fierce passions, his fierce prejudices, a victory over his lawless ambition. We prayed only that we might support the cause of justice, of truth, and of God. We prayed not for his destruction, but that he might give up his throne, reconcile the world to the recollection of his character, and [illegible] into the paths of humanity and peace. [illegible] day they were called upon by the Sovereign [illegible] to pay their homage to the Almighty God whom they worshipped, to humble themselves before His throne, to make [illegible] for their sins, to repent of the past and to relieve their [illegible] [illegible] assisted in mere words, and let [illegible] [illegible] munificently by contributing to the support [illegible] children of those who were now exposing themselves to the [illegible] and the tempest in defence of the common rights of nations.

ST. MARY, WOOLNOTH.

THE REV. R. DEAR.

God is our hope and strength: a very present help in trouble.—Psalm xlvi., 1.

In the present [illegible] her cause was "Humiliation and prayer"—[illegible] circumstances of our present time. They had had to maintain [illegible] terrible war, and had been called upon several times by authority to [illegible] themselves in contrition and prayer. We have been hitherto more happy than our forefathers. For forty years peace has continued to bless us; and great and worthy fruits have been borne, having relation to the promotion of God's kingdom upon earth—the building of two thousand new churches [illegible] of schools for the poor, ameliorating changes socially, morally, and [illegible], at home and abroad, not to mention the many important and stupendous undertakings which minis er to man's temporal happiness. It is evident that such works could not have been accomplished in time of war. Therefore might our existing position be rightly termed, in the Psalmist's language, "a trouble." None knew better than David how sore a trouble, for he had often experienced it, and records as his experience that "in the day of trouble" he sought the hands of the Lord; and into the hands of man preferring, on one memorable occasion, pestilence or famine to the sword of his enemies. To whom, then, should we look for "help"? To God, as "our hope and strength." He can alone give us the victory; and if He so deem fit, can cause "our foes to be again at peace with us." Prayer, therefore, should be offered up that He will interpose His arm; and, in order that it may be effectual, examination should be made into the causes of the visitation, whether we have provoked God individually or nationally.

TEMPLE CHURCH.

THE REV. ARCHDEACON ROBINSON.

Through God we shall do valiantly, for it is he that shall tread down our enemies.—Psalm lx., 12.

The rev. gentleman commenced by saying that David, the patriot King of Israel, after a lengthened struggle with the nations upon the immediate borders of his territories, and after having gained repeated victories over them, determined to restrain the proud ambition of Idumea, whose harbrought hosts, secure in the impregnable fortress of the desert, hovered upon the borders of the Holy Land and menaced the integrity of its possession, having resolved to enter upon that just and necessary war, that righteous monarch—the leader of the devotions no less than of the armies of his people—poured forth to the Almighty the expression of unfeigned humiliation at the many imperfections of his past unworthiness, and the defections which had called down upon the nation the Divine chastisement. There were many circumstances in the position of our own country, in the present eventful crisis, which presented a parallel with the history of Israel thus united upon the victorious king. There was much in the language and attitude of our own beloved Sovereign addressing her people and leading them to the footstool of God's throne to implore His favour before the first blow should have been struck by her fleets and armies, which formed an impressive and beautiful parallel with the simple devotion of the Royal Psalmist. Now, did the heart of the nation, which had unquestionably spoken its sanction and approval of the war in which we were engaged, offer up its sincerity and humility its prayer for Divine aid in that war, or did we presume to utter to the ear of Omniscience the vows and lamentations of a required repentance? That was another question; and therefore, in responding to it, he should entreat the congregation to descend to the solemn and faithful self-communion of that hour; to examine, before the thunders of war were heard, how few there were actuated by the earnestness of a simple faith in the power and the willingness to save the nation, of Him who alone could ensure victory to our arms. To no country, assuredly, in ancient or modern times, had so much of prosperity been given as to ours; and of none, as assur dly, would so much be required. How, then, he would ask, had the advantages which had been afforded us been employed? How had the aristocracy of England, by its high position not for themselves alone, but for their dependants throughout all the lessening grades of society, employed their leisure, their wealth, their influence, and their knowledge? Had the ignorance, which had been proved to be the great cause of crime throughout the manufacturing and agricultural districts, been met upon their part by any adequate provision of general and permanent education? Much, no doubt, had been attempted in that respect, much was at present in progress—but the efforts to educate the people, as yet been only partial, and had been supported but in particular directions. The rev. gentleman then proceeded to dilate upon the effects produced upon the people hitherto by the partial knowledge which they had been enabled to acquire. Knowledge in itself was not necessarily good, but a power indifferent on good or evil; and there existed great danger that increasing, but superficial and perverted, knowledge should aggravate the evils which, at first sight, it may appear as if it would remove. It was true that benefits were conferred upon the people which could be afforded by mere lectures, must be resorted to; but even that more solid teaching could not afford an antidote to the poison to which he had alluded. The true remedy for the existing evils of partial education was to be found in the establishment of moral teaching in the Church, not only by building churches commensurate with the increase of the population, but by breaking up our overgrown parishes into small districts, and placing in each one of those districts the efficient agency of God's ministry. He would not enter into politics, but he held as well as to other subjects for our many transgressions against His Divine will, we should confess with shame that Almighty God might justly have cast us off, and deprived us of His favour and protection But in the very hour of that humiliation as a people he knelt down to deplore the frequencies of the national sins will, for the past and for the present, lay the foundation of our hope that Divine Providence would not, in the hour of our need, withdraw from us His aid. Our sovereign was on distant fields; but her heart was at home, and, perhaps at that moment upon distant seas; but it was not the swords of the bravest warriors—it was not the strength of our ships, invincible as they had ever been—that would secure to us victory over our enemies. They were but the instruments of our success, that success must come from God alone. Let the nation's prayer, therefore, be to Him, as in Him was its whole strength. The truth and the reality of our prostration (and the rev gentleman repeated it with a voice beat down by the unalterable allegiance of our hearts and live to that God in whom we trust, and "who only giveth salvation unto Kings."

CAMDEN CHURCH, CAMBERWELL.

THE REV. D. MOORE, M.A.

And Jehoshaphat feared, and set himself to seek the Lord, and proclaimed a fast throughout all Judah. And Judah gathered themselves together, to ask help of the Lord: even out of all the cities of Judah they came to seek the Lord.—2nd Chronicles, xx., 3, 4.

The preacher proceeded to a twofold division of his subject; the first referring to the Scriptural authority for these acts of humiliation, and the blessings that followed; and, the second, to the occasion of the present fast. Under the first head, it was shown that, under the Jewish dispensation, days of Divine appointment, were [illegible] analogous to England's fast on this day, where, though enjoins only by a human and uninspired authority, the approval of Heaven became manifested in the most signal manner, and the deprecated evil was turned away. And, therefore, that it was [illegible] sophy should so far have obtained the ascendancy among us as to [illegible] God out of His own world, we must believe that every act of national self-abasement and humiliation, every reverent acknowledgment of the control of a true Providence, every humble confession in the [illegible] we trust not in sword or spear, but only in the name of the Lord our God, will come up with acceptance before Him, and draw down His blessing upon our land. The preacher then proceeded to show it is one part of Jehoshaphat's fears belonging to us in the multitudinous forces of the enemy; and proceeded to censure the confident boasting with which some looked upon the present contest, as if there were not everything in the military resources of the enemy to necessitate the most prudential caution and to stir up to the most fervent prayer. Think of war as one of the four sore judgments of Heaven, as the scourge of God coming on the nation for its sins, protected by our remote and insular position from the danger of invasion. Thus look at war, as it leads to a fearful waste of human life—of human life, not in its helplessness, and decrepitude, and misery, but in its vigour, its strength, and manhood, and aptitudes for moral usefulness. Think of it in the misery it entails upon households. Oh! how earnest should be our prayers this day that none of our brave countrymen should be cut off in the prime and blossom of their sin; and, though a pious soldier or sailor be one whom we can less afford to lose, yet let us pray that such a discriminatory guilt as the foeman's fate, that none of our brave men may shed their blood in their country's service of whom it could not be said, in the highest sense, that Christ had not first shed his blood for him. He alluded also to the perpetuated jealousies and animosities which inevitably follow great national conflicts. Forty years had not extirpated the hatreds of a great nation against us, on account of our victories over the ambitious Corsican; and if the present alliance with that nation should tear up that root of bitterness, yet the present war, if successful, would only transplant it to another portion of the European soil. After some further remarks on the righteousness of the war itself—the duty of prayer for our infatuated enemies—the necessity of pleading with God for peace rather than victory—the preacher concluded with an earnest and affectionate appeal on behalf of the fund for the families of those who compose our army and navy, who are exposing their lives for us abroad, while we sit in security and peace at home.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Duke of Saxe Coburg-Gotha has declared his willingness to take the command of a Prussian division, in the event of Prussia taking an active part in the war.

The Cuban authorities forbid all persons who have not gone through a regular certified course of collegiate instruction, to write in news, apers.

Apartments have been taken at Homburg for M. de Bunsen, who is expected to arrive there about the beginning of May.

Lord Carlisle arrived at Constantinople on the 5th inst., and left on the 7th for Varna.

The Oriental Gas Company has undertaken to supply Calcutta with gas. One of the conditions of the agreement is that 10s. per 1000 cubic feet shall be the maximum price for public lights.

The 15th of May is appointed for the "aggregate meeting of the Catholics of Ireland," to protest against the proposed inquiry into conventual and monastic institutions.

A jockey club, recently established at Adelaide, has resolved that the annual races shall take place during the first week of the month of May.

One of the regiments which has been most successful in obtaining recruits in Ireland is the 81st North British Fusiliers. At the present time there are upwards of 300 Irishmen in this regiment.

Mr. Edwin Forrest, the American tragedian, has become a convert to the belief in supernatural knocking and other spiritual manifestations.

After a contest of unexampled duration, the parishioners of Liverpool have refused to vote a church-rate of three-farthings in the pound. The poll closed on Tuesday with a majority of 537 against the rate.

Several French officers are training, at Brussels, with Abd-el-Kader, to induce him to take the command of an Arab corps, and it is said that the Emir seems inclined to comply.

Arrangements are in progress for bringing under the early consideration of the Court of Session the question as to the right of passengers to use the piers on the Clyde on Sundays, as well as the other days of the week.

A large assembly was present on Sunday to witness the re-opening of the Church of the Sorbonne, in Paris, which had been closed for Divine Service for a quarter of a century.

The Great Southern Railway Company of Ireland has given £200, and the Irish Midland Great Western an equal sum, towards the proposed Dargan Institute.

The village of Oberberikon, in the canton of Argau, in Switzerland, was last week destroyed by an incendiary fire. Eight persons lost their lives.

Steps are being taken by the people of Edinburgh to erect some public memorial of the late Professor Wilson.

The *Ecclesiastical Gazette* of Vienna states, upon the authority of authentic documents, that in White Russia, in 1854, 30,000 persons were converted to the Greek religion. The means employed were distributions of brandy, and to those who resisted that temptation, an application of the knout.

The *Simla*, a new gigantic screw steamer belonging to the Peninsular Company, is expected to be at Southampton about the 1st of May next, to be placed on the Alexandrias line.

A duel was fought on the 18th, between two journalists of Turin, one of whom was wounded in the arm.

The Society of Merchants of Bristol intend giving a grand banquet on the 7th of June, to his Grace the Duke of Beaufort, who has recently succeeded to the title and estates.

By a late ukase the Emperor Nicholas orders the construction of telegraphic lines between Bucharest, Odessa, and St. Petersburg.

Colonel Rose, so well known for the important part played by him at the commencement of the Eastern question, has left Constantinople for Candia, to organise the hospitals in that island.

The Archbishop of Paris has addressed a pastoral letter to the curés of his diocese, recommending them to exert themselves to the utmost to have the Sunday properly observed within the sphere of their influence.

The copper mines of the Cape of Good Hope promise to be a very valuable addition to the wealth of the colony, the quantity likely to be raised being large, and the quality good.

The Emperor Napoleon III. completed the 46th year of his age on Thursday week. A number of banquets took place in the various quarters of Paris in honour of the day.

Government have agreed with three West Riding contractors for the supply of 3000 tons of hay for our cavalry and artillery horses in the East.

Mme. de Lacenal, widow of a Jew banker at Prague, who died recently, has left 100,000 effective florins (£41,666*l.*) for the erection of a hospital for the poor Jews of both sexes.

At the suggestion of Lord Palmerston, it has been proposed to form a volunteer artillery corps in Liverpool, as the most suitable manner in which the materially-inclined townspeople may contribute towards the defence of the port.

A pharmacien at Provins has recently discovered a means of producing sugar from the carrot, parsnip, beet, leaves, and stalks of borage, by a process similar to that adopted for the extraction of sugar from beetroot.

A few days ago a large tract of bog in the vicinity of Athlone by some accident took fire, and in a few hours the heath was in a flame of three miles, in a blaze. The cover for game is destroyed on a part of a thousand acres.

During the month of March thirty-six vessels, of an average capacity of 1076 tons each, and an estimated aggregate value of £465,000, were in course of construction at Quebec.

The purchase of steamers from the Australasian Pacific Company, by the Compagnie des Messageries Maritimes Imperiales, which already possesses a large number of steamers, plying in the Mediterranean and elsewhere, has been completed, and the steamers have passed into that company's hands.

A man named Caisson, nicknamed the "Prince," has just died at Villafranca, near Nice, at the age of 104, having been born in 17[illegible].

The ton of flax, which this time last year was worth only from £36 to £40, now brings £70, in consequence of the Russian war.

So great is the demand for men as substitutes in the French army that the price has increased in the departments from 1000*f.* or 1200*f.* to 4800*f.*

Iconoclasm is destroying property by wholesale in Philadelphia. Eight or ten fires occurred there between sunset on the 8th and day light of the 14th, most of which were of that kind.

Instead of attempting to put an end to the demoralizing smuggling along the coasts of Sweden, the Government, whose three years' period of service as Commander-in-Chief at Dovorport expired on the 17th inst.

The Archbishop of Mexico has addressed to all the clergy of the city, in which he recommends to them the greatest vigilance in preventing the circulation and reading of Protestant Bibles, which are being introduced from the United States across the Texan frontier.

Of the fifty-three millions and a half of people which Russia contains, 22,500,000 are serfs, and less than 4,000,000 were slaves; and of these, 15,000,000 were slaves of the Crown, or the Emperor!

Mr. Baillie, on the meeting of Parliament, is to call the attention of the House of Commons to the manner in which cadets are appointed to the Royal Navy.

Redschid Pacha is said to have stated that he never will allow either Kossuth or Mazzini to enter the Turkish dominions.

Gilbertt's library, says the *Piedmontese Gazette* of the 22nd, is announced for sale.

Prince Dolgorouky II., Minister Plenipotentiary to the Court of Persia, had just arrived in the Russian capital from Teheran.

ATHERTON. By MISS MITFORD, Author of "Our Village," &c., 3 vols. with Portrait of the Author, and other Illustrations.
"Atherton" is a charming tale, written in a cheerful, kindly, and buoyant spirit, and refreshes the reader like a draught of cool water in the country."—Athenæum.
"Those who desire to see sunshine in suffering, should read 'Atherton,' and can overlook the prolixity."—Illustrated London News
AUBREY. By Author of "Emilia Wyndham," &c., 3 vols.
PHŒBE MILLER; a Scottish Story by the Author of "The Runaway," 3 vols.
JANET MOWBRAY. By CAROLINE GRAUTOFF 3 vols.
"In the whole range of works of fiction, it would yet be easy to find a better love-story than 'Janet Mowbray,' and we congratulate the author on the profession of a work which entitles her at once to foremost rank amongst the female writers of the day."—Morning Post.
Also, just ready, in 2 vols.,
The AMERICANS at HOME; or, Byeways, Backwoods, and Prairies Edited by the author of "Sam Slick."
HURST and BLACKETT, Publishers (Successors to Henry Colburn), 13, Great Marlborough-street.

BY THE AUTHOR OF "THE MARVELS OF SCIENCE."
Now ready at all the Libraries, in Three Volumes, with Illustrations by Leech,
THE GREAT HIGHWAY.
A Story of the World's Struggles. By A. W. FULLOM, Author of "The Marvels of Science."
"This story throws a light, not unfairly, on the social systems of the day The description of the literary world of London is strongly painted, but not overcoloured, and there is an honest effort to pace in their right lights some of the most prominent follower of modern society."—Globe
As a very executed fiction, we have not read any superior to this."—Sun
"This is a story of that 'Great Highway,' the World, detailed, with an air of actuality which makes the reader hear, see, and think. There is no air of fancy about it, but the contrary, as opposition. As an exposure of the knavery met with by the literary man, we know of nothing like what is detailed in this work. There must be authority for the full-pecuniary. It is a new triumph for his pen, and one of the most spirited novels of the day."—Dispatch.
London: LONGMAN and Co.

Ready, in Two Volumes, 8vo, with Portrait, 28s. Bound,
MEMOIRS AND CORRESPONDENCE OF
MAJOR-GENERAL SIR W. NOTT, K.C.B., sometime Member of the Army of Candahar
Edited by J. H. STOQUELER, Esq., at the request of the daughters of the late general, from materials left by him at his decease.
HURST and BLACKETT, Publishers (Successors to Henry Colburn), 13, Great Marlborough-street.

DR. MERLE D'AUBIGNE'S HISTORY of the REFORMATION. Oliver and Boyd's Revised Edition, complete in Five Volumes, 8vo, price 30s. cloth, is now ready in England.
I. The Planet Library Edition. Large Type. 5 vols., 8vo. 30s.
II. The Smaller Library Edition. 5 vols. post 8vo. 25s.

Edinburgh: OLIVER and BOYD. London: Simpkin, Marshall, and Co.

CAPTAIN SPENCER'S NEW WORK ON THE SEAT OF WAR.
In post 8vo, price 9s., cloth gilt,
TURKEY, RUSSIA, the BLACK SEA, and CIRCASSIA. By CAPTAIN SPENCER, Author of "Travels in Circassia." With numerous Woodcuts, and four Portraits, printed in colours, from Original Drawings by Count Gurowski, and a Map of the Seat of War.
"As it exists like the present, when the extraordinary and unforeseen events now passing in the East have excited the sympathies and interest of all Europe, the work of Captain Spencer is one of the most seasonable publications that could have appeared. It is necessary, however, to do justice to the author, to say that, although the work of a traveller, he cannot be correctly known to the public by the able descriptions of Eastern life and manners, and for the liberality and soundness of his political opinions cannot fail to afford him full credit for the information every topic connected with the Seat of War in the East."
London: GEORGE ROUTLEDGE and Co., 7, Farringdon-street.

JOHNSTON'S MAPS of the WAR, engraved from entirely New Drawings, and containing the latest and most authentic information
1. The BLACK SEA, Caucasus, Crimea, &c., with Large Plans of Sebastopol, and the Positions of the Russian and Turkish Armies. 21s. M.S.E.". "Horrible!"—The Bosphorus and Scutari Bay.
2. The BALTIC PRINCIPAL ISLANDS, and adjoining Countries from Viborg to Copenhagen, and Map of Central Europe, from St Petersburg to Lisbon. 21s.
3. The BALTIC SEA and GERMAN OCEAN, with enlarged Plans of Cronstadt, Sweaborg, Revel, Port Baltic, and Gulf of Riga. Prize, Coloured, 1s. each; by post, 1s. 4d.; or the three by post, 3s. 6d.
Edinburgh: W. and A. K. JOHNSTON, Geographers and Engravers to the Queen And all Booksellers.

LAMBERT'S MAP of the SEAT of WAR. "It would be difficult to produce a Map more satisfactorily designed for the purpose of reference at a glance than Lambert's arrangement. It cannot but be eagerly welcomed by our intelligent population."—Sun. "It is a really valuable Map, and contains a copious collection of a region with which every one should now be as familiar as with the map of England."—Morning Advertiser
We have already found it of great use, for reference; and can confidently recommend it to our readers, for it is, in our opinion, the most useful Map of the Seat of War yet published."—York Herald.
Published by LAMBERT and Co. Edinburgh: Menzies. Newcastle: Lambert, and all Booksellers.

Price 5s. 6d., by post,

THE ILLUSTRATED LONDON NEWS

No. 681.—VOL. XXIV.] SATURDAY, MAY 6, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE FRIENDS OF RUSSIA.

THE British public is not unanimous in its opposition to the pretensions of the Emperor of Russia. Although there is not, as far as we are aware, a single British journal which supports the pretension of the Czar to rob his neighbour, and to rule supreme in Europe, and although the voice of public opinion declares itself strongly against Russia, and in favour of Turkey, on every opportunity that presents itself, in the press or out of it,—we learn from the debates in the British Legislature that the unanimity is not complete. We also learn from the columns of the American newspapers, that the Czar has a few friends in that country. In England, the chief allies of the Czar appear to be Messrs. Pease, Sturge, and Bright, and other members of the Society of Friends to which they belong, and Mr. Cobden. In America, the most noted friend of the Czar is an Irishman named Mitchel—a convicted traitor and felon—who hates the British Government, apparently for sparing his life, when it might justly have sentenced him to the gallows. Mr. John Mitchel expressly avows his sympathies with the Czar, and calls upon all Irishmen to fight against England, which he affects to consider the enemy of human liberty. We are sorry to place the names of respectable men like Mr. Pease and his fellow pilgrims to St. Petersburg, and those of Messrs. Cobden and Bright, in the same sentence with that of Mr. John Mitchel; but false principles, like misery, bring men into strange company. Whether it be from the spirit of pugnacity, strengthened by the long and successful agitation of the League—or from the desire of taking the side that has few supporters—or whether it be from any obliquity of moral vision, or from sheer incapacity to understand the greatness of the issues which have been raised by the ambition of the Czar—Messrs. Cobden and Bright are doing their utmost to augment the bitterness of the war, and to destroy the reputation which they once achieved. Were they not members of the British Legislature, their opinions might be left unnoticed. Like those of Friends Pease and Sturge, we might consider their peculiarities to be the eccentricities of men highly to be esteemed on 'Change—of men hating war upon principle, and loving ducats more than such small matters as national dignity and honour—and pass them over with indifference. But Messrs. Cobden and Bright have a higher position, and their statements or mis-statements go for something in forming the opinion of the country. It is for this reason, among many others, that it may become necessary, from time to time, to show how little entitled they are to aspire to instruct the public mind upon this question—how prejudiced is their judgment, how erroneous and mischievous are their principles, and how base and mean are the motives on which they would have a mighty and honourable nation conduct its foreign policy and its intercourse with the other States of the world. Of Mr. Pease and Mr. Bright it would not be necessary to say much, if they merely supported themselves on their religious dogmas. If they conscientiously believe that Turkey, in resisting attack, commits as great a wrong as the Power that unjustifiably occupied her territories with a hostile purpose; if they think defensive and offensive war to be alike wicked, we might leave them to the enjoyment of their principle, and thank Heaven that they are not the rulers of our Empire. But, when we see men like these depart from the simplicity of the faith which they allege to be in them—when they go out of their way to flatter the aggressor, to vaunt his magnificence, to laud his magnanimity—to vilify the Sovereign whom he seeks to injure, and the Allies which have taken up arms in defence of the independence of an unoffending nation; and when they have a good word to say for every paltry State that gives its support to the wrong-doer, we are entitled to ask, whether they are true to their own principles, or whether the ultra-peace party is not in reality an ultra-war party, and a party having greater sympathy with him who provokes hostility than with him who resists it. When such men talk of the barbarism of the Turks, but ignore the barbarism of the Russians—when they dilate upon the violence committed by Mahomedans, but have not a word to say about the massacre of Sinope—when they systematically refrain from alluding, in the slightest manner, to the malice prepense of the Czar's proposal to Sir Hamilton Seymour to share with Great Britain the plunder of the "sick man;" and when they take every opportunity to point out to reprobation the errors that may be committed by the unfortunate Sultan or his advisers,—we have the right to consider them as no friends of peace, but as abettors of war, or at the best as men who are contented to have dishonourable peace in their own day, at the price of cruel war in the days of their own children, and those who are to come after them.

Mr. Bright thinks the war has been "got up" by newspapers anxious to sell additional copies, and to procure new subscribers. We doubt, however, whether Mr. Bright has in reality so poor an opinion of the intelligence of his countrymen. At all events he did not think so meanly of them when the battle of Free-trade was to be fought and won. No doubt we should do Mr. Bright a great injustice if we accused him of wishing for peace *à tout-prix*—even at the price of the extinction of Turkey, and the incontestable supremacy of Russia—from any motive so vile as the desire to sell carpets in Russia. Not less unjust is Mr. Bright's accusation against the newspaper press, and against the common sense of his countrymen, which is implied by it. Mr. Bright should know better. But the fact is, that both he and Mr. Cobden are intolerant of the press, whenever it does not support and re-echo their opinions. It is not long ago that Mr. Cobden made a specific accusation against the Sultan of desiring to destroy the liberty of the press in Greece; forgetting that not many months previously he expressed his anxiety to confine the British press to the simple

KULLEN, AT THE ENTRANCE OF THE SOUND. (SEE NEXT PAGE)

function of reporting events and speeches, and his hostility to "leading articles" and editorial opinions. Mr. Bright still more constantly sneers at the press; and gives ground for the suspicion that, if he had the power to set limits to its freedom—which fortunately he has not—the English nation would not long be in possession of so inestimable a privilege as that of liberty of printing.

Mr. Cobden—who no longer speaks of the facility with which the Russian Empire may be "crumpled up," but who appears to be more desirous of "crumpling up" the Sultan, or his own renown—thinks the British Government should not allow that of Turkey to expel foreigners engaged in the attempt to create insurrection in Constantinople. Because Greek merchants, subjects of King Otho, reside in that capital, and carry on an extensive trade with England, the Sultan is not to exercise his right of expulsion; or, if he do, he is accused of being guilty of as gross an act of folly and cruelty as that which Louis XIV. committed when he revoked the Edict of Nantes. Louis XIV. banished his own subjects, because they were Protestants. The Sultan has not banished his own subjects, nor has he banished the Greeks on account of their religion. He has banished them because they were foreigners plotting treason against his authority, and attempting to deliver his country to the Emperor of Russia. Lord John Russell set Mr. Cobden right in this historical mistake; but Mr. Bright, looking at the matter as one affecting no higher interests than those of trade, insisted that "there was not a man above the rank of an idiot" who did not think that it was most unwise policy, "which must end in great loss to the commercial interests of this country." But it might have been replied to Mr. Bright that there was no man above the rank of an idiot who did not know that if the Czar obtained Constantinople, a blow a thousandfold heavier would be aimed against the commerce of Great Britain and the civilised world, than would be inflicted by the expulsion of the Greeks, were they ten times as numerous and ten times as wealthy. Even upon the narrow principle of the interests of trade, Mr. Bright should have taken the part of the Sultan rather than that of the Czar. Surely he cannot deny that it would be better to submit to a temporary inconvenience and loss, rather than incur the risk of the total annihilation of the trade of the Levant? The Sultan is a Free-trader, and the Czar a Protectionist—another fact which makes it difficult to comprehend the strange friendship which the ex-leaders of the Anti-Corn-law League have so suddenly formed for the Russian Government. It is because we believe both Mr. Cobden and Mr. Bright to be sincere, that we regret the unfortunate twist which their usually clear and direct intellect has taken upon this question. The Emperor of Russia knows that they once exercised great political influence in this country. If, in his ignorance, he imagine that their influence is as great as ever, he may be induced to persevere in his wrongful course, with the hope that the war against him either is, or speedily may be, made unpopular by their exertions. Such a result would be a great misfortune, and is one of the reasons why it is necessary for the press and the people to disavow all connection or sympathy with the friends of Russia. Power and position are dear to most men, and especially to those who have once enjoyed them. If Mr. Bright and Mr. Cobden wish to lose both, they have but to persevere in their present course. Their wishes in that case will assuredly be gratified.

As regards the opinion of the great American people on the struggle into which this country has been unwillingly forced, we are glad to see that the rabid John Mitchell, and some of the fierce spirits who have left Ireland for Ireland's good, meet with no encouragement on the other side of the Atlantic. His bitter denunciations of Great Britain, or his hopes that the Czar will be triumphant, excite no other feeling but disgust. The Americans cordially support the cause of the Allies. They see, like practical and generous-minded men, that Great Britain would have voluntarily descended into the rank of a second or third-rate Power if she had quietly allowed the Emperor Nicholas to work his will against Turkey. They pray for our success and for the Czar's discomfiture, and they treat the fanatic John Mitchell with the contempt he merits. As for the Pennsylvanian "Friends," they are wiser than Mr. Bright, and say nothing.

THE BALTIC FLEET.—CAPE KULLEN.

OUR magnificent fleet in the Baltic paid a visit to Stockholm lately. On the 21st ult. nineteen vessels anchored in Elfsnaben Harbour, five hours' sail from the city; and on the 26th Sir Charles Napier had an audience of King Oscar, by whom he was most cordially received, as well as by the inhabitants of Stockholm.

By the latest accounts, which come down to the 27th ult., the line-of-battle-ships under Admirals Corry and Chads were keeping up a rigorous blockade of the Gulf of Finland, which would render the escape of a single Russian ship impossible. Cruisers were stationed off Revel, Riga, Memel, Dantsic, Stockholm, Gothland, Bornholm, in the Sound, Cattegat, and Gulf of Kiel, so that the whole Baltic Sea and coasts are under strict guard.

The *Tribune* left Copenhagen for England on the 26th with one of her prizes, having captured six. The *Magicienne* was at Copenhagen on the 26th, coaling and left for the Baltic fleet with despatches on the 27th. She was literally loaded with provisions and parcels for the Baltic fleet—making it a duty to receive anything and everything for the officers and men; and had also a heavy mail from the Government. The *Magicienne*, *Dauntless*, *Gorgon*, *Impervieuse*, and *Kuryalus* had all made prizes, which were to be sent to England immediately for condemnation.

The Danish Government lingers on the side of Russia. The Swedes are decidedly in favour of England.

Upon the preceding page we have engraved a very effective View of the romantic scenery of the Sound—Cape Kullen, which forms its northern entrance on the east. Kohl, in his forcible manner, says: "The views along the whole of the northern coast, over the Sound to the Kullen, in Sweden, and towards the Castle of Kronberg, are enchanting; and black ink, white paper, and a goose quill, can give no adequate idea of them." But the draughtsman's graphic art has here pictured a portion of its sublimity, in the rocky coast, and its greatest elevation crowned with a lighthouse.

RUSSIAN YACHTS.—According to a letter from the Baltic, the Emperor of Russia has ordered that all the boats belonging to the members of the Yacht Club of the Neva shall be placed at the service of the State, to form part of the flotilla of the armed row-boats which is being formed at Sveaborg and Cronstadt, to act against Sir Charles Napier.

TERMINATION OF THE PRESTON STRIKE.—In consequence of the funds of the weavers' committee at Preston being very small this week, the committee have issued a placard intimating the abandonment of the strike, which has now lasted thirty-six weeks. Large numbers have resumed work since Monday. The spinners, however, are resolved still to hold out; and, up to Thursday, only a very small number of them had gone in. The weavers generally are willing to resume work; but cannot so long as the spinners remain out. The card-room hands are also kept out of work from the same cause. At Stockport there are symptoms of the strike coming very speedily to an end.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The fêtes of the official world continue with the utmost brilliancy. That of the Hôtel de Ville has been more than usually magnificent: upwards of seven hundred persons were present on the occasion, consisting entirely of the Court, the families of the Ministers, the *corps diplomatique*, the principal Government officers, members of the Senate and of the Legislative Body, and a number of foreigners of distinction, more especially English. The fête commenced with a dinner; after which, the grand ball-room was thrown open for the reception of the evening guests, who began to arrive at half-past nine. From the entrance of the hotel to the ball-room, a decoration as novel as it was beautiful was arranged—the whole of the walls were lined with a gilt trellis-work, arching overhead, in which were twined white lilac-trees, in full bloom: nothing could exceed the beauty and fragrance of these temporary bowers, which preserved their freshness and perfume the whole evening. At ten o'clock the new gallery—which, for size and magnificence of proportion and decoration, stands almost unrivalled—was thrown open, displaying at the end a theatre of considerable dimensions, with benches covered with crimson velvet for the spectators. Arnal and Numa, of the Variétés, played "Les Erreurs du bel Age"—a choice which, to our judgment, was the only spot on the good taste which presided over the whole of the rest of the entertainment. The piece is coarse and vulgar in the details, complicated and uninteresting in the plot. Arnal and Numa have both seen their best days, and are, at the utmost, only fit to represent broad farce to a not very fastidious audience. A ballet followed, "La Chasse au Papillon," which owed a portion of its piquancy to the fact that it required a decision of the Minister of State to arbitrate between the pretensions of Mdlles. Cerito and Rosati in the affair. The Préfet de la Seine having expressed a wish that the latter should perform the principal *rôle*, the former put forward her claims in the matter. The spectators benefitted, as it was decided that both the celebrated *danseuses* should appear—Mdlle. Rosati in the dancing part, Mdlle. Cerito in the pantomime. The fête, as it merited to be, was brilliantly successful.

The Emperor and Empress are about to proceed to St. Cloud, but intend previously passing some days at Fontainebleau.

M. Méry has no intention of accompanying the Oriental expedition, as was stated; his voyage is to be of a private nature, and has been retarded by his literary occupations, consisting of the conclusion of a piece originally destined for the Français, but transferred to the Vaudeville, entitled, "La Hausse et la Baisse," and the composition of a piece, in one act, called, "Aimons nous les Uns les Autres." Both are said to be most favourable specimens of the author's genius.

The Eastern nostalgia seems to have seized on the representatives of French literature. M. Gérard de Nerval is about to proceed on an Oriental trip; Alexandre Dumas intends setting out in September to tread the route rendered celebrated by Lamartine; and Mdme. George Sand has also planned an exped tion to Egypt, purposing to extend her travels to the furthest point of Nubia to which European travellers could penetrate, but it appears that the task of revising her Memoires compels her to defer the voyage to another year.

The uniform of the *Cent Gardes*, which has just been decided on, is extremely picturesque. It consists for the *petite tenue*, of a cuirasse of buff-skin, with the Imperial arms embroidered; for the *grande tenue*, of one of steel, with the arms engraved; blue sleeves, with gold ornaments, white breeches, jack-boots, and casque.

On Saturday the *Assemblée Nationale* is to make its re-appearance after its two months' suspension. It is said that in the reorganisation of the paper, it is probable that M. Charles Letellier, one of its principal writers, will cease to contribute to it.

A new rule has been adopted for all the theatres, which creates much dissatisfaction, principally among the actresses. No new piece is to be *affiché* until a representation, with costumes, decorations—in short, all the details precisely as they are to appear before the public—is given before the inspector named by the Bureau of Examination. The actresses complain bitterly of being compelled to wear low dresses of a morning, and to run the risk of impairing the freshness of their dresses, which are so tenderly preserved for the *début* of a first representation.

M. Proudhon is actively engaged in writing for posterity—the works on which he is employed not being, it appears, of a tendency which the present state of the times would permit to be published. Among others, there is said to be a comedy, written in the style of Aristophanes, containing keen raillery on many of the *notabilités* of the day, including some of the heads of the Republican party: "Le Dedans de la Statue" is, we are informed, the name of the piece.

Among the facts relating to modern magic, table-turning, &c., we learn that a book is about to appear, under the auspices of three Bishops, the object of which is to prove that the *esprits frappeurs* are neither more nor less than demons. At the same time, a new journal has just made its appearance, entitled *La Table Parlante, Journal des Faits Merveilleux*, which examines in a religious point of view, the question of the marvels lately revealed, and enters into a critical analysis of phantoms, *esprits frappeurs*, possessions—in short, all that relates to supernatural agency, real or pretended. It cites the opinions of the Père Ventura, who regards the question as one of the greatest events of our age; and of the Père Lacordaire, who calls them a fearful glimpse into the invisible world.

Mdlle. Rachel, who is at Pau, attending on her sister, who is ill, has sent from thence her resignation to the Théâtre Français, for the third and last time, according to rule. It is said that the celebrated tragedian has received, and contemplates accepting, the most magnificent proposals from America.

UNITED STATES.

The *Europa*, which left New York on the 19th ult., arrived at Liverpool on Sunday night. The latest telegraphic advices from Philadelphia state that no intelligence had been received of the steam-ship *City of Glasgow*, then fifty days out. It was proposed to send the steam-ship *Granite State* from Philadelphia in search of the missing vessel. The several packet-ships arriving at New York continued to report passing large icebergs on the passage. A very severe snow-storm had been experienced at New York, Boston, Philadelphia, Baltimore, and Washington.

NEW ZEALAND.—FAREWELL DINNER TO SIR GEORGE GREY.—On the 26th of December last, an entertainment was given to Sir George Grey, on his retirement from the Governorship of New Zealand. The dinner was served in the Odd Fellows' Hall, Auckland; which was tastefully decorated for the occasion with flags, and beautiful tropical evergreens of the island. Between 250 and 300 merchants, farmers, and tradesmen were present; William Captain Rowdidch, a very old settler, presided; and was supported by the venerable Bishop, Sir George Grey, the Attorney-General, and the Speaker of the Provincial Council. Several native chiefs were present, and delivered excellent addresses. The Governor was received with great enthusiasm, and the proceedings were altogether of the most satisfactory character.

GREEK PIRATES.—The pirates of the Archipelago are again on the alert, and have taken a vessel bound from Malta to the Black Sea with coals for the fleet. The piracy, it is said, was committed off the Isle of Andros, where the vessel was run on shore, and the master and crew, consisting of fifteen men, murdered in cold blood.

POLISH EASTER CUSTOM.—The Poles in Constantinople, who number about sixty souls, principally refugees, had an entertainment of their own last Easter Sunday, in the style of the Jewish Passover. They met in the house of one of their principal countrymen, and ate a meal standing—a custom among them of great antiquity, and a bond of union to a people scattered abroad over the face of the earth.

THE WAR.

DEFEAT OF THE RUSSIANS.

The whole of the news from the Danube during the past few days has been of an encouraging nature. First of all, it is now beyond doubt that the Russians have evacuated Lesser Wallachia, after burning all their stores. The motive assigned for this display of weakness is "a desire of tranquillising Austria, by removing the scene of hostilities from her frontier." The real motive is, that they have found Kalafat too strong for them. On the 18th or 19th a battle is said to have been fought near Rassova, in which the Russians were defeated with great loss. One despatch speaks of a general engagement having taken place between 70,000 men under Omer Pacha, and the Russian army under General Liders; but this is not confirmed. Be that as it may, the whole of the accounts lately received represent the Russian force in the Dobradja as in a very critical position: instead of being able to attack Schumla, as was originally intended, it seems in a fair way to be cut to pieces, or starved into submission by the blockade of the Danube, which must stop the passage of its supplies from Odessa.

A second battle is said to have taken place near Czernawoda, which lasted six hours, and ended in the defeat of the Russians, whose loss is said to have been 600 killed, 250 taken prisoners, and fifteen guns.
